### THE Japan Gazette. MAIL SUMMARY.

FROM 21ST AUG., TO THE

BIRTH

On the 24th August, at No. 1 Street; the wife of Mr. A. MITCHELL, of

On the 31st August, at No. 1 Yokohama, the wife of Mr. E. J. Moss, of

At Shanghai, on the 19th of F. H. BELL, Esq., of a son.

On the 9th inst., at No. Mrs. F. V. DICKINS, of a son.

MARRI

At Nagasaki, on the 21st, at H. B. M.'s Consulate, by Marcus Flow, Consul, and a. towards at the British Episcopate, by Revd. H. Burnside; WILLIAM Second son of James Stuart, Esq., of to EMILY WARRAINE (widow), second of Dr. Joseph Peachey, of St. Kilda, Melb.

At Shanghai, on the 19th the Rev. R. N. son, JOHANNES WILHELM MANNA BERTHA HANMANN. No cards.

On the 29th instant, at Trin Shanghai by the Rev. Canon Butcher, JOSEPH POND, of Shanghai, to ALICE FANNY, of South Lambeth, Stockwell, England

On the 17th instant, at Yokohama, by L. Weintraub, officiating Chaplain the presence of Government Officials, M. of Yokohama, to BERTHA, only daughter Horowitz, of Yokohama.

DEATH

On the 9th April, at Peter Sydney Australia, of Pneumonia, HENRY A late of Yokohama, fifth son of the late Rev. B. D. of Stourbridge, Worcestershire, aged 39 years.

At the Yokohama General Sept. 4th, GARGINOLO SEBASTIANO, seaman M's ship *Garibaldi*, of consumption.

Suddenly, at No. 58, Main Street 4th inst. WILLIAM MARSHALL, Esq., aged

At No. 24 Bluff, on the 9th St. Mr. JOHN D. WILKIE.

At the Yokohama, General September 14th, of Consumption SALVADORIL a native of Malta, aged 35 years.

At Hankow, on the 16th Aug STRONACH, Esq., aged 30 years.

At the Nagasaki Hospital, 8th August, ANDREW GRAY, native of Fair Glasgow, Scotland, age 40.

### Summary.

OUR last Mail Summary was published on the 7th instant. We are since in receipt of all mails due to date.

WITH THE close of the hot weather the Mikado has returned to Tokoi, and has had an opportunity of showing hospitality to a scion of another royal house—the Duke of Genoa, nephew of the King of Italy. The prince was lodged at O Hama Goten, the residence set apart for such guests, and entertained in every way the government could think of. The Mikado visited him, and a review was held in his honour; and the arrangements for his amusement—including theatrical performances, &c., were much like those adopted for the Prince Alexis of Russia. The simplicity of Japanese life prevents the Mikado showing as much splendour as most other courts display, but in all probability, his visitors find that an advantage rather than otherwise.

ALTHOUGH THE government officials have all resumed their especial duties, nothing particularly interesting to foreigners has been done. They are looking forward to the Revision of the Treaties, which will in a few days be seriously entered upon.

THE CHIEF ambassador Iwakura and his two assistant ambassadors Ito and Yamaguchi, have at last reached home, after their long wanderings. As yet nothing has been heard of them since their arrival, and it is more than likely that they will be visiting their friends or resting themselves before they enter upon the active home duties now devolving upon them. The revision of the treaties has been put off until their return, and we must suppose that they are expected take a prominent part in the discussions. It has not leaked out, what are the changes to be made or suggested, but on the point of opening up the country to foreigners, the contention is likely to be sharp. The government is quite as desirous to open it, as foreigners are to see it opened; but the former are unwilling to concede it, unless foreigners are under Japanese law; and Japanese law being little better than a myth, it is impossible that this can be agreed to by foreign powers. The report is that a kind of compro-

mise will be made; and that passports will be freely granted to all foreigners, provided they accept them on the condition of being under Japanese law, whilst travelling under their protection.

THE PERUVIAN Minister has left for China to negotiate a treaty at Peking. He has been quite successful here, so far as arranging a treaty of Commerce and amity, but we think there is little to come of the treaty, as it is very unlikely that any Japanese will leave, to work either the mines or the Guano of islands of Peru. Japan has plenty of employment for every one of her labourers, if only the government will permit mines to be worked; and every day we approach nearer to this degree of liberality.

ABOUT 30 out of 70 of the Italians now here, signed an address to the Duke of Genoa, who received it from a deputation of three of their number, and made a suitable reply. A Yokohama contemporary states, that the 40 Italians who refused to sign the address did so, as being either republicans, or staunch upholders of the papacy.

SOCIAL ITEMS are entirely wanting in this city of Tokoi. The foreigners resident here are so scattered, that they see but little of each other; and as yet the Japanese have but little social life.

THE GOVERNMENT has appointed a commission, composed of Japanese assisted by Mr. Hannen the Acting Assistant Judge of H.B.M.'s Supreme Court, to enquire into the outstanding claims of foreigners against the Hans, or old clans. The enquiries take place at the Gaimusho (Foreign Office), and both the claimants and the government are represented by lawyers.

IN YOKOHAMA, we have to regret the untimely death of a gentleman who was one of the earliest arrivals after the opening of the ports: who has been the member of one of our most respected mercantile firms; and who has from the earliest days been one of the most useful members of our community. In Mr. Marshall, of the firm of McPherson and Marshall, that port has lost one of its very best citizens. He died suddenly from apoplexy.

### To Our Subscribers.

THE *Japan Gazette* reverts to its old proprietor; and in resuming the helm, it is particularly pleasing to us to see that of the former supporters of the paper, hardly any of the names are missing from the subscription list, and that the circulation is nearly the same as it was when we parted with it seven months ago.

We have now but few promises to make, for our readers know us and our principles well. Yet we have some explanations to give that our plans may be thoroughly understood.

When in 1867, we started the *Japan Gazette* we well knew the difficulty attending the production of a daily news sheet in such a settlement as this, and we told our readers at the time that we would collect all the news we could but that "extracts" from newspapers and magazines must oftentimes satisfy them. We mention this because we often hear such remarks as that there is nothing but extracts in the papers. If all the papers ceased publication for lack of news, or declined giving "extracts" when they have nothing else to give, there would be far greater grounds of complaint. We suppose there is no country in the world where it is more difficult to collect news of a character fit for publication in the columns of a newspaper, than it is in Japan. Nevertheless our ambition to make a really good paper of which the bulk of the matter is original, is as great as ever, and circumstances make our opportunities for doing so, much greater than before.

We in future date our paper from Tokei and Yokohama. The *Japan Gazette* will no longer be a Yokohama paper solely; but its feature will be its Japanese news—i.e., as collected from the facilities afforded by the native press.

This is the principal alteration in our plan. Whilst publishing our paper in Yokohama—simply because we dare not expose our valuable plant to the risks of fire, in a city where Insurance is as yet impossible to effect—yet we shall consider the *Japan Gazette* a Tokei newspaper, and we shall use our utmost efforts to give it a metropolitan character.

We have one or two additions to make to the information hitherto given in the foreign papers, but we will not speak of them more fully until we find our plans more matured for carrying them out.

We now once more spread our sails to the wind, and in doing so think it well to inform the public that the chief officers who assist in navigating our barque have themselves a share in it. Our new Manager and old Superintendent of the Printing Department, are both well known to the community, and the fact of their having a stake in the enterprise will create confidence that they will leave nothing undone by which they may earn the good-will of all classes.

WE yesterday published two paragraphs reflecting strongly on the conduct of certain foreigners in Tokei. But although we feel strongly on the subject and deprecate even the slightest misbehaviour of foreigners in the city, yet we are by no means blind to the fact that frequently the provocation they receive is very great. It often happens that the police, if they have the least opportunity of exhibiting their authority over foreigners in sight of their countrymen, act most offensively and nothing but the most cool reasoning with oneself can under such circumstances ensure calmness of temper. Instances are constantly coming to our knowledge, in which not only are the police clearly in the wrong in interfering at all,

but more especially so in the overbearing manner in which they behave; adopting a mode of action which foreign policemen would not think of attempting except in very extreme cases.

For instance, a gentleman driving in a trap in a crowded part of the city, was simply moving with the stream at a walking pace, there being a long string of jinrikishas before and another behind him. There was a sudden stoppage before him, which of course brought him up like the rest, and the man immediately behind him was unable to stop so suddenly and ran into foreigner's trap. Now, here there was clearly no fault of any one, but the jinrikisha man behind, who, however, lost his temper, and called the foreigner a beast. The foreigner took no notice, and it would have gone no further, but that a policeman hearing the jinrikisha man, at once assumed that he had cause for his offensive epithet, and ran up to the foreigner, and told him to alight; (thus stopping the whole traffic). The foreigner asked why? The man said, he had damaged the jinrikisha behind. As this was not damaged at all, and it was no fault of his if it had been, the foreigner simply refused to get out of his trap, and proceeded to drive on. The policeman then went for the betto, who was at the horse's head, and asked who his master was; and when the man hesitated for a moment, down came the policeman's staff—a thick stick a yard long upon the poor boy's back, and the blow was about to be repeated when the foreigner jumped out, caught the stick in his hand in its descent, and dexterously twisted it out of the fellow's hand, and threw it to a distance. "Now," he said, "unless you beg the betto's pardon, I'll place you in the trap and drive you to the stationhouse and lodge a complaint against you." The fellow immediately begged both the gentleman's and the betto's pardon, amid the jeers of the crowd. So the affair ended, and the gentleman drove on.

Again on Sunday last, "a gentleman who had been busy for the previous two or three days and up to midday on Sunday with the American Mail, determined in the afternoon to get a little quiet change; and, being in the constant habit of going about the country by himself, or with no other attendant than a Japanese employé who acts as his teacher, took the train to Kawasaki, and thence walked quietly across the fields to Ikigami. On reaching the tea-house there he was well received, and he and his tutor had some Japanese food. When, however, he expressed his intention of staying over the night, as it was already too late for the train to Yokohama, he was asked for his pass. "Pass" he said "I have no pass. I am in the habit of going wherever I please, and have never before been asked for such a thing." Then, said the proprietress, you cannot stay here. Being not only of a peaceable disposition, but also understanding the Japanese very well, he said it was his intention to stay, and begged there might be no more trouble made. The old woman then sent for the police, two of whom came, and behaved in a most exasperating manner. The gentleman early in the interview, wrote his name and address on paper and gave it to them, but off and on for nearly three hours did these fellows bait him. At length, he demanded their names, determining to make a formal complaint against them; and having given their names, they thought it prudent to retire, and leave him without further molestation.

These are only two of many cases, we could relate. Now it can easily be seen with what a narrow line the division between the right and the wrong is drawn. Either of these cases

might have been reported in the stern tones of yesterday's paragraphs but for the judicious control of temper displayed by the foreigners. But few can restrain their temper under such provocation: especially if the foreigners are not acquainted with the language and the idiosyncracies of the Japanese.

We are quite aware, that when this article is read, almost every foreigner in Japan will record to his friends, experiences of his own, in which he has been hard set "to keep on the right side."

Whilst therefore we strongly urge upon all to be careful in this respect, we call upon the authorities to issue orders to the police that they be careful not to exceed their duties, and to avoid giving unnecessary trouble and annoyance either to their own people or to foreigners.

AT the extreme east and west of Asia lie two ancient empires, each of which at this time possesses an exceptional interest in the eyes of the world. Persia and Japan are indebted to their geographical position for a history the very opposite of each other. Persia being in the highway of nations has always been more or less mixed up with the world; whilst Japan, having been until now out of that highway, and on the extreme confines of the Far East, has been almost unknown and unnoticed. The real origin of the Japanese is not known with any degree of certainty; that of the Persians is thoroughly well known. The kingdom of Elam mentioned in scripture is none other than the original seed of Persia, and Elam was the grandson of Noah. There are some who claim for Chinese and Japanese a common origin with these, and it is by no means improbable, but it is not our present object to discuss the matter. For all practical purposes we may generalize, and say that the Empire of Persia under Cyrus its founder, and the Empire of Japan under Jimmu Tenno, were established nearly about the same time, viz., about six centuries before the Christian era. Japan has from that time gone steadily on her way, holding little or no communication with the rest of the world; whilst Persia has seen more changes than almost any other country. Raised to the highest pinnacle of glory by Cyrus, the victorious army of Alexander subdued it so completely under Darius that it ceased to have a separate history, but was thenceforward interwoven with Greece and her conquerors; the people keeping their distinctive nationality in spite of their enslavement. Their brilliant empire only lasted about two centuries, and was followed by the era of the Seleucidae, who in the third century B.C. led to the Parthians, and for a period of 500 years, these latter were the masters of the country; until the middle of the third century, when the Persians raised the Blacksmith's Apron, and against their oppressors. The empire was established under the Sassanides, and lasted until the middle of the sixth century, when the conquering Saracens landed, and made it a part of their empire. Subsequently the Turks became masters of the old Persian Empire, and most important portion of their empire was in the establishment of the empire. Persia still maintained much of its independence. On the opening up of Europe with India, it became of great importance in the modern world, and it has been the policy of England, France and other governments and dynasties have been to maintain friendship with its rulers, but the present Shah reigns over a very little changed from that included in the original empire.

How different the history of Japan. For two thousand five hundred and thirty three years she has acknowledged but one imperial dynasty; and during that period has only once been threatened with an invasion, when Kublae Khan despatched an army and a fleet from China. But the ships were wrecked on the coast, and the soldiers who were spared by the sea were killed by the natives.

There was however one point of partial resemblance. In both countries the sovereigns were looked upon by the people as semi-divinities, and historians agree that to this fact may be traced in some measure the declension of the early Persian Empire.

To day both Empires stand out before the gaze of the world, with totally changed ideas. The fatalism of Mahomedanism left all things to take their course. Change and decay were the will of Allah; why should men fight against God? So far as Persia is concerned this foolish doctrine is now to be renounced, at least by the government, as it has already been by the rulers of the Ottoman empire.

The Shah of Persia has determined that if modern science can do anything for his country it shall not be excluded by him. Hence the extraordinary concessions he has made to Baron Reuter, and the arrangements entered into for the construction of Railways, Telegraphs and other modern appliances for saving time and labour.

The Mikado of Japan has already given an earnest of his sincerity in entering on the march of modern improvement, by emerging from his old seclusion, and by personally encouraging the introduction of whatever foreigners can supply that is likely to be for the good of his people.

Persia and Japan seem determined to run a race together. Their new career commences almost simultaneously, as originally their empires did; and circumstances make their every action of importance. Russia has a policy in connection with each; and that policy at this very time is more or less a menace to the world. She has planted her foot on Saghalien, and nothing will ever induce her to withdraw it, or to act justly with Japan in respect of it. She would if she could—aye, she will if she can, find a pretext to gain a location in Yezo—which would be but the wedge by which she would lay the whole island open to her power and to be appropriated by her insatiable maw. It is, however, well for Japan, that she is no longer the isolated, unthought-of country she formerly was. The rapidly growing Pacific trade, renders her a most important station in the intercourse of nations, and for their own sakes the other Powers of the world will keep an eye on Russia, and bring all their moral weight to bear upon her to prevent any further encroachments.

In Western Asia also Russia is the *bête noire*; and her designs in that quarter can only be thwarted by the constant watchfulness of Great Britain, whose interests, more than those of all other nations put together, require the keeping intact of the Persian empire.

The visit of the Shah of Persia to England has been an event worthy of the sensation it made. It is not as the holder of the sceptre which has swayed the world—for that sceptre has been entirely lost. The present Shah is but the second of his dynasty, and the vicissitudes of Persia forbid any reference to its former power. It is, first, because he is what we may call a regenerate sovereign, who had to overcome all his personal prejudices, his religious prejudices and the prejudices of his people, before he could make so great an innovation as to leave his own country and visit foreign lands. And next it was as a sovereign whose interests are closely

interwoven with England's, and between whose people and the people of England the firmest friendship is desirable. He has now returned to his own country after a tour which must have wonderfully opened his eyes; and we doubt not that his ideas will be correspondingly enlarged.

There was last year a report current that the Emperor of Japan would visit foreign countries. We heartily wish that this could have been arranged, but there are various reasons against it, which the Emperor would be unwise to disregard. Had it been possible, we are satisfied that His Majesty would have had a reception in all countries, not inferior to that accorded to the Shah; and what we have heard of the amiable disposition of the Mikado leads us to believe that he would have been much more personally popular.

The reception everywhere of the Embassy whose chief returned this morning must be an assurance to Japan that nothing but the sincerest friendship actuates all nations towards her, and we cannot too strongly express our hope that the government and people of Japan will increasingly reciprocate these amicable feelings.

MUCH has been written at home and in Japan about the character of men engaged by and for the Japanese government. The American papers particularly have been extremely hard upon those who were selected and sent out by the United States government, and although in some instances probably the strictures were deserved, in others—at least in our opinion injustice has been done.

From an article in the *Engineer*, a scientific paper published in London, we read under date 15th June that further selections have been made in England, and we give an extract from the article, as shewing the kind of men who have been chosen, and describing the work they are engaged to do. The article is headed "Progress of Science in Japan" and it says:—

"The Japanese Embassy which lately quitted our shores, had its political and commercial aspects. It had a no less important scientific mission, as a result of which an Engineering College is about to be started at Yedo by the Japanese Government for the instruction of the young members of the Public Works Department. The principal of this college is Mr. Dyer, a gentleman who has had a thorough training in practical and theoretical civil engineering, and who has gained unusual distinction at the University of Glasgow. As professor of natural philosophy they have appointed Mr. Ayrton, formerly a student and assistant at University College, London, late the assistant electrical superintendent of the Indian Government Telegraphs, and recently in charge at Mitcham, on behalf of the Great Western Telegraph Company, to represent its Engineers, Sir William Thomson, and Professor Fleming Jenkin. In each of these four capacities Mr. Ayrton has shewn marked ability and in recognition of this the Society of Telegraph Engineers have elected him their honorary secretary for Japan. Mr. Marshall, late assistant to Professor Tait of Edinburgh, comes next as the professor of pure mathematics. The instruction in chemistry is to be given by Dr. Divers, a gentleman who, by the scientific papers he has written, and the work he has done, has proved himself to be a thoroughly skilled chemist. There are also teachers of drawing and English and other competent assistants.

From the above it will be seen that the College proposes to afford its students a full scientific education. The liberality of the ar-

rangements which have enabled a library of some hundreds of volumes of our best text books, and a large quantity of scientific apparatus to be sent out for the use of the College, will further the practical utility of this institution, which is but another of the many proofs of Japanese enterprise and intelligence. The fact that this College, already built, stands on the grounds of a suppressed Daimio is emblematic of the way progress has supplanted feudalism in Japan."

Now from the above, we are justified in assuming that good men have been obtained. The only thing is that the Japanese officials are apt to turn good men into comparatively useless encumbrances by their persistent delays, their continual interference, and the idea that possesses them, that they know better than their foreign teachers, what is to be taught, and when a pupil has mastered his studies.

There is not one department in which this great folly is not more or less exemplified daily. It has often been a marvel to us, how men of culture and of experience can submit to the harrassing hindrances of the Japanese officers who, although placed over them, are ignorant and dilatory to a degree; and who, whilst polite and agreeable in their outward demeanour, are utterly wanting in everything that constitutes a man of business. All governments are to a certain extent penny wise and pound foolish, and we cannot expect Japanese tyros to have the wisdom of learned and experienced heads; but if they would only recognise the value of time, and the fact that they cannot learn in a day or a year, what it has taken their paid teachers many years to acquire, much would be gained.

We had already heard that the gentlemen alluded to in the *Engineer* would be found, the right men in the right place; and we are happy to see it confirmed in such an authoritative quarter. We have but to add that to get the utmost value out of their services, for the money paid, it is of the first importance that confidence be extended towards them, and that they have free leave and encouragement to make their instructions of the greatest possible value to their pupils and to the country.

THE Japanese have been used to pay no regard to the value of time; and in the transactions of business one hour or one day was as good to them as another. They had the loosest method of carrying out their commercial transactions of any people we have had experience of; and they are even now, after fourteen years intercourse with foreigners, very little better in this respect than when the ports were opened.

Very different is it with foreigners. They have been used to punctuality in all the affairs of life; and an unpunctual man is a mistrusted man. With them too time is highly valued, and as great efforts have been made to invent time-saving as labour-saving machines.

It has been the habit of Japanese when they have concluded a bargain, to sit down and ruminate over it. With foreigners it is the custom to set to work to complete the transaction as quickly as possible. If the observations of Japanese who have been in London and seen the activity of commercial men in that city, could be published, it might enlighten the merchants and shopkeepers of Japan considerably. But as it is, only the few native merchants who are brought into contact with foreigners see any more active method than their old one, and foreigners give them so much license that they are far behind what they ought to be.

Now if the commercial men of Japan are thus lethargic, what can be expected of the samurai class, from whom most officials are selected? They have never been used to be hurried. Even in affairs of life and death time was of little account; how much less so in mere matters of business routine? We often have felt surprise, considering the habits of this class, that they have fallen into harness with the spirit and ability which many of them undoubtedly possess. Like our neighbours we have been inconvenienced by their delays often and often; and we join heartily in the demand for greater activity and increased promptitude in all departments. The Japanese have not been used to find fault with their government or their officials, and probably very few complaints would be heard however the shoe pinched. But with foreigners it is otherwise. They always let their governments know of any official shortcomings; and anything that affects business people is sure to bring a hornet's nest about them. In Yokohama we have been very long-suffering. The delay in opening the "Goods traffic" on the railway; the abominable mismanagement of the telegraph line from Tokei to Nagasaki; and the irregularity of postal delivery between this city and Yokohama are, and have been, just subjects of complaint; yet the public have been content with quietly grumbling among themselves, instead of publicly making their voices heard through the press.

It is more than a year since the railway was first opened for passengers between Yokohama and Shinagawa; and nearly twelve months have elapsed since the line was completed and opened to the Shinbashi terminus; yet for some reasons incomprehensible to the general mercantile community,—and we fancy almost as much so to the foreign employés of the railway—there has been no activity shewn in hastening the opening of the goods traffic. There is equal indifference shewn to the convenience of the public, in the refusal to grant return and season tickets. The public have good reason to complain of this as a real and positive injustice. It is of course impossible to know why this selfish and inconsiderate policy is adopted; and why such indifference to the public has been exhibited; neither can it be told with whom it originates, or who is responsible for it. We cannot imagine any good reason for it; and may be inclined to attach blame where it is not deserved. But blame is certainly due somewhere. We claim that every railway having the sanction of the state is bound to work as well for the benefit of the public as for its own shareholders; and that a railway such as that between here and Yokohama, being built with money supplied by the state, is especially bound to consider the people. If primarily the officials are government servants, it should not be forgotten that the government itself has one supreme master—the people; and that rulers and governments are only appointed and endowed with authority by the people. The people then have a right, a direct and unquestionable right, to demand that their convenience be not overlooked.

We will not say any more of the past, we will demand only that more consideration be shewn to us for the future. Return tickets and season tickets must be issued, and that too without any unreasonable delay. We call the particular attention of the Minister of the Public Works to this matter, and on behalf of the public request that he will not lay it aside as unimportant.

The Telegraph Department we need say lit-

tle about. We know that there has been much unpleasantness there, and we believe it will not cease for a long time. Mr. George ought to have fought to keep a good man, Mr. Gilbert, when he had him. He it was who set telegraphs going successfully in the country, without any squabbling or difficulty with the authorities. His work remains to this day, the best ever done in Japan. Our honest opinion is that the department never committed a greater error than in bringing out on expensive staff from Europe, when they had such a man as Mr. Gilbert in their service; yet even now we hear that there is a talk of sending home for an increased staff, whilst Mr. Gilbert is on the spot unemployed. It is not the way to work economically. Let the telegraph work be put into tried hands, and let not the Government again get out a number of men who are without experience of this country and its people, and who are quite likely to be as difficult to manage as others have been before them.

But the Post Office demands especial notice, because our Yokohama contemporaries as well as ourselves have all called attention to the delays in the delivery of letters. We must say for the authorities of the Post Office that they have shewn a great desire to do the business of their department well; and this department, more than any other has surprised us as to the quickness of its organization and the general excellence of its arrangements. We, like others have suffered, not only from delays, but occasionally from actual non-delivery of letters, but much of this may arise from the imperfect directions on the letters, and the difficulty of finding the places to which they are addressed.

Be that as it may, we are satisfied that the remonstrances already made will add to the efforts of the post office authorities to improve the service; and we only suggest to the public that any miscarriage or delay in the delivery of letters may be reported to the Post office, and it is sure of attention.

### Tokei.

WHEN SOYESHIMA, the Japanese ambassador to China, returned, the *Nisshin Shinjishi* had an article upon his successful mission, and commenced by saying that amongst the men now in office in the Japanese Government, there were a few of whom great things for the good of their country might be expected—and of this few Soyeshima was one. Some weeks after this article appeared a writer signing himself Oi Riyu Ichiro of Aichi Ken, living in Yedo, sent in a long letter, of which some extracts will not be uninteresting to our readers:

"In your valuable paper—No. 78—of this year you say there are a few persons who are engaged in the Government and labour for the benefit of Japan; and although you desire to say who is most able there is only one, Soyeshima, whom you would honour. I am very doubtful of the justice of this.

My opinion is that those few persons of whom you have told, have already displayed great deeds towards our Government and Japan; and they are not inferior to Soyeshima; only people do not hear of their deeds.

For example I will speak of one.

Which is most important among all the nine departments? The department which has made such wonderful progress, that the honour of Japan has been increased at home, and which can compare with foreign countries abroad? The department which has grown extremely large and strong, and which contains most able

officers? I ask, which is that? I am sure it is the Army Department.

What makes this department so superior to others? He who improved it so much is Yamagata, the minister of the department.

In his youth he was devoted to the art of war, and attained great cleverness in it; and he has been able to turn his experience to account.

He first entered the service of Choshu; and rose by degrees from a common soldier to the command of a regiment. He was always most loyal to the Imperial family; and in Oshiu he displayed great valour, and received great rewards. When Oshiu was tranquilized, by the Emperor's order he visited several foreign countries, and returned to Japan after a year's absence.

At that time Arisugawa-no-Miya was the Minister of War (Hiobu-kiyo), and the Kuga was the Shoyu of the department. As the work of the department was too heavy for them Yamagata was selected as Shoyu to help them. He at once set to work and recommended and carried into effect the erection of large military stations throughout the Empire, as, for instance, those of Saikaido, Tokaido, Hokaido, etc. He then called a strong force consisting of the three hans of Satsuma, Choshu and Tosa, to protect Tokei from violation by the other clans, and then finally abolished the han and established the ken; and dispersed the old clan soldiers, who returned their weapons into the Government stores.

The four large military stations were now selected by him. He raised the body guard for the Emperor. He also removed the military school at Tokei, and engaged many French teachers. By the benevolence of Yamagata the art of war was placed perfectly within their attainment. Daily drill and instruction have brought the army into its present perfect state. He next appointed the six divisions of the army; and now the art of war is very perfect—quite enough so for practical purposes.

Although the influence of His Imperial Majesty now shines throughout the world, the perfection of the army is due to Yamagata alone; whose selection of officers is excellent. For example, Tayiu-Saigo, Shosho-Yamada, and Toriwo, Kirino, Miura, Iani, Nozu, Asa, Miyoshi, Nishi, Ozawa, are all very capable officers. They all help Yamagata; and are soldiers by nature.

Thus are Yamagata's deeds displayed at home, and people do not observe them. They are negative. On the contrary the deeds of Soyeshima were done abroad and all men saw them. They are positive. But wise men can compare the two for themselves without any further expression of opinion from me.

ON THE 20th August, two ministers Goto and Yeto, acting in the absence of Sanjio Daijin issued the following notice:—

From and after this day 20th August 1873, the 1st Bank of Kaiunbashi may distribute paper money in \$20, \$10, \$5, \$2, and \$1 for money privately deposited by the people. This kind of paper money may be used in any kind of payment with the exception of taxes, duties or interests of public debt. Therefore people should circulate them with free confidence.

A FOREIGNER living at Shintomi-cho Shichomé, whose name is given in Japanese characters as Metsune, has been guilty of violence, which seems to have been very unjustifiable even supposing the provocation had been greater than alleged. It seems that a servant of Metsune's

went to a "sweet sake seller's" shop, and said that his master had left \$2 on the shop front a few moments before, and that the woman must have taken it. The woman said she had not seen it. Mets'ne then came up, made the same remark and received the same answer, when after making a great bobbery, he proceeded to beat the woman and her old mother; and then left, taking with him a boiler belonging to them. Next morning Mets'ne again went to them and ill-treated them and was very violent. At length the poor women took refuge in a neighbouring house, but even there did the foreigner go and abuse them, and assaulted the neighbour; and as a last resource the protection of the police was obtained.

For the credit of foreigners we hope this foreigner whoever he may be, will be sought out and punished. He is said to be an Austrian. At all events his address is given above; and whatever nationality he belongs to he is a rank coward to treat women in such a manner; and undoubtedly if he is taken before the Austrian Acting Consul, and such charges are proved he will be made to feel it.

WE REGRET very much to see that the same name Mets'ne figures in another most disgraceful case. Our readers must not think the circumstances too old for relation, since they were only published in the *Nisshin Shinjishi*, a few days ago, and they have not been told in any of the Yokohama papers. Everything of the kind however that comes to our ears shall receive the fullest publication in our power to give it, and if foreigners misbehave themselves in Tokai, and escape public opinion if it be possible for us to ascertain their names—whether they be high or low, rich or poor. The whole of the foreign residents suffer in character through such people. It appears that four foreigners visited the temple gardens, Asakusa, and then an eating house kept by one Inouyé. On being asked for payment, they said they lived in Yokohama, and if the owner would send there he could get his money, going so far for a small sum was objected to by a girl of the house. New up to this point we can imagine the foreigners may not have been much in the wrong. It has happened to many of us to be so overcharged by tea house people that they have had to be told to get their money at the Custom house Yokohama, where whatever was just would be paid in for them; but nothing can justify what followed. The native account says—they barbarously struck the girl. A policeman was sent for, and on his arrival the foreigners had gone to a carriage which was waiting for them. The policeman went to the carriage and asked their names, and tried to get it from the betto, who, however, did not know them. The foreigners then got down and the four of them surrounded the single policeman and one beat him with a stick. He then ran to the station house, "but the carriage of the *Beastly Fellows* had gone away and could not be found."

Three policemen now went to Shimbashi station in hopes of catching them; but here though they did not find the carriage, a betto told them that the foreigners described lived in Tsukiji. The police then went thither, and to Shimabara, Shiutomi cho, and on enquiry found the carriage, but when they were about to enter the house to make further enquiries a foreigner came forward with a revolver, and asked what they wanted. Unable to obtain admission they ascertained from the land lord that the foreigner who lived there is an *Italian* named Mets'ne; and from the betto they learned that he was one of the party at Asakusa.

We know not that anything more has been done by the police, but whether or no, such conduct ought to render the perpetrators heartily ashamed of themselves.

ON THE 29th ulto., the Okurasho declared that the yearly expenditure for prison physicians was:—for Kanagawa Ken, \$200; Hiogo, Nagasaki and Niigata, \$150; and the other sixty kens, \$100. Surely such figures are very suggestive.

LATELY A MOST strange judgment has been given in the town of Shidzuoka:—

A man named Zenzayemon had a wife, who was thoroughly bad. He himself was a most exemplary son and not only supported but was very respectful to his parents. This the wife often resented, and made his parents very uncomfortable. As length Zenzayemon could endure it no longer and poisoned his wife. The Ken authorities having heard of his crime took him to prison, and on examination at the Ken Saibansho it was stated that the murder was absolutely necessary for his father's comfort. The punishment for this crime according to the new Shihosho laws, is death by strangulation, but for the reason given above, the judge of the Saibansho would not decide the case, but sent it to the supreme court (Shihosho); and the decision there given is, that "though his crime might be punished by a sentence of ten years transportation, yet the man's obedience to his parents was so admirable and proper, that he shall be punished by wearing a chain, but he may live freely in his own house and work for his parents as he likes, he being their only son!"

A CORRESPONDENT of the *Nisshin Shinjishi* protests against the foolishness of those who celebrate the gods. Instead of doing so in a proper and respectful manner, they go into all kinds of rioting, drunkenness and excess. Moreover some actually sell their wives and daughters to cover the expences. They think it very pious; but it must annoy the gods. All people therefore ought to obey the recent rules of Kiyobusho.

A CORRESPONDENT named Sawada addresses himself to the *Nisshin Shinjishi*:

The city of Tokai is very populous and prosperous. Horses, carriages, jinrikishas and pedestrians traverse the streets day and night. It is a pleasant place, daily increasing in beauty by the application of art. It has however the disadvantage of being often swept by fire, and to guard against destruction as much as possible, the walls of the houses are covered with mud; so that whenever a fire occurs the ground is strewn with burnt earth and tiles, and wherever you go, you see such debris.

Having the sea to the eastward and southward, and an extensive plain of above 30 ri on the northwest: southeast winds prevail in summer and violent north winds in winter. From these causes combined, the streets are very dusty throughout the whole year. To lay the dust people take water from the ditches, which being putrid produces an offensive smell and is very injurious to health. Would it not be well to get rid of this state of things by the citizens of every street uniting and subscribing to have the streets properly and systematically watered? If this be done passengers will be less inconvenienced, and the health of the city will be improved.

THE CHIEF of Tokai Fu has issued an order that no persons shall assume the dress of the opposite sex, under severe penalty. Actors are excepted.

A PROOF that although you may take a horse to the water you cannot make him drink, is given in an account of a very famous teacher of the Chinese classics, who although surrounded by the progress and improvements of the present day, eschews them all. The manner in which the *Nisshin Shinjishi* speaks of him, reminds one of the "skolastikoi" of old Greek Delectus days. It says:—

A foolish but very famous Chinese Scholar named Ohashi Masajiro lives in Konmemura of Mukojima. He strongly believes that there is no wisdom in the world except in the old sages of China. Of course he abhors foreigners and calls them savages. Any person who visits his house is first examined by a pupil, and if he have any part of his dress in European style—if even he wears shoes or cuts his hair, he is not allowed to enter the door, however important may be his business. He calls all persons who adopt anything European barbarians, even though they may be his old friends, and accustomed to associate freely with him.

Perhaps much learning hath made him mad.

A GRAND REVIEW took place yesterday before the Emperor and his guest the Duke of Genoa. At the close His Majesty accompanied the Duke to O'Hama Goten, and remained to luncheon.

THE FOLLOWING Notification appears in the official portion of the *Nisshin Shinjishi*:—

All Cards of Silkworm's Eggs whether for home use or exportation, must receive the government stamp. This is often evaded. Stamped cards are also required by Law for Silkworms cultivated privately for family use. Therefore a strict watch must be kept on all cultivators.

OKURASHO SHIGENOBEL, SANGI.

5th September, 1873.

TO FU AND KEN.

THE PRIESTS of temples often apply to the government for the support of monasteries without consulting their parishioners. In like manner the parishioners sometimes make similar applications without conferring with the priests. As this is unlawful, hereafter no separate applications of either one or other will be received.

Let this be circulated.

SHISHIBO KIYOBUTAIYU.

31st August, 1873.

THE MAIN Street or Tori is not the only thoroughfare in the big capital which changes with the new order of things. With the removal of those old landmarks—the gate-towers and the turtle-back bridges, the levelling of embankments, etc.; many of the old streets, once so familiar would not be recognized by an old inhabitant of Yedo. Such a street is the famous Yanagi-wara dori or Willow Street. This street ran from the large plaza at the end of the Tori, at the Suji Kai Go Mon, down along the canal, to the river, which it strikes near the Riogoku Bashi. Formerly this was one of the most noted streets of the capital. At the north end was the street leading out to the Nakasendo, on which faced the large yashiki of Idzumo, and a smaller one belonging to a retainer of Kaga. To the right, looking north, flowed the artificial river, dug by a former daimio of Sendai for some offense against the Shogun. Along the street was an embankment planted with

trees, and overlooking the water. To the north-east, across the canal, stood the Chinese College and Temple of Confucius embowered in groves of tall and luxuriant trees, beyond which was the higher grounds and still loftier groves of the temple of Kanda Mio Jin, the patron deity of the city of Yedo. The clustering roofs of the houses in the district of Hogo could also be seen from this point. Looking south, was the bustling Main Street or Tokaido, as foreigners call it, and at the north-east angle of the irregular square was the gate-tower of the Inclined Plane, so carefully guarded both before and after the battle of Ueyeno. Into this spacious area, eight streets open, and from it, Yanagi-wara dori runs eastward to the Sumida gawa. All along this street, on the north side, were high embankments sloping down to the canal, and planted abundantly with willow trees, whence the name of the street. Near the east end, stood Asakusa Go Mon, on the Imperial gate-tower, through which the street leading to the district and temple of Asakusa passed. Near both of the gate-towers, stood the large kosatsu, or edict-boards of the central government. At present, gate-towers, embankment, edict-boards and many of the trees have disappeared. The demolished gate-towers have furnished stone for the building of two handsome double-arched stone bridges across the canal, one of which is nearly finished, and one is about to be begun. The embankments have been levelled, the street widened and macadamized, and a few of the willows remain like the last roses of summer. With the old landmarks, have passed away many of the curious sights and scenes that made Yanagi-wara dori so famous all over the country, new dwelling houses, photographers, spectacles and shows, archery galleries, recitation halls, shops for the sale of foreign drinks etc. attest the changes wrought by the new order things.

THE CHIEF of Tokai fu, has published the order of REHOKIO, that it so frequently happens that children are found in Tokai, without the possibility of ascertaining their homes, henceforward all children must always wear a ticket stating their name and address.

It is the custom with Japanese to shirk the responsibility of holding and promulgating strong opinions, by presenting them either under the form of a dream, or of a story or discussion, or some equally indefinite shape.

A letter in the *Nishin Shinjishi* takes up the subject of wearing two swords. The writer says:—

The subject of wearing swords has been decided long ago. To bring it forward again is to seek for a stick when the fight is finished. And this is the act of a fool. Yet some people are mad enough to wish to restore the old custom of wearing two swords in the streets.

Now a visitor came to my house, and said The sword is to the samurai what the hoe and spade are to farmers, or the rule and compass to the mechanic. No one has proposed that farmers and artisans should lay aside the spade or the rule; then why should the samurai be asked to lay aside the weapon of his profession? Is not the sword the soul of the Samurai? If a robber appears on the highroad how shall the samurai oppose him? Or if rebellions occur, how shall they be put down but by the sword of the samurai? The rebels of a whole nation fly before it, and the wisest rulers of ancient or modern times could never maintain tranquility without it. Swords therefore are like for the protection of the individual and of

his country. The great founder of Japan Zinmu Tenno effected his work by the sword. And for a recent example, many rebels in several Ken have been quieted by the swords of the Ken samurai. Thoughtless people only think of the quiet of to-day, forgetting the disturbances that may happen to-morrow—but the golden rule should be borne in mind—"Neither forget peace in war, or war in peace."

The government has left it to our choice whether to wear our swords or not. There is no penalty for wearing them or leaving them at home. The samurai should wear them.

At first no one replied to the visitor; but at length a young boy smiled at him and said:—I will try and shew you your mistake. To put down cutting and robbery and to tranquilize rebels is the duty of government; and it is also the business of the government to keep the country at peace; and the humble class of samurai do not concern themselves with such things. If then the samurai does not concern himself with government affairs, of what use is it for him carry the weapon of the murderer—which though useful to the soldier is useless for the mere samurai who has nothing to do with the army. If the punishment of rebels and robbers is committed to the Samurai, of what use is the government? The farmer and the mechanic earn their living by the spade and other implements; but the samurai does not live by the sword. If he do so he is a robber.

Our great Zinmu founded the Empire by virtue, but never, never by the sword.

The late rebellions in the Ken were put down chiefly by the regular soldiers and the officers of the Ken, and the Samurai, though loyal, did very little.

I am only a boy, and understand but little of government; but I know that if Samurai like to wear their swords there is no prohibition. I fear, however, that our visitor does not consider the benevolent intentions of our government, which tend to our freedom.

That war is not forgotten in peace is shewn by the six large divisions of the army; and the new method of raising soldiers evidences the energy of our government. This is a very large matter, for His Majesty the Emperor and his highest officers. The abolition of the wearing of swords by Samurai is a very small affair and not worthy to be thought of in connection with the proverb

Now the visitor, having heard the boy, could not answer him, but taking off his fine sword, returned home.

A FEW days ago, a woman attempted to commit suicide, by throwing herself from the bridge called Zengamebashi, within the city gate known as Gofuku-bashi. She was observed by a policeman, who being a good swimmer plunged into the water and saved her. On examination it appeared that she has been long suffering from ophthalmia, and though she has had medical advice and tried all kinds of remedies, her cure seemed hopeless; she thought it better, therefore, to die than to become blind.

IN ONE of the Tokai newspapers called the *Kobun Tsushi*, a long and interesting story is made of what we tell in a few lines. A poor fellow living in the country, found it all but impossible to support his mother and wife by charcoal burning. He determined to try his fortune in Yedo, and with a promise to return in three years, he set out, after receiving one admonition from his mother, who said, "I am only anxious about you for one thing—your hasty temper. Now, my son, always pause and consider before you act, and practise patience."

He left and was fully as successful as he had hoped to be, and before the three years were concluded he returned, and cogitating over the surprise he should give them looked through the chinks of the windows. To his mortification he saw only his wife, who was spinning, and opposite to her a man, who he immediately supposed must be her lover. His first impulse was to rush in and kill both—but his mother's words came to his mind, and he went in quietly, with the full intention of "having it out" with his supplanter and his wife, when to his surprise the arch-enemy was the first to rise to greet him, and he discovered it to be none other than his mother. On enquiry, she told him, that since he left, she had always attired herself in masculine garments in the evening, that if robbers came they might fancy there was a man to contend with. Great was the rejoicing at the reunion, and the man acknowledging his first suspicions, thanked his mother for the good advice, which had come to his mind so opportunely, and prevented his committing a great crime, and bringing perpetual sorrow on his head.

The *Kobun Tsushi* moralizes over the story and commends such filial obedience, as an example for all to follow, bringing as it does its own reward.

A DASTARDLY attempt at murder was made at Shinbashi Railway Station yesterday, by a Japanese. It appears that Inspector Blockley, Railway Police, attracted by some shouting, had left his office to see what was the matter, when he perceived, just in time to avoid the blow, that a Japanese, having the appearance of a samurai, was in the act of cutting him down from behind. He was pursued for a short distance by his assailant, from whom he tried to escape by running round the benches in the central hall, and who, finding he was unable to reach him, hurled his sword with such accuracy and force that it buried itself deeply in the left thigh, about an inch and a half above the knee joint. Blockley having secured the weapon, although severely wounded, at once pursued the miscreant, who, when he came up with him, overcome with fear, fell on his knees and implored for mercy,—nor in vain, for, seeing his would-be murderer defenceless, he forbore to strike. The man was then secured and tied up with cords to a post, until the arrival of the Municipal Police, to whom he was finally consigned. An attack of this description, occurring in broad daylight, and in a crowded railway station, calls for some decided action on the part of the authorities to prevent the recurrence of so serious an event. A very determined attempt should be made by the foreign representatives to induce the Government to adopt measures to compel the discontinuance of the practice of wearing such a senseless and dangerous ornament as a sword. It is notorious that in Yedo it is not safe for foreigners to go about after nightfall, and rumours of increasing disaffection are rife. The natural result of such a state of things will be that the old practice of carrying revolvers will be re-adopted, and unpleasant results may be expected to follow.—*Japan Herald*.

THE MAN who recently committed the deadly assault on Mr. Blockley, one of the Railway inspectors of Police, is a samurai of Kumagaya ken named Uchimura. His examination leaves not the slightest doubt of his insanity; and unhappily he is religiously mad. The facts which came out on examination were, that he was always a friend of foreigners, and from one of the missionaries became so impressed with

the truths of christianity that it became his one all absorbing idea. He was always praying, and reading or thinking about christianity, and he at length got into his head, that his family could not be saved unless he died as a propitiatory sacrifice for them. But he would not take his own life, and didn't know how to attain the martyrdom he desired. Happening to be in the station, and seeing Blockley standing there, it occurred to him all at once that the surest way to ensure decapitation was to molest a foreigner with a drawn sword: and acting upon this insane impulse he made the rush which was happily evaded by Blockley's activity. Of course he will be taken care of for the future. We are glad to hear that the comparatively slight wound received by Blockley is nearly healed, and that he is not likely to be permanently injured by it.

THE TOKAI Hospital is removed from its old locale in the Tokushima yashiki, Hachobori to the former Honda yashiki, Atagoshita Nichome, close to Shiba.

RULES HAVE been laid down by the Preachers of Shintoism, at Daikiyo-in (formerly Zozoji Temple, Shiba,) in hope of combining the whole country in the bonds of knowledge and holiness. The rules are ten in number:—

- 1.—The great subject of "the three laws" should always be borne in mind.
  - 2.—Every man should walk in the way of Truth, so that all things may prosper.
  - 3.—All men should be allied in the bonds of brotherhood, so that the happiness or misery of one is felt by his companions.
  - 4.—Wicked and devilish opinions must not be entertained.
  - 5.—Persons wishing to become one of us can only be admitted in conforming to our rules.
  - 6.—The direction of our affairs must be in the hands of just and upright men.
  - 7.—The hours of Preaching shall be increased or diminished according to circumstances. These must interfere as little as possible with the working hours of the people.
  - 8.—Any companion who disobeys the order of the senior preacher must be admonished.
  - 9.—Money should be liberally provided for the payment of preachers.
  - 10.—The appointed days of celebration must be observed, that men lose not the living way.
- These rules were circulated privately by Daikiyo long ago; they are only now published.

To the Editor of the Japan Gazette.

DEAR SIR,

IN YOUR last night's paper there appears a translation of ten rules laid down by the preachers of Shintoism at Daikiyo-in, Shiba. I find considerable difference between the original of those rules in the *Nisshin Shinjishi* and the translation.

But I wish more especially to speak of the fourth rule.

In the original as published in the Japanese paper it reads thus, *Iron jasetzuwo shinko subekarazaru koto*. This is the exact version of the fourth rule in full as there given. The first word *Iron*, if you refer to Hepburn's Dictionary you will find there translated "A different opinion, an argument, a dispute." But I think the primary definition should be *interdicted* and that this is the proper translation of the word in this connection. The second word in the 4th rule is the old term of contempt applied to our holy faith—the Christian religion. *Jasetzu* is the same as *Jashu* and *Jashumon*, for the definition of which see Hepburn's Dictionary.—"A cor-

rupt or wicked sect—formerly applied to Christianity." This definition is also found in most of the old native lexicons with the same application to Christianity.

The Chinese character *ja*, may also be found in Hepburn under that head and is the same as *ya* in *yaso*, also used as a term of contempt applied to our Saviour by Japanese and Chinese haters of our faith, and unfortunately copied by some of our missionary translators of the Bible.

The three last words of the fourth rule *shinko subekarazaru koto*, are literally rendered, *believe shall not affair*. The entire rule then put into good English would be, "The interdicted wicked faith (Christianity) shall not be believed." From this we may get the true meaning of all recent movements of union between Shintoism and Buddhism in this country. And this is according to the interpretation of the signs of the times by intelligent natives, viz. that the two great religious bodies of Japan, having little or nothing in common as matters of faith or practice in their respective systems, are yet making the strongest efforts to combine against the introduction of Christianity in this country.

Before closing my letter I would also beg to say a word about the unfortunate man who made the attack upon Mr. Blockley at Shinbashi. I must express my doubt about the correctness of that portion of your article last evening which says that *he was always praying, and reading and thinking about christianity, and he at length got into his head that his family could not be saved unless he died as a propitiatory sacrifice for them*.

If he had truly, *from one of the missionaries become so impressed with the truths of christianity that it became his one all-absorbing idea*, and then had been, *always praying, and reading and thinking about it*. I doubt if he would by such means become *religious mad*. At least I feel as though I should like to have some of these statements verified, and should like to know under whose instruction he has been, and how long he has been *praying and reading and thinking about christianity*? I never yet knew of a case where such a course made men insane, but I have known cases where men after long resistance of the truth and neglect of known duties have become unsound of mind.

Very truly Yours,

VERUS.

September 12th, 1873.

A CORRESPONDENT of the *Nisshin Shinjishi* suggests that among all the efforts being made for the education of the people something should be done for the soldiers. The writer says that the discipline of the army has so improved that it is now a match for those of Europe and America. Yet as there are no schools for the soldiers and they are apt to get into rows through idleness, as in the old Tokugawa times, it were better that one-tenth of their pay be set apart for the provision of proper teachers, who should be employed at every station, and the foundation of whose teaching should be "truth and honour." He winds up with the grandiloquent conclusion—"Now, if this is done, I am sure that our soldiers will certainly surpass those of Europe in a very few years."

THE *Kobun Tsushi* speaks a word in season, which foreigners will heartily agree with:—

We have heard reports from the Colony in Hakodate that when an officer has business in the island of Karafuto a crowd of natives (*ainos*) assemble, and look upon him as a

wonderful curiosity. As this is the most remote so it is the most barbarous region of Japan, and the natives behave in this gaping, openmouthed fashion, simply because they are ignorant and savage. But any one who walks in Tokai, and sees a foreigner stop at a shop to make a purchase, must have observed that immediately a silly, curious crowd assembles, hampering the transactions between the shopkeeper and his customer, and perhaps preventing a sale by shutting out the light.

Now wherein does the difference consist between the savages of Yezo and Yedo?

In the same paper is a long letter on the advantages of foreigners coming to Japan. It is very well reasoned and finishes:—"Owing to these circumstances, there is now no one in Japan who does not use some foreign article, or imitate foreigners in some respect. Hence also arises the greatly increased enlightenment of the present day. A Chinese proverb says that wherever a sage goes civilization naturally accompanies him, without his knowledge. The Europeans and Americans have come to Japan and we are gradually improving, even though we do not stop to notice already we are greatly advanced; and if so much has been done on a short time what may we not expect in process of time?"

AN IMPUDENT robbery was committed at the Tanaka Hotel—known as the Japanese restaurant opposite Mr. Waters' house, Tokai,—on Saturday night last. Since the British Naval officers who came out under engagement with the government, arrived, they have been staying there. On the night named, a thief entered their apartments and succeeded in clearing out with three watches, some wearing apparel, and two pocket books about \$80 each besides other documents, photographs &c. One private gentleman who was staying in the hotel, also lost all his clothes except his sleeping clothes. Some of the clothes and the pocket books minus their contents were found next morning, a short distance from the hotel. The naval officers removed on Monday to their new residences Nos. 21, 30 and 31 Shiba.

On Monday the Band of the Imperial Marines played for some hours at the palace, under the direction of their master Mr. Fenton. The Duke of Genoa was present.

A FEW nights ago three thieves entered the house of a farmer living at Tanaka-mura, in the suburbs of Tokai. Each man wore a mask and hakamas, and all seemed to be experienced robbers. They entered with drawn swords, demanded all the money in the house on pain of death on refusal, and were rewarded by the frightened farmer with a contribution of nearly 300 rios to their common stock. They retired most politely, thanking their benefactor, and smiling as if a child might play with them.

A MAN named Ishii Seizaburo, of Asakusa, has taken it into his head to travel over the whole empire and worship all the gods and goddesses on horse-back. One day this week, he arrived at Atago-yama, and rode up the 100 steps known as the Otoko-zaka, in spite of the remonstrances of the priest, who apprehended danger, and that they would be held responsible should any accident happen. The devotee gave a written document to the priest holding him harmless. He rode up boldly enough amid the cheers of the people, but having made his orisons, he descended by the easy winding stairs, known as the Onna-zaka:

YAMAO KOBUTAIYU has notified the Chiji of Tokei Fu, that the railroads *via* the Nakasendo and Oshiu Kaido are about to be commenced, Shinbashi station being the Tokei terminus. The survey officers were to begin their labours on the 13th instant, and it is ordered that every facility be afforded them.

It must be understood that although the *Nisshin Shinjishi* is under foreign ownership and foreign editorship, yet such paragraphs as the above are constantly inserted by the Japanese editor, who makes his remarks on them at pleasure. To the above information he adds:—We now see from this order, the direction these two important lines of railway will take. Travelling facilities to all the adjacent countries, and Oshiu, Shinano and Yechigo, will be wonderfully improved. Arrivals from far distant places will be quick as thought,—like going only to a neighbouring house! Transactions done in a breath! Let us fly over a thousand miles without wings! Let us jump over space without using our nimble feet! Isn't it a jolly world!!!!

A MAN named Mayeda residing in Shitaya Gojomachi, Tokei, has been fined two rios and a half for neglecting to cover in his well, and thus causing the death of a young man named Sugawara, who fell in and was drowned.

THE NOBLEMAN Shosammi Tokugawa late Prince of Kii, seeing that the temporary palace of the Emperor at Akasaka is too circumscribed for His Majesty, has offered his yashiki which adjoins the palace for the Imperial use. His offer has been accepted, but Daijokuan ordered the Kunaisho (Imperial chamberlain's office) to present the prince with the sum of 20,000 rios. This is to be paid out of the offerings which have been contributed by the people towards the new castle.

WE HAVE told within the last few days of robberies effected by clever scoundrels, one in the guise of a shopkeeper another in that of a samurai. In to-day's *Nisshin Shinjishi* is an account of a fellow who got in with a vain young coxcomb at a teahouse, and as gradually they became very thick, he reported himself a friend of Sanjo Daijin, and represented himself as living in his house. He led the young dupe on to wish to become a yakumin, and then promised he would intercede with his friend Sanjo to get him into a public office. Afterwards they went out together and spent some hours at another tea-house, and subsequently the loan of a few rios was asked on the ground of his having been on the spree overnight, and having no wish to return home yet. The youth had it not about him, but took him home, and cajoled his father to let him have it. They then went out together to another teahouse, and the friend of Sanjo wrote a letter which he asked his friend to take to a place close at hand; and he left the house for that purpose. On his return he found his friend had decamped taking with him even some of the victim's garments which he had not put on when he went out. Again we ask—who says Japan is not civilized?

A FEW DAYS ago a very serious accident happened in a government fireproof godown at at Renjeishi village near Nikko.

The fireproof contained 127 kan 400 momme of gunpowder belonging to the Army department, which was sold to a shopkeeper called Ishiwoka Kaichi. In taking delivery it somehow ignited and the explosion blew three persons who were engaged in removing it, to pieces. Ishiwo escaped.

THE FOLLOWING notifications are from the official columns of the *Nisshin Shinjishi*:—

STUDENTS who are abroad at private expense are no longer subject to Mombusho.

SANJO SANEYOSHI,

DAIJO DAIJIN.

13th Sept., 1873.

ON THE 12th September, Mombusho ordered that in future in all Fu and Ken, if any persons contribute or offer money for erecting hospitals, information must be sent to the department.

THE CHIJ of Tokei Fu orders that in future any person commencing mercantile business or altering his original business, must give detailed information at the Civil office of streets called Atsukaijo, that registration may be made by the proper officer.

A FATAL accident happened lately at a new building in course of erection in Asahe-cho. The carpenters were about to put the posts, which were all prepared, in their proper position, and one of the men climbed up one of them before it had been secured. His weight made it top-heavy, and it fell over upon one of the men below and killed him.

ON THE night of the 11th instant, some person unknown entered the house of the Kenrei of Wakamatsu Ken, living in Honjo Midori Cho, and murdered the Kenrei's son. The murderer made his escape, but left behind him the sword with which he committed the murder, and his clogs. It is hoped that these may form a clue to his discovery.

A SAMURAI of Shimané or Idsumo Ken, named Susuki, living in Tokei has received a letter from his native country, of which the following is an extract:—

"Since March of this year, very little rain has fallen in this province, and the ground has been so dry that no vegetables have ripened. The fields cracked and looked like the back of a tortoise. Between the 10 and 20th August, however, a great change took place in the weather. Incessant rain commenced to fall, accompanied by a violent wind, and finally a lake in the province, named Mutsuye, overflowed and caused a dreadful inundation. All the low lands were covered with water to the depth of eight feet. The river became a torrent and all the houses near it were washed away. People could only move about in boats. Even officers had to go by boat to the Kencho. Many persons were drowned, indeed hardly one tenth were saved. The banks of the rivers were broken, and the whole plain was like a sheet to the eye.

It is difficult to give you any accurate description of the calamity; but you may easily imagine what it must have been. One family who were awakened from sleep by the waters washing them, hasted up, and fortunately a boat was near, into which they all got. They were scarcely in when the fierce torrent aided by the wind swept them away, and they drifted for a great distance, until they were carried into the lake, where the waves were so rough and tempestuous that their boat was upset. A sea-going junk was just near them, and into it they managed to get, but the vessel broke loose and drifted down the lake, and to the very mouth of the Masuye river, where they were brought up, and landed after having been a whole day tossing about.

Five hundred and sixty villages of Idzumo country have suffered more or less by this misfortune; and the water is not even now all confined to its proper limits.

The Cotton crop—so productive to the province—has been totally destroyed, and this year the people will suffer incredibly from the loss of all kinds of crops.

Alas! the work of a hundred days is swept away in one, by a single inundation. How can Idzumo feed its inhabitants, all its productions being washed away?"

A CORRESPONDENT of the *Nisshin Shinjishi* writes:—

"I see in your paper the account of the welcome given by the nephew of the King of Italy at O Hama Goten, (Yenriyo Kan). It is a subject of congratulation to us that our intercourse with foreign nations becomes so intimate day by day, and there will be no people in Japan who do not rejoice at it.

As I saw the review you mention as having taken place, I should be glad if you will allow me to inform you, that you may mention it in your paper.

About 7 o'clock in the morning of Monday the 7th September, Shosho Shinowara, having command of the assembled regiments, drew them up in review array on the drill ground of Hibiya.

In the absence of Yamagata, Saigo Taiyu then took supreme command, and with his aides de camp awaited the arrival of the Emperor and his guest.

They had not long to wait. In a few minutes His Majesty arrived, accompanied by Higashi Fushimi no Miya, Sanjo Daijin, Gaimuikiyo Soyeshima, Kunaikiyo Tokudaiji. The Duke of Genoa also arrived accompanied by several naval officers, and some of the foreign ministers.

The Italian Prince took his seat in the carriage with the Emperor, and they proceeded down the lines of the regiments who stood with grounded arms; and the proper salutes were made as they passed.

The Emperor then gave orders to Saigo to put the troops in motion, and at his command, Shinowara put them through their evolutions in a way which aroused the spectators to enthusiasm, which they gave utterance to by clapping their hands.

The Band was not present because several of the best musicians are sick.

At the conclusion of the review, the Italian Prince complimented Saigo, and said he had heard that the Japanese army had been lately reformed, and that the method of raising it had been changed so as to include all classes. But he could not have supposed it possible that they could have made such progress in so short a time; nor could he have expected to see discipline which might bear comparison with that of some European nations. He added that on his return home he should certainly tell the King of Italy what he had seen; but he supposed that some of his countrymen would hardly credit him, imagining that Japan is far behind in military art.

These words are most honourable to us and give us just cause of rejoicing.

I hope you will find a place for this in your newspaper."

A TYPHOON visited Shikame ken about the middle of last month. A long drought had been experienced, and when the rain fell the people were hopeful it would save the crops; but half of the rice fields and more than half of the tobacco, millet, &c, were destroyed by the storm.

## Law Reports.

## In H. B. M. Court.

Before N. J. HANNEN, Esq., *Assistant Judge*.

Thursday, 21st August.

VALMALE, SCHOENE &amp; MILSOM

versus

Capt. DAVIS, of the *Denbighshire*.

Claim for \$218 for ship damage to 6 casks of wine.

Mr. Dickens appeared for Plaintiffs.

Mr. Ness for Defendant.

Mr. Dickens said that the captain had agreed as per Bill of Lading to convey 48 casks of wine, instead of casks, 48 Hogsheads were sent on board and it was found on arrival here that six Hogsheads were damaged. 3 of them being empty. They were put on board in good condition.

A. Milsom, plaintiff, sworn: I went to see the 6 casks of wine on the 5th August. I had read, no notice that they were going to be landed; the balance of the casks were in good order and condition. I sent my man on board several times but could not get them. My man then found them on the Hatoba. I have been in business 8 years. It is customary to get a note from the agents of a ship to inform the consignees that their packages are landed when they are so. My Chinaman was told that he would be informed when the goods came to hand. I frequently receive barrels of wine; they are generally in good order never more than 1 cask being damaged. 1 cask appeared as if it had been stove in by a heavy weight having fallen on it. The Hogsheads are worth \$35 each. I sent in a claim on the agents for 6 casks.

To Mr. Ness: 3 casks were half empty. The captain would not have signed the Bill of Lading if they were not full when shipped. I do not actually know if the casks were full when they were shipped. The contents of 1 cask were nearly all gone. A weight on the bilge of a cask would cause the bung to split, 1 cask seemed to have been stove in by a weight falling on it. There was an indent 1 inch deep on it. The wine did not leak through the indent. It might have leaked from other causes. All the casks bore signs of bad handling; in one of them the staves were cracked and the wine leaked out of it when the cask was rolled. I noticed no other marks. I don't think they had previously been on a voyage except from France to London. On the 22nd July 1873, I did not receive a notice to take delivery of the remaining 18 of the casks, this was after 30 casks had been taken delivery of. My Chinaman saw the casks on the Hatoba on the 4th August. I don't know how many days they had been there. I never proposed that a joint survey should be held on the casks. I did not see any of the sound casks leak. I could not tell if they leaked from the inside. I could not tell without getting inside which is impossible. Wine does not effervesce or evaporate out of casks.

To Mr. Dickens: It is not possible to tell if the wine is shipped in good casks. It is the custom always to ship full casks. I did not notice the cask particularly. The wine had leaked through several places on the 18th or 19th July; my Chinaman took delivery of the 30 casks. G. Penny & Co., the shippers of the wine held a survey on the wine in London.

C. Jubin, sworn: I have been 3 years in Yokohama. I remember surveying 6 casks of wine for plaintiffs I don't remember the date. I think it was the 7th or 8th instant. The six casks were much damaged. The casks were damaged on the quarter and the bilge. I think

the leakage was caused by the damage. I think the damage was done on board the ship. The casks of wine are worth about \$30 each 5 or 6 per cent. of wine is generally lost on imported wine.

To Mr. Ness:—Sometimes we receive damaged casks of wine. I have not seen casks leak without they have shown marks of violence. 6 casks leaked. Other casks were damaged but were still full—all the six casks were damaged. It is not a usual thing for casks of wine to arrive half empty. I receive a good deal of wine.

To Mr. Dickens:—I saw marks of external damage. The indents were sufficiently strong to cause the casks to leak. Casks of wine very seldom come out half empty.

W. Grauter, sworn: I saw the six casks of wine, 3 were half empty and 3 nearly so, I saw marks of damage on the 6 casks. One was particularly so; I think the wine leaked out on account of the damage. I think the damage was done by bad stowage.

To Mr. Ness:—I am a merchant. Sometimes I receive wine. All the 6 casks bore marks of violence. One of the bungs of the casks was not in: one had a hole in it. The casks must have leaked during the voyage. Three were half empty, three empty. I do not know if the motion of the ship would cause the casks to leak. I only noticed that the casks were damaged. I think the damage must have been done on board or in dis-embarking them. Wine may leak from casks that are not damaged. I never heard of the staves of casks of wine, when full, contracting from the heat of the hold. I do not know if the casks were old or new. I can't describe the marks on each cask.

Ah Po, Chinaman of plaintiff stated:—I am in plaintiff's employment. I went to get the casks from the ship. The first time I went on board I received 30 casks. The Captain told me not to come again as he would inform me when the balance of the casks came to hand, this was the 22nd July. I went to No. 12, and the comprador there told me the balance of the casks were not landed. I had 18 more casks to get after I got the 30.

To Mr. Ness:—One cask had a hole in it, another had a bruise on it's sides. I do not know if the wine was delivered in 3 lots. I shook one of the casks and it was empty. I put the 30 casks in the godown. None of the 30 leaked. I recognise the captain in Court. The mate did not tell me to come again for the 18 casks.

Oscar Fanthorpe, sworn:—I am employed in Valmale, Schoene and Milsom. I did not see any notice that the goods were landed. I saw a circular that the ship had arrived. I have been 10 years in the East. It is usual to notify the consignees when goods arrive in any vessel. Letters were here handed into Court to show that out of 50 casks sent from France to London, the captain in London refused to convey 3 casks as they were damaged.

To Mr. Ness:—The casks came from France to London. I do not know if a survey was held in London. I look in the newspapers for advertisements regarding the arrivals of vessels. I think it is the custom to receive other notice besides the advertisements in the papers to consignees. I was told several days after the *Denbighshire* had arrived.

To Mr. Dickens:—I did not see any other advertisement except one. It is customary to receive notice when the goods are to hand. (The Court here examined one of the casks which showed evident signs of bad usage).

Mr. Ness here applied that the petition be dismissed as there was no evidence to show that the negligence was on the part of the captain.

His Honour refused to grant a nonsuit.

Capt. Davis, of the *Denbighshire*, sworn:—I am the defendant. Several casks I rejected in London as being unfit to be shipped. I rejected three because they were empty. The Customs officer told me one was empty. I saw the empty cask. The casks came on board in London. There was a proper stevedore. The mate and I superintended the stowage of the cargo. My hatchways were properly secured before I left London and were not opened till I arrived in Yokohama. I had bad weather during the voyage. The casks were properly stowed. I entered a protest on arrival on account of the bad weather. Capt. Scott came on board and I got him to make a survey of the hatchways before I opened them. Capt. Scott's report was here read, stating that all possible care had been taken, and that the hatchways had been properly secured before leaving London. The cask which is empty looks in better condition than those which are full. My men used every care in handling the cargo. I think the casks are very old. I brought other claret to Yokohama, it was in good condition.

Cross-examined by Mr. Dickens: The Hogsheads were in good order when shipped. I knew the casks had wine in them. One of the 48 casks was empty, and it was replaced. I don't deny that the casks contained wine. It is easy to see when a cask is full or not. I judge from the appearance of the casks that they are old. The casks of claret were in about the middle of the cargo. I have been master of a vessel for 12 years. I never heard if a survey was held in London on the casks.

To Mr. Ness: If goods are in good condition I ship them, I know nothing about the contents. If a survey was held in London something must have been wrong with the casks. I signed all the Bills of Lading.

A. Winstanley, sworn, to Mr. Ness: On the 11th, I inspected 18 casks for Messrs. Van Oordt & Co. the survey was signed next day (survey handed into Court). I don't think the leakage is attributable to the captain. I consider the casks were delivered in good order and condition I consider the casks are old.

To Mr. Dickens: I was requested by Messrs. Van Oordt & Co. to survey the 18 casks. I have often imported beer in cask but not claret.

To Mr. Ness:—I don't think it necessary to give special notice to consignees. I consider the casks in good order. I think there is always a certain leakage in casks of wine or Beer especially during a long voyage.

To Mr. Dickens:—I should not consider the cask the Court has viewed to be in good order.

C. J. Melhuish, sworn:—I am agent for Messrs. Gilman & Co. Mr. Winstanley and I surveyed the casks. I signed the survey. The casks were old. The casks had not been roughly handled. If the casks had been badly stowed they would have been worse than they are now, all the Hoops would have come off.

To Mr. Dickens:—I should prefer claret to be put into a cask that had been used and held claret. On the 11th and 12th the casks were examined. Some casks were bung up and some down. I found most of the casks full—do not know if any were empty. Considering the state of the hoops I think the cask must have been in good order.

Capt. D. Scott, sworn:—I was asked to inspect the hatchways of the *Denbighshire*. I inspected 18 casks by request of Messrs. Van Oordt & Co. I found them externally in good order I considered the casks insufficient for so long a journey.

To Mr. Dickins :—The difference between the weight of a full and a half full cask might not be perceived when they were being shipped. One cask had a crack in it.

To Mr. Ness :—Hoops are liable to start from confinement in a heated place. Leakage sometimes takes place through bad stowage.

C. Janger, chief mate of the *Denbighshire* :—I superintended the stowage of the cargo. I recollect the 48 casks being shipped. The hatchways were never opened after leaving London. The casks were in the same position when we arrived here as they were when we left London.

To Mr. Dickins : All the casks appeared to be in good condition when taken on board. I don't know if all the casks were full when they were shipped.

Mr. Ness and Mr. Dickins having summed up for their respective clients.

His Honour said he did not believe that the leakage was caused by the negligence of the defendant therefore he felt obliged to give a verdict for defendant and costs.

Friday, 29th August.

JOHN DUBLIN v. R. RICKABY.

The complainant is a seaman on board the *Clausina*, and he charged the defendant, who is the master of the said vessel, with imprisoning him in a place unfit for him to live in.

Defendant denied the allegation.

Complainant stated that he was put into a dirty water-closet, where the paint was kept, which was removed for him to be put in; was imprisoned for impudence to defendant. The closet was 7 feet high, 7 feet long, and 3 feet wide. The only ventilation to the place was a hole cut in the door, a foot long, by an inch and a half wide. He was kept 42 days in the place. Had no bed or bedding, only a piece of canvas 4 feet long and 4 feet wide, which was continually being wet, through the water coming in. He was confined in irons night and day. Had as much bread and water as he could eat. Was not allowed any books of any description. When weather permitted, was allowed on deck for a short time.

It was proved by witnesses that the place where complainant was confined had been thoroughly cleansed, and was a fit place for him to be in.

His Honour dismissed the case, but ordered the defendant to pay the costs of the action, as it was the opinion of his Honour that 42 days' imprisonment in irons was exceedingly severe.

HANS HATTERBERG v. same Defendant.

The complainant accused the defendant with striking him on the head with a belying pin, which the defendant did not deny, but urged he had received great provocation.

Fined \$5 and costs.

THOMAS VINE v. CHARLES JOHN BROWN.

The complainant was seaman, and defendant chief mate on board the *Clausina*; and the complainant charged the defendant with assaulting him, and striking him on the head with a belying pin.

It was proved that complainant, who bore a very bad character, had greatly aggravated the defendant by refusing to obey his orders, and had also violently assaulted him, by striking him in the eye and kicking him.

His Honour fined the defendant \$1 and costs, remarking that he had only inflicted a nominal fine on account of the provocation received, but that the defendant must distinctly understand he must keep his hands off the sailors in future.

W. Lawrence, charged with theft at Yedo, was brought up on remand, to receive sentence. The prisoner having nothing to say in reply to the charge.

His Honour remarked that there was evidence of the prisoner having been at plaintiff's house, and of money having, shortly after his leaving, been found to be missing; that the prisoner had failed to prove an *alibi*, or how he obtained the money he spent so freely about the same time; he should therefore sentence the prisoner to three months' imprisonment, at the end of that term to be deported.

The firm of JOHN WYNN & Co. v. BLACK & Co.

Mr. Black, one of the judgment debtors, appeared to answer a summons to be examined touching his ability to pay the judgment debt and costs in this case.

In the course of his examination by Mr. Ness, it appeared that he was possessed of a one-third share in the business of Black & Co., and that the receipts of the firm, since the date of the order, amounted to \$1,000.

The Court ordered the debtor to make an assignment of his one-third share in the business above-mentioned, to be sold to satisfy the claims of creditors, anything remaining to be returned to him.

### In U. S. Consular Court.

Before C. O. SHEPARD, Esq., Consul.

#### THE COLLISION CASE.

YENNOMOTO ROKUBEI v. P. M. S. S. Co.

GUSTAVUS FARLEY, jun., }  
and } Assessors.  
THOMAS STEVENS, }

Captain STANTON, of the *Yantic*, sat with the Court as Senior Naval Officer.

Mr. Hill appeared for plaintiff, and Mr. Ness for defendants.

Friday, 22nd August.

This was an action brought by the plaintiff, owner of the barque *Hogiyo Maru*, (late *Saturnus*), 347 tons burden, through James Alexander Hilgrove, master of the vessel, for damage done, to the amount of \$2,679.27, to the barque, through the defendants' ship, the *Colorado*, running into the said barque on the 25th of May last, in the Bay of Yedo, at 9 o'clock p.m., as the barque was proceeding from the port of Shinagawa, laden with a cargo of rice.

Mr. Ness asked for an adjournment until Monday next, the 25th, on the ground of his being engaged at H.B.M.'s Court.

23rd August.

Okadabi, master of the barque, warned to speak the truth: I am Japanese master of the *Hogiyo Maru*. To Mr. Hill: I was on board at the time of the collision. It occurred on the 25th of May, at 9 p.m. The barque was going to Noburo, with a cargo of rice. The ship was unable to perform her contract on account of the collision. The vessel was steering N.W. by N. at the time of the collision. I know the points of the compass. The vessel was about a mile and a quarter off Kanonsaki Point. The lamps were set at 7.35 p.m. At 8 p.m. some sails were furled. Ten minutes after 9 a vessel was seen. At the time, the wind was blowing E.N.E. I saw three lights on board the steamer, also the smoke from the funnel. The barque was steering S. half W. at the time the steamer was seen. I first saw the steamer on the port

side. I kept on my course S. half W. I first saw a green, and then a red light; I saw the masthead light all the time the steamer was coming stem on towards the barque. The steamer then showed her green lamp again, and then changed to the red, and I thought the vessels would safely pass one another. The wind was blowing E. N. E. I did not alter the course of my vessel. There was a channel of about six miles, through which vessels could pass. Kanonsaki Light was N. W. from my vessel when the collision took place. There was a distance of about 1,300 feet between the vessels when the steamer opened up her lights. The bow of my vessel struck the steamer on the starboard side, near the fore-mast, and the steamer passed on. My vessel was going 2½ knots an hour; the steamer was going about 9 knots an hour. I saw the collision. I consulted the foreign captain directly I saw the light of the steamer, 10 minutes past 9 p.m. From the time I called the foreign captain until the collision, about 40 minutes elapsed. The paddle-wheels of the steamer were revolving; I saw them. The wheels were revolving at the time of the collision. I saw them revolving for about four minutes. The foreign captain of my vessel hailed the steamer, but I did not understand what was said. Heard voices on the steamer. The steamer blew her whistle twice. The steamer bumped my vessel two or three times, and then passed ahead. I saw the steamer for about fifteen minutes after the collision; she then disappeared. The barque's fore-sail was torn, the rigging damaged, and the anchor gear, &c., carried away. About 1,500 rios would probably repair my ship's damage. My ship drifted to Uraga, and I hired a steamer there for 120 yen, to tow my vessel to Yokohama. Captain Robertson and a ship carpenter named Thomas surveyed the ship in Yokohama. My ship is 347 tons register. The wind was very light at the time of the collision, and the weather clear. A vessel without lights could be seen about six miles that evening.

To Mr. Ness :—My ship was about the centre of the channel. The channel is about 2½ ri wide. I have been at sea since a boy in foreign ships. I used to be master of the Brit. barque *Ettrick*. There is a foreign Captain on board over me. The owner is a native of Japan. I have never had an accident at sea. I learnt the rules regarding vessel's lights in different ships; I am now learning seamanship on board the barque. I consider I am the Japanese master of the ship; I don't know why there should be two masters for such a small vessel. I saw the rice contract before, I did not particularly notice the contents. I do not know the details of the contract or the date of it. I recognise the contract you show me. My vessel was going to ship a cargo of rice and convey it to Shinagawa. I do not know the amount of money which was to be paid by the charterers. On the evening of the 25th May, 15 persons were on board the barque. Everybody was on deck some were smoking, but it being early I think nobody was asleep. I had dinner about six o'clock that evening. It took me about a quarter of an hour; I never sleep after dinner but sometimes after breakfast. The man at the wheel had his instructions from the foreigner. I was walking about the deck when the steamer came in view. Eleven men were on the watch that evening. I first saw the steamer. The lookout man was not asleep. Just before the collision the lookout man came aft, my lamps were hung out at 35 minutes past 7. I heard the men calling out to the steamer's crew to take care. The lamps were burning brightly I saw them several times before the collision. I did not change my course when I saw the steamer. I was not in a place where I should

not have been. The steamer appeared to be South half West. I heard the steamer's whistle twice. It was not very dark on the night of the collision. I was very excited at the time of the collision and told the sailors to look after the boats and then went below to see what water the vessel was making. I saw the motion of the paddle wheels. The steamer had some sails set. My barque is being repaired at Yokoska, she went into the dock on the 14th August.

To Court:—The lamps were burning brightly to the time of the collision. The vessel's course was not changed after sighting the steamer.

J. A. Kilgour, sworn:—I am master mariner, I am master of the *Hogiyo Maru*. I have been 11½ years at sea. I hold a certificate from H. B. M.'s *Hornet*. I navigated the ship about 7.30 on the evening of the 25th of May. We were to the North of Kanonsaki light. A heavy squall came down, and we had to furl some sails. I ordered the lights to be set. The lamps were burning brightly, they were fitted in board screens 3 feet in length. After the squall, I got the ship on the port tack and steered nearly S. at 8.30 the wind fell light, Kanonsaki was then about West. At 10 min. past 9, I heard of the approach of the steamer. The Japanese Captain came and told me, the steamer lights appeared to be a ½-point on my starboard bow. The steamer was about 3½ miles off when I first saw her. Kanonsaki Light was about 1½ miles off. The lights were burning brightly till they were taken in. The steamer first showed three lights and them only, and then three again. I should think the steamer was going about four knots an hour. I heard the whistle about three minutes before the collision, after the collision I ordered the pumps to be sounded and the boats cleared away, and I went forward to see what damage was done. I heard the word on board the steamer, "go ahead, we're all clear." This was before I hailed the steamer, about half a minute perhaps. The blow shook the barque a good deal. I thought we had done but little damage to the steamer. The rule in a narrow channel is to keep on the starboard side. The channel is about five miles broad. The rule is not a Board of Trade one, but a general rule amongst seamen. The night was not a dark one. I think the damage done to the barque is about \$1,033.00 as by a survey by the late Capt. Robertson. After the collision the ship anchored in Uraga, she is now being repaired at Yokoska. The ship has not been able to earn money since the time of the collision. The steamer by keeping her helm hard a starboard would have cleared us. I give my orders to the helmsman through the Japanese Captain.

To Mr. Ness. I hold a provisional certificate that enables me to take vessels to sea. I was in charge of the *Malacca* for seven months. I also hold a Board of Trade Certificate as second mate. I lost the rudder of one Japanese vessel *Owarai* it was rotten and broke off. In 1863, I was shipwrecked I held the position of boy then. The Japanese Captain takes his orders from me. The barque before the collision was staunch, sound and in good seaworthy condition and was well found.

To Court:—I should think it would cost from \$1,400 to \$1,600 to make the repairs.

Captain C. R. Harris, examined by Mr. Ness. I am master of the *Colorado*. At the time of the collision was first officer under Captain Warsaw was on deck at the time of the collision. The Captain the 3rd Officer and the quarter Masters were also on deck. Was a clear light overhead, though hazy on the water. There was nothing to indicate anything ahead until a few minutes before 9.30. Heard the whistle blow twice and gong sound for ship to stop, Heard the Cap-

tain give orders to back. The collision took place after the orders to reverse were given. There were no lights on the barque until after 2nd blast of the whistle when a red light was shewn must have seen a light had there been one. Will swear there were no lights when we first saw the barque.

Mr. Ness here read (after objection by Mr. Hill had been withdrawn) three letters from the former Captain and one letter from the 3rd officer who was on deck at the time the collision took place the contents of which corroborated the statements made by the witness.

The witness was subjected to a searching cross-examination by Mr. Hill, but nothing material was adduced to alter the evidence of the witness in his examination in chief.

John Cobin, examined by Mr. Ness: I am assistant engineer on board the *Colorado*. Was on watch in the engine room on the 25th May last. Heard a signal given to stop the ship and another to back her. Continued to reverse the paddle wheels about five minutes. [The witness seemed either incompetent or very reluctant to answer the questions put to him by Mr. Hill in cross-examination, and had to be cautioned by the Court].

D. W. Kline: I was passenger on board the ship *Colorado*. I remember the 25th May last. [Here the witness gave an account of the collision, which exactly corroborated that given by Capt. Harris].

The Purser on board the *Colorado*: I was talking to the first officer (now the Captain) on the night of the 25th May. Heard the whistle blow twice, and the gong sound for the ship to stop. Went to see the meaning of it. Saw the collision. The barque at the time was only showing a red light. It was five or six minutes before the ship, after having her engines reversed, came to a dead stand. Went to look for a passenger, and when I came back the barque was away astern.

The Japanese Paymaster of the barque, warned to speak the truth, examined by Mr. Hill, gave evidence as to the amount of damage done to the vessel; and the Japanese Quartermaster, also warned to speak the truth, deposed that he was in charge of the wheel at the time of the collision. The barque was steering south-half east. Was directed to steer south-half-west. Did not see the ship before the collision, as he was attending to the wheel.

R. Forsyth, examined by Mr. Ness:—I am chief engineer on board the *Colorado*. Was on deck on the night of the 25th May. Heard the gong sounded for the ship to stop, and reversed engines. The ship backed for about five minutes. Did not see the collision. It was impossible where I was to have seen it. Signal to stop and reverse engines was given at 9.30. Went ahead at 9.45. [Entry in Log-book produced.]

C. H. Tarbarts: I am now third officer on board the *Colorado*. At the time of the collision I was quarter-master. Was on deck at 9.50 on the 25th May. Was off duty. Did not see any vessel approaching. Went forward after the collision, and saw a barque a short distance from the steamer's paddle-wheel. Only saw one light—a red one. From where I was standing I must have seen another light, had there been one. Would swear there was no green light up.

J. Esdailey gave evidence exactly similar to previous witness.

Mr. Ness addressed the Court on behalf of the defendants, arguing that the plaintiffs had in every respect failed to make out their case.

Mr. Hill, in a very able and lengthy address, argued that his case was complete, and he left the decision in the hands of the Court.

The Court in resuming this case called the attention of the parties concerned to Articles 3, 5, 15, and 16, of the regulations for preventing collisions on the water, approved by Act of Congress April 29th, 1864; but in deciding its relative merits, the Court deems it necessary to go beyond these articles, and considers the action to rest upon the following propositions:—

1st. Did not *Colorado* carry on the starboard side a green light, on the port side a red light, and at the masthead a bright white light, as required by law?

2nd. Did the *Colorado* make all due effort to keep out of the way of the *Ko-gi-yo Maru*?

3rd. Did the *Colorado*, when approaching the *Ko-gi-yo Maru*, so as to avoid risk of collision, slacken her speed, stop, and reverse?

4th. Did the *Ko-gi-yo Maru* carry on her starboard side a green light, and on her port side a red light, as required by law?

Upon the first point, there being no evidence to the contrary, the Court found that the *Colorado* did have the lights required by the statute, and placed according to law.

Upon the second point, the Court found that the *Colorado* did all in her power to avoid accident; and that upon sighting the *Ko-gi-yo Maru*, at a distance of from one-eighth to one-fourth of a mile, to have done otherwise than as she did would have either placed her within the "danger line," or brought about a collision "end on," which would only have resulted in the total loss of one or both vessels.

Upon the third point, the Court found that the *Colorado* did, upon approaching to *Ko-gi-yo Maru*, so as to avoid risk of collision, stop and reverse, as required.

In the fourth place, did the *Ko-gi-yo Maru* carry on her starboard side a green light, and on her port side a red light, as required by law?

The Court found that she did not; and herein, in the opinion of the Court, lies the whole and only fault. Upon personal inspection by the Court, it was found that the green and red lights of the *Ko-gi-yo Maru*, instead of being placed respectively on the starboard and port sides of the vessel, as required by law, and where nothing whatever could obstruct them, were each placed fully seven feet inboard from those positions, and on the corners of the deck house. Again, the Court found that, in such position, they were only five feet from midships. The Court also found that, with the lights in the position as stated, the jib and fore-top-mast stay sail being set as shewn by plaintiff's testimony, it was an impossibility for the *Colorado*, headed as was the barque, to have seen either of her (the *Ko-gi-yo Maru*'s) lights, until within close proximity. Placed such a distance inboard, a few sailors even, standing in a certain position upon the fore-castle, would suffice to shut out entirely one or both of the lights; and it is greatly to be regretted that where, as in this bay, so many lives are constantly in jeopardy, and so much property in transit, the plain, wise, and reasonable provisions of the law are not strictly and carefully complied with.

The Court hereupon dismissed the case, and adjourned.

Gaimusho, Yedo.

September 3rd, 1873.

CLAIMS AGAINST THE OLD HANS.

Judge HANNEN & Mr. TAMONO, Commissioners.

J. M. SCOTT vs. TONAMI HAN.

The following is the first of a series of claims preferred by some nine claimants against the old

Hans of Japan, the payment of which is resisted by the Government. The claims to be immediately decided upon are those instituted by Mr. J. M. Scott, the plaintiff in the present report, and Messrs. E. C. Kirby & Co., and P. S. Cabe'der, all of Kobe. In the case below, the plaintiff was opposed by Mr. Kitamura-Yoskatz, representing the Government as defendant. The claims of the plaintiff amount to \$5,400, for merchandize supplied at the end of 1870 and the beginning of 1871.

John Marshall Scott, examined by Mr. Ness, stated: I am a merchant, residing at Kobe. Learned in December, 1870, that the officers in Tonami Han wished to purchase goods. Heard from banto of Tonami Han. My banto went away, and on his return told me that he had seen their tickets, which were from Tonami Han, and also tickets from the Hiogo Saibansho, proving that these men were recognised as their officers. The names of the officers were Nakayama Otonoske and Hara-Genshiro.

In consequence of a petition put forward by Mr. Ness,

Commissioner Hannen remarked that the Commissioners were there assembled simply for the purpose of taking evidence, and not for the purpose of deciding on the merits of any case that might be brought before them.

Mr. Ness expressed his acquiescence in the observations of the Commissioner, and proposed to withdraw a clause in the petition claiming interest and expenses, in addition to the original demand. The clause, however, had been sworn to by the plaintiff in Kobe under the impression that the Commissioners were to sit as judges.

Examination resumed:—My banto told me that Idz'nomiya had introduced these officers to him. The banto also told me that he had asked the officers for references as to their authority, as he did not know them.

Mr. Hill here asked the Commissioners whether the banto would be called upon for examination. Having received an answer in the affirmative, the witnesses' evidence was proceeded with.

Examination continued:—In consequence of what the banto told me I went to the Saibansho at Kobe, to make inquiry as to whether these men were the officers they represented themselves to be. I inquired whether they were empowered to act for the Tonami Han; that is to say, whether they could purchase or do other business of any sort for that Han? I saw at the Saibansho an interpreter, whose name I forgot. He spoke to another officer, whose name I afterwards discovered to be Kanasawa who said inquiries would be made. I called a few days after to get an answer. I saw Mr. Kanasawa, and an interpreter. Mr. Kanasawa said that the men were properly authorized officers of the Han. As such I did not fear to do business with them. It has always been my custom to enquire as to the authority of persons purporting to be acting as agents. The Hiogo Saibansho I always found to be willing to render me every assistance. On receiving this information, I resolved to enter into this contract. Just before closing the contract, I heard that a high officer of Tonami Han had arrived in Hiogo. His name was Otaki Sikuimon. When I heard this, I went to the Saibansho, and acquainted Mr. Kanasawa with the fact, and asked him if he would summon him and enquire if these persons were truly and properly authorised officers of the Han. I was informed by an interpreter that Hara Genshiro had been recognised by Sakuimon, and Nakayama, as an authorised officer of Tonami Han. Tanaki Sanai, Hara Genshiro, and Nakayama Okonoske came with some other

man to our office, and we entered into a contract. It was a written contract. There were two copies made. The contracts were written before they were taken to my office. Nakayama Otonoske had them in his breast, and handed them through his broker to my banto. The original contracts were afterwards given up to Mr. Kanasawa at his request. I received copies of the original documents from the Hiogo Saibansho. I produced documents marked A, consisting of an affidavit by myself, which describes the documents. Attached, amongst these, is a true copy of the original contract. I saw Hara Genshiro and Tanaka Samai stamp the documents. They paid a portion of the purchase money, viz: \$600, and gave me two promissory notes for the remainder. I saw the officers affix their stamps to the promissory notes, they were also signed by Komeya Sakubei, Zakoya Iakuich, being witnesses to the signature. When the promissory notes became due, an investigation took place before Mr. Kanasawa. I then handed the promissory notes to him at his request. These notes bore no interest. The first fell due about the 15th June, but was not paid. I applied to Komeya Sakubei, to learn the address of these Tonami officers. He failed to give it to me. About this time I met Sakuyemon, who came with me to my office. I asked him how it was that the promissory notes had not been paid. He told me, through my banto, that I need not fear as they were officers of the Han. In consequence of non-fulfilment of contract, I sent in a complaint through my Consul, and a Court was held on the 29th June, at the Hiogo Saibansho. I attended on the first day with my banto. I was told through an interpreter that the officers had received the goods on behalf of the Han, and they would be paid for. They begged for and obtained an adjournment for 10 days. At the end of this term another investigation took place. I was told by the judge that all the money was not forthcoming; but that I should be paid \$1,000 in a few days, and that promissory notes would be given me for the balance to be paid with interest. I received the promissory notes from Mr. Kanasawa at the Saibansho. I mean that they were sealed at the Saibansho. There are the originals. [NOTES PRODUCED, MARKED B. & C.] I noticed that Nakayama's seal was not on the bonds and notes. Through the Interpreter I stated to Mr. Kanasawa that I wanted his seal upon them. Mr. Kanasawa said that it did not much matter, because Mr. Nakayama had acknowledged to him that the goods had been purchased on behalf of the Han; and that Mr. Nakayama was away in Osaka. I asked for the original contracts and promissory notes, but Mr. Kanasawa said he could not give them to me, as I had new bonds. The new ones had interest; the old ones had not. The original contracts were detained by Kanasawa against my will. In receiving the new bonds, I protested against the absence of Nakayama's Seal. Shortly after this I accompanied an officer with a summons to Osaka, to point out the Tonami officers, who were supposed to be sick, I found Tanaki Sonai, Hara Genshiro, and Nakayama Otonoski at an Hotel, apparently in good health. I was told to leave the house. On requesting payment, I refused to go until I received the money. I stood up and they gathered round me. Tanakai Sanai seized me by the shoulders and pushed me out, and then stood there with his sword. In consequence of his threatening me I left. The three men, according to summons, appeared shortly afterwards at the Saibansho. An investigation took place. Two days adjournment was allowed, I was told by Mr. Takaki at the end of this time that the three officials had absconded. In September they came back to Kobe. They appeared again

at the Saibansho according to summons, when an investigation again took place.

At this Stage Court adjourned until 1.30 P.M.

Examination resumed.—They gave as a reason at the investigation, for not paying the promissory notes that they had come to purchase a steamer from the China and Japan Trading Company. They said that on completion of this affair, they should have money, and asked for an adjournment.

Cross examination resumed:—After a few days I called again at the Saibansho, and saw Mr. Takaki. He had seen the Tonami officers, and said that they wished a new set of bonds to be made, to extend over twenty-three months. I declined to take them. He, Takaki, tried to induce me to take them, promising me interest, saying that the government would see them paid if I would give time. I saw him again a few days after when he told me through an interpreter that a notification had been received from Tokei Changing the Han to a Ken, and that he had no further power; that, as the case had been thoroughly investigated there, and judgment given in my favor, I should find no difficulty in obtaining my money at Tokei. He requested me to inform my Consul of his decision and of the change that had taken place, I did so. An interpreter at the Saibansho told me, in the presence of Mr. Mishta, the present judge officer, that some officer had been sent from Tokei with orders that no paper should be given me: with regard to my claim. The name of the officer was Sarke Koriyoski. Mr. Sarke Koriyoski said that he had been sent down by the government. I asked him to go with me to the Saibansho or to the British Consulate, and there I would give him proof that Nakayama Otonoski's stamp was affixed. I afterwards received a letter from him, but did not come to any terms. The matter was there referred to H. B. M.'s Minister, and I received a document, which seemed to be a judgment of the Governor and Vice-Governor of the Hiogo Ken. [Document handed in.] In that document it is stated that, the Tonami Han ought to pay. [This document purports to be addressed to the Foreign Office.] I also received a letter from the Minister of Foreign Affairs enclosing copy of the minutes of the Judicial Board concerning this case. Mr. Ness asked for the original of this letter.

Examination resumed:—In this document it states that they obtained goods from me for the purpose of raising money to purchase a steamer. I was told by the head partner of the China and Japan Trading Company, Mr. Forbes, that the steamer had been paid for by the government.

Mr. Hill objected to this last portion of the evidence.

Examination continued—during the whole proceedings of the Hiogo Saibansho, the defence that they had no authority was never raised, such a defence was never hinted at by the judge or officers. I produce a list of prices attached of the goods I sold. The amount still due to me is \$3,050. I claim interest upon this sum at the rate of 2 per cent. per month, from June, 1871 until payment. Since this claim has been in abeyance I have at times had to pay 3 per cent per month, giving good security. It was because this amount was not paid that I was obliged to borrow money. I consider that my bare expenses, will amount to \$250, and my claim for loss of time and extra expenses in conducting my business during my absence I rate at \$400 more, besides this I have incurred legal expenses.

Cross examined by Mr. Hill—I do not read and write Japanese. My banto, who assisted me in the transaction, is called Kaische. I did not trust to him entirely. My banto speaks English tolerably well. Besides the information I received from my banto and the Saibansho, I received private information from several officers of the Saibansho. My original arrangements for the sale of the goods were made with three men. Nakayama Otonoske, Tanaka Sanai, and Hara Genshiro. I think I recognise one of them in this room now. I have also noticed Saiké Koriyoski. I have compared the copies of contract which were put in my examination in chief which are attached to affidavit marked. A with the originals. The documents marked a came to me from the Saibansho direct. I think about March, 1873. I brought my action against the Tonami Han before the Hiogo Saibansho, I gave the original copy to Kanasawa, at the time of the trial in March, 1871. The second time I had to make a complaint I made it through my Consul. I think I made the second claim with the same individuals as at first, with the addition however of Harimaya Kunoske, who, I have reason to believe, was also an officer of the Han. My letter referred to my claim against

the Tonami Han, and in it was mentioned the names of all the officers who had ever anything to do with it. It was during the course of the investigation that I gave up the originals of the first contract, and it was at the conclusion of the investigation that I received the documents marked B. and C. I received these two documents in pursuance of the judgment of the Saibansho. I did not give notice to H. M. Consul that I was dissatisfied with this judgment. I understood that the sum of \$200 came in some way from Komeya Sakubei and Zakoya Yashiji.

At this stage in the proceedings the Court adjourned till Friday, the 5th instant.

September 5th, 1873.

J. M. Scott, cross-examination continued.—I had never on any former occasion sold goods to the Tonami Han or to the officers of that Han. I have sold goods before that to others. I forget the names. I have done so to two different Hans. The goods I sold consisted of merchandise. Some paid for and some on credit. I made the necessary enquiries, as I have said before. These promissory notes were paid the officers who executed them. The sheet you have in your hands is a copy taken from my day-book. The only entry in my books made at the time of the transaction was made by my co-partner. At the time of these transactions I had a co-partner. The items included in this transaction were decided on with an interval of a few days. It was at the latter end of 70 and the commencement of 71, the New Year intervening. I think the interval was about a week or ten days, perhaps more. I verified the entries in the day-book. My co-partner made that entry. I know that to be a fair copy. [Copy produced.]

It was here urged by the examining counsel that witnesses ought to be put on their oaths, or in some way made responsible for any evidence they might depose to.

Commissioner Hannen declared his inability to comply with or enforce the demands of counsel in this respect. In consequence a long discussion ensued both counsel taking part in it. The Commissioner suggested that it was a matter which might afterwards be decided on between the two Governments; but that he, as Commissioner, had really no power to administer an oath.

Mr. Hill asked whether, in that case, the conditions under which the evidence was being taken might be entered on the records.

Mr. Ness said that this objection was beside the enquiry; that it bore reference to the wisdom of the two Governments, and it was for Mr. Hill to represent to his Government what he thought as a defect in the arrangement; that while such arrangement existed its terms ought to be abided by.

Commissioner Tamonô was averse to the present way of taking the evidence, and thought that it would be advisable to refer the matter to the Ministers of the two Government. He considered the evidence worthless taken under present conditions.

The Commission hereupon adjourned, to consider some method by which witnesses could be held responsible for the evidence they were giving. On returning into Court, Commissioner Hannen stated that an arrangement had been arrived at, according to the terms of which every foreign witness giving evidence before the Commission would afterwards have to subscribe to it in the form of an affidavit before his Consul.

This plan appeared to solve the objections raised by the opposing counsel, and the taking of further evidence proceeded.

The plaintiff having been made fully cognisant of the conditions under which further depositions would be accepted, said that he wished to make a slight correction in his former evidence.

Plaintiff:—In my evidence I have stated that the entry in the day book was made by my partner. This is a mistake, it was made by my clerk. The clerk was not my general partner. He was a clerk with a slight interest.

Cross-examination continued:—I verified the entries made. The first contract for \$1,650 was made on one sheet, and second contract on another. The earlier contract was made on the same day as the entry in the day book. The entry as to the second contract was not made on the same day, because there was some arrangement to be made by the officers of the Court. The prices of the goods were fixed before they were delivered. The contracts were signed before delivery. The delivery of the goods contained in the first contract took place on the same day as the contracts were signed. I do not think that I have stated that the

contracts were signed on the same day. I could not have said so; because there was an interval of some ten days between the signing. The names of the officers who signed the first contract were Hara Genshiro, Tanaka Sanai, Nakayama Otonoske, finance officer of Tonami Han, and Komeya Sakubei. The second contract was signed by Hara Genshiro, Tanaka Sanai and others, on account of the Tonami Han. My banto acted as interpreter on the first and second occasions. I made the pencil notes you indicate when I was having them looked into at the Saibansho. I took the first contract before the second one was executed. The entries mentioned in document F were made at the time they are purported to have been made. I took the second contract to the Saibansho to be verified a few days after it was signed. I never saw any preliminary contract in regard to the \$1,650. The entry in my day-book concerning this contract was, "Goods bought by the Tonami Han, \$1,650; \$200 cash, and promissory note for the balance." These entries were. The receipt of \$200 which I received afterwards was, I think, entered in the cash-book and ledger, but not in the day-book. The second bonds were not mentioned anywhere in any of my books. My only reason for having omitted the entry of balance due in so many months was that it is not usual to do so on the list of goods. The document F is a complete copy of the entries in my day-book in regard to the first contract, with the exception of the omission of the entry of the balance. [Document handed in being a copy of the items contained in the ledger.] That is a true copy from my ledger.

Court, at five o'clock, adjourned till to-morrow morning at nine o'clock.

September 6th, 1873.

Cross examination of J. M. Scott resumed:—I have not completed and accurate copies of my books in regard to this transaction. I have addressed the Okurasho in regard to this claim personally. I have received a reply from the Okurasho to my letters. My correspondence was carried on in Japanese, enclosures of the contracts contained in them there were. These copies were from the original contracts. They were not made specifically for demanding payment from the Okurasho. I always make duplicates. I think the copy which I kept in this particular case was sent in to the English Consul. [Document produced.] I recognise the document handed in as one of those sent to the Okurasho. It is a copy of the second letter sent in, not the first. My mistake must have arisen from my inability to read Japanese. This document marked H. is another of those sent to the Okurasho. [Doc. handed in.] The third one I also recognise as the second contract. [Doc. handed in.] The fourth one is the first contract [Doc. handed in]. The letter you now produce in Japanese I recognise as having my name and seal affixed [Doc. handed in]. This letter [Letter produced] has my name in Japanese attached but I do not think the stamp is mine. It may be my second letter to the Okurasho. [Doc. handed in.] The documents you produce marked G. and H. I cannot distinctly remember. There is a note in my hand writing for \$2,000. [Doc. handed into the Commission.] I think my first letter to the Okurasho contained an application for the payment of my claim. My second acknowledged the receipt of my letter to the Okurasho. None of the copies were made from the original documents. [Document handed to witness marked J.] The original of that document was with my consul when the copy was made. I don't know where the copies are, from which the document marked J. was copied. I think the endorsement in my hand-writing on document J was written down from the words of the officer of the Saibansho, at the time judgment was given me. When I said just now that the original of document J. was with my Consul at the time the copy was made out, it was a mistake. I cannot say whether document J. was ever compared with the original, for I do not recognise the document. On reflection, I do not think I sent document J. to the Okurasho. I think it must have been sent by me to the Hiogo Saibansho. [Document marked K. handed in.] I think that document was made from a copy in my possession. I do not know what the Japanese writing on document J. is, or whether it is a copy. I have said all I can relating to J. until I see a translation. [Document marked H. and K. handed in.] Both documents were written by the banto. [Document G. handed in.] That one also was written by my banto. I still say that I know nothing of document J. I did not receive any communications from H. M.'s Consul. No written answer. [Document handed to witness.] That is a statement made at the request of my Consul in regard to my claim. I have received a communication from H. M.'s Consul some time this year, in Japanese, purporting to be

a judgment of the Saibansho. It is impossible for me at the present moment to say how many original contracts I received from the Tonami Han. It is the second time I have come to prosecute my claim.

Court adjourned to 1.30.

Cross-examination resumed I had not written to the Okurasho in July. I was mistaken. I came up to Yedo in July, 1872. I have addressed altogether three communications to the Okurasho. My second banto's name is Masazo. He is in Kobe. I borrowed money at 3 per cent of Capt. Ore. I gave as security goods. That is a high rate, as far as my experience goes, in Japan. I see several of the men here with whom I have dealt.

Re-examined by Mr. Ness:—I held two valid contracts against the Tonami Han that they would come back and buy the goods; the second was a completed copy. The document marked J. I believe to be a copy of a paper which the officer wished me to accept. It is in the nature of a promissory note for \$4,666 rios, the payments extending over twenty-three months. The original was made out at the Saibansho signed by some party, and handed to me. I took back the copy after maturely considering it, and said that I would have nothing to do with it. I gave the Saibansho authorities a number of documents and I suppose that he had come to try and arrange my claim; and that if I could prove to him that I had Nakayama Otonoske's seal to the contracts he would pay me at once. I considered the second bonds to be supplemental to the first. The original ones were detained against my will. If the second contract, constitutes a new contract it was obtained from me without my knowledge. I ascertained from the Saibansho that these three men were authorized agents of the Tonami Han.

Edward Hazlet Hunter, examined by Mr. Ness.—In 1871, I was manager in Messrs. E. C. Kirby & Co.'s store, Kobe. During that year some officers of the Tonami Han came to our store on business. Of these, two were named Hara Genshiro and Tanaka Sanai. I cannot remember the names of the others and I believe Nagayama Otonoske, and Okabane Misawa, were amongst those who came to the store, and entered into a contract with the firm. They showed me no written authority. They showed me seals, etc.—stamped authority—a kind of passport. I cannot recollect whether there was any writing on the paper. They told me that if I had any doubt I might go to the Custom House and make inquiries. I was careless about doing business with them for I had not too many goods on hand. I went to the Custom House. I was accompanied by one of the officers, it was I think Hara Genshiro. I do not recollect whom I saw there. An officer told me that he would make inquiries. I went again, accompanied by the same person. The same officer whom I had seen on a previous occasion told me they were duly authorized officers of the Tonami Han. I told him that I was going to do business with them; and asked if they were proper officers. I also made inquiries through my banto as to their authority. He was perfectly satisfied that there would be no risk in doing business with them. The banto told me that he had been to the residence of the officers in Osaka, and that on the outside of the dwelling they had their names posted up. Finally, from the inquiries which I made, I was satisfied they were officers duly authorized to act on behalf of the Tonami Han. The opposing counsel declined to cross-examine. Commissioners hereupon adjourned the Court until Monday morning, the 8th instant, at 9 o'clock.

Mr. Ness, on behalf of his client, P. S. Cabeldu, requested that the Commission would see fit to defer the further hearing of the case actually before the Commission, in order to dispose of the evidence of the plaintiff in the action pending between his client, P. S. Cabeldu, and Ewasaki Han, owing to urgent private affairs of the plaintiff.

The Commissioners signified their acquiescence, appointing Monday next for the hearing of the evidence, and then adjourned.

CABELDU & Co. vs. EWASAKI HAN.

The sum claimed in this action is \$1,025, for goods delivered to agents of Ewasaki Han in the month of April 1871. The defendant and Counsel for both parties to the suit are the same as in the foregoing case.

Mr. Hill begged permission of the court to hand in to the Counsel for plaintiff his reply in brief to the petition on plaintiff's behalf, summarising the grounds of the defence.

Before commencing the case Commissioner Hannen admonished the witness to be careful in view of the conditions under which he would make his deposition.

I am a merchant tailor in Kobe and a plaintiff in this action. I remember in April 1871 Yoshida Zenzo and Taraiya Mangiro came to purchase goods at our store. They addressed themselves to the banto. They said they wanted any kind of goods we had on hand, for the Ewasaki Han. Yoshida Zenzo told me that he was produce agent for the Ewasaki Han. They came together and Mangiro introduced the business they had in hand. I told them that I had some flannels, as well as the price. They made an offer which I accepted; they said they were not prepared to pay cash. They accordingly gave me a contract with the seals of Yoshida Zenzo and Taraiya Mangiro attached to it. They then left. I believe the preliminary contract was written by Zenzo. I told my banto to make every inquiry about the seals of Yoshida Zenzo and Taraiya Mangiro, and told him to inquire about their responsibility whether they were empowered to act for the Han. The inquiry was made from the bantos of other merchants. It was satisfactory; and we learned that Yoshida Zenzo had already purchased goods on behalf of the Han from other parties. I took the contract myself to Messrs. Hall and Holtz, and they told me, as the reply of their banto, that it was the seal of the produce agent, but that I had better get the seal of Yamasaki Shōzo, a higher officer of the Han, attached. I told my banto that I would not make a contract unless the seal of Yamasaki Shōzo was also attached. The second or third day they returned to my office with the contract complete with the exception of the number of yards of flannel and the price. It was already executed; but I would not complete the contract without the seal of Yamasaki Shōzo. Two officers afterwards came with Zenzo and Shōzo, price was arranged as well as the number of yards. The contract was read out to Yamasaki Shōzo and translated to me. The seals were all now attached, except the seal of Yamasaki Shōzo. Yamasaki Shōzo then had a paper with writing on it attached to the contracts and stamped it. [Contract handed in]. That is the contract, marked A. I asked them to wait in the office until I had verified the seals on the contract. I was informed that the seals were those of Yamasaki Shōzo, Yoshida Zenzo and Taraiya Mangiro. The seals were also verified at the Custom House. There I was told that they were those of the Ewasaki Han. I then executed the contract, for I was perfectly satisfied. I was paid in cash \$163.75 cents and the goods were delivered. I gave them an invoice of the goods and a receipt on it for the money paid. They then handed me the contract. I was to be paid the balance \$642.75 cents on 24th July, 1871. They failed to pay the balance when due. I made inquiries and was informed that Mangiro and Zenzo had gone two days before to Osaka. The Consul recommended me to apply to the native authorities. There I went and saw Asahi Kwaisuki. The judge officer took a copy of the contract and said he would make inquiries. He then told me Zenzo and Mangiro were absent, but that he would summons them as well as Shōzo. They were, I believe, summoned. The next day I went again. This same judge told me that Zenzo was a bad man, and had made many contracts with other merchants, and that the authorities were seeking for him, Zenzo had sufficient property to satisfy the claim, and I was recommended to sue him. I sued Zenzo as surety, because the principals were absent. Mangiro was summoned. After several complaints made by me he did appear at the Custom House. He was accompanied by four or five officers of the Ewasaki Han. After the inquiry, the judge proposed that Mangiro should pay \$143.75 cents within ten days and \$100 per month until paid. I agreed to this, provided that Mangiro's property was held as security. On the next day, a contract was executed and handed to me to that effect, (including interest at 1½ per cent). I never agreed to substitute Mangiro's contract for the Ewasaki Han contract. I viewed this as a supplemental contract on behalf of the security, by no means intended to lessen the claim against the Han. I gave up the original contract when the new one was given me. I left the original contract in the hands of the judge; because I fully believed that he would see the new one kept. On the failure to keep the new contract, I demanded and obtained the original contract from the judge's office. Mangiro's house was ordered to be sold within five day's time but the next day he paid the full amount due \$143. He paid nothing more. I then complained to H. M.'s Consul. The Consul, Mr. Gower, went with me to see the native authorities, by whom the claim was admitted to be a just one. The claims of three other merchants in town had been paid already. These contracts were all made by Zenzo, I learned on inquiry. The balance of my claim still due is \$500. I claim interest on this sum at the rate of 2 per cent from the 24th July, 1871, until paid, also on \$143 from the 24th July to August, same year. I claim in addition \$1000 for other expenses. I also claim legal expenses.

Cross-examined by Mr. Hill.—The preliminary contract was translated to me by my banto. The substance appeared to be satisfactory. In the body of the contract Zenzo was mentioned as the produce agent of the Han. I had never previously dealt with Zenzo or the others mentioned in the contract. Yamasaki Shōzo I took to be the residence warden. I am sure that it was Shōzo, I learned so from various sources. I was most particular in making the contract. I neither read or write Japanese. When the contract was first brought to me, the latter part was wanting. It is the portion marked with a red line which I first saw. The seals were not affixed to the portion included in the red line in my presence.

It is the latter part surrounded by a double red line, which Yamasaki Shōzo attached to the original.

Court adjourned till 2 o'clock.

Cross-examination resumed:—The piece of paper attached I cannot say for certain to have been affixed before or after the contract was brought my office. I believe that the whole of the document as it now is was translated to me. That is the first contract I have made with Japanese. Shōzo took the paper marked with a double red line and gave it to Zenzo, who attached it to the contract, Shōzo then stamped it. I am as sure as of any thing done in the contract that I saw the stamp you point out attached. The small piece was attached and stamped at my house. It is the only one I remember being attached. I did not take the paper in my hands. I observed the stamp on the back of the document. It was affixed at the same time. The three parties to the contract had stamps. The stamp was about two inches long. The impression was made in Japanese ink. There are three seals. I observe now that the contract is made up of four pieces of paper. I am certain that the stamp at the back joining the larger and smaller pieces was affixed in my presence. I cannot recollect whether one or two persons stamped the back of the document. I never noticed the stamps affixed on the joint in the middle of the document surrounded by a single red line until my attention was called to it at the Custom House. This was the first time my attention was drawn to the fact of their being there. When the contract was handed over to me I did not examine the stamps, my banto examined them. I should not have noticed any difference in the stamps. I was positive at the time that the seal in the double red line was different to those in the single red line, from having examined it myself. I was also positive that there were three distinct seals on the paper. On the preliminary contract I first made inquiries as to the seals, but I did not compare them with the seals on the paper surrounded by a single red line. I believe I had the document in my hands before it was finally executed. My banto and the merchants, I have mentioned, assured me of the authority of the seals. I did not make any inquiries about the seal purporting to be Shōzo's, until the contract was handed over to me. The goods were delivered on the same day but after I had made inquiries about the seals and the authority of the persons. I noticed all the seals on the document before I took it to Messrs. Hall & Holtz. It did not occur to me to ask the reason for putting the seals on the back. I deposited the documents in the hands of Messrs. Hall and Holtz for safe keeping. I cannot say whether my banto knew any of the officers previous to seeing them at my office. Considering the distance of time it is difficult to remember some of the items. I have no copy of the second contract. I gave it up when I got back the original from the judge officer. I keep regular books—at that time a day book, a cash book and a ledger. I believe that when I sold the goods I made a memorandum in my day book, I have not got my books with me, I made no entry as to the second contract. On the 26th July I wrote to the chief police officers, Kobe. It was in consequence of that communication that the case before the Kobe authorities was commenced [Letter produced and handed in to the Commission.] The conditions awarded by the judge were made on the morning before the contract was executed.

Cross-examined: Between the time when payment fell due and the receipt of the second contract, I made many visits to the Foreign Office. On the first occasion the judge took a copy of my contract. When Mangiro was first brought forward there were persons present, who the judge told me were officers of the Han. It was on the day before the second contract was made. The judge said that Zenza had escaped, and that I must look for payment to the security, Yoshida. Zenzo could not be found. I returned next day; to receive a new contract. Mangiro was present, and sealed the contract, on the last day of the Japanese sixth month, 1871; the day I receive it. Nothing was said about Yamasaki Shōzo, when Zenzo was examined. The judge had said previously that Yamasaki had made a false contract. He believed it to be false,

because the seal of Yamasaki was not on the joining of the two sheets of paper. My claim was first made against the Iwasaki Han about the 24th of July. I could only claim against the prince and security. I consider the prince had sealed the contract, through his servant. I was not familiar with the Han seal, nor did I make any inquiries as to the seal. Considered Yoshida and Yamasaki's seals collectively and separately to represent the Ewasaki Han. Did not consider any high officer authenticating a document with his seal bound the Han. I only considered that Yomasaki and Yoshida would bind it. The second contract was returned to the native authorities about the 4th or 5th of the Japanese eighth month, 1871. The document you produce is a copy, but I know nothing of it. The Consul may have had a copy. As far as I know, the original contract was left in the hands of the Judge officer. The original was signed at my office on the 24th April, in the forenoon. It takes about two hours to go from Kobe to Osaka per steamer.

The counsel for the plaintiff declined to re-examine, and asked the court whether they would have any further questions to put him, requesting that he might be allowed to leave for Kobe on urgent private affairs per next steamer.

It was suggested by Commissioner Tamono, that it would be advisable to adjourn the Court to consider the evidence of the witness before such permission were granted.

The Court accordingly adjourned. Shortly afterwards Commissioner Hanneu informed the counsel for the plaintiff that the witness' presence would be no longer required. He would, however, be required to make an affidavit on the evidence given before the Commission in his case before the Consul, prior to leaving.

The Court then adjourned to two o'clock.

On the re-assembling of the Court, Mr. Ness craved permission to bring forward another witness *in re* Cabeldu, before proceeding with *Scott v. Tonami Han*. His evidence would be short.

Accorded after some discussion.

Mitani Sasuki examined by Mr. Ness: About three years ago Mr. Cohen transacted some business with the Ewasaki Han. The officers I saw were Yoshida and Yamasaki. I saw Yamasaki two or three times, but Yoshida only once. There was a go-between between me and the firm when I transacted the business. There was a party, Temaya Saik, who asked me whether they could sell him any goods. I thought he meant on behalf of the Han.

Cross-examined by Mr. Hill:—I do not know of my own knowledge that Yoshida was a public officer of the Han, I was told by the go-between. The same party told me that Yamasaki was the chief officer of the Han. I know nothing whatever of the contract between Mr. Cabeldu and the Ewasaki Han.

The counsel for the defence, on the termination of this witness's evidence, asked for an extension of ten days to prepare his answers to the petitions *in re* Howell (two cases) & Blakistone.

In consideration of the shortness of the time intervening, the request was granted.

The Court then resumed the hearing of the case pending between J. M. Scott and Tonami Han.

The first witness examined was the plaintiff's banto.

Kashichi, examined by Mr. Ness: In regard to the purchase of the goods, I first saw Idzimeya. He asked me whether we had any goods for sale. They were wanted for some daimio; but the name was not mentioned. In reply to Mr. Scott as to whether it would be safe to sell the goods, I replied that I would inquire whether he were really a daimio, and whether he wanted to buy. The Produce Department at Tonami Han wished, it appeared, to purchase goods for Osaka. When Satsumiya came to buy goods, I replied that my master must make inquiries, and that I did not know Tonami Han. I did this of my own accord, without asking Mr. Scott. Two or three days afterwards three officers came, and asked that goods might be sold to them; that they were really for the Tonami Han. Satsumiya introduced the officers, saying, "These are the officers of the Tonami Han." This was about the latter part of the 11th month of the 4th year Meiji. In answer to inquiries, he said that Nakayama Otonoski was inferior in grade to the other two officers. Nakayama said that the goods would be paid for, part in cash and the remainder in four months. I did not ask as to the authority of these men, nor did I see their seals. I did not see in Nakayama's possession anything which indicated that he or the others were high officers of the Tonami Han. Sonai produced something covered

with paper, stating that it was the seal of the Tonami Han. He said, "If you doubt my authority, inquire at the Saibansho." I know Komeya Sakube very well; also Zakoya Yasheji. Komeya and Zakoya accompanied the officers of the Han. It was Zakoya who told me that a steamer called the *Rising Sun* had been bought by them, and that they were really officers of the Tonami Han. Sakuba, in regard to their authority, said that he could not answer immediately, but would make inquiry. He inquired at the Custom House, and the reply was to the effect that they were really officers of the Tonami Han. I told my master this. Subsequently, I recommended my master to inquire at the Custom House. I remember these three men coming with their broker to buy goods. There were three officers and Satsumya, and by them the purchasing of goods was settled on. (Document, subdivision of A, marked O, handed to witness.) This is a copy, Tanaka said, of the contract for the purchasing of goods for the Tonami Han. It was settled the next day. I did not recommend my master to go to the Saibansho to inquire as to the authority of these officers. He went to the Saibansho, I know. As far as I am concerned, I was fully satisfied that these men were officers of the Tonami Han. The contract was settled finally. Those present when the contract was executed were: Satsumya Sasaki, Harimaya, and the three officers. The contract of which I am speaking was the original one. There are the seals of Harimaya Okonoski, Hara Genshiro, and Tanaka Sanai affixed. All the parties signed the document, except Satsumya. Before delivering the goods, I recommended my employer to inquire at the Custom House concerning these men. After he came back, he said, "All right"; and the goods were delivered. \$200 were paid in cash; but goods to the value of \$1,650 were delivered. The invoice delivered stated that the goods were for Hyashi Totsogoro, an under officer of the Tonami Han. It was also made out to an officer named Takabataki. I understood at the time that it was not the goods actually which were to be sent to Tonami Han, but that money was realised from them when sold. All the officers of Tonami Han stopped at Michi's Hotel. I did not see them there, but the other banto did. None of these officers came back after the purchase. (Document marked P, subdivision of A, handed to witness.) I do not know who brought that document. I saw the original on the writing-table of my employer. I believe that it was torn up by him. No one was present. I read it myself.

The Court adjourned at this point in the evidence until to-morrow.

SEPT. 10.

On the re-assembling of the Commission, the Counsel for the defence gave notice that he should require the presence of Mr. Scott's second banto from Kobe.

Kashichi, examination continued: It was the document marked A, subdivision O, which was torn up. It was one for \$2,000. It was a provisional contract, not the real one. It was a Contract to ensure the payment of \$400, on the completion of the real contract. It should have been sent in, but this was forgotten; it was, therefore, torn up as waste paper. Zayokeji was not the agent of the Tonami Han. He put his seal to the contract when the goods had been delivered. The provisional contract was made in the first month of the fourth year of Meiji. Sakube's seal was attached to the original of the second contract for \$2,000 before the delivery of the goods in question. The arrangements were made on the previous day. I did not see the provisional contract sealed. I believe there was an interval between the first and second contracts. Satsumya and another came back to the office. The \$2,000 contract was executed by Tanaka Sanai, Hara Genshiro, Okonoski (Finance Minister), with Sakube as witness, and three others, brokers. Sakube did not appear once in regard to the transaction. When the \$400 were paid, Sakube was not present. Tanaka Sanai was the first to broach the question. Okonoski said that he had come to pay \$400, according to contract. They paid the money, and took delivery of the goods, of which an invoice was given to them. No contract was entered into at that time. On the day when the goods were handed over, there was a complete contract made. I cannot say where it was written; they brought it with them. I think it was Tanaka Sanai who wrote it. The seals were attached at the office where the goods were delivered. Sakube's seal was already on it. The seals of the three officers, Tanaka, Hara, and Nakayama, were attached when it was executed. I saw it done. It was made out in the names Hyashi Tatsogoro and Takabataki Tomonoshin, officers of the Tonami Han. The goods were delivered to the officers of the Tonami Han, and taken away by the coolies. I was present at the Saibansho when a complaint was pre-

ferred. The officer was Kanasawa. At the investigation, the parties to the contract were asked whether they had made the contract in question, to which they replied that they had, on behalf of the Tonami Han. This is the contract for the \$2,000. [Document marked Q]

Cross-examined by Mr. Hill: The other banto made those copies. (Documents handed to witness.) I gave the instructions, and I am familiar with his writing. They were all copied from original documents, stamped in the same manner. The original of the contract marked O was destroyed after the complaint was made. The document you show me is in the second banto's handwriting. This letter, I know, was written by the second banto, although I cannot very well read the writing. It was written on the 22nd day of the 12th month of last year. (22nd Dec., 1872.) I did not give instructions for the writing of it. On the original destroyed, there were the seals of Tanaka Sanai, Harimaya Kiunoski, and others. Copies of the other contracts were in my employer's hands, and therefore I do not know what became of them. Generally speaking, there are two copies of each made—sometimes one. The two letters marked M and L, I knew of when they were written. I gave instructions that they should be written. (Document handed in.) G and H were also written by the banto. (Handed in.) The document marked G is the one which I saw on my employer's writing-desk. That also was written by the same banto. (Document handed in.) I believe that two copies—one for \$1,650, and the other for \$2,000—were put in one or other of the two letters addressed to the Okurasho. It was the second banto who sealed the letters and sent them off. I was consulted by my employer about the contents of the contracts or letters on which there are any pencil marks. It was then he or the second partner made them. I cannot speak specifically concerning the red pencil marks you allude to. A copy of O was made by the banto. The originals of K and H I have seen, but where they are I cannot say. Copies were made. The original of G I have not seen. I think the seals were not stamped, but written, the same as on the copy. Some time after my employer said that he had received \$200. I did not see the money. I cannot say whether he had received the money from those who were parties to the contract G. I believe that my employer told me that he had received it from the Custom House, when I was told to have a copy made. The other three copies were made at another time. They were made for laying a complaint before the Consul and the Custom House authorities. Concerning the originals I know nothing, only that I gave them to my employer.

The Court now adjourned to two o'clock.

Cross-examination continued: I have had charge of the original contract for \$2,000, but have not had the custody of the original for \$1,650, and the final one for \$2,000. I recognise this latter document rather by the writing inside the seals than anything else. (Document marked 2 handed to witness.) The documents marked H and K were those, I think, which were sent to the Okurasho the year before last. The provisional contract was copied from an original, sometime before the eighth or ninth month of the year Muma. The original was afterwards destroyed. Of the four, the only one copied from an original contract is that marked G. I have read the provisional contract for \$2,000, and the copy for \$1,650, and saw them stamped. In one contract the signature of Sakube was upon it, but on the other, for \$1,650, that of Gakoya Yaheji was wanting, when the goods were delivered. I afterwards took this latter contract of my own accord to Yaheji, for his signature. I handed it over to my employer when all the seals were complete. My employer was not in the room or office at the time. The making of this contract was left to my entire charge. All I had to do was to report it to him. It was about fourteen days before the temporary contract was brought to my employer's office. Satsumya and another were the chiefs of the transaction. I had entire charge of the contract for \$2,000. Komeya Sakube was the witness or guarantor. The receipt for the goods on delivery was signed by Ishta Totsogoro, and Tatabaki Tomonoshin. When the documents marked B and O were handed to my employer at the Custom House, I was not present. I have seen them before in his office. Harimaya Kiunoski and Tanaka Sanai produced them, as the terms on which the adjournment had been accorded by Mr. Scott. The seals were affixed to the document when they all got back to my employer's office.

The Court hereupon adjourned to Friday next, at nine o'clock.

SEPT. 12.

Kashichi, cross-examination continued: The document produced marked A, I recognise as having been written by the second banto. I heard afterwards that Harimaya transacted business for the Tonami

Han. I did not go with my master to the Custom House to have the final contract for \$1,650 examined. I never saw my employer mark the contracts with a red pencil. I never saw any stamps placed on the contracts marked B and C, nor have I ever heard anyone acknowledge the stamps were his.

In consequence of an apparent disparity in the evidence, a long explanation ensued between Mr. Tamono, and witness.

Mr. Ness suggested that it would be more in accordance with usual procedure if these questions were asked through counsel. He was completely in the dark as to what was passing.

A suggestion to this effect was made by Commissioner Hannen.

Cross-examination resumed:—Mr. Scott has not, since the adjournment of the Court, the day before yesterday, told me that my former testimony in regard to B and C was wrong; nor has anyone told me that my evidence differed from that of my employer's. As I have already said, I have seen those documents before. I know nothing of the execution of this contract, however. It was only the original contract which was left entirely to my charge, and which I saw sealed. I did not accompany my employer to the Saibansho to have B and C sealed. I first saw these contracts being sealed when copies were being made. I told my master what the names were. I told him that one name and a seal were wanting, but he said that it did not matter for the moment. When the copies were made, I thought they were for the purposes of the present action. I was not told so. Copies were perpetually being made, so that I cannot say exactly when these were made. I do not think the officers were all present whose seals are attached. I remember that I gave my employer a rough idea of the contents. The conditions Harimaya Kiunoski and Komeya Sakube referred to, when they spoke of having obtaining certain conditions, were not mentioned to me. I suppose they referred to the present contract, when they spoke of delay. I knew that the balance of the first contract was due at the end of the third or beginning of the fourth month. On the prosecution, at the time of the claim, I did not hear Mr. Kanasawa tell Mr. Scott what was to be done or what would be the result of the claim. I did not hear anything of it from my employer.

The banto, at the request of Counsel for defendant, was here examined before the Commission touching his knowledge of English, and specimens carefully taken down. The results obtained were not very brilliant.

Re-examined by Mr. Ness:—I understand my master's Japanese. He knows about as much Japanese as I know of English. Neither my employer nor any one else has asked me to say here what is untrue. My employer, from his office, cannot see all that takes place in mine. The two offices are separated from each other by a partition about as high as my breast; the rest is open grating.

Court adjourned to two o'clock.

Re-examination continued:—I do not recollect in what part of the store Mr. Scott was when the original contract was signed. I cannot say whether my employer was looking on or not. My employer never told me that he had relieved Nakayama of his liability.

Mr. Okamura, examined by Mr. Ness:—I was acting vice-governor in Hiogo, in 1871. I have heard of Scott's claim against Tonami Han. It was brought to my notice by the clerk, Kanasawa. I and the acting governor sent a despatch to Yedo in regard to this claim.

Mr. Ness demanded the original of the communication referred to. (Letter produced, with the enclosures.)

Examination continued:—That is the letter which was sent on that occasion. The report does not purport to come from the Gon-Sanji, Dai-Sanji and Sho-Sanji, but from two persons, the Gon-Sanji and Dai-Sanji. It is dated the 5th day 9th month, 1871.

Cross-examined by Mr. Hill:—These are the copies of bonds which are mentioned in the letter as enclosed. They are not called enclosures in the letter. There were five documents altogether in the letter (pointing out the documents). I did not enter into the details of the case. I was merely told that so much money was owing and referred the parties to the chief officer. I know nothing of the execution of the bond for \$1,000, nor, of the one for \$2,050, nor of this one for \$4,656.

Mr. Ness signified that this closed the case for the plaintiff. He had no further witnesses to call.

Mr. Hill, for the defence, called Mr. Kanasawa—My position at present is Gon-Chiuroku; in 1871 I

was complaint officer in the Hiogo Ken. I know something of the first part of Mr. Scott's case, but I was not there when the latter part was decided. The first thing I knew of it was a communication setting forth Mr. Scott's claim, sent in to me through the Consul. I did not decide the case, for while it was in suspense, the two parties came to an amicable arrangement, and the complaint was withdrawn. The defendants in this case were Tanaka Sanai, Harimya Kinoski, and Komeya Sakube; at least they are those who came on this occasion. The copies of bonds I speak of, as coming from the British Consul, were after the friendly arrangement, labelled and put aside for future reference. Scott brought the originals of these documents to the Foreign Office, but I did not take charge of them. They were merely brought to verify the copies. The papers were brought, probably, two or three times to the bureau. I gave instructions that, after the arrangement came to, the original documents should be given to Tanaka Sanai in exchange for the new ones. There were certainly new bonds drawn up; but where, I do not know. I did not inquire under the circumstances; nor did I see them after they were completed. I do not recognise the documents you produce in the least. [Documents marked B and C.] I cannot say whether the new arrangement was ever fulfilled. When the arrangement was made, Tanaka and Harimya were present. I also think Komeya and Zokoya were there, Scott and his banto were there also. I don't know of an interpreter on the occasion; it is now some time ago. The private arrangement was made to elsewhere, so that there was really no need of one. There was a communication sent in to me from the Consulate, informing me of the new arrangement on the following morning. I heard of the action pending only after the laying of the complaint. Okaki Sakumon was not connected with this affair. He was only there, as well as I can remember, in order to prevent those who should sign the document from leaving. I know nothing of the social position of these parties. The fact of their being Tonami Han samurai was only made known to me by the plaintiff.

Cross-examined by Mr. Ness:—When they first borrowed the money, they said that they had done so on their own private account.

Mr. Ness here gave notice that he should require the originals of the bonds, said to be in the archives to be produced.

The Court here adjourned until Monday morning next, at nine o'clock.

SEPT. 15.

Kanasawa, cross-ex. continued:—As to the authority of the three officers, enquiry was not made at the Saibansho from me. Scott brought a complaint against the three Tonami Han officers and the guarantee. I have no details of what took place. On the 9th month, last year, I sent sundry notes I had made on the occasion to the Consul. I changed office in 1871, and know nothing of this report to the Governor and Vice-Governor, which was made three months after. When the amicable arrangement was made, I told the Governor that he might write to the Consul that the case had been settled. [Letter to Consul produced, marked Z.] No one appeared to contest Scott's claim on the part of Tonami Han. No document was drawn up to release Otonoske while I was in office. I certainly saw the first contract. The documents say the goods were purchased on account of Tonami Han, but the officers told me they had falsely stated that they were for the Han. Therefore I treated the matter as a private debt. I am sure I told Scott this, as he was constantly coming to me. I do not remember distinctly about the proceedings, but as he was in constant attendance, I am sure I must have informed him of the state of the case. I believed from the statement of the officers that they were not acting for the Han. I did not think it worth while to go deeply into the question. I think that the persons who signed the first contract should pay. I did not know that Genshiro, Sanai, and Otonoske were officers of the Han. I knew that they were samurai. I learnt this at the time of the investigation. Although I knew that they were samurai, and that they had acknowledged themselves guilty of fraud, still I believed them when they said that they had no authority to bind the Han. I considered at the time they were punishable for theft.

The witness was next asked whether he had taken any steps to punish Genshiro, Sanai and Otonoske for the fraud of which they had, according to his showing, acknowledged themselves to be guilty.

Mr. Hill objected to the question on the ground that it was irrelevant, and that it was in the nature of an inquiry into the witness' conduct in his judicial capacity.

Mr. Ness urged that it went to the credibility of the witness.

Commissioner Hannen explained that according to English law the question could not be objected to, and ought to be answered.

Mr. Tamano was of a contrary opinion. He considered that it was not the judges official conduct which was under investigation.

Mr. Hill applied to the court to have his objection to the question noted.

Commissioner Hannen declined to allow the Counsel's application. He further intimated that according to the rules laid down for the guidance of the Commissioners, it was for them to decide on the admissibility of the evidence; and that in the event of disagreement between the Commissioners the evidence must be accepted.

Mr. Tamano asked for an adjournment to consider the question, which he urged was of serious import. The question to his mind seemed to suggest collusion on the part of a public officer. He objected emphatically to the request of counsel for the plaintiff.

In consequence the Court adjourned to three o'clock.

On the re-assembling of the Commission: Commissioner Hannen said that the Commissioners had failed to come to an agreement, and that, in view of the rules laid down for the guidance of the Commission, the question would be put.

Cross-examination resumed:—I took no steps to punish the officers for their fraud. I made no inquiry concerning them. I found out that they were officers of the Tonami Han from the investigations which took place.

Mr. Ness at this point handed to the court the memorandum made by the witness at the time of the examination marked A. A.

Documents marked B. B. C. C, and D. D. were also handed in by Mr. Hill.

Saiki, examined by Mr. Hill:—I am an officer of the 8th rank in the Okurasho. At the time of Scott's application I asked him for copies of original contract with Otonoske's seal on it, but he could only show me copies of second contract. In consequence I wrote him a letter declining to have anything to do with the matter. Mr. Scott replied to me. I went to see Mr. Scott about the original documents. I was to report to the Okurasho if I found all the documents in order. I had no authority to settle the claim. I made no promises to Scott.

Cross-examination by Mr. Ness:—I never saw the originals of the first two contracts. Scott told me to inquire for them at the Saibansho. At the Saibansho I was told that they had not got them. I was simply told they were not there. I told Scott this. He then said, "they are in the Consul's hands." I saw Kanasawa at Kobe but I did not ask him about them. I did not know that he had investigated the matter. I saw copies of documents afterwards at the Saibansho. I was shown three copies, but I cannot say whether they were made from originals or not. I did not say that if Scott would produce document with Otonoske's seal on it, the Government would pay the claim. I never wrote such a thing to Scott. I merely said that if a document bearing Otonoske's seal could be produced an investigation would be made by the Okurasho. If the seal had been forthcoming I should have reported the fact and asked for instructions. Scott asked to have his case treated like Twombly's. His contract had Otonoske's seal and was I believe paid by the Government. Scott's second contract of which he showed me original had not. I told Scott of this. I don't know whose seal was on Twombly's contract. Otonoske's title was that of finance officer, and therefore I insisted on seeing his seal. Otonoske may or may not have abused his authority, but as he was an officer of the Tonami Han I insisted on seeing his seal. I cannot say whether Twombly's contract was paid. I have heard that Twombly's claim has been paid.

At this stage in the proceedings the commission adjourned until Monday next, the 22nd inst.

### In H. B. M.'s Provincial Court.

Before N. J. HANNEN, Esq., *Assist. Judge*.

September 11th. 1873.

SMITH & Co. v. BLACK & Co.

The counsel for the creditor in this case, Mr. Ness made an application that Wm. Black should be ordered to execute an absolute assignment of his share in the firm of Black & Co., and to satisfy the judgment debt and costs in this case, declining to accept an assignment subject to an alleged previous one, which counsel furthermore urged was a fraudulent one.

The debtor stated that he had already made an assignment of his share in the business to Wm. Wilkins,

in favour of the creditors, but that the assignment was not yet registered, nor had he brought it with him.

Mr. Ness submitted that the assignment ought to have been produced, and ought, moreover, to have been made in favour of the whole of the creditors.

His Honour granted the application, adjourning the summons *sine die*, and ordered an absolute assignment to be made.

Below we give the official deposition of Captain Perkins of the *Admiral*, the loss of which we reported in our last. We learn from the Captain that the fishermen and sailors near the place where the vessel struck had gathered together, and when the six men were washed overboard by the sea, plunged in to rescue them, though the sea on the beach was very heavy. After leaving Singu, in company with the interpreter supplied by the Shosakwan of the place, they skirted the coast till close down by Oosima, into which harbour they ran by boat. The Japanese Captain of the *Kaiso-maru (Elgin)* very kindly supplied Captain Perkins with what European stores he required. From thence they came by "Kago" to Wakayama. The country is very wooded and the roads mostly mere bridle paths. Occasionally there are places which are in a state of high cultivation, under grain and cotton. The former was all level with the ground. It rained very heavily from the time the party started from Oosima till they reached Wakayama. Here there was a plentiful stock of every description of supplies required by a foreigner; in fact the stores seem to have proved as well stocked as those of Osaka. From this place, the journey was performed in jinrikishas, an official from Wakayama being added to the party. The fields and gardens seemed to be in much better order between that place and Osaka, and there were signs of very careful cultivation.

The utmost care was taken of the rescued crew, both by the officials and the ordinary people at Singu, and Captain Perkins states that during the whole trying time no better care could have been taken of him than that taken by the escort and the other officials he came in contact with.

The steamer *Augusta* left for the scene of the disaster at 5.10 p.m. yesterday, with the Agents of the parties principally interested.

The Captain made the following statement:—

I, James Fisk Perkins, a Citizen of the United States of America, and duly appointed Captain of the Brigantine *Admiral*, of Shanghai, China, knowing and appreciating the importance and solemnity of a deposition, do depose and say as follows: To wit.

The American Brigantine *Admiral*, of Shanghai, of 261 tons burthen or thereabouts, cleared from Yokohama, Japan, on the 15th day of August, 1873, bound to Kobe (Hiogo), Japan. She was consigned to Messrs. E. Fischer & Co. of the latter place, and had on board, as cargo, Railroad Iron, Curios, Furniture, Glass, &c. &c. as will appear from the Manifest, at present in the hands of the said E. Fischer & Co., Hiogo.

On the 21st August, finding it impossible to beat to the South-West against the strong current setting to the East-North-East, I changed the course of the vessel to North-East, making the Bay of Kaneda, and anchoring on the afternoon of the 21st August. On the afternoon of the 22nd, there having sprung up a favourable wind from the South-East, the vessel was got under way, and stood to the South-West, but the wind again haul-

ing to the South-West and blowing strong, found the vessel driving to the East-North-East. I for the second time changed the course of the vessel, running back and anchoring in the Bay of Kaneda. On the 26th, at 9.30 a.m. the vessel was got under way and beat to the South-West. On the 27th, at about 7.30 p.m. the wind commenced blowing from the North-East; increasing during the night, the following day (28th) it became a heavy gale. At 7 p.m. of the 28th, finding it impossible to proceed, the vessel was hove to, heading South-East. During the night the wind hauled to the South-East, with heavy gale and high seas. At 7.40 a.m. of the 29th land was sighted, bearing West-North-West. Sail was made, and we attempted to beat to windward. 10 a.m. found the vessel driving on the shore. The masts were cut away and both anchors were let go in 10 fathoms water. Shortly after this the port chain parted and the vessel still continued to drive on shore. At 11 a.m. she struck, breaking her back and filling with water immediately, the sea throwing her high on the beach at Singu, a point some 30 miles from Oosima.

Just before striking, a heavy sea boarded the vessel, washing overboard the Second Mate, Cook and four Seamen, also the life-boat. The Second Mate, Cook and one Seamen were washed on shore, and rescued by the Japanese, the remaining three Seamen, by name Thomas Lindsay, William Fortman and S. Williams, I suppose to have been drowned, as they were not found up to the time of my leaving Singu, although efforts had been made by the Japanese and myself to discover them or their remains. On the 30th, the *Admiral*, was about fifteen feet above high water mark, on the beach at Singu. At 2 p.m. of the 30th I left Singu in chairs for Kobe, to obtain relief and assistance. I arrived in Kobe (Hiogo) on the night of the 5th September. When I left Singu the crew were as comfortable as the circumstances would permit. The Japanese, both officials and private persons, were unexceptionably kind and hospitable, and rendered both myself, my officers and crew every assistance in their power.

\* Given under my hand and seal, this sixth (6th) day of September, A.D. One thousand eight hundred and seven-threes.

[L.S.] JAMES FISK PERKINS.

Witness to Signature—DANIEL TURNER.

## Yokohama.

It is with feelings of most poignant sorrow that we have to announce the death of Mr. William Marshall, of the firm of Macpherson and Marshall, which took place suddenly this morning, at his place of business No. 58 in the Main Street. He was one of the very early arrivals in Yokohama, after the opening of the ports, and from the earliest days was always one of the most respected of the foreign residents; his house, his heart and his hand, were ever open to entertain those who knew him socially, and to advise or to aid those who went to him for counsel or assistance. His time was ever at the disposal of his fellow residents, in any matter of public importance, and he was equally liberal with his purse and in his opinions. Looking back in the period we have known him, we do not call to mind any one thing that can be alleged in his disfavour, whilst the memory is crowded with instances of his constancy, his zeal for everything that tended to the good of the settlement, and his genuine kind heartedness. Every one

who has known the settlement sufficiently well to become acquainted with its members will mourn for him and sympathize with his widow and children, to a far greater extent than it is possible to express. We think we do but record the universal feeling when we say, that though we still have good and sterling men left among us, the first and best is taken away. There is not one who just fills up the gap caused by his removal. We do not presume to represent him as a perfect man, but we do say he was a good citizen, a staunch friend, and an honest man.

## INQUEST.

On Thursday the 4th inst., an inquest was held by H. S. Wilkinson, Esq., Vice-Consul, as to the cause of the death of Wm. Marshall, Esq., Merchant, of this settlement.

The following jurors were sworn:—T. Thomas, J. H. Brooke, and W. G. Howell, Esqrs.

The jury having viewed the body,

F. W. White, one of the assistants in the employ of the late Mr. Marshall, deposed: The first I heard of this event was when the godown keeper's child came to us and said he had heard strange noises in the water-closet. I went immediately to the spot, and, finding I could not open the door, called out "Mr. Marshall." Hearing no answer, I knocked the window in. When I entered, I found the deceased lying at full length on his face. I then got assistance, and had him carried into the house. I at once dispatched coolies for Dr. Siddall, and went to the Dispensary myself to see where I could find another man.

The Vice-Consul here asked if the jury would wish to examine the witness.

By the Jury: I did not see any movement in the body at the time of finding it. I was with the deceased until ten o'clock. I saw him lock his safe, and shortly afterwards he went out. He appeared to be somewhat depressed in spirits. It was about twenty-five minutes to eleven o'clock this morning when we burst open the door. The deceased's clothes were in perfect order. He must have entered the closet, closed the door behind him, and then fallen. The body, falling on the stone floor, did not make sufficient noise to be heard by those outside apparently. His feet were close to the door. The reported strange noise was not of long duration. He had a mark on his nose and forehead, where he had fallen.

The next witness examined was—

Dr. Louis Klotz, who deposed:—I live in Yokohama. I arrived at the deceased's residence about eleven o'clock this morning. I was taken into a large room. There I saw a man of about 50 years of age. He was quite dead, slightly warm. There was a scratch on his nose. There were no signs of vomiting either on the clothes of the deceased or on the ground. He had the appearance of having died a rapid death, most likely from apoplexy. This is as nearly as I can judge, and I think correctly, without having made a *post mortem* examination of the body. I judge from the condition of the hands, face, eyes, &c., that he died a natural death. I recognise the body as the one I called there to see this morning.

The jury, after a short consultation, gave the following as their verdict: "That the deceased died suddenly from natural causes."

## More about Inouye.

(From the *Shimbun Zasshi*, No. 134, 8 Month)

## JUDGMENT.

You being then in charge of the Government treasury, having joined with Shibusawa in writing a memorial to the Daijokan on matter of national policy, did grossly violate the laws of the land by publishing the same in various public newspapers.

Therefore, you are condemned to serve in the chain gangs with common coolies for forty days and after that to be confined as a prisoner in your own house for other forty days.

Nevertheless on account of your rank you are permitted to commute the sentence of the Court by paying a fine of three rios.

TOKIO SAIBANSHO.

July 20th, 1873.

THERE WAS a time when we really thought aquatics were taking a firm stand in Yokohama; for eight years ago we were able to get up better sailing and pulling matches than we are now. We then got the length even of Ocean races—rather modest ones it is true, all of the competitors being open boat; and our pulling races were of a far more exciting character than any we have seen of late years. Yet we had no such pretentious craft in the sailing line then as we have now, and no better rowing boats. We have still, with one or two exceptions, the same men, and they have better boats, but for some reason or other there is little public competition, all the fun being kept to themselves except on the single Regatta day in each year.

On Thursday last at 4 p.m. a new yacht was launched in the Canal, which deserves especial notice. She is of 22 tons measurement, and is built for Mr. G. M. Dare by Mr. Oastler (Watson & Co.) on plans, lines and detailed instructions supplied by the celebrated yacht builder, Mr. Ratsey of Cowes. The lines are those of the most successful yawl lately produced, the *Corisander*; and any one who sees her must at once perceive that her racing capabilities, if properly rigged and well handled must be prodigious; but we have some doubts as to her being so well adapted for a mere pleasure yacht. Her model is very fine, and she will be very comfortably fitted for short cruises. Her dimensions are:—

Length over all, . . . . . 55 feet 1 inch.

„ between perpendiculars 48 „ 7 „

Beam . . . . . 10 „ 4 1/2 „

Her draught of water forward will be 4 3/4 ft. aft 7 1/2 ft. Her frame is of camphor wood crooks; keel, stern, stern-posts, dead-wood and garboard streaks of kiaki. Planking of hinoké. The fastenings below water line and sheathing are of yellow metal; and above the water line of galvanized iron. Her sails will be of American cotton canvas, double seamed, by Hiltz & Co., and the rigging—also by Hiltz & Co., of galvanized iron.

She is named the *Breeze*, and in welcoming her as a valuable addition to our Yokohama musquito fleet, we trust she may give great satisfaction to her spirited owner, and never succumb to any breeze that blows.

INTELLIGENCE HAS been received here, of the wreck of the American Brig *Admiral*, off Oosima, on her passage from this port to Kobe, with a heavy cargo of Railway Iron, &c.

Lot No. 76, Main Street, was sold on Sept. 8th at Public Auction by Messrs. Fletcher & Co. for the sum of \$25,200, to Messrs. Strachan & Thomas; we understand this is only half the amount paid for it eight years since by the late proprietors to the present purchasers.

ANOTHER SUDDEN death has occurred in our midst. Mr. Wilkie, a well-known and respected resident, died on Tuesday Sept. 9th, from the bursting of a blood-vessel. His partner Captain Robertson died from a similar cause a few weeks ago; and it is remarkable that his widow came out as Mrs. Marshall's maid seven years ago, and mistress and maid are widows within one week and both by sudden deaths.

THE NEW Custom-house is now nearly finished, and although some tricks have been played with Mr. Bridgens' original design, it is a building of great pretensions as compared with any other government buildings in Yokohama. The most unpractised eye, however, can discover how loose has been the supervision. The floors are only a few degrees better than a common Japanese floor, the boards roughly laid the workmanship bad. And this is only the least of the evils we perceive as we examine the building internally and externally. However there is a building tolerably pleasing to the eye, and its weakness will be discovered, as year by year the appropriations for repairs have to be made. The external effect is a good deal marred by the buildings on the same lot.

A FINE large building is about to be erected as a Town hall. It will contain one room 100 feet long by 50 feet broad, without a single pillar to support the ceiling. There will also be a tower 80 feet high, and in this tower a clock with glass faces 6 feet in diameter which will be illuminated at night. A bell of three tons weight will also be in the tower.

THE PRINCIPAL members of the Japanese embassy arrived in the *Golden Age* on the 13th instant from Shanghai. They landed about half past 9 A.M., under a salute from the Japanese and Italian men-of-war and were driven to the Okurasho, near the Railway station. Thence at noon they went to Mitsui's bank, where they dined, and by the 2 o'clock train they left for Tokyo.

We have not learnt by what misunderstanding, none of the foreign men-of-war but the Italian saluted. But it was through some mistake.

A FIRE broke out on the 14th inst., on the premises of Messrs. D. Nowrojee & Co., Navy Contractors for Bread &c., on lot No. 87 Yokohama. It was discovered immediately, and very quickly got under; but about a couple of hours afterwards it broke out again, and was again easily and effectually extinguished. It was well that it was so quickly discovered for Mr. Pestonjee and his employes, by means at their disposal on the premises, were able, by great activity to prevent the flames making any head, and when assistance came, as it did very quickly, there was not much to be done. Still much is due to Mr. Hohnholtz, who took an *extincteur*, Mr. Berger, Mr. Allen and several others who exerted themselves. The *extincteur* had no fair trial, as the fire was subdued before its arrival. The loss will not be very heavy,—perhaps some \$300 or \$400—which falls on the Phoenix Insurance Co. The origin was in some soot in the chimney catching fire.

A MEETING was held at the Chamber of Commerce on the 17th inst. for the purpose of electing a Chairman, and three members of the Committee. Members present were:—Messrs. A. J. Wilkin, Vice-Chairman, in the chair, Thomas, Jackson, Winstanley, Atkinson, Evers, Pistorius, Dell'Oro, Barlow, E. J. Fraser, J. A. Fraser, Johnstone, D'Iffanger, Abbott, Barnard, Van Oordt, Lane, Milsom, Brent, Conil, Dodds and Pearson.

The Vice-Chairman in opening the meeting paid a high tribute of respect to the late Chairman, Mr. Marshall.

The secretary then read the minutes of the previous meeting.

The members then proceeded to elect a Chairman. The result of the Ballot was, the choice of Mr. A. J. Wilkin for Chairman, and Mr. A. Winstanley for Vice Chairman.

The Ballot to fill up vacancies in the Committee caused by the retirement of Messrs. Greven, Spence, and D'Iffanger resulted in the choice of Messrs. Evers, Brent and Melhuish, the latter being unable to attend to the duties required, another Ballot ensued which 3 times resulted in a tie between Messrs. Dodds and Geisenheimer, when Mr. Dodds elected to withdraw his name. The Chairman then declared Mr. Geisenheimer duly elected, but should the latter gentleman not be willing to serve then Mr. Dodds would be elected.

The business of the Meeting terminated with a vote of thanks to the Chairman.

THE ship *Beemah*, Cap<sup>t</sup>. Blackstone, arrived on the 17th inst., after a remarkably quick passage of 104 days from Cardiff, and reports having sighted off the Bashees, a large wooden ship, with painted ports, elliptic stern, and a white wheel house, she had lost many of her spars, and the whole of her sails, with the exception of a mizen stay-sail, with which she was brought to under, Captain Blackstone reports having passed close enough to her to have seen any signals, if any had been made, but could not see her name as it was coming on dark.

#### The Height of Fuji-yama.

IT IS remarkable that such a mountain as Fuji-yama has never yet been exactly measured. Two attempts at it have been made lately, one by an English and one by a French officer, but they differ so widely that both are rendered doubtful. Although neither of the officers had all the appliances necessary, we are inclined to give most weight to the English computation as made upon what we consider more reliable instruments than the other. The French calculation if we remember rightly was based on two barometers of no special excellence, whilst the Englishman had instruments of particularly fine quality. We regret that though we have the measurements by the French officer we have not his name, which otherwise we should be glad to publish. His estimates are:—

Odawara, - - - -	20 feet
Hatta, - - - -	1399 "
Hakoné, - - - -	2566 "
Ashinoyu, - - - -	2973 "
Sengoku, - - - -	2270 "
Gofugaku, - - - -	3411 "
Takenoshita, - - -	1207 "
Suhashiri, - - - -	2866 "
Eastern top of Fuji, -	11,577 "
Mitakegu, - - - -	7541 "
Kitaguchi Umagayeri, -	5110 "
Kamiyoshida, - - -	2894 "
Tanemura, - - - -	1724 "

The other estimate we get from a neat little brochure published for Lieutenant Sandwith R.M., entitled "A trip into the interior of Japan." It was originally published in the "Far East," but has been considerably added to and improved, and is well worthy a place among the note books on Japan. The author says that the notes of an ascent of Fusi-yama forwarded to him by a brother officer are principally interesting as determining the exact height of the mountain. "The observations have been corrected by instruments at the Lighthouse department at Bentsen."

The estimates were as follows:

By Hutton's method, feet	13,070.64
By Wrigley's, - - - -	13,091.8598
By Rankine's method, - -	13,030.643
A mean of the three methods, - - - -	13,064.32

Correction for distance of upper station below highest point, - -	6.00
Correction for distance of lower station above sea level, - - -	10.00

Total height feet 13,080.32

These calculations are by Lieut. Fagan R.M. who estimated the approximate diameter of the crater, 590 yards with depth of 440 feet. "The bottom of the crater appeared to consist of a comparatively small patch of sand—but it might have been dirty snow. The sides are all loose clinker, affording no foothold unless with the assistance of a rope."

"MR. WILLIAM H. SEWARD'S *Travel's Round the World*," has appeared, and residents in Japan naturally read first that part of the volume which relates to this country, the book is edited by Miss. Olive Risley Seward, and in point of Typography and binding is all that could be desired, opening at the chapter headed "Yokohama and its vicinity," we read in a foot-note, that the Prime Minister informs Mr. Seward that "he estimates the population of Japan at fifty millions," There is a fair wood-cut representation of Yokohama, and following in the wake of most other recent works which describe the outside of Japan, the volume is enriched by many views taken from Humbert's *Japan Illustré*. Some of the cuts are, however, original. The style of the narrative is crisp and lively. Here and there, we find the inevitable mistakes which new comers to, or short residents in, Japan make, *Hari-kari* is given for *hara-kiri*. Miako is given instead of Kioto. A picture of the "Interior of Sheba" is in reality, a representation of the temple at Ueno, burned down during the civil war. The picture of "Nippon Bas, Yedo" is from a French print that has as much of imagination as fact in it, while that old convex wooden structure is spoken of as. "The high stone bridge." The grounds of Hama-goten are said to be "as extensive as those of Central park in New York, and not less elaborately embellished," which is a very generous exaggeration, Asakasa appears as Osakasa. The two albino ponies at "Asakasa" occupy "apartments neat as a parlor." Many of the American residents are mentioned, but the lady editor seems to have had a painful desire to let all her readers know that the U. S. Minister is a western gentleman, with the exception of these few slips and blemishes, the book is quite as accurate as most of the books reeled off by travellers round the world, and quite superior to many of them. The editress endeavors to reproduce Mr. Seward's speeches and wise sayings as nearly *verbatim* as possible. The book displays very little of national prejudice, and the endeavor seems to have been to give a fair picture of the world as it is or at least of that part of which can be seen by a Traveller round the world.

IN VOLUME forty-second of the Journal of the Royal Geographical Society, just published, we find three papers relative to the Geography of Japan, they are as follows:—"A journey in Yezo. By Capt. T. Blakiston. (Map.)"

"Notes on the East, North-east, and West coasts of Yezo. By Commander H. C. St. John."

"Tour through the Provinces of Echigo, Echiu, Kaga and Noto, Japan. By J. Troup, Esq. (Map)" Also. "On the Island of Saghaline" By Colonel Veniukoff. (Map.) It is to

be hoped that with the aid of these contributions together with the very full and accurate paper on the Geography of Japan, read by Mr. Satow before the Asiatic Society, the geography and atlas makers of England and the United States, and indeed, of other countries also will produce sometime like a true description of Japan. The rising generations for years past have been most hopelessly misled on the subject of Japanese Geography. Nearly all the maps of Japan are absurd caricatures, and especially outrageous is the spelling of the geographical names. Nearly all the names on the maps now in use defy pronunciation, and when, as in the case of even the map published by Mr. James Wyld "Geographer to the Queen," we have such orthographic wonders as "Sidzd," "Sikoke," "Ietsissen," "Ieetsiu," "Fitata," "Iwami," "Iamat," "Isie," etc., it seems as though the achievements in bad spelling could no further go. While English and America maps were mere copies or translations of Dutch imitations of the native caricatures, it was too much to hope that a good map of Japan could be produced. Wyld's and Colton's maps of Japan are the compound resultant of inaccurate native sources, distorted into Dutch and thence tortured into English. The only really scholarly map of Japan is found in Stieler's Hand-atlas, a German work, which has had the benefit of Von Siebold's notes, and the observations of the various Prussians formerly employed in the service of the Southern daimios. Dutch orthography having been copied by ignorant geographers and book-makers for centuries, it is now time that English had its way, and that a reform in the writing of Japanese proper names should begin. We are pleased to note that the papers published by the R. G. S. above mentioned, show that attention has been paid to correct spelling, and instead of the old Jeetsiu, we have Echiu, instead of Ietsissen, Echizen etc. So long as we have no Academy, or any sufficiently weighty authority in either Japanese or English, we cannot expect to have absolute uniformity in geographical spelling. Yet a very simple system is now in use by foreign scholars, and it would be well if all writers were to conform to it. We have heard that a new map of the Japanese Empire is now in course of preparation in London, on which a uniform system of writing the Japanese proper names, will be pursued. We cannot say, with certainty, whether the report is true or not but a thoroughly accurate map of the Empire of Japan is a great desideratum.

### Correspondence.

To the Editor of the *Japan Gazette*.

SIR,

THOUGH ONLY a stranger in Tokei, I take a liberty in writing to you, as I have also done to the *Nisshin Shinjishi*, believing that the subject I write upon is nearly of as great importance to foreigners as to my own countrymen.

A law has been published concerning weights and measures—that any one with false scales, or weights that are incorrect, (whether for more or less) shall be punished with long imprisonment with hard labour.

This would be no hardship if all scales were true when delivered by the manufacturer, and if there was a well understood standard. But neither one or the other is the case.

For Example:—Although Hiogo and Osaka are so close together, yet both customs and language differ in them. How much greater

will the difference be between there and Tokei. Tokei people buy rice, asking how many to or how many sho for a rio?

Osaka people ask how many rios and boos per Koku?

Saikoku (the western provinces) says how many momme per Koku? And there is no one universal plan.

Again there are several kinds of Kin. In some parts 1 kin is 160 momme, in others 200 momme, and even 230 momme; and nowadays foreign weights are often mixed up with ours—and 1 kin of 120 momme is the equivalent of a foreign weight.

This is very troublesome to us; and very different from Europe. Our measures are equally uncertain.

Before punishment is mentioned, these things should be reformed; and if a fixed standard is made and well observed over the empire, it will save us much trouble, as well as remove the chance of punishment.

I have thought on this thing for a long time, and wished to send my letter to the newspapers in Osaka; but they are so flattering to Osaka Fu, that it is likely that they would refuse to insert it.

I am told that the *Japan Gazette* is a foreign paper published in Tokei, and I humbly ask foreigners to represent to our government to take my suggestion into consideration.

KIYOSE SAIBEI,

Osaka.

Tokei, 17th September, 1873.

To the Editor of the *Japan Gazette*.

Tokei, 10th September, 1873.

SIR,

I ASK the kindness of your honorable company to speak of my country's foolish celebrations. I know that holidays are good; and that all countries have their rejoicing days—such as the 4th of July in America and the Queen's birthday in England, for I have seen these days kept in those countries as well as here; and I do not think to abolish holidays, but only foolish ceremonies. Now you have made the *Japan Gazette* a Tokei newspaper, and find the great deal of news about my countrymen, will you call attention to this subject?

I will instance the celebration of "Bon." The original meaning of this was not celebration for dead, but to deliver souls from torture. Therefore a son is unreasonable in attributing a bad character requiring punishment, to his father. If you will like to hear it, I will tell you the origin of Bon. There was in India a Shaka disciple named Mokuren. He was so deeply learned in religion that he understood both heaven and earth; but his dead mother had gone to hell, where, among the devils, she could get no food. For grief of his poor mother Mokuren offered 100 sorts of fruit on 15th July to Buddh, in order to save her from torture. Now in our religion it is said that a son must honour his father by his own deeds—but how do people dishonour their parents by Bon celebration? Can all people think their mother same as Mokuren? The celebration of Bon is very foolish!

I enclose my card to comply with foreigner's rules, but sign myself

A JAPANESE.

### Provincial.

THE *Nichi Nichi Shinbun* gives the correspondence which passed between the officials of Ashigara Ken and the Gaimusho respecting

the grave of the little child of Mr. Shand who died and was buried last month at Hakoné.

To TANETOMO SOEJIMA,

Minister of Foreign Affairs.

SIR,

The chief warden of the post station of Hakoné has reported to us that Mr. Shand, an Englishman employed in the Treasury Department, requested to be allowed to bury his deceased son in the grave yard of Mampukuji temple; the child having died from sickness about noon on the 8th August, whilst the said Mr. Shand and his wife with a maid and manservant had lodged from the 16th July at the house of Koma Sagoyemon—an inn at Hakoné—for the benefit of the hot springs.

Although your instruction ought to have been obtained, yet as the hot weather rendered interment imperative, we permitted the burial to take place temporarily, explaining to Mr. Shand, that we could not give him permanent permission without referring to you. For this we received Mr. Shand's thanks.

We have enquired of the priest of Mampukuji respecting the agreement he had made with Mr. Shand respecting ground rent; as the latter desires to borrow 12 feet square as the true grave; then to enclose it with a good fence, with a path 3 feet wide and 120 feet long lined with shrubs.

But we must receive your instructions what to do; as we doubt if the ground rent may be paid, it being the law of the Empire that no foreigner be permitted to buy any ground in Japan; but there may be no objection to allow the priest to receive a gratuity as a thank offering for the time being.

TADATOSHE KASHIWAGI,

Gonrei of Ashigari Ken.

August, 1873.

REPLY.

To Tadatosh Kashiwagi,  
Gonrei &c.

I have acceded to your request respecting the grave of Mr. Shand, an Englishman employed by Okurasho. Though the place where the grave of his deceased son is, is beyond the limits in which foreigners have been permitted to live, yet under the peculiar circumstances he may be permitted to rent it, and the money may properly be paid to the priest, in proportion to the general ground rent payable by Japanese, according to the private arrangement between the priest and Mr. Shand. There is no need to collect this land tax publicly like other ground rent.

TANETOMI SOEJIMA,

Minister of Foreign Affairs.

25th August, 1873.

THE OFFICIAL account of the disaster at Shimane Ken, says that after a long drought, the rain began to fall heavily about the middle of August, but it was on the 29th that a perfect deluge came, and on the 31st the inundation occurred. The wind was like a hurricane, and the furious torrent washed away buildings, distant villages suffered, and many cattle and people were killed.

Officers were sent to aid the people, and supply the sufferers with food. Details are promised.

THE Kenrei of Yamanashi ken has forbidden hunters of wild animals to shoot them near human habitations, as they so frequently wound people. He also forbids the digging of pits near villages to entrap them, as people often fall in and are injured.

AN ORDER has been issued by the government that in future all officials are to be allowed leave of absence on the days of ceremony for their deceased parents.

THE DEPARTMENT of public works have altered the rules of the school for females in connection with the department, so that girls who attend all day shall pay \$1.50 a month, and those who attend only half the day 75 cents.

THE CHUJI of Tokei Fu, reminds people of the order issued in the 3rd month of last year—that every analytical chemist must have a license.

TOKEI FU has been informed by Hokishikibu-no-Kami that although it is but proper that at the Kamane Matsuri of Shintooism, all noblemen not holding office under government, should be ordered to worship the gods, yet as the place of worship is so small, no order will be issued.

THE DISEASE from which many Japanese suffer—Kaki—or a kind of dropsy has generally been supposed to be incurable. A native doctor named Hirai Norimasa, however, living in Iwairi Cho, professes to make its cure his specialty, having lately succeeded in a case in which even foreign doctors failed.

One Sato Chimpei was suffering very badly from the disease. His whole body was numbed, and his legs so heavy that he could hardly endure them. The Kaitakoshi department kindly ordered its doctors, Hajiware and others to attend him, but their treatment had no success. He was also taken in hand by Yamamoto, Kumagawa, Dr. Simmons, and the Naval Medical teacher Dr. Awar, (? Wheeler) and by Mr. Okuyama. During eighty days these several doctors treated him, but he was successively given up by each. Each visit of each doctor cost 5, 7 or 10 rios, which were cheerfully paid by Kaitakushi.

At last, when they had all tried in vain, Sato had only to mourn and wait for his last hour. But a friend went to visit him, and urged him to see Hirai Norimasa, and the poor dying man having no objection, and still clinging to the chance of life consented.

Hirai visited him and gave him medicines. From the first day Sato began to mend, and the improvement from day to day was marvellous. He is now recovering very quickly.

If this be true, it is certainly a feather in Mr. Hirai's cap; but as he is sure to have plenty of practise on the strength of it, and the publication this cure has received, he should do as medical men all over the civilized world would do under such circumstances, make the treatment known to the medical world, for the benefit of his countrymen attacked by this terrible disease. Our readers may remember that Kaki was the disease that carried off the Tycoon Iyemutzu, the predecessor of Keiki.

NATO KEN has officially reported a serious mortality among the cattle in that province. In a very short time, 281 oxen and 18 horses died of the pestilence, which took the form of violent diarrhoea. Some of the beasts were taken off in a few hours, while others lingered 4 or 5 days.

MIZAKI KEN reports that the preachers sent to them by the Religion Department, have been doing their work well; not confining themselves to religious affairs, but explaining to the people the recent government orders, respecting the conscription for the army, Stamp duty, the alteration of the calendar, &c.; and shewing the public spirited policy of the government. Their addresses are eagerly listened to and are very effectual.

THE FINANCE Department has received information from Yehimeme Ken of great floods and much destruction of crops in their provinces. Such a calamity has not happened to them for several years.

SIMILAR REPORTS have been received from Tottori Ken. In Inaba and Hoki, Hiroshima and Iyo, the effects of the storm and inundation of the 29th August are very severe.

A COUNTRY paper tells of a strong little chap of 9 years of age, considered by all who see him to be rather gigantic in his way. He belongs to Rikuchin, and has most extraordinary wrestling power. He is 4 feet 3 inches high—which is tall for a Japanese boy of 9, and weighs 13 Kan.

To THE *Kobun Tsushì* a correspondent writes:—

Dear Sir,

I listen with regret to the vilifying of the Government, by thoughtless people, who disapprove of the proclamation permitting the export of rice and other cereals to foreign countries; I wish to point out to them their error, and to shew the light of the present times as compared with the darkness of the past, and to exhibit to them the benevolent intentions of the Government. Kindly, therefore, grant me a little space in your columns.

The reason why the exportation of rice and corn from Japan was prohibited was a very simple one. She had then no treaties with any foreign nations, and no port was open to their commerce. If we had exported grain, while having no commercial relations with other countries, we should have left ourselves without food in case of short crops.

But no such prohibition is necessary now. The circumstances under which we live are completely altered.

The friendship now existing between Japan and foreign nations is now as intimate as that existing between near and dear relations. It must be known to most of us that we are deriving much assistance from foreigners not only in their teaching us their arts and sciences, but by supplying deficiencies in their countries with our abundance and *vice versa*.

However, I cannot understand why any objection should be made to the export of rice and grain, when none has been expressed with regard to silk, tea, and many other articles, we taking in exchange different kinds of machinery, cloth, furniture, &c.

And why do people grumble and say that if rice be exported either the poor must be troubled on account of the high price it must go to, or in the event of an unfruitful year, the people must starve? Is this not mere ignorance? If the export should raise the price, will not the fact of its becoming dear, prevent the continuation of the export; and at the same time induce merchants in China and Siam and many parts of India, to send cargoes to us until the price gets too low to pay them a profit. So that the real effect of this proclamation will be to reduce rice to something like a level average price, instead of its going very high in years of drought or very low in seasons of abundance.

I thus, for my own part, feel very grateful to the government, and I am anxious that other people should see the matter as I do.

The *Nichi Nichi Shimbun* tells, of a man belonging to Fuchui in Musashi, who was very well off, but had a son of very dissolute habits. The young fellow was constantly running away from home, but returning as soon his means were dissipated. At length the father became thoroughly

disgusted with the youth, and thought to himself that all the wealth that he had accumulated by hard labour and constant attendance to his business would be scattered by this young scapegrace. Rather therefore than this should be so, he would divide his property among his relations.

Reasoning like a mad man, however, he thought it would appear strange to divide it to them whilst he was living. He devised therefore this foolish plan—which he carried out.

He gave out that he was dead. Got into a coffin which, however, had air holes out of sight in the sides, and was conveyed to the temple accompanied by a large crowd of relations and friends.

The funeral ceremonies were performed as for an ordinary corpse. But these being ended he got out of the coffin, saying that he was thenceforward as a dead man, and asked them to accompany him home, whither he was borne in a cango, and there he divided the bulk of his property among them.

The editor says that this story is told him by an eye witness; and he takes occasion to launch out at the conduct of the fool or madman, who acted in such a manner—and saying that it were far better the son should have had the scattering of the old fool's wealth, than that he should himself so disgrace himself and his name.

It is notified officially, in the *Nisshin Shinjishi*, that

Whereas, His Majesty the Emperor has hitherto given to his relatives their income in rice, in future this custom will be abolished and they will receive it in money:—The titles are such as we have never seen before—for instance *Iyponshi kushi Nai-hin-no* (most of them are equally long, and equally strange to foreigners) the salaries range from 6,800 yen per annum, to 4,552 yen—one or two being 1,300 and 500. The total amount of money is 59,000 yen, and the amount of rice formerly given was 2,076 Koku.

THERE HAS been a good deal of excitement in the Owari Ken, through a misunderstanding of the government order respecting the conscription. The Ken officers however acted very promptly, and put the disturbance down with a high hand; taking several men prisoners, and punishing them with fines or hard labour.

THE PREACHERS appointed by the Religious Department have reached Yamagata Ken, and a notice has been issued, urging all people who have time to go and hear them preach on "the great subject of 'the three laws of Kiyobusho'."

## China.

THIRTY-SEVEN VILLAGES SWEEP AWAY.  
OVER 10,000 PEOPLE MADE HOMELESS.  
LARGE NUMBERS DROWNED.

TIENTSIN, 24th August, 1873.

I wrote you last on the 11th instant, and the only news I can give you to-day is about rain, of which we get a heavy shower nearly every day; the height of water in the river is about two feet more than it was during the large flood last year, it broke in a little below our settlement last night, but luckily they got the damage repaired at noon. To the North Westward of Tientsin, on the other side of the Grand Canal, there is a very large inundation; villages have been swept away, and more than 10,000 people made homeless, and large numbers are said to be drowned. Between this and Peking a great deal of the country is also under water, and the Capital only approachable by boat, as the roads, in many places, have about five to six feet over them. Business very dull.—*Hongkong Times*.

## Law Reports.

## In H. B. M.'s Provincial Court.

Yokohama, 18th September, 1873.

Before N. J. HANNEN, Esq., Acting Assistant Judge.

(Postponed from the 2nd August.)

DEVINE vs. KIRBY.

This was a suit to recover the sum of \$4,500 in respect of pecuniary loss and personal injury for wrongful dismissal.

Mr. Ness appeared for plaintiff; Mr. F. V. Dickens for defendant.

In opening the case, the learned counsel stated that the parties to the suit had been acquainted for over ten years in business, and at defendant's solicitation plaintiff entered his service, the latter expressly stipulating that he should be allowed to sign or use the name of the firm. On November 15th, 1872, the defendant wrote to plaintiff agreeing to this, and to pay him as salary for his services the sum of \$200 monthly with quarters. In June last plaintiff received a letter stating that he had forfeited all confidence by signing the firm name to a cheque instead of doing so "per procuration," and dismissing him with a sum of \$400 in lieu of notice. Defendant now pleaded incompetence, incapacity, disobedience and falsehood of the plaintiff, and using the name of the firm in such a way as might have subjected him to a criminal prosecution. Mr. Ness in conclusion stated that he should prove the sanction of defendant to the use of the firm name, and that the allegations now made were wholly unfounded.

Wm. Henry Devine said he was plaintiff in this action and entered the service of defendant under the written agreement contained in the letter produced. He acknowledged receipt of the letter and accepted the situation. He continued in defendant's employment up to the 2nd July, when he received a dismissal. On the 26th June he had received a letter from Mr. Kirby stating that on the previous day he had desired plaintiff to write out a cheque in favour of the manager of the Commercial Bank, and to his utter astonishment discovered that plaintiff had signed the firm name instead of per procuration. He replied to the effect that it had been distinctly understood between them that he was to sign the firm name, (the idea of his making that stipulation being that would give him a better standing commercially), and further submitting that the arbitrary action of defendant in breaking the agreement would place plaintiff in a painful position with regard to the mercantile world; for which reasons he could not agree to accept the dismissal. The defendant answered this letter by another demanding delivery of the Power of Attorney to Mr. Valentine, and also sent another letter to the effect that the dismissal of the 26th was not absolute, but optional for plaintiff's acceptance; that he must have been under an hallucination as regarded the power he alleged to have been given him to sign the name of the firm, and that his previous misconduct consisted in having signed the firm's name previously without the sanction of defendant—as had been found on reference to the letter book. Many conversations took place with reference to the powers of plaintiff before the agreement under which he entered defendant's employment was finally come to. The Power of Attorney was given in consequence of verbal arrangements made before the written agreement was entered into. He signed the name of E. C. Kirby & Co. from the date of receiving that power till the day of his dismissal. He considered himself empowered to do so both by reason of the Power of Attorney and the verbal authority he had received from the defendant who knew that he thus used the firm name and never found fault with him for doing so. He wrote, almost daily, letters bearing that signature; and from first to last conducted the correspondence above that signature only. These letters were all copied in the letter-book which was kept in Mr. Kirby's own office, and frequently on his desk. Defendant occasionally went to Kobe, and on his return from such visits the whole of the correspondence which had passed during his absence was handed to him. Witness had seen him read such correspondence, and refer to the letter-book produced. He sent letters from Yokohama to E. C. Kirby & Co., Kobe, and signed them E. C. Kirby & Co., whilst Mr. E. C. Kirby was staying at Kobe. One such was sent on the 26th April, and its receipt acknowledged by defendant in his own hand-writing. On the 14th of March, he sent a letter to the Kobe firm signed "E. C. Kirby & Co.," which was similarly acknowledged. In neither reply was fault found with plaintiff for signing the firm name. On the 10th May, another

letter signed "E. C. Kirby & Co." was sent, and acknowledged by Mr. E. C. Kirby on the 12th. On the 3rd June, he wrote to Mr. Hunter, the defendant's manager at Kobe, and from a subsequent conversation with Mr. Kirby ascertained that he had seen that letter. It was written under his instructions. Defendant looked over his shoulder whilst witness was writing it. On the 7th April last, he remitted a small draft to the firm's London agent, Mr. Kirby instructed him to obtain the draft which was made out in favour of "E. C. Kirby & Co." and endorsed by witness similarly. As he had nothing particular to write about, and as Mr. Kirby was writing, witness took the draft into the inner office and asked Mr. Kirby to enclose it in his letter. Defendant looked at the endorsement upon the back of the draft, and made the observation "I don't think I've yet sent your signature to the London Bank." Witness, reflecting they did no business direct with the London Bank, remarked "The London agents have my signature and can produce it, if necessary." Previous letters had been forwarded formally to the agents in London with a specimen of witness' signature. Would most positively swear that Defendant looked at the endorsement on the draft, and Bills of Exchange on the firm were accepted by witness as "E. C. Kirby & Co." The paid bills were kept in the office and open at any time to Defendant's inspection. Witness also signed all the Bank cheques under the belief he had full power to do so. He commenced immediately after he entered the Defendant's service. The accountant of the Bank called his attention to the difference in signature and he said "Well! if there is any doubt about it, I'll go over and ask Mr. Dickens, as I'm under the belief my power of attorney gives me power to sign the firm name." He asked Mr. Dickens to explain to him the meaning of the words "P. Pro." as he could not find a full explanation in any commercial work in his possession. Mr. Dickens replied: "As far as P. Pro. goes, the meaning of those words is somewhat vague." Witness then asked "Am I safe in using this signature?" He said, "Yes, you are perfectly safe," and witness went away, and asked no further question. He had fully explained that he did not sign "P. Pro." but "E. C. Kirby & Co." Mr. Dickens told him the Power of Attorney would cover that signature.

He went straight over to the Bank and told the accountant what Mr. Dickens had said, and heard no more till he got his letter of dismissal. Had never used the name "E. C. Kirby & Co." except in the ordinary course of business. The day before he was dismissed, the 25th of June, he made out a cheque and signed it in his usual way. He handed that to Mr. Kirby himself. Did not know if the latter took it to the Bank. Thought Mr. Kirby noticed the signature at the time. Therefore no fault had been found with witness's conduct, directly or indirectly. He had never been accused of incapacity in business, and conducted defendant's affairs aright. Was never accused nor guilty of any act of disobedience: was certainly never accused of falsehood. Nor had he exhibited a gross disregard of truth in the conduct of his business, nor signed defendant's name contrary to his wishes, or in direct disobedience of his express order, with the object of fraudulently gaining some advantage for himself, or exposed himself to be criminally prosecuted, or improperly absented himself from the service of the defendant. Three years and a half of his agreement were unexpired at the date of his dismissal. Dismissed in such a manner, he had not dared to apply for another situation. His salary was to have been \$200 per month, with quarters—probably worth \$100 per month more. It was very improbable that he could obtain such another situation in Yokohama. He had sustained considerable personal annoyance, besides damage to his prospects and anticipated it would be necessary for him to go to England, to obtain a suitable employment. He had offered after being dismissed to remain in defendant's service.

Cross-examined. Had estimated his damages at a low scale. The accusation of having falsely and fraudulently used the name of Kirby & Co., had injured his feelings, together with the accusations of falsehood contained in the answer to the suit. Defendant had told Dr. Dalliston witness had "told a lie" nothing beyond that.

The witness here applied for the protection of the Court, Mr. Dickens having just said "That was a lie" to Mr. Kirby.

His Honour: If you did so within the witness' hearing, Mr. Dickens, it was a most improper observation for a barrister to make.

Mr. Dickens: I must represent to the Court that witness made a very gross accusation against myself. His Honour: He has not for one moment made any accusation against you, and you have no business to say that in Court to a witness.

Mr. Dickens: I did not say so to the witness.

The matter here dropped.

Witness declared most positively that Mr. Dickens told him that the power covered his act in signing the firm name. He had known Mr. Kirby for some years. Was never very intimate with him. Now knew his business habits thoroughly. Knew Mr. Kirby was a man of standing in the settlement, or would not have joined him. Remembered business negotiations in May, 1872. He was then in the employ of Lane, Crawford & Co., and wrote the letter produced, which declined to complete an arrangement to join Mr. Kirby, though the latter had stated he considered himself as much bound as if he had signed a deed of partnership.

A lengthy correspondence, in relation to the then contemplated partnership, was here put in, together with witness' acceptance of the offer made by the defendant.

He entered the employment of Mr. Kirby in January, 1873. He did not sign the firm name to the letters and cheques during January until he had a letter from the Bank accepting his signature. (A notice to the Bank from Mr. Kirby authorising it to honour the signature of Mr. Devine p. pro. E. C. Kirby & Co. was put in). The reason no Power of Attorney was then drawn out was because Mr. Dickens was too busy to do it. Witness might have signed "p. pro." in February. He might have signed half a dozen cheques as "E. C. Kirby & Co." before applying to know if the Power of Attorney gave him authority to do so. When Mr. Kirby saw the Power, he said "I see this gives you power to mortgage my property." Witness looked at the Power, and pointed out that the word was "manage." He knew the advertisements in the papers said he was to sign per procuration. Mr. Kirby left Kobe twice or thrice during the time witness was with him. During his absence "private" letters, as well as the "business" correspondence passed between each. Generally there was a good deal of business introduced into the private letters. The letter-book was placed on Mr. Kirby's desk by witness when Mr. Kirby returned. He most certainly thought defendant must have read the official letters as well as the private. In one letter to plaintiff he replied "You do not say anything about forwarding the cattle in your official letter." He considered Mr. Kirby must have seen the letter of the 3rd of May from what he said to witness concerning it in a general way, from his always having the letter book before him, and from his looking over witness' shoulder whilst the latter wrote. He saw defendant read the endorsement on the draft procured for the London Agent. Witness signature had gone several times to them. The letter with his specimen signature was sent from Kobe for him to append his signature at foot and send it on. It stated that Mr. W. H. Devine was authorized to sign E. C. Kirby & Co. per procuration and that the firm were about to send several indents for execution. When he presented the cheque he had signed to Mr. Kirby he made no remark whatever. Was positive he returned to the office that day; was in the house whilst dinner was going on. The cheque was drawn about three o'clock. Witness was at the office at five o'clock. His business took him away from it often. Did not exhibit his Power of Attorney at the Bank: he was not asked for it. Defendant must have known he was signing the name of the firm, as it was constantly before his eyes.

A letter was here put in received from Cowderoy & Rainbow calling attention to the fact that the signature of Mr. Devine to the letter of authority was informal, as he had signed the name of the firm instead of per procuration.

Witness continued. He went daily to the office after his dismissal. On two occasions he was ordered by Mr. Kirby to leave the premises. He continued to attend, as Mr. Kirby did not give him a definite dismissal; but had first written him a letter of dismissal, and then another stating that it was not a dismissal. He went to Mr. Dickens' office on hearing that Mr. Kirby had said his statements about the power of attorney were a lie, to ask him to state what he had said about the power of attorney. Mr. Dickens at first said he did not remember about it, but afterwards did so and said, "It don't authorise you to make new contracts." He could not at first remember that he had any conversation with witness about the power of attorney. He asked him to walk down with him to the Bank and Mr. Kirby's. Legal proceedings against him were never contemplated, so that he could not have begged with tears in his eyes that Mr. Dickens should intercede for him with Mr. Kirby. He went to Mr. Ness after Mr. Kirby had ordered him to leave the place, when he had gone with Mr. Dickens to this office. Considered his services were worth \$30 per month, but would rather some one else would say so for him. Knew Byron Binninger of New York; had known him as a neighbour in Shanghai; was not aware of any circumstance justifying his dismissal. Had never traded for his own account.

Two letters were here put in from Mr. Binninger thanking Mr. Devine for procuring him an order for 2,000 cases Devco Oil, and promising to send some circulars of a Milking Machine.

Re-examined by Mr. Ness.—He had never absented himself from the office except on business of the defendant. It was not Mr. Kirby's custom to take his word for the contents of letters written by witness. It was a matter of caution on his part that he did not sign the firm name till he had the power of Attorney. Had never admitted to Mr. Dickens he had ever done anything which was wrong.

Ed. H. Hunter testified that he was manager to Mr. Kirby at Hiogo between February and June. He had frequently received letters from plaintiff as manager of the Yokohama house signed E. C. Kirby & Co. On the first occasion he observed that signature in the beginning of February, he called Mr. Kirby's attention to it. Had also observed all letters thereafter coming to Kobe were signed in a similar way. As a rule, Mr. Kirby did not read the business letters which came to Kobe, but read the private letters. Defendant usually was only a short time there, and as a rule did not open the letters, as he never took the management of the business over. Defendant had spoken to him regarding the contents of business letters.

Cross-examined:—He never signed the firm name, but "per procuration." Did not consider himself entitled to sign in any other way. When he called Mr. Kirby's attentions to the signature to the letter, he did not take much notice of it, but simply said "he supposed it was a mistake made in the hurry."

Mr. Wilson, assistant at Lane, Crawford & Co.'s testified that in February last he was in Messrs. Kirby & Co.'s store at Kobe, where he saw defendant open and read the letters from Yokohama. Did not see whether they were official or private. He handed one to Mr. Hunter after he had read it.

Dr. J. J. R. Dalliston stated that he was an intimate friend of defendant, and formerly lived in the same compound with him. On many occasions Mr. Kirby had spoken to him concerning Mr. W. H. Devine. Did not think he had canvassed him favourably or unfavourably from after the first six weeks till after his dismissal. At first, he spoke very highly of his industry. Never heard any fault found with him up to the time of his dismissal.

Fredk. Townley testified that he had known plaintiff ten years—nearly eleven. Was once manager to Mr. Kirby, and considered plaintiff possessed capacity to fill that post. Never found Mr. Devine guilty of falsehood. He held a Power of Attorney from Mr. Kirby. There had been no previous agreement that he should sign the firm name; nevertheless, he had done so, and it had received the sanction and approval of Mr. Kirby.

Cross-examined.—Witness had signed the receipts for payments by the French Government for over three years during Mr. Kirby's absence. In the first instance he did it without defendant's knowledge or consent; but afterwards it was known to the latter and ratified. He ordinarily signed "per procuration." He should certainly think that the Power of Attorney of plaintiff's did not authorise him to sign the firm name.

His Honour.—What is the difference to a business man of signing "per procuration" and signing firm name?

Mr. Townley.—I should say the power of signing the name would simply imply greater confidence in a person.

His Honour.—Nothing else?

Mr. Townley.—Nothing else, because I know of many instances where persons in charge of a business who are not partners sign "per procuration." It is simply to put them in a certain higher position with regard to other persons.

This was plaintiff's case. In reply Mr. Dickens, after referring to the case of Stagg v. Elliot where bill drawn on a father was accepted "P. Pro." by the manager of a firm, stated that in general he would argue that Mr. Kirby had justifiable cause for dismissing the plaintiff. As a matter of law it was not necessary that the alleged cause of dismissal should be a real cause, if he could shew at the trial that there had ever been any real cause of dismissal. At first he would shew that a partnership was contemplated, but abandoned owing to plaintiff's conduct; and then that in November an ordinary service was agreed upon; that as soon as defendant's back was turned, he commenced signing the firm name; that there was no such stipulation made as he alleged; his conduct shewed wilful, down-right disobedience of direct orders and must shew an evil motive on the part of plaintiff, and in the matter of the letter to the London agents, and in others to which he (the speaker) would refer he had misconducted himself:—But if a servant misconducted himself in only one single instance, his discharge was justified. Amongst

other things, he should show how plaintiff's conduct shewed his intention to put himself in such a position as at a future day to be able to claim as partner. As regarded the interview with himself, he would prove by his own oath and books, that plaintiff's account was wholly false, and also give a very different version of the interview with Mr. Kirby. He regretted that it would be a lesson never to extend his good offices to a servant again under such circumstances.

Edward Charles Kirby testified that he carried on business here and at Kobe as E. C. Kirby & Co. In May, 1872, negotiations with plaintiff for a partnership broke through owing to the vacillations of Mr. Devine. It was intended he should have one-third interest. In November fresh negotiations were commenced with him. It was not then understood he was to sign the firm; it had been before, when a partnership was contemplated. In November, plaintiff never asked to be allowed to sign the firm name. If he had served for three years and conducted himself well, witness might have done so. The letter to the Bank of the 15th January was not a simple *ad interim* power, but was intended to hold good till cancelled. Early in February witness asked Mr. Dickens to draw up a power of attorney. He said he had not time, but meanwhile would buy a printed form and fill it in. Witness never intended to give Mr. Devine power to sign the firm name. Plaintiff never informed him he was signing the firm name up to the 23rd June, or that he filled in the letter to the London agents with the name of the firm. Between April and June he went to Kobe frequently and received private letters from plaintiff by every mail. He did not receive and read the official letters to the firm. On one occasion Mr. Hunter pointed out to him that a letter was signed E. C. Kirby & Co. H. remarked that probably it had been written in a hurry and took no further notice of it. When he came up to Yokohama from time to time, nothing was shewn him to arouse his suspicions. Plaintiff would generally tell him what occurred in his absence. He remembered that on the 3rd May he wished plaintiff to write a letter to Mr. Hunter. Witness did not see it before it was sent off, and was never told by Mr. Devine that he had signed that particular letter with the firm name. Could make a similar answer with regard to all letters. With regard to the draft for £21, witness told plaintiff to get it, and forward it to England. Did not remember seeing it. Did not see the endorsement on it. Plaintiff never shewed it him, nor did he examine it. As a rule, he seldom wrote business letters. About the date the draft was sent, he did not think anything particular occurred to necessitate his writing a letter to Messrs. Cowdroy and Rainbow. [On reference to the letter book, one from Mr. Devine dated 7th April was found stating that the draft was enclosed in a private letter from Mr. Kirby]. Did not make any remark to the effect that his signature had not been sent to the London Bank. He authorised the order to Binninger for the oil, but wrote to plaintiff that "if the order for oil had not gone forward to give it to Mr. Abbott, a traveller for a New York house, and if it had been sent to give Mr. Abbott a small ample entury order." Mr. Devine did not send a small order by him but a large one for 2,500 cases costing about \$4 a case. He would not have sanctioned such an order immediately having allowed the other. Would probably lose on the order, for some oil was now selling at about cost price, and some 80,000 cases were on their way here. His special attention to Mr. Devine exceeding his power was called to it by the letter of the 24th of June. He did not realise at the moment what the effect of such a signature would be. On the 25th, he told Mr. Devine to write a cheque in favour of the manager of the Chartered Bank, which he did, and placed the cheque on witness' desk. He looked at it presently, and was so astonished he sat there for ten minutes or so and did not move. He then went out, to the out-offices, to speak to plaintiff about it and cancel the cheque. The latter however, had gone out. Witness thought Mr. Devine's manner peculiar as he brought in the cheque, and had since thought he might have been "trying it on" so as that witness passed that cheque, he might claim some right to partnership. Mr. Devine did not return to the office that evening, but slept in the house. Witness then found on examining the letter book, the name of the firm had been frequently signed, and next day found out that the cheques had been signed in the same manner. Witness then visited Mr. Dickens who, on his stating he had lost all confidence in plaintiff, said "Then there's nothing to do but to discharge him." He could not in justice to his own interests take back Mr. Devine into his employ. The nature of his business required almost implicit trust to be placed in those in his employ. It was because of the trust he reposed in Mr. Devine, witness entered into so informal an agreement with him. There had been no personal quarrel or disagreement with him. The loss of confidence was one of his principle

motives for dismissing plaintiff. Doing so was productive of the greatest inconvenience. Mr. Hunter was on the point of leaving witness, and Mr. Valentine had only just come out from England to take his place. No one else had signed the firm name, except Mr. Townley, who did so in an exceptional case.

Cross-examined by Mr. Ness:—Mr. Townley, might have signed his firm name without his authority. He managed the business here. If he required an ordinary business letter written, he told his confidential clerk to write it. He did not care to read it afterwards unless the letter was very important, and, in that case, he wrote it himself. He had copied other letters in the same copyingbook without observing the signature of the firm name to Mr. Devine's letters. Did not think anything of the signature pointed out to him by Mr. Hunter, because he imagined it was accidental. He objected to the signature E. C. Kirby & Co. because it would give him unlimited power. "P. pro." implied a limited power only, whilst the signature of the firm name would imply that he was a partner. Had the signature been to a cheque or important document, he should have objected immediately. Though the fact of signing the firm name did not constitute a partnership yet if permitted, it gave a man opportunity to set up a claim to partnership especially in the event of the decease of the other partner.

Witness had known plaintiff in Shanghai and was well acquainted with him. When witness came to Yokohama he did not see all the correspondence. He never looked at the letter book when he came from Kobe, and never saw Devine's signature. Had not, that he remembered, till recently, read any letter in the business letter book copied between February and June. The old acceptances were kept in the safe in the outer office. Never noticed the form of acceptance on the paid Bills of Exchange. Never found fault with plaintiff about the order to Abbott. He dismissed plaintiff because he received the letter from London stating that he had signed the firm name instead of doing as he was directed and signing "p. pro." at the foot of the letter forwarded to the Agent, which witness considered an act of direct disobedience, possibly with a fraudulent intention. The name of the firm had been improperly used at all times, witness considered, but did not know that it had been used outside his own business. Did not know that there was any document which would have had a different effect if he had signed "p. pro." He did not know of any specific injury suffered up to the present time. By saying plaintiff had "used the firm name so as to expose himself to criminal prosecution" did not know that he had been forging his name to each cheque he had drawn because he had no authority to sign.

Re-examined:—Did not think if he had repudiated the cheques, the Bank could recover the money. It was his duty to superintend all the acts of his clerks, but having confidence in plaintiff did not take the precautions some others would have done. When he went to the Bank, to enquire concerning the payment of the cheque, he was told that Mr. Devine had stated he had seen Mr. Dickens who said his power extended to signing the firm name. Witness then saw Mr. Dickens who denied this.

F. V. Dickens, sworn, stated that early in February last defendant instructed him to make out a power of attorney for Mr. Devine, as he was going home. Witness said it was a matter of importance requiring consideration, and he had not then time to prepare one. He suggested eventually that a short power made on a printed form, should be temporarily given. He did so because he knew that Mr. Kirby held much property in Yokohama and it was necessary for some one to manage it. He inserted in the form the power to sign per procuration and to manage the business with the object of limiting Mr. Devine's power. In his opinion, this gave Mr. Devine no more power than he already possessed. In witness' rough diary there was no record of any visit from Mr. Devine in February or March: if he had come to witness specially in the way he alleged, it was extremely improbable witness should not have entered it in his diary. At that time the case of *Mammelsdorf v. Kirby* was pending and witness saw Mr. Devine several times in respect to that case, but never, so far as he could recollect, at his office. The questions Mr. Devine said he had put were never asked witness on any special visit or at any time touching the power of procuration, and he never gave the answer Mr. Devine alleged he did give, and never said at any time to him or any one else, from which that by any reasonable possibility, he could have inferred such an answer. He never in any way told Mr. Devine he had power to sign the firm name, and in fact on one occasion, (not at his office), something was said about the power and he told Mr. Devine his power was limited—that he could only manage the existing business and not initiate new, without Mr. Kirby's authority. On the 28th June

plaintiff came to him and implored him with tears in his eyes to intercede for him with Mr. Kirby as his dismissal would damage him in the opinion of the mercantile world and urged it on the ground that witness had given him the alleged authorization, and on witness saying he had never done so, begged him to try to recollect their previous conversation. He looked at his book but found no record of such a visit. If he had not believed from the tenor of his conversation that Mr. Devine had put himself within the grasp of the law, he should not have interfered between the parties.

Cross-examined. Mr. Devine did speak of using the name of "E. C. Kirby & Co.," but did not admit that he had used it improperly. He was evidently of opinion witness had given him that authority, but made no positive statements to that effect. If he had not been in a terrible state of distress, witness would not have interceded for him. The power of attorney was prepared in great haste, and was intended to be replaced by another more definite and fuller when Mr. Kirby went to England, giving Mr. Devine more authority. What the difference was to be was not then decided upon. The chief object of the power given was to enable plaintiff to manage Mr. Kirby's landed property here. It was a somewhat vague power, but perfectly distinct so far as it went. Should not have told Mr. Devine it was vague, if he had asked. It was vague; because it did not distinctly define his duty and authority. It was a power generally to manage; but not a general power to manage. The latter would be the same power as the principal had. Devine was to sign *p. pro.*, that people might know he was acting under a power of attorney. It did not imply a general agency, but a special agency in so far as it was intended plaintiff should manage the business as a manager, and not as a partner. He invariably entered every interview he had with clients by whom he was retained. Several relative to Mr. Mammelsdorff's suit were entered and such a conversation as he had referred to might have occurred at one of these consultations. He believed that such a consultation did not take place, and that if one had taken place, it could not have escaped his recollection. He would swear most positively, it did not take place. He never stated to Mr. Devine it was not likely to have been entered in his book.

R. B. Baker, manager of the Chartered Mercantile Bank, deposed that he did not think the plaintiff, under the power given, was justified in signing the firm name. If the power had been shown him, he would not have honoured the cheques drawn. Signing *per pro.* denoted a limited power and confidence, and signing firm name unlimited power. He considered Mr. Devine ought to have signed the letter of advice to London "*per pro.*" as the part defining that was specially under lined. Under such circumstances, he thought an employer would be justified in losing confidence in a servant.

Cross-examined:—Witness considered that the plaintiff had exceeded his power in using the firm name. He had a right to draw money by signing "*per pro.*" If Mr. Kirby had disputed the cheques, the Bank would have been liable to him for the whole. The plaintiff's power ought to have been inspected at the Bank, but was not.

Mr. Jackson, manager of the Hongkong & Shanghai Bank, deposed that under the power Mr. Devine had the right to draw money from the Bank, but only in one particular form. He was not at all justified in signing in the way he did. Witness considered the money obtained improperly, though the result of signing in the other and proper way would have been the same. If he had once found a cheque signed in an improper manner he would at once have obtained a written ratification from the principal. Signing *per pro.* indicated a limited authority, and using the firm name usually indicated partnership. The firm name was, however, often used by persons holding powers of Attorney.

Mr. Fraser deposed that he should consider himself, if signing the firm name to such a letter as the letter of advice to London, guilty of disobedience to the instructions in the body of the letter. Signing the firm name instead of *per pro.* would be an excess of power.

In reviewing the case, Mr. Dickens raised a point as to whether under the order in Council the Court ought not to be presided over by the Consul, and whether under the 63rd Section, assessors should not have been called.

His Honour replied to the effect that the first question had been decided, and it was too late to raise it; whilst as to the latter, the Secretary of State's certificate had been extended to give the Court power to sit as it was then doing.

Mr. Dickens summing up after making an objection to jurisdiction which was overruled, said:—The plaintiff complains of having unpleasant accusations made against him. But this is entirely his own fault. He might have left Mr. Kirby quietly

without "esclandre." His Counsel had called upon us to prove allegations in the answer or we should have been content to rest our case upon the mere disobedience. The facts may now be briefly run through. About May, 1872, negotiations took place between the parties having a partnership in view. These negotiations fell through entirely by reason of the vacillation displayed by the plaintiff, as is sufficiently evident from the correspondence. In November, 1872, fresh negotiations on an entirely new basis were commenced which resulted, in the contract contained in the letters of the 13th and 16th. This contract a simple engagement for three years on the one side and a simple acceptance on the other without any conditions, shows the confidence reposed in Mr. Devine. The plaintiff says that it was then stipulated that he should sign the firm, but of this there is no evidence whatever. The defendant denies it and the whole of his conduct as admitted or proved corroborates his assertion. About January 1873, the plaintiff commenced his service as manager of the Yokohama business. On January 15th a letter was sent to the Bank authorizing the plaintiff's signature *p. pro.* and the plaintiff's signature *p. pro.* was in that letter. About the beginning of February 1873, the defendant went to Mr. Dickens to ask him to draw up a power for Mr. Devine to act in his defendant's absence at home. Mr. Dickens could not then draw the power owing to business and to the fact that it would demand serious consideration and advised a short temporary power to serve while Mr. Kirby was away at Kobe. This was drawn up on the 5th February and expressly and in terms limited the signature as "*p. pro.*" The object of the power was chiefly to give the plaintiff power to manage Mr. Kirby's landed property. It did not give any power as to the business which the plaintiff in his capacity as manager did not already possess. The defendant left Yokohama about the 7th February and was on the move between Yokohama and Kobe until June 24th. The moment Mr. Kirby's back was turned the plaintiff commenced to sign the firm; and continued signing letters of all kinds and cheques &c., &c., in that way up to the 25th June. With one exception this never came under the defendant's notice until the 24th June when he received a letter from his London agents that caused him considerable alarm. It appears that on the 7th June he wrote to those agents Messrs. Cowderoy and Rainbow notifying Mr. Devine's signing "*per pro.*" The words "*per pro.*" were underlined. At the end of the letter was the phrase "Mr. Devine will sign" and then a blank. This letter was forwarded to Yokohama to the plaintiff for him to send on after signature. Now the letter of Messrs. Cowderoy and Rainbow, of the 24th June, informed the defendant that the plaintiff had filled in the blank into the bare firm and without the "*per pro.*" and advised the defendant to have this rectified—clear proof first of an act of gross and wilful disobedience, secondly that the London agents thought the matter one of considerable importance.

On receiving the letter on the 24th June the defendant intended at once to speak to the plaintiff but was prevented through the day being a mail day. The next day the 25th, the defendant asked the plaintiff to draw a cheque, and to that the plaintiff signed the firm. The defendant was struck by something peculiar in the plaintiff's manner and examined the cheque. On finding the bare firm signed, this on the top of the information coming from his London Agents stunned him and for some minutes he could do nothing. He then went into the outer office, cancelled the cheque and drew another. The plaintiff had gone, and never appeared again in the office—though he avers that he did—and in fact was never seen by his master at the house or elsewhere that day. The defendant then on making inquiries found out all the facts given in his evidence. It was hoped that the plaintiff would choose to go without being forced and this explains the letters between the 26th of June, and the 7th July. Here then we have numerous acts of distinct and wilful disobedience to orders. Even had there been the verbal stipulation asserted by the plaintiff, this being part of the written contract was not binding upon the defendant. The plaintiff is a man of 40 years of age, also for some dozen years has been in business, and cannot therefore plead ignorance; and the evidence prevents his pleading mistake. Indeed he has not attempted to. He relies on two stipulations—the power, and the alleged ratification. Surely to sign as he did in the face of the letter of *procurator* to the Bank of January 15th, of the advertisements announcing him as entitled to sign *per procurator*, of the power of attorney to the same effect, and of the letters to the London Agent dated 7th March, and the instructions sent to him in that letter by the defendant, were as distinct acts of disobedience to lawful orders as could be conceived.

Powers of Attorney are always construed strictly—see Howard v. Baillie in 2 H. Blackstone, and general words only assist to carry out the special intention see Attwood v. Menning, 7 Barnewell and Cresswell and Esdale v. La Nanze in 1 Young and Collier. The same cases show with equal clearness that the mere position of manager does not of itself give any powers to draw cheques &c. Indeed strictly the power of attorney does not give that power though all the circumstances by implication probably would be held to do so.

The meaning and legal effect of *per procurator* are shown clearly not only in Attwood v. Menning but also in Stagg v. Elliott, 31 Law Journal Common Pleas. There cannot be a moments doubt but that these causes would be held sufficient in England. Here, it is true, business is less strictly carried on but there is nothing to erect that negligence into a custom binding on the defendant.

And the evidence of Messrs. Jackson, Baker and Fraser, affirmed on cross-examination, shows clearly that in the mercantile world a difference is held to exist between the "*per procurator*" and the bare firm signature. The one betokens a limited the other an unlimited power and confidence. To sign the firm is to sign as a partner as Mr. Jackson admits, to sign "*per procurator*" is to use the greatest power that can be given to an employé. Then as to the fraudulent intent. Fraud has not reference necessarily to a pecuniary advantage. It is defined as getting an unfair advantage to oneself of any kind at the expense of some one else. Here the plaintiff admits his intention to arrogate a higher mercantile position to himself than would be implied in signing "*per procurator*." And this was to be through widening his principal's liability without permission—in defiance of express orders. Mr. Baker admitted that if the power had been shown him he would not have honoured the cheques. Thence the plaintiff's conduct exposed the defendant to the serious commercial risk of having a cheque signed in his name dishonoured. It is an accident—the belief of the Bank in the plaintiff's power without due inquiry—that alone prevented this occurring. It is unnecessary to go deeply into the plaintiff's motives—indeed impossible—and equally so to go into all the possible results of his conduct to the defendant. It is certain that if Mr. Kirby had died suddenly the plaintiff would have had a pretty case for claiming a partnership. He could have suppressed all the evidence unfavourable to that claim and made the most of all—including his own assertions—in favour of it, and it is hard to see how Mr. Kirby's representatives could have defended themselves. In a word it is plain that the plaintiff intended some advantage to himself—not to Mr. Kirby—at the expense in one way or another of his employer. Now the cases I shall cite shew that it is not necessary to prove moral turpitude or even any loss to the master. It is sufficient to prove real disobedience or substantial misconduct. Thus in Amore v. Fearon, 9. Adol. and Ell. the plea was disobedience and misconduct, and this was supported by evidence of Amore having on one occasion disobeyed his master's orders and muttered something about his being entitled to be considered as a partner. No fraud or loss was even alleged. And Amore really had good ground for supposing that he might be considered a partner.

Z. A. & E. Ridgway v. Hungerford Market Coy. Here too there was no fraud and no loss. So also in Turner v. Mason: a particularly strong case, 14 Meeson and Welsby, the plaintiff asked permission to be absent for one night to attend his sick mother; leave was refused, nevertheless he went and was consequently dismissed, and the dismissal was justified. In this case there was no loss whatever to the master and no moral turpitude or fraud ascribed to the servant. In fact wilful disobedience destroys the relation of master and servant. I would call the attention of the Court to the expression of the judges in Capron v. Spinner 11 M. and W. 161.

On the point of improper and unfaithful or fraudulent conduct, I would cite the case of Houghton v. McMurty. The conduct of the plaintiff in respect of the Kerosene order to Mr. Abbott giving that gentleman a large order where expressly ordered in writing to give a small supplementary order (supplementary to a previous one to another party) is worth adducing, not so much as a cause of dismissal as showing the plaintiff's tendency to arrogate power to himself never given him. And the letter from Mr. Byninger to the plaintiff ending with a wish that the plaintiff would succeed in his new business, shows clearly that Mr. Byninger derived the impression from his correspondence with the plaintiff, that the latter was in the position of a partner. The letter thanks Mr. Devine (it was a private one accompanying an official one) for obtaining the order for Byninger. Next as to the plaintiff exposing himself to criminal proceedings. The signature was criminal if done with intent to defraud. Fraud as shown before need not be of pecuniary nature. If the defendant

had repudiated the cheque the plaintiff might have been called upon to prove his innocence. The presumption of innocence is rebuttable, his conduct was such that the law would infer fraud and it would lie upon him to prove his *bona fides*. This would have been difficult for he could give no evidence in his own favour and if his evidence were struck out of this record it would be extremely hard for him to shew his innocent intent. As to falsehood our evidence if correct proves it completely.

The plaintiff's witnesses did not assist him in the least. Mr Townley was distinctly against him; he always signed p. pro. on ordinary occasions and only the firm on certain extraordinary and special occasions when the p. pro. signature would not have been taken, and where it was manifestly serviceable and necessary to Mr. Kirby that the full signature should be used. The other witnesses were unimportant.

The only difficulties indeed we have to meet are the following:

1st.—How was it Mr. Kirby never saw the signature at Kobe? This is explained by the fact that the plaintiff sent to Kobe with every official letter a private one. The private letters are in and are almost entirely occupied with business details; thus it was unnecessary to see the official which were in other cases. Besides Mr. Hunter's evidence corroborates Mr. Kirby with regard to these official letters, and shows that Mr. Hunter communicated whenever necessary the contents to his employer. On one occasion Mr. Hunter called Kirby's attention to the signature but Mr. Kirby having then on ground of suspicion—it was the first letter sent to Kobe &c.—disregarded the fact as a mistake. In letters to him from the firm too it was not of any real consequence.

2nd.—The plaintiff may say—and this is a rather fine point—that he could not but imagine that the defendant saw his signature at Kobe. This however at the most could only justify his *continuing* and not his *commencing* to sign the firm. During the time between Mr. Kirby leaving Yokohama and the receipt at Yokohama of the answer to the first official sent to Kobe, at all events, there was neither authority or ratification of the cheques &c., signed the bare firm during that interval. The letter to Cowderoy and Rainbow must have shown the plaintiff that the defendant imagined him still to sign per procurator as the plaintiff went on signing the firm. Whatever may have been the plaintiff's real object he may have said to himself, If Kirby passes these letters to Kobe I assist my designs; if he does not I can fall back upon the excuse they are only firm letters. The plaintiff be it remembered never at any time in any way hinted that he was signing the firm, and never once verbally or in writing claimed to sign firm in spite of the letter of procurator of the 15th January, of the advertisement, of the power of attorney and of the letter to Cowderoy and Rainbow—four distinct occasions of his being ordered to sign p. pro.

The plaintiff knew Mr. Kirby well, knew his somewhat careless habits or rather his habits of implicitly trusting his employees, and may have learned much from Mr. Townley, who is evidently a strong partisan of his, and who received him the moment he left Mr. Kirby. No doubt if the plaintiff's account of what took place at Yokohama, with respect to certain correspondence to the letter of 3rd June to Hunter and to the draft for £21 is correct; our defence is a difficult one, though even then ratification of particular instances of no importance whatever would not imply ratification of a whole course of conduct. So too if the account given by the plaintiff of his interview with Mr. Dickinson is correct, our defence is difficult. Putting then the plaintiff's and defendant's veracity on a par, is it at all likely that Mr. Kirby if he *did* intend the plaintiff to sign firm should have taken the precautions he did to ensure his signing per procurator on four separate occasions, and should have acted as he did on receiving the letter of Cowderoy & Rainbow on the 24th June, and seeing the cheque of the 25th. For there can be no doubt that the signing firm was the real cause of Mr. Kirby's conduct. There was no other motive alleged or hinted, and acting as he did, he was put to extreme inconvenience.

If, as we assert, there was no intention that Devine should sign the firm but a strict intention to confine him to sign per procurator then the allegations of Devine as to the letters of the 3rd June and the draft of £21 are impossible. So too putting Mr. Dickinson and Mr. Devine's veracity on a par is it likely that a day or two after having with a special object drawn up a procurator power Mr. Dickinson would authorise a firm signature. Is it likely again that he would do so extremely stupid a thing as to approve Mr. Kirby acting as he did on the 26th June if he, Mr. Dickinson, had himself authorised Mr. Devine to do the very thing Mr. Kirby complained of.

After some further observations. Mr. Dickinson concluded by submitting that the defendant had a right on all or any one of the grounds alleged to the verdict.

F. PILON v. W. CHESHIRE.

The plaintiff in this case sued the defendant for the sum of \$200, the amount remaining unpaid on a contract in the gross of \$350 for work done on lot 55, Foreign Settlement.

In the course of the evidence adduced by the plaintiff, it appeared that he had completed the contract between the 6th May, date of contract, and the 14th July last. There had in the interval been some eight or ten days of stormy weather, admitted that the work did not appear to have been done to the satisfaction of the survey afterwards instituted by the defendant. The amount he had so far received was \$150, but had not received the balance \$200 owing to the unfavourable report of the surveyor. He considered that the parts complained of were well and properly finished. The plaintiff denied having sublet the contract to Japanese or others. The defendant had offered to leave the matter in dispute to two arbitrators, one of them to be a countryman of his own, but he had refused.

The defendant stated that, on the completion of the work he had a survey made, and went himself to inspect the premises. He found the roof leaking in several places, plaster falling from the ceiling, the gutters out of order, etc. A survey was sent in to the plaintiff to the effect that the work was not finished in a workmanlike manner, and that the roof was leaking. The defendant had in consequence undertaken to make good the defects, but he submitted to the Court that the repairs had been inadequately performed.

From the testimony of two surveyors, who appeared in Court to give evidence, it appeared, according to their reports, made on the 22nd July, and later, the 12th inst., that the roof was in a leaking state which had caused part of the ceiling and paper on the walls to fall. That none of the outside repairs had been done according to the contract produced in Court. It was asserted also that the tiles, the whole length of the building, had shifted; that the gutters were rotten and full of plaster; and that no repairs had been made so to speak. The plaster itself was inferior, and not at all fit for the purpose. Finally, that it would cost from \$150 to \$170 to complete the work.

H. A. Crane one of the occupants of the premises, confirmed, in the main, the evidence adduced for the defendant.

The plaintiff asked for a few days' delay in consequence of one of his witnesses not appearing, but His Honour declined to postpone the case, considering the evidence conclusive.

The Court allowed \$75, without costs.

J. H. SMITH and J. WYNN v. J. H. WILKIN.

Mr. Ness supported, and Mr. Dickens defended the motion, which prayed the Court to restrain defendant from receiving or collecting monies for Captain Wm. Black or for the firm of Black, Batavus & Co. on the ground that it was expedient that the Estate should be liquidated and that defendant's presence was prejudicial to the interests of the creditors under the recent judgment.

His Honour questioned whether a precedent existed for such a motion, and especially in the present case desired not to overstep his powers. Under the aspects of the case, which on the face of it shewed a desire to defeat the judgment of the Court, he did not see how he could possibly interfere, as there were other modes in which Mr. Ness might obtain his end. His Honour contended: If people will do all they can to defeat their creditors, it is difficult for me to interfere. But I can do something else, and if such persons are brought before me I shall feel inclined to do it, and to punish them for what they are doing. You see Mr. Ness, every possible obstacle will be thrown in your way, and I ask you is it worth while going to the trouble and expense? Let it alone; see if there really has been any fraud committed, and if there has been, prosecute the parties. As they intend to fight it to the death, let them take the consequences.

Ultimately, His Honour refused to make an order restraining defendant from receiving or collecting monies or in any way interfering with the personal estate of Wm. Black, and adjourned the motion *sine die*.

## NOTICE.

THE undersigned having re-sold the *Japan Gazette* to its former Proprietor Mr. J. R. BLACK, all subscriptions falling due on and after the 1st day of this current month will be payable to him.

A. VERNEDE.

Yokohama, 5th Sept., 1873.

## NOTICE.

THE undersigned having taken into partnership in the business of the *Japan Gazette*, Messrs. C. D. MOSS, and J. R. ANGLIN, the former will henceforward act as Sole Manager, and the latter as Superintendent of the Printing Department.

# Hokohama Market Report and Prices Current.

## STAPLE IMPORTS.

We have to note a much more hopeful state of things in this market, than we have been able to do for a long time. In the principal staples a very decided improvement has taken place both in the extent of business and in prices. Still the market is so overstocked that remunerative rates cannot be looked for until a large reduction is made in the stocks. In GREY SHIRTINGS very considerable transactions have taken place, and sellers have been enabled to show some degree of firmness; COTTON YARNS have also received their full share of attention, and the demand continues. TURKEY REDS have met a small enquiry, and TAFFACHELASS and VELVETS have been moved at quotations.

Articles.		Price.		Remarks.
Cotton Piece Goods.				
P. E. Grey Shirtings:—				
7 lbs	38½ yds. 39 in. ... ..	per piece.	\$2.15 to 2.22½	} Good business.
8 "	do. ... ..	"	2.50 to 2.55	
9 "	do. 44 in. ... ..	"	2.60 to 2.70	
G. E. White Shirtings:—				
56 to 60 reed	40 yds. 36 in. ... ..	"	2.40 to 2.65	} No demand.
64 to 72 "	do. ... ..	"	2.75 to 2.90	
T. Cloths:—	6lbs. to 7 lbs. ... ..	"	1.45 to 1.55	
Handkerchiefs	assorted ... ..	per dozen	0.25 to 0.80	} Nothing doing.
Brocades and Spots	(White) ... ..	per piece.		
do.	(Dyed) ... ..	"		
Chintz (Assorted)	24 yds. 30 in. ... ..	"	1.25 to 2.40	} Small enquiry at quotations.
Turkey Reds	24 yds. 30 in. ... ..	per lb.	0.83 to 0.95	
Velvets (Black)	35 yds. 22 in. ... ..	per piece.	9.00 to 9.75	
Muslins, Cambrics & Lawns	12 yds. 42 in. ... ..	"	0.90 to 0.95	
Taffachelass	... ..	"	2.40 to 2.65	
Cotton Yarn.				
Nos. 16 to 24	... ..	per picul.	38.25 to 39.25	} Very fair business.
" 28 to 32	... ..	"	40.50 to 41.50	
" 38 to 42	... ..	"	44.00 to 47.00	
Woollens and Woollen Mixtures.				
Camlets SS	assorted 56 to 58 yds. & 31 in. ...	per piece.		
do. Black	do. ... ..	"	14.50 to 15.00

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Silk has been brought to market more freely during the past month, and as the quality is greatly improved, buyers begin to act with less hesitancy. Although we do not note a decided rise in prices, the tendency is upwards. Settlements to date this season are 3,500 bales against 6,000 last season to the same period, and 4,500 the proceeding year.

**TEA.**—Our last issue reported a fair amount of business on our Tea market, and holders firm. This feeling has somewhat strengthened and has in a measure checked business to great extent. Settlements for the fortnight amount to 5,300 piculs, and as arrivals have been on a limited scale, stocks are accordingly light. On all grades below "finest" and advance of from \$2.00 to \$2.50 per picul has been established; the higher classes, however, are considered too dear for investment.

The *Etta Loring*, *Morro Castle* and *Clausina* are on the berth for New York, and the former having completed her cargo will have quick dispatched.

Freight for above port rule at £3 to £3.5 per ton of 40 cubic feet.

## REPORTS.

The Am. str. *Ariel* reports pleasant weather throughout.

The Brit. str. *Geelong* reports having experienced a heavy typhoon, in Lat 32 deg. N. Long 153 deg. East at noon on the 2th which continued till noon of the following day the wind moving from N. E. to south and S. W. No damage done, the ship behaving well, a very heavy confused sea during the time.

The Am. str. *Relief* reports very little wind during the passage but a very heavy swell from the S. East. The *Brami* reports rough weather shortly after leaving port since had fine weather throughout.

S. S. *China*, 3,836 tons, W. B. Cobb, Commander, left Hongkong Aug. 2th, at 4 p.m.; from Lam-mocks Island to Van Dieman's Straits strong N. E. winds, at east entrance of Straits experienced a heavy gale from N. E. to E.; from thence to port moderate easterly winds and pleasant weather. At 10 p.m., Aug. 31st, 95 miles W. S. S. of Ingersoll Rocks communicated with P. M. S. S. *Colorado*, from Yokohama to Hongkong, reported having experienced a heavy typhoon on the 29th, at the east entrance of Van Dieman's Straits. All well.

The Brit. str. *Quang Se*, reports pleasant weather throughout the passage.

The S. S. *Bombay* left Hongkong Sept. 4th at 6 p.m. and arrived at Swatow Sept. 5th at 2 p.m. Trans-shipped mails, treasure, and about 1,000 packages of cargo from the S. S. *Malras*, (which vessel had struck on something off Namoa and put into Swatow leaving. The *Malras* had temporarily stopped the leak and was to proceed same day to Hongkong to deck having discharged rest of her cargo.) Left Swatow at 1 p.m. on the 6th. Experienced fine weather in Formosa Channel; unsettled weather with N. Easterly gales and high sea to the Linschoten Island, since then moderate and fine weather. Sept. 11th off Oo-ima, passed a small screw steamer standing to westward and a P. M. Co. steamer standing to eastward.

Steamer *Golden Age*, Chas. S. Coy, Commander.—Left Shanghai, September 5th 9.33 a.m. Strong S. S. E. winds, thick rain and foggy weather during the passage. Arrived Nagasaki, Sept. 7th, at 7.47 a.m. left Nagasaki Sept. 8th, 0.15 a.m., light variable winds and light rain, arrived Hiogo Sept. 9th, 5.34 p.m. Left Hiogo Sept. 11th, 5.05 p.m. Passed U. S. ship *Saco*, bound our course 8.38 p.m. Sept 11th, and exchanged signals with Co's steamer *New York* bound for Hiogo; 10.30 p.m. experienced strong N.N.E. winds with rough sea. Arrived Yokohama, Sept. 13th, 8.49 a.m.

The U. S. Gun-boat *Saco* reports strong head winds all the way up, had to put into Simoda, Harbour for shelter where they lay 30 hours, raining and blowing, all the time.

The H. M. S. *Cadmus* reports fair weather. The Admiral and Squadron will probably arrive here about the 3rd of October.

The British ship *Bernah*, Capt. Blackstone, left Ponarth Roads, Cardiff, June 5th, had most part very fine weather to the Equator, which was crossed July 3rd in 29° West; lost the trades in 17° North. Passed Meridian of the Cape July 23th in 41° South. Sighted St. Pauls August 8th, got good trades in 25° South, and passed Java heads August 20th; 76 days out. Through Gaspar Straits August 25th, thence to Natasas light Southerly winds, after which strong winds between S. W. and N. W. to 13° North there light variable winds to the Ba-bees, passed through Balintang Channel Sept. 7th, winds light from North which steadily increased with a falling Barometer; made 120 miles E. by N. wind blowing very hard with threatening appearance. Barometer 29° 50'; believed a typhoon was approaching from the Eastward. Shortened sails and kept away to the Southward and Eastward; wind veering to the westward. 1 a.m. of the 9th, blowing a fearful gale with a nasty sea running, ship scudding under two lower top-sails; barometer at its lowest 29° 08', wind W. S. W.; 4 p.m. wind S. S. W. and moderating a little. Sept. 10th fine weather, winds moderating fast. Since 10th inst., variable winds and fine weather. Arrived at Yokohama, 17th September, 1873, 104 days out.

The Am. str. *Colorado* reports having experienced fine weather and light northerly winds.

#### MARRIED.

On the 16th September, by the Rev. E. Klitzke, at Hongkong, OTTO BENECKE of Hongkong, to OLGA, second daughter, of the late Friedrich Wilhelm Stender, Esq., Hamburg.

#### DEATHS.

On the 22nd Sept., at No. 81, Yokohama, H. BER-  
THAL.

On the 22nd Sept., at No. 56 Main Street, Mons  
ESTICUS AUGUST PRADIER, aged 35.

On the 22nd September, at Tokai, MICHISABURO  
HAYASHI, H. I. M. Vice-Consul at Hongkong.

On the 24th Sept., at the Yokohama General Hos-  
pital, of Dysentery, Mr. NICOLAS WILLAUME, late of  
Saigon, aged 27.

On the 2nd August, at Margate, after a short ill-  
ness, ALEXANDER E. PETROCCHINO, aged 28, late  
of London and formerly of Shanghai, the beloved  
brother of P. E. Petrocchino of Yokohama.

On 25th September, at the U. S. Legation Yokoha-  
ma, REID CRANDALL, infant son of the Hon: C. E.  
DE LONG, U. S. Minister, aged 5 months and 15 days.

On the 1st October, at No. 24, Yokohama, of  
Inflammation of the Brain, JOHN A. son of F.  
DOUGLASS, aged 10 years and 9 months.

OUR last Mail issue was published on the  
24th September and despatched by the  
P. M. S. S. *Colorado* on that day. We are  
since in receipt of the Mails by P. M. S. S.  
*Japan* from San Francisco September 1st, New  
York August 25th, and the English Mail from  
London *via* Brindisi August 8th. The French  
Mail from Marseilles, due here on the 1st  
instant, is not yet in.

#### Summary.

ON THE 18th September, the first child of  
His Majesty the Emperor of Japan was born,  
but hardly survived its birth. On the 25th  
the funeral took place at the new imperial  
cemetery, Tokai, with great ceremony.

CONTRARY to expectation the subject of the  
revision of the treaties has not yet come on  
for regular discussion; and it still remains  
doubtful when it will.

IWAKURA, the chief ambassador in the late  
Embassy to foreign courts, has not been in his  
usual health since his return: but though some-  
what indisposed, he has not been seriously ill.

KIDO, the ~~late~~ <sup>present</sup> ambassador, and to  
whom all classes of Japanese looked as one of the  
ablest men in the government, has had a pa-  
ralytic stroke, and his life was for many days  
despaired of. He is slightly improved—but  
it is unlikely he will ever be able to resume  
active duties.

FOLLOWING immediately on Kido's illness,  
the announcement reached us of the death of  
Sawa; formerly the Minister for foreign affairs.  
He had just been appointed the head of an  
embassy to Russia, and was preparing for an  
immediate start, when he was thus cut off.  
He was one of the Kioto nobles—and an inveter-  
ate opponent of the old Tokugawa rule. In  
him the government has lost a most able col-  
league, and the country a valuable servant.

THE PRINCIPAL item connected with foreign  
relations, is, that there is a probability of the  
good offices of China being put in active opera-  
tion, to bring Corea to a sense of her behaviour  
to Japan. If Corea refuses to make a proper  
*amende*, war will be declared.

THE GOVERNMENT is a good deal perplexed  
just now, by the difficulty of putting a stop to  
a number of petty lotteries, which have been  
opened in T'skidji, the foreign quarter of Tokai;  
and which, though belonging to, and exclusive-  
ly worked by, Japanese, are under the protec-  
tion of foreigners, who lend their names for  
a monthly (dis)honourarium. Lotteries are ille-  
gal in Japan, and these are doing an immense  
deal of evil among the poorer classes.

TOKEI (Yedo), from being one of the most  
interesting cities in the world, has become the  
very reverse. In the rage for improvement,  
the old gates of the city and the towers of the  
castle are fast being removed; and there is  
literally very little left to give a true idea of  
what the city was in the past. The members  
of the late Embassy who were absent less than  
two years, declare that nothing they saw  
abroad gave them greater surprise than the  
changes they met with here.

ON THE 24th September, Yedo and surround-  
ing provinces were visited by the nearest ap-  
proach to a typhoon we have had this year.  
The rain, however, did more damage than the  
wind; and, continuing for upwards of 24 hours  
in a steady even-down pour, the whole of  
the valleys were flooded; much damage was  
done to the crops, to homesteads, and all things  
within reach of the water; and to human life.  
Several bridges were carried away; and there  
were numerous land-slips. Two of these in Yo-  
kohama were fatal—one at the extreme end of  
the Western bluff, the other near the end of  
the Eastern bluff. A little girl of 12 years old  
was drowned in one of the streets in Tokai.

THERE HAS been great mortality, in several  
provinces, among the cattle. The disease has  
been of the nature of diarrhoea. It carries  
the animals off very quickly.

THE NEW minister from the United States to  
Japan, Mr. Bingham, has arrived. He took  
over the duties from his predecessor, Mr. De  
Long, on the 7th instant. From all those who  
know Mr. Bingham's career in his own coun-  
try, we have every reason to believe that the  
interests of America are safe in his hands;  
notwithstanding the extraordinary and un-  
measured statements of the San Francisco  
papers. He will find his path made easy for  
him at the outset by the great favour in which  
Mr. De Long has always been held at the For-  
eign Office (Gaimusho). We hear that it is  
Mr. Bingham's present intention to reside per-  
manently at the American Legation in Tokai.

**A** Yokohama contemporary, the *Japan Mail*, rejoices over the fact it gives to its readers as news, that the Shosha is to be abolished, and a National Bank to be established with two offices in Yedo, and one each in Yokohama, Osaka, &c. We will honestly confess that we cannot certify whether this is correct or not; simply for the reason that no two persons give us the same answer to our enquiries. The word Sho-sha, means trading company and the Yokohama Shosha is represented to us as having sunk this character for two or three years past, and as having merged into the Kawase Kaisho, or Exchange company; and as for the National Bank it has already been open for a long time in Tokei, and the places mentioned. The bank known as Mitsuri with all its branches, is in fact, the National bank; and whether or not that is of particular value to trade, we doubt whether any merchant or writer is in a position to give the public correct information. Any one may know the nature of business done by a foreign bank, as well as the name of its proprietary the amount of its capital, its rules and regulations and the average amount of its transactions, and their results whether profitable or otherwise. A little trouble only is requisite, and probably a small disbursement at the offices to cover the cost of the book, containing all this information; but such is not the case with a Japanese Bank; and what is the capital with a National Bank, whence derived, by whom the business is conducted, in a word everything about it, is as much a sealed book, as if it were a strictly private bank.

The Shoshas as originally established were to be huge monopolies whose privileges whilst expected to enrich every one connected with them were sure to be inimical to the trade of the country at large. Why they did not succeed as trading companies we cannot tell; for had they had good business men at the head of them, they ought to have heaped up riches almost without limit. It may fairly be supposed that they did not make profits, or they would have continued, unless indeed their operations were stopped in response to the remonstrances made by the foreign newspapers and the merchants of Yokohama.

It is not now the Shoshas, as such, with which fault is to be found: it is the infinity of interferences with and squeezes upon trade. Beginning with the Government and the customs duties and the octroi rates, every native who handles the goods expects to get something out of them; and the provincial buyer of foreign goods finds the cost to him prodigiously augmented by the time he gets them into his warehouse, and the seller of native produce in like manner finds the money mightily diminished from the price obtained from the exporter, by the time the nett proceeds are put into his hands.

There is one particular explanation of this, and it lies in the existence of the licenses granted to only a few to trade with foreigners, or to buy or sell certain articles. This forces all goods through narrow channels; combination is rendered easy among the Japanese middlemen or as they call themselves merchants—god forgive them; and the buyer, the seller, and trade in general suffers. The farmer who produces his 20 or 30 piculs of tea cannot go to a general market and sell it at the best price buyers are willing to give, but he must take it to one of a certain number of licensed men who have the price in their own hand because no one else is allowed to meddle. These men again send it to Tokei or Yokohama, not according to the demand of foreigners, but according as the prices obtained and the sales made will allow of it; and let a man require money ever so much, let him be willing to sell at ever such a

sacrifice, it is impossible except through these licensed men.

Again, when the tea and silk seasons commence, those whose goods are fortunately in the hands of the middlemen—they cannot truly be called merchants—they accompany them to this city or to Yokohama as the case may be. They then lodge at the houses of their agents, and are expected to made themselves popular with all belonging to the house, by treating and spending money freely. This season is as much looked forward to by the proprietors of the Yoshiwara pleasure houses who make it their great harvest time, as it is by the eager foreign buyers, each anxious to rush in and madly grab at the dribbles of produce held out as bait to them. And as it is with exports so is it with imports. Only certain men are allowed to deal with foreigners direct, and they all agree together, and anything like the competition that is seen among foreigners is rendered hopeless. But those who sell the goods to the consumer, are not generally, those who buy them of foreigners. No—they either have to pay a high price to the original nominal buyers, or the goods are put up to auction among themselves, and each man buys what he wants, and the profits go to a common fund divisible among those especially who form that particular clique. So that in both cases, the genuine producer and the genuine exporter, as well as the genuine importers and the genuine consumer suffer.

Is this a system that should prevail in such a country as Japan? If they would act up to treaties, or shew themselves possessed of true commercial astuteness—certainly not. If they are content to follow the old beaten track, and allow a few to earn by chicanery, what the many might share to the advantage of the country—why let them take their way.

In this city of Yedo there are but few foreign merchants; and these seem to us to be mightily afraid of letting one another know what business they are doing. But this is a matter which does not affect them alone, nor the Yokohama foreign merchants only. It affects the whole commerce of the country and is the greatest incubus it experiences. We would, if we could get the native merchants of this great depot to throw off the yoke, and to insist upon having these middlemen scattered to the winds. Japan has, however, to learn a great deal before her merchants arrive at that of their own accord.

But the foreign merchants of Tokei, most of whom, we take it, are already members of the Yokohama Chamber of Commerce, should join their brethren there, and use every exertion to get this enchainment system filed through and destroyed. The men they are generally brought in contact with in Yedo are for the most part, superior to those met with among the so called native merchants of Yokohama, and proper arguments and representations might have some effect upon them.

But we must not forget that monopolies existed in England to as great an extent as ever they did in any country; and it is only within 30 years that they have been swept away. When the time came for their abrogation, it was not from the monopolists themselves that the demand arose for their prohibition, it was from those whom the shoe pinched. It is little likely also that the monopolists here will yield up their privileges willingly. The movement against them must come from outside—from those who are sufferers. It is certain that the Japanese will not initiate any such movement, much as they would rejoice were it successful; therefore we strongly recommend the foreign merchants to examine into the whole subject, and see what can be done to eradicate the evil.

Now is the time to do it. Business never was so suffering since the ports were opened, and it was these monopolies that enabled Japanese to take advantage of the competition which produced such a large amount of over-trading among foreigners. It was these middlemen, these licensed squeezers, who by combination ran prices of exports so high, and reduced the prices of imports so low, that the small profits of several years have been in many cases dissipated by the large losses of one.

The time is at hand for the serious discussion of all such matters in full council of foreign and Japanese ministers. To-morrow the meetings on the Revision of the Treaties will commence. Let the merchants, nay, let the whole community begin at once, and agitate this question in such a manner that its importance may be fully seen by the ministers; and action taken accordingly.

**S**OME three or four years ago there arose in Tsukidji, in this city, a number of companies called Komé Kaishos, the proprietors of whom paid foreigners handsomely to allow the business to be conducted in their names. At that time there did not appear to be any valid objection to these Rice exchanges, but the government knew more than foreigners did: they knew the character of the men who carried them on; they declared that they were nothing but gambling companies; and they put them down with a high hand. The great feature of them was. That their business was not genuine; though we are convinced that those foreigners who gave their names did so in ignorance of the real nature of the transactions of the concerns they protected; and imagined that they were of the same kinds as are considered legitimate on the European Exchanges. They were in fact, as it proved, established exclusively for the purpose of gambling in time bargains, and as a rule no rice ever passed between the buyers and sellers—the exception being just once and again, for the purpose of blinding the eyes of the foreigners, and deceiving the officials. Unaware of this fact, most people, ourselves among the number, considered the action of the authorities harsh and unjustifiable; and one of the foreigners who had allowed his name to be used, Mr. Van Reed, made a formal complaint to his government at Washington upon the interference with his business, and the infringement of the treaty.

Had nothing else arisen to take the place of these establishments, we probably should never have taken the trouble to enquire any further about them, and should have adhered to our original opinion, that the government was wrong and that the companies had been harshly treated. The gambling, however, for which we are now convinced they were established, has since taken different shapes; but always under the names of foreigners.

It was easy enough for the original lenders of their names to fancy that they were justified; for at that time no Japanese could either buy or sell in Tsukidji, without paying a heavy squeeze. Frequently has it happened to us that having made purchases in other parts of the city, when we have asked the shop-keepers to send the goods to Tsukidji, they have refused, unless we would pay a much higher price—the difference being what they had to pay to those who had the monopoly of trading with foreigners in Tsukidji. Yet, if we engaged a coolie, and let him accompany us, there was no interference, and no squeeze was demanded of us. So foreigners might well take these companies under their protection; under the im-

pression that they were thereby facilitating trade, by removing it from the charges all Japanese had submit to.

But things are totally different now, and every foreigner must be aware, that if a Japanese offers him a high salary merely to be allowed to use his name, there must be some good reason for it. As a rule Japanese prefer buying and selling of one another; and if they could get what they want without the intervention of foreigners, they would do so. The only reason then why Japanese who opened rabbit auctions in Tsukidji, and paid liberally for the use of foreigner's names, was, that they might be enabled to carry on an illegal business without molestation. Those rabbit auctions came to an end, and now, with a boldness hitherto unexampled, all disguise is thrown aside, and lotteries are openly carried on under foreign names. It is not very long since we heard of foreigners being engaged on a salary for the sole purpose of instructing Japanese in gambling games with cards; and we are assumed that at this moment, the amount of gambling which is fathered by foreigners in Tsukidji is beyond belief.

All this is very regrettable. It injures the character of foreigners in the eyes of Japanese, who imagine that they are all tarred with the same brush; and the good nature with which those even who disapprove of such things abstain from expressing their sentiments to Japanese, leads to the belief that they do not object to them.

We can assure the Japanese of all classes, that nearly every foreigner highly disapproves of these gambling establishments; and particularly of any infringement of a well-understood Japanese law; and the few who are known to give their names to such establishments, although they may be tolerated, are not respected by their countrymen.

Hitherto Tokai has been a city in which, from its vast size, any one could reside almost out of sight of his fellow countrymen in Yokohama; and we doubt not that some of those who have been tempted to lend their names to the establishments we have alluded to, have done so under pressure of pecuniary circumstances combined with the belief that their friends would not hear of it. Had we only to deal with individuals, we would probably withhold our strictures, whatever might be our opinions. But it is not only with individuals, but with a set of systematic law breakers, who make foreigners a cat's-paw; and who deserve no kind of sympathy or consideration. These things then properly come within our province to expose. There will not in future be the same facility for foreigners to engage unobserved in such affairs in Tokai. The press has efficiently suppressed them and kept them under in Yokohama; and we will do our utmost to expose them in Yedo.

**T**HE Tokai authorities are full of good advice and give excellent warningsto the citizens, but we should like to see them bestir themselves to a greater extent than they do. They have taken the trouble to urge upon the people, the necessity of cleanliness for the prevention of disease, particularly cholera, but we see very little effort made by them, to cleanse the public thoroughfares, and remove the hotbeds of malaria that exist in every part of the town. They suggest to the inhabitants that they should attend to the cleansing of gutters and keep the roads clear of puddles, but it is very little in this way that they look after them, and they appear to us as like unto those who say but do not—who talk but do not act.

We highly approve of advice they have given to the public on this subject; but is it likely that these will pay any extra attention to cleanliness, if they see that their advisers are idle? The streets of Tokai from North to South, from East to West are in a disgraceful state; and they have been left so for so long that if the much dreaded cholera should arrive within anything like a reasonable period, there would not be time to get them in a fit state to meet it, before it was in their midst. The Japanese people are essentially clean in all their households, and, with the exception of the lower classes, require very little advice from any one on that score, but outside drains and the streets should be seen to by the municipal officers, and nothing that can be regarded as a public sanitary matter should be left to the chance of private persons attending to it. If the officers of Tokai fu are not too proud, we would ask them to look at Yokohama foreign settlement, where, although the sanitary arrangements are imperfect, in many respects, still they are far better than either in Tokai or the native portion of Yokohama.

There is an old saying—"What is everybody's business is nobody's business." It is useless telling the people that they must have the gutters and streets cleaned. On such a notice as this, no one will begin, but all wait for others to lead the way, and so it is left undone altogether; but if proper officers are appointed as health officers in each of the six public districts, and it is their duty to keep an eye over the whole locality given into their charge, and to see that what is requisite is actually done, there may be some hope of even yet getting clean and wholesome streets. But there must be some person with energy to examine, with sagacity to see, and with authority to execute what is needful.

Let not our Japanese friends fancy we preach without practising. Any one who was in the settlement of Yokohama eight to ten years ago must remember that the establishment of a sanitary committee was among the first things foreigners combined in. When the first municipal committee collapsed, the sanitary Board outlived it, and Mr. Kingdon and Mr. McDonald deserved a great deal more of the gratitude of the community than they obtained. Frequently we have seen Mr. Kingdon up and hard at work directing the corps of coolies he had organised, whilst others were still looking for another hour or two of slumber, or taking a healthful morning spurt over the country. There was no circular road in those days. There were three sources from which malaria could be expected—viz., from the whole of that locality now called the Momechi, which was then a most offensive swamp; from the Southern Creek, then at every low tide almost empty, and with banks covered with all kinds of rubbish and impurity; and from the bad drainage of the settlement itself. The two first could not be dealt with by the committee on account of the very small means at their disposal; but the third could be and was well looked after, and as those most active in it are among the few old residents still left among us, our readers on our mentioning them by the way, and shewing them that though they may no more think of the duties they performed for the community, there are still some left who remember the benefits they conferred by their unwearying zeal.

The time came, however, when after a second abortive attempt at a municipal council worked solely by foreign residents, the want of funds compelled them to throw the onus on the proper shoulders. The Japanese government had undertaken it as a part of their duty when they fixed the heavy charge for ground

rent, and it was but right that they should fulfil the duties thus agreed upon. Looking at the state of Yokohama now, its residents have little or no cause to complain—for though the authorities, through an unwillingness to take advice from those who knew better than themselves, made several most expensive mistakes, and thus months and months passed by before any great improvement was seen, still they at last did allow themselves to be guided, and now they have good well-drained streets, and altogether as clean and wholesome a settlement as can be found either in Japan or elsewhere.

Why then should not Tokai take a lesson from Yokohama. The main Street, as the houses are finished ought to be at once cleared of all obstructions, the causeway made, and the whole kept free from accumulations of filth and dirty water; and every other street should, as a beginning have the holes in a streets filled up; and receive daily attention from the scavengers. Any person allowing unwholesome matter to collect should be compelled to see to its removal, and in one sense, the health officer should be lord paramount.

The expense of the scavenging ought not to be an impediment; as in many of the great cities, men will pay a considerable sum for the privilege of carrying away all the city cleansing, as by the sale of it for manure, large fortunes are realized; but care is always taken that those who obtain the contracts, bind themselves to do the work according to the rules of the municipality.

If properly managed the sum obtained from the contractors ought to pay the salaries of the health officers and all employed in supervision. But whether such an arrangement as this be entered into or not, there ought to be no delay on the part of Tokai fu, in undertaking the duties they have recommended to the citizens, so far as falls properly within their province.

**A** LONG and profitless correspondence on the subject of missionaries has recently taken place in one of the Yokohama newspapers—a correspondence which simply served to prove one thing that every one knew quite well before; viz., that in that community, as in every other, there are differences of opinion as to religious matters and religious professors; and that those who do so differ are not very silvertongued as touching those from whose doctrines they dissent. Throughout the whole controversy we have been struck most forcibly with the good-sense the general public have displayed in allowing it to be confined to the few with whom it began, continued and ended in the *Herald*, and in hardly condescending to take further notice of it than is conveyed in the passing remark in response to the ordinary question "What news?" "Oh nothing! Only another missionary letter." And now that the patience of the writers, the editor, and the public is exhausted, the whole has sunk into oblivion; not one letter having produced five minutes discussion beyond the immediate circles of the writers.

But from those disquisitions we turn to a solid fact. We are not going to ask our readers to listen to our meagre arguments as to the truth or falseness of christianity; nor as to whether the missionaries who have chosen Japan as their field of labour are sinners above all men because they did not go into the highways, and hedges in their own country, and compel men to come in. But believing as we conscientiously do, that the christian faith is productive of greater happiness in this life than any other, and that it is the only faith accompanied by an assured hope of happiness hereafter, we rejoice to see that there have been christian workers in Japan; and that, so far as acts can

be received as an outward and visible sign of an inward spiritual grace, we have proofs of their success among the Japanese.

Long ago we told our readers of converts, whom to particularise at that time, would have brought the notice of the authorities upon them, to their certain annoyance and probable punishment. But we did not think that the period would so soon arrive when we should be able to make plainly such an announcement as that which appeared in our columns last evening—that a church of native christians has been publicly established in Tokai as well as in Yokohama. These are not altogether the first fruits of modern christian missions; for there have long been men and families who have only been prevented from making an open profession of faith, by the dread of consequences; and it was no part of their teachers plan to make martyrs of them. If then we mention them, it is not to welcome them as sharers of the same faith, nor to felicitate their teachers on their success in their master's service, though both of these things are within our thoughts and desires, but it is to congratulate the whole empire on the growing enlightenment of the government, which once more returns to the primitive liberality of Buddhism—the most practically non-persecuting religion under the sun. Theoretically of course Christianity is equally non-persecuting, though the bad passions of men have made it in times past, much the reverse; but now we hope that so far as Japan is concerned there may never be known another instance of persecution for religious sake, or punishment for mere opinions. It must be borne in mind that heretofore it has not been Buddhism persecuting Christianity as religion; but the government trying to put down what they believed or affected to believe to be a seditious and disobedient sect. It has been looked upon as a political rather than a religious party from the days of Taico-sama downwards; and it is and must be a great satisfaction to all to see that this view is held no longer.

And now we would say one word—a word of warning—to the missionaries who have at length seen some good results from their patient labours. It is that it may be possible to overdo bible-teaching as it is everything else. As recently as one day last week we heard of a young Japanese student who has hitherto been learning English from a missionary, but who was enquiring for another master, because he was only taught to read from the bible; and though, (he admitted we suppose for decency's sake), that it may be very nice and very interesting, still he would like sometimes to read something else. We believe all laymen and most clergymen will sympathize with this youth. It is quite possible to have too much of a good thing, and more than one instance has come within our own ken of youths being disgusted by being made to learn chapters of the bible—in season and out of season.

In the beginning of this article, we have alluded to certain letters which appeared in the *Herald*. Before we conclude it we must turn to a paragraph which appeared in the 'Notes of the week', in last Saturday's *Mail*. The writer gives the character of certain men, whose existence "beneath the surface of society in this country" "is a curious commentary on the discussion which has recently taken place." Having painted men whose "lives are pure and well regulated", and with a perfect galaxy of high and noble qualities they are represented as talking "with earnestness and good sense" upon the condition and prospects of this "country. While they do not undervalue the

"advantages Japan must derive from her material progress from the introduction of railways, telegraphs and the mechanical appliances of modern life, they are persuaded that she requires moral reformation, and that therein lies the secret of her future higher life. As far as their own example in this respect can avail, they set it, and neither the temptations of pleasure, nor the allurements of idleness serve to divert them from their purpose."

"These men are christians."

Does our contemporary mean this to be a description of Japanese? We think so, though those who read the whole article from which it is taken will see that it is somewhat obscure. We have met one or two Japanese who profess to be christians who would pretty well answer the description in the main. But those four words at the foot of so fine a picture "These men are christians" puzzle us. Are we asked to look for all these qualities in a man, and on finding them to recognize at once that This man is a christian. Our experience is very different. We know many sufficiently well to say that they may have sat for the portrait, but with the one or two exceptions we have admitted they are not christians.

If our contemporary should tell us that the allusion was not to Japanese, we still have a similar reply. We cannot "verify his words." Literally, we know Jews and professing infidels who would answer the description as well as any christians.

IT is some satisfaction to see that the Japanese government has become alive to the fact that it is useless to send youths to study abroad until they are of sufficient age to have learnt their own language and the history of their own country—(especially during the present century), thoroughly; and have attained at least so much stability of character as not to be altogether dazzled by the activity and evidences of wealth and power they see in other countries. There are many Japanese who have been abroad, who come back to Japan with regret; and that too, among those who have only travelled at a mature age. What must it be then, for a youth who leaves this about the age of 15, to come back four or five years afterwards, from the gaiety and pleasures that even students in other countries indulge in during the years between 15 and 20? They almost forget their country and their mother tongue. They become accustomed to life under free institutions; and when they return, everything seems to contrast unfavourably with what they have become accustomed to. As long ago as 1866, when several youths had already been sent by private individuals to Europe, and the government began to give attention to the subject, we strongly urged those who had any voice in the matter to avoid sending mere youths abroad; and we pointed out the danger which any one of common intelligence, who thought at all upon their matter, must foresee.

At that time foreign newspapers were not as widely read in Japan as they are now; but we had occasion to know that our remarks met the eye of some of the officials for whom they were intended; though whether they had any effect on their minds it is quite impossible to tell. Perhaps not—for youths were sent abroad for their education, and many have been since, and it is only now that we are beginning to see those youths return as young men. The question arises. Do they fulfil all the expectations of those who sent them? Time will show.

The *Japan Mail* says that the majority of them come back with "a prodigious contempt for their own country." We hope that this is a mere figure of speech. We do not think

that the majority despise their own country, if so nothing but their youth and inexperience, and the fact of their having been absent during their most character-forming years, can save themselves from contempt. It is not at all to be wondered at that their first impressions of what they see in their own country on their return are disappointing; but we contend that there is much that strikes the eye even of foreigners arriving in Japan which compels respect and saves it from contempt; and we should indeed think lightly of a Japanese who allowed such a sentiment to find utterance, even supposing it to be felt.

Japan has so completely changed from its old traditions that it may truly be said to have been born again, and that which is true of all nations and men, is particularly so of Japan—that the present is the parent of the future. Young England, Young France, Young America, were expressions which never had greater meaning than "Young Japan." Old Japan is and for many years will continue to be largely represented in the rural districts and provincial towns of the empire; but Young Japan represents the spirit of progress which permeates the metropolitan cities, and the most busy open ports. The enlightened policy of the day, it must be remembered has been inaugurated by men, who, belonging to, and educated in, all the traditions of the past, have had the foresight and clear understanding to appreciate the great fact that a new life was necessary for the empire: that Japan had been asleep for ages whilst all the rest of the world was in motion; and that the only plan to rejuvenate the country was to make a total, a radical change. What plucky, determined men must those have been who had to direct this change. We do not mean those who drew the sword to overthrow the Shogun. We mean those men of brains who undertook to solidify and render permanent what the men of the sword handed over to them. These men, we repeat, were men of Old Japan; and it speaks well for them and for their countrymen, that the present state of progress has been reached under them; but we look to them now to regulate the speed of that progress. They stand out among their countrymen, calmly holding the reins over somewhat difficult tracks; there are others who having originally been of their number, have lately seen foreign countries, and are eager to increase the speed, so that they may not be altogether distanced in the world's race; and there are others again—the young fellows we first spoke of, who think the pace is altogether too slow, and that it must be increased so as to bring Japan neck and neck with other lands.

In the good time now coming, all of these will have their influence on the state. Foreigners have been very much in the habit of crying out against the rapidity of the improvements that having been going on, and prophesying a collapse. We do not share these views. On the contrary, we do not look upon Japan as making progress in any greater proportion than other countries. The only thing is that it is more perceptible in her, because she had to begin at the beginning and change everything, from the government downwards.

It is currently reported that those who have just returned from the Imperial mission to Europe, are so impressed with the backwardness of Japan, that they are eager for many changes. It is but natural. They are people of mature judgment, who had been well grounded—so to speak—in a love for their own country before they went abroad. Their counsels must be of great value to the government; and it is quite to be expected that the men in power will not be unwilling to adopt their suggestions

so far as they may appear to be really feasible and for the good of their country; but they will take care that caution is present at all their deliberations.

As for the third class—those youngsters who would run a race with all the world, without considering their want of training, the day will come when they will be useful. Few of them are immediately competent for official employment; but they will mix with the people; their very grumbings will make many wish to see or experience the things they pine for, and so the desire for foreign travel will increase, and every one who is able to indulge in it, will bring back a fresh supply of determination to see Japan advance. These are the leaven who may, after all, leaven the whole lump; the advantage being that though their discontent, and their glowing accounts of other lands may lead their friends to travel, these latter will not be mere boys—but men of minds capable of appreciating civilization of the world at large, and bringing it to bear on that of Japan, without losing their love for the land of their ancestors and of their birth.

BOSWELL, in his life of Johnson, tells of a certain Irishman named Campbell being introduced to the “leviathan of letters,” at the time that great man was purposing to visit Ireland. Campbell expressed his fear that he would find it little to his taste. “Why, Sir?” asked Johnson. “Because if Scotland was so distasteful to you,” answered Campbell, “where the people are so intelligent and industrious, I ask myself how will Ireland appear, where the people are ignorant and idle.” “Sir,” was the ponderous reply, “you need be under no apprehensions. The Scotch think nothing like Scotland and Scotchmen. When I find a Scotchman, to whom an Englishman is as a Scotchman, that Scotchman shall be as an Englishman to me. You need have no fear for your countrymen, Sir, for I never heard one Irishman speak well of another.” Whether this is a special fact as regards Irishmen, we are not prepared to say. But we may tell our readers, that it is the character that foreigners have among Japanese—that they never speak well of each other. It has been represented to us as the most striking peculiarity of foreigners, from Ministers downwards. In fact, if several illustrations that have been related to us be true, some of those in and about the foreign legations deserve from their countrymen very different treatment to what is usually accorded to them.

But not to make our remarks appear personal—which most emphatically they are no further intended to be than as every one may find them applicable—we will simply ask whether this is a characteristic of foreigners which has struck themselves? For our part, although we do not think it can be laid down dogmatically as *the* distinguishing feature among foreigners, it certainly is a prominent one, and we are not surprised to hear that it is that which is most observable to Japanese; because oftentimes in the desire to raise themselves in the opinion of the natives they may speak slightly of others.

There never was yet a community where people did not talk of one another. There never will be one in which people do not know their neighbour's affairs better than the neighbours themselves. And the inference we may draw from this is that it is one of nature's laws. But the disagreeable aspect presented by this fact is, that in speaking of one another's affairs, not among ourselves, but to Japanese, we should appear to them *always* to speak ill of each other. If this be really the fact, is it not somewhat humiliating? We come here and

boast of our civilization, and are all so anxious to teach and improve those we have come amongst; and lo—the first thing that strikes them is our jealousy and our ill-nature.

It is hard to be obliged to admit the correctness of their judgment. But no one who considers a little will be able to deny it. Unfortunately the old proverb about giving a dog a bad name is exemplified here: for through our having exhibited this bad quality so freely and universally to our native friends, they give us a character for it, any virtues we may chance to possess being altogether ignored and lost sight of.

It will be very difficult to shake off this bad name; and it never can be shaken off unless we cease altogether to confirm it in the future.

What shall we do then? Shall we continue to scandalize and belittle each other; and so retain and strengthen the uncanny character we have won? Or is it worth while considering that when men begin “to talk of their friends” ill-naturedly, it is apt to, and with Japanese it certainly will, recoil upon themselves? The intelligent natives of this country are quite cognizant of the fact that there are saints and sinners in other parts of the world as well as in Japan; but when they behold a number of strangers visit and settle down upon their shores, whatever, credit they might be willing to accord to them for what they see, they are obliged to believe that the sinners very much predominate, simply because every one they talk with, has some fault to find with the rest.

It is bad enough that this overhauling of our neighbours and their affairs is always going on among ourselves; but “it is an ill bird that fouls its own nest;” and that is what we do when we make our Japanese friends our confidants in our backbiting propensities.

Probably if people would pause and ask themselves what the effect of their utterances is likely to be, there might be an improvement. Or if people who consider themselves so clever, and capable of teaching Japanese, would occupy their minds with the study of subjects likely to be useful to them, and take opportunities of imparting information connected with them, it would tend to a diminution of the contempt which must be produced by constant infraction of the command “Thou shalt love thy neighbour as thyself.”

We leave the matter with our readers. We are willing, if they desire it, to admit that foreigners in Japan are pretty much like all the rest of the world; but we would suggest that a little more caution is necessary here than elsewhere. The people watch us closely—we are a novelty and an enigma to them. Not one in a hundred foreigners is aware of the character attributed to us before we obtained a footing here. We can only assure them that had we been anything like what we were represented—barbarian—would be no name for us,—no we might go so far as to say that devils would have been a mild appellation. All such wild and wanton absurdity we have dissipated and outlived; and there are many men among us who have personally begun to win something like esteem; but just when their conduct has engendered confidence “some good natured friends” have a fling at them, and leave the Japanese to fancy how extremely cautious they must be to avoid being deceived.

Each one emulates the illustrious Thomas Codlin. Each one wishes to get all the advantage he can out of the Japanese, even at the expense of his friend. “It's me that's your friend—not him. You can't think what an interest I have in you, I'm the best adviser that ever was, and so interested in you—so much more interested than Short. You need not tell Short, you know, that we've had this

“little talk together. God bless you. Recollect the friend. Codlin's the friend, not Short. Short's very well so far as he goes, but the real friend is Codlin—not Short.”

Is it wonderful if the Japanese, like little Nell, leave in a state of extreme surprise—or should feel a misgiving that such men are not the fittest companions for them?

WE RECENTLY wrote:—“The amount of gambling which is fathered by foreigners in Tsukidji is beyond belief.”

It is no part of our duty to ascertain exactly how many houses there are in that district of Tokei, whose sole business consists of this gambling; but it is a duty we owe to the whole public of Japan, to expose the fact of their existence and to warn people against them.

It shows in some measure the weakness of Japanese law, when the government can be thus set at defiance. And at the same time it shows the determined spirit of gambling that pervades the people, who, generally so obedient to government and acquiescent in its decrees, most resolutely support these illegal establishments.

The necessity for opposing and putting down these places is seen every day. It is precisely the same as that which induced the British Parliament to suppress lotteries. Every day brings to the knowledge of the authorities of Tokei fu, the ruin brought on poor families through these houses. It is not the well-to-do and comfortable citizens who feel the evil of them; for they out of their plenty stake a few rios, and it is of no importance whether they win or lose. It neither makes nor breaks them. But it is the poor people who have little, and who pawn everything they have to raise enough for the requisite investment, upon whom, if they fail in getting a prize, the ruin is absolute.

The evil is so great that the Chiji of Tokei Fu is unequal to cope with it, and has represented it to Daijo-kuan. So long as the Japanese people alone are to be dealt with, there is no difficulty whatever. The official permission to carry on such business is withheld, and the evil is prevented. But when these rogues hire the names of foreigners, the native authorities are rendered powerless. Of the foreigners who lend their names we can only ask, how would they like to have their friends at home know that they kept a low betting house in any of the cities or towns of England? And the kind of business they father in Tokei, is precisely of the same character—low, degraded and demoralizing. As every man who does what he considers an honest business is desirous of having it advertised and noticed in the newspapers, we will give time for those who do not approve of what they may have in ignorance taken under their protection, to withdraw their names. And we will then publish the names and addresses of those who remain under engagement; and use our utmost effort to secure the greatest amount of circulation for them, both in Japan and in America and Europe.

The anomalous position of the government may be seen in this:—that they can with the most perfect ease control all the genuine business people, but these fellows check-mate them. They can say who shall and who shall not deal in this or that article; and, however hard it may seem, the people obey. But here is a business which all respectable Japanese abjure, and which they condemn in the most unmeasured terms, and the authorities are powerless to deal with it, because it is carried on under foreign names. They have applied to the Consuls—at all

events to several of them—but they are told they have no power to interfere. Can it then be that foreigners may openly infringe the law of the land, and be held harmless? It may be that no particular case has been brought before any Consul. In that possible case they may say truly that they have no power to interfere. It rests with the authorities to bring specific charges against individuals; and each of these must be tried on its own merits. It ought not to be a matter of overwhelming difficulty to get a good case against any or all of the foreigners who, having lent their names, have assumed the responsibility of these firms. Gambling is illegal on both sides of the Atlantic, and the high hand with which it has lately been suppressed in Germany, in deference to the public opinion of the world, may serve to prove to the Japanese authorities that there is no sympathy with those who make a trade of it. On the contrary, foreign Consuls know as well as the authorities of Tokai Fu, how ruinous it is to multitudes; and will aid in the suppression of the dens if it be clearly shown that it is within their province.

As it has become a most serious question with the municipal office and with the Council of State, we should recommend them to put the whole matter in the hands of one or other of the able lawyers now at their disposal in Tokai and in Yokohama. We cannot for a moment doubt that any of these gentlemen would sift the matter to the bottom, and means would be found for putting an entire stop to this highly objectionable system.

It is no interference with trade that we are urging—far, very far from that. We believe that, with one or two exceptions, the foreigners who receive the pay of the gambling houses, scarcely know where the houses are, and never go near them. A raid upon them therefore in their capacity of owners of "hells," would be no raid upon, nor interference with, honest trading. And if it were successfully carried out, and such fines or other punishment accorded as would be likely to deter others from a repetition of the offence, it would purge foreigners from the slur that now rests on all through the cupidity of a few; and Tsukidji would cease to be looked upon, as it is now, as the centre of law-breakers.

WHILST in the columns of our contemporary No. 22, a controversy has been dragging its interminable length along, the subject of religious belief has been occupying the public attention among the Japanese. There is hardly a native newspaper throughout the country which has not had letters from correspondents on this subject; thus shewing that the national mind is very unsettled, and that it is seeking a solid resting place. It is not a question connected with Christianity with them; for only very few of the writers mention that faith at all; and of these few, some speak of it in perfect ignorance, only to denounce it unheard and unexamined; and others shew a leaning towards it rather on philosophic grounds than anything else.

The *Kobun Tzushi*, (a Tokai newspaper which has been lately alluded to by the *Japan Herald* as a sprightly little paper (in spite of its having placed the *Herald* as low down as No. 22 on the list of newspapers in Japan), contains a letter which may be called an apology for the Christian religion; as the writer takes in hand to protect it, and plead for it—not that it is good, but that it is not altogether bad.

Here are his arguments:—

"There are at present many men among us who dispute about the right or the wrong of Christianity. Some say it is a corrupt religion; and that if once the edicts against it are withdrawn, the people will be misled by it and forsake the way of righteousness. Consequently the sacred country of the Kami will become a land of sin and wickedness.

"Again, some say that as the Christians teach that there is only one true God, who governs the world and all persons are instructed to love him alone, the people will forget to reverence the Imperial family line, which only has continued through thousands and thousands of years—from the beginning of this country; and so they will become so vile as to rebel against the Emperor, and disobey their own parents.

"But how ridiculous these arguments are. Such eccentric and peculiar men seem to know nothing of the world. Like the frog in the well which is utterly ignorant of the mighty ocean.

"Look here, ye ignorant. What is most necessary to mankind? Assuredly, religion. And by what means are laws made? Surely, by government.

"Well in what country is the government good where the religion is bad? Equally where the religion is corrupt, there the government is oppressive.

"Know then, that there is no country in Europe or America where Christianity does not exist. Now if Christianity be bad, all government in Europe and America must be bad; and all Europeans and Americans must be bad; and steamships, locomotives, and many other machines, and a great many kinds of important manufactures must all be bad, because they come of bad people.

"But the Japanese government has already imitated those of Europe and America; and our people are all studying their learning, and using their productions. Now, who would like to adopt corrupt law, and use bad things? Surely, those who denounce Christianity condemn the Japanese government and people as wicked and corrupt; and so doing they shew their ignorance.

"Again, I have never heard that in any country where Christianity prevails, its inhabitants forget to love their parents or their rulers. See how all English and Russians exalt and love their Queen and Emperor. So all other countries should reflect upon the example of the two."

The termination is abrupt enough, and gives one the idea of the writer having got a little out of his depth—or tired of his subject; reminding us somewhat of Barham's story of the two London youths who followed him so closely down the Strand that he was able to hear their conversation. "Oh, I say Tom—I'll ask you a riddle. What's that country where, let fellows be ever so great friends—as great friends as you and me, Tom,—they must quarrel? Come now that's a paradox."

"A parable?"

"No, not a parable—a paradox."

"A paradox? What's a paradox?"

"A paradox? Why don't you know what a paradox is?"

"No, what is it?"

"Why, a paradox is—a—a—Aparadox is—a—a—Oh (passionately) what's the use of speaking to a fellow who don't know what's a paradox?"

Tokai.

THE *Kobun Tzushi*, an excellent little paper, published daily Ooweno, Tokai, has the following article, which is well worthy of transference to our columns.

"As newspapers are most useful and necessary to mankind, assisting the government and enlightening the people; condemning what opposes and upholding what advances the public good; instructing goodness; correcting ignorance; praising right and rebuking wrong; they are published and widely read in all civilized countries; where not only the noble and gentle read them, but all classes even in the most remote regions value them as a means of increasing their knowledge and aiding their business.

So have we heard that since newspapers first began to be widely read in Europe and America, the liberty of the people has increased tenfold. And so it must be—for this reason:—

There is nothing that becomes a matter of public interest that is not published in the papers. It is of no consequence whether it agrees or disagrees with the editor's views, or whether the government or people like it or not. It is communicated to the people, and they are able to form their own opinions upon it; and thus Public Opinion is formed.

So now, as our empire is in process of time becoming prosperous and is fast improving, we are very pleased to see how many different newspapers are published: for they must gradually prove most useful to the people.

Still there is a great difference between them; some being clever and others very dull. Some people take a newspaper only to find new theories for conversation, or the curious matter it may contain, whilst some read it as they would a story book. Hence there is in much that we are desired to insert little else than fable, childish absurdities or Buddhist doubt—the publication of which can do no good and much evil. We will therefore be obliged to our friends who write to us, that they will only send sensible and instructive articles. This will give great pleasure not only to us, but to the world. For the information of our readers we append a list of all the newspapers published in the Empire. There are in number 52:

- |                                 |                                 |
|---------------------------------|---------------------------------|
| 1.—Japan Gazette.               | 27.—Aichi-Shimbun.              |
| 2.—Japan Mail.                  | 28.—Matsuyama-Shimbun.          |
| 3.—Hochi-Shimbun.               | 29.—Kinki-Shimbun.              |

| 23.—Yokohama-Mainichi-Shimboon. | 49.—Tokai-Shimpō.               |
| 24.—Hiyōgo-Shimbun.             | 50.—London-Shimbunshi.          |
| 25.—Sūsū.                       | 51.—Kōbun-Tzushi.               |
| 26.—Nisshin-Shinjishi.          | 52.—Nagasaki-Shimbun.           |

PURSUANT to a notice issued several days before, the native Christians in Tokai met in the Union Church in Tsukiji, to organize the first native Christian church in Tokai. The elder

Okuno, from the native christian church of Yokohama, presided. After prayer, the fourth chapter of Galatians was read. Following this, the letter of eight native christians in Tokai asking their brethren of Yokohama, that a branch church might be established in Tokai was read, together with the letter of response. The constitution and creed of the Yokohama native church was then read. This document sets forth that the native christian church in Yokohama is entirely independent of any organization outside of Japan, that they elect an acting pastor, temporarily, from among the foreign missionaries now in Japan, but that as soon as they can, they will have a native pastor. They cannot, and do not need to, understand the causes of difference among christians in foreign lands, but accepting the points of agreement among all christians who acknowledge Jesus Christ to be the Son of God and the Saviour of sinners, they profess their faith in Jesus Christ, and promise to live lives of faith and of pure morals, and to be diligent in prayer and the study of the scriptures.

After the reading and acceptance of this document, they proceeded to the election of an elder. Ogawa, formerly an elder in the Yokohama church, was elected elder of the Tokai church. There being but a few members in the church, no deacon was chosen.

Proceeding to the election of a temporary pastor, Rev. David Thompson was chosen, who, on accepting the position, made an address in Japanese, and a very brief one in English; closing by these words: "Not as a missionary, nor as a Presbyterian, but as a man and as a christian, having human and christian sympathies, I take this charge." The entire proceedings throughout were conducted by Japanese, in their own language, with the exception of very brief addresses in English from the Rev. Messrs. Balagh and Thompson. The dignified and orderly manner of the proceedings surprised several of the foreign auditors who have never seen Japanese act in public assembly.

At the exercise, about an equal number of foreigners, and natives were present. Bible study or preaching services will be regularly held in the Tokai Union Church, which, for the present, has been granted to the use of the native christians. Although nearly the whole of the New Testament is already translated into Japanese, and the Scriptures in Chinese are accessible to educated natives, yet so far, only the three gospels, Matthew, Mark and John have been translated, revised and published.

It is remarkable with what avidity native correspondents discuss the subject of religion in the columns of the *Nisshin Shinjishi*. Indeed the controversies seem sometimes to excite an interest much beyond the value of the arguments advanced, and far greater than the "missionary" correspondence that a Yokohama contemporary has favoured its readers with of late. At last one Koderu, a priest of Anraku-in of Hiroshima Ken, has entered the lists in support of religion. He says:—Under our new government, intercourse with foreign countries has increased, the state of society is totally changed, and people are exalting Natural Philosophy as taught in Europe and America, and despising religion; publishing their opinions in the newspaper. For example they say "Now is a time of civilization, and religion is useless." They also say "The welfare of a nation depends only on a knowledge of the art of war." And again "Natural Philosophy is sufficient to explain all things, of what use is religion?" They believe that Buddhism is great nonsense, and only calls for their con-

tempt. Now it is a great pity that they are so ignorant of the true nature of Buddhism, which is a cheerful and happy faith; and that they speak evil of so mild and beneficent a religion. I cannot, however, remain silent and allow them to mislead people by their sophistry; but I will take my pen and address myself to all intelligent people.

Buddhism says that everything depends upon mind. Good or evil fortune alike. In this it agrees with Confucianism. And thus it is clear that the welfare of the world depends on tranquility of mind. For this feeling of tranquillity religion is most important. If there be no religion people disregard truth and falsehood, disloyalty and patriotism: and disunion in families produces disunion in nations.

Africa, one of the great continents, is inhabited in great part by barbarians whose chief business is robbery. They are like beasts, and are despised as savages. Compare them with our nation, and what pity they excite.

In our country also there are many ignorant people who are easily roused to rebel against government. It is useless to say they are foolish—but why are they so? The reason is that they are insufficiently influenced by religion, and they are uninstructed as to the benevolent intentions of government in the new methods of taxation, selecting soldiers, &c. But although their minds are darkened, yet their hearts are good, and the power of religion is sufficient to melt their stone-like minds, so that they may listen to good councils, do their work diligently, and repent of their follies.

Human beings are ahead of all things, by reason of their brain and understanding. Religion is so good that it is able to calm men's minds, and to open heaven to upright and god-like reasoning men. It is able for all things (lit—to feed millions of things). Buddhism, Shintoism and Confucianism are wonderfully spread: but their object is only one—that is, to purify the human heart. Nothing is comparable to it. Truth proceeds from it: and nature tells us that in reality Religion and Government are the same, though they appear so different.

Why then should the lover of Natural Philosophy be the hater of Religion, and fail to comprehend its greatness? How foolish are they who say that a nation's welfare depends on the art of war. How shallow is their reasoning. Thunder and lightning cannot calm men's minds. Those who take their stand on the cannon and murderous arts, are always ill at ease, and carry destruction everywhere. The preacher kindly speaks of religion to the people, and their hearts become as smiling spring. Misfortunes are kept at a distance, and bloodshed does not enter the head.

This is what our new government wishes to see. But although I have thus spoken of religion, I do not ignore the importance of military and naval power. Tranquillity may exist at home, whilst enemies may arrive from without. Religion and the art of war are both necessary. But let none despise Religion. I wish all men to open their minds on the subject, but only to do so after careful thought.

AT HALF-PAST 3 P.M. on the 18th instant Mitzko Hamuro, a Mekaki of the Emperor, gave birth to a prince, which, however, died almost immediately. It was therefore ordered that, for three days after the proclamation to that effect was received in all Fu and Ken, there should be no music allowed in Japanese houses.

The funeral took place to-day, the 25th instant; the coffin being deposited at Toshima Oka, newly appropriated as the Imperial Burial-place. It is in Koishikawa.

The child's posthumous title is notified in the *Nisshin Shinjishi*, as Waka-midzu-tera Hiko-no-Mikoto.

All officers above the 7th rank and all Kua-zoka (nobles) were expected to call at the Chamberlains' office (Kunaisho), to-day as an expression of condolence with his Majesty.

WE obtain from the *Nisshin Shinjishi*, a very different statement respecting the man who attacked Inspector Blockley at the Shinbashi Station, from that we published before, and which was obtained from a Japanese officer.

The man has been put on his trial, and the judge said that for such a crime he ought to have been condemned to hard labour for two years, but taking his madness into account, he would be decreed to pay the sum of 15 rios.

He is a samurai named Hyakuji Uchinuri, belonging to Kumagaye Ken, 25 years of age. He had a severe illness, since which he has become frequently lightheaded. He came to Tokai in August, in order to place himself under medical treatment on this account. He was first attended by a native doctor named Yugen Obutsu, in Shin-Ogawa-machi; but taking it into his head that he would like to have the advice of a foreign doctor, he started to go to Yokohama for that purpose. As he walked along the street a fit of the insanity came on, and passing the sword shop of Tatz'bonaya, in Horiyo cho, he borrowed a sword by force; and also seized and carried off a piece of silk belonging to Uyeda in the same street, and finally reached the station. (It does not seem to have occurred to the examiners to ask how it was that the two shopkeepers were so quiet). At the Station he commenced dancing and singing and committing a number of foolish vagaries, until at last, he made for the foreign inspector, and threw his sword at him, as formerly described. At his trial he professed to know nothing of the charge. He was then quite rational, but the judge taking the above story as correct, punished him with a light fine.

\* \* And judges who give such decisions as this, are expected to be acceptable to foreigners! Clearly the man was guilty or not guilty. If guilty he ought to have been sentenced to the proper penalty for his offence. If not guilty—and if he was mad and unaccountable for his actions, he was not guilty) he ought not to have been punished; but provision should have been made for his being looked after, that such violent proclivities during the mad fits, should not be allowed to endanger the lives of foreigners who come in his way. It is a little strange that in his paroxysm, he had sufficient power of discrimination to distinguish a foreigner from his own countrymen; and if doubts arise in the mind of any who take into consideration the combined facts of his seizing the sword whilst on the way to Yokohama, and, passing by all his own countrymen, using it on the first foreigner he met or saw, we think their doubts are not unreasonable.

AS THE citadel of the castle in Tokai is already dismantled of its towers and covered parapets, and since the entire wall-circuit of the castle is being dismantled and denuded of its gate-towers, we present below, a list of the Go Mon or Imperial Gates:—

O Te Go Mon, ("King's hand"—"check-mate" gate).—Through this gate, the Foreign Ministers formerly entered to attend the Shogun's Court.

Sakashita Go Mon, ("Beneath the slope").—So called because it is situated beneath a slope which is inside of the gate.

Sakura Da Go Mon, ("Cherry-field" gate).—So named, because formerly a prince of the Shogun's family named Sakurada lived near it. Close to this gate, the Gotairo, or Regent, was murdered by a band of rōnins on the 23rd of March, 1860.

Hirakawa Go Mon, ("Level river").—The place in which it stands was formerly called Hirakawa c. o. or street.

Takebashi Go Mon, ("Bamboo" gate).

The three gates, called respectively Shimidzu ("Pure water"), Tayasu (lit. "Field easy"), and Shitotsubashi ("One bridge"), were named after the Go San Kio families of the names given above.

Hanzo Go Mon, ("Half warehouse" gate).

Hibiya Go Mon.

Babasaki Go Mon, ("End of the riding course").—Just within this gate, are the Iwakura mansion, and the yashiki now occupied by the Daijo Kuan.

Wadagura Go Mon.

Kanda Bashi Go Mon, ("God's field bridge" gate).—Kanda is a very old and celebrated quarter in Tokai.

Taiwashi Go Mon.

Kaji Bashi Go Mon, ("Blacksmith's bridge" gate).—The street, on which this gate opens, was formerly called Kaji-cho.

Gofuku Bashi Go Mon, ("Cloth bridge").—The street near this gate is called Gofuku-cho.

Yamashita Go Mon, ("Beneath the mountain" gate).—It was in front of this gate, in February, 1862, that the Minister Tsushima no-Kami was attacked by rōnins, and wounded, after they had tried to assassinate him.

Saiwai Bashi Go Mon, ("Good luck bridge").

Tora No Mon, (Tiger's gate).—This gate is close to the Gaimu-sho, or Foreign Office.

Asakusa Go Mon, ("Morning grass" gate).—This gate opens into the district called Asakusa, in which the great temple is situated.

Akasaka Go Mon, ("Red slope" gate).—The Mikado's palace is situated just outside of this gate.

Kuichigai Go Mon.

Yotsuya Go Mon, ("Four valleys" gate).—So named from the place in which it is situated.

Ushigomi Go Mon, ("Cow drove" gate).—The district outside the gate is so called.

Koishikawa Go Mon, ("Pebble river" gate).—Named for the same reason as above.

Sujikai Go Mon, ("Diagonal" gate).—Many streets lead diagonally to this gate.

Sukiya Bashi Go Mon.

The Niju Bashi Go Mon, ("Double bridge" gate).—This gate leads directly into that part of the castle, in which the Emperor's palace, recently burned, was situated. Two bridges are here built very close to each other.

Jejo Bashi Go Mon, ("Get down bridge" gate).—All nobles were formerly obliged to get down out of their norimonos before entering this gate.

Of the above, about one-half have been destroyed, and the rest are being so rapidly demolished that by the New Year, there will, most probably, be not a single gate left to tell how the castle once looked. The demolition of the chief ornament of Tokai, will doubtless be looked upon as a high achievement in modern civilization.

A RACY proposition has been made by a Samourai of Yedo, in a letter to the *Nisshin Shinjishi*, by which he imagines he can relieve the government of the payment of the hereditary salaries of the Samourai. He thinks it high time that people should cease to live in

idleness, and that every one should earn his living, and put by something for his family. But for this a certain amount of capital is necessary, and as most of the Samourai have neither land to cultivate nor money to invest, they cannot hope to do anything separately. Yet something ought to be done; for under present circumstances they only eat and drink, and spend their spare time viciously. The writer then propounds his scheme, which, being about as practical as Mori's lingual suggestions, may amuse our readers. He writes:—

"Now although I do not know how many thousands of Samourai there are in this empire, the number belonging to Tokai Fu has been estimated at about 10,000.

Now let each of these contribute 50 Rios, and a capital of Rios 500,000 is at once raised. With this let a large Printing Company be established. We will then request the government, that In-so-kiyoku (government printing office) and all similar offices be handed over to our company, and that all Daijo-Kuan and other government notices of every department be contracted to be printed by us without ordering it of any other printer or book-seller.

Then, when the Company's business shall have gradually improved, and a large profit shall have been accumulated we shall not only be able to repay the money advanced by government to the Samourai to pay their original contributions, but also to contribute a per centage of the profits to the government as a requital for its favours. Besides, not only should we thus find employment for the 10,000 Samourai but we should greatly enrich the empire."

THE STORM of the 23rd instant, did a great deal of damage in Tokai and its neighbourhood. The two large rivers Tonegawa and Sumidagawa, both overflowed their banks on the 24th, and many parts of the mound have been destroyed by the current. The village of Sannamura on the Tonegawa was completely inundated, and the Yoidai temporary bridge was carried away by the current. Makojima, Hondjo and Fukugawa were all under water, and the people had to take to boats to save themselves from drowning. At Senji, both sides of the bridge were unapproachable, and communication by boats being for a time impassable, the traffic was totally stopped. In the Kandagawa river, the current was so strong that the bridges Shehei-bashi, Idzumi-bashi and Asakusa-bashi were all destroyed.

Besides these, a great number of houses in Takata-bahushita, Koishikawa, and Furukawa were carried away by the violence of the current, and several persons were drowned.

"THE PEN is mightier than the sword."

A NEW and very remarkable illustration of this epigram has just been afforded in that strangest place in the world—Tokai. The Japanese people are original in many respects, but the manner in which they reverse or illustrate our maxims and wise saws is more than amusing. For instance, a few months ago, a merchant, named Yamashiro, aspired to do a big business in boots and foreign notions, and began to build a three-storied stone clad building in the Hon-cho, the great business street of the capital. To get the necessary funds, he borrowed of the Government to a heavy amount, but when New Year's day approached, he could not "come to time," and the consequence was, the Yamashiro spoiled his digestion and took his own life at one operation,

by *seppuku* or hara-kiri. The dirk or sword that thus slew Yamashiro was a mighty thing, since it ended the life of a merchant. For months, however the big three storied stone house remained vacant, though the Government had it finished. Lately, an application to use it for educational purposes was granted, and a stroke of the pen transformed a fire-proof warehouse and set of show-rooms into a temple of knowledge, in which Kobo sama, instead of Daikoku, now receives homage; or as we Caucasians would say it, the temple of Mammon was transformed into the halls of Minerva. Instead of show-cases, we have writing-desks; instead of clerks, are pedagogues; instead of show-cards, we have charts; and instead of glittering wares, we have brushes, ink, ink-stones, and copy-books. In spite of the smearing propensities of the urchins, and the manifest lack of the use of soap, it is a very pleasant sight to see scores of boys and girls being taught according to the improved system of charts, after the American fashion, and as originated in the Normal School, now in charge of a practical teacher from the States. Better are a hundred urchins learning to use the pen than a single merchant committing hara-kiri.

THE GREAT government banker of Tokai, Mitsui, who is to the Japanese what the Rothschilds and Barings are to Europe, and the Vanderbilts and Astors are to the United States, intends to astonish the natives—imperial, noble and common folk of the Japanese capital, by building a house enormous in size, and imposing in appearance. It is to be three stories in height, the ceilings unusually high, and the timbers very strong. On the top of the cupola is a huge *shachuhoko*, or upright fish—endeavouring, apparently, to turn a somersault. Certain ontraying metallic points lead one to suppose that the fish and house are to be protected by a lightning rod. In front of the house, fronting on the Tori, or Main street, is to be the silk shop, whereat all lovers of Japanese silks and crapes, whether natives or foreigners, can dispose of their spare cash in exchange for products bought. This will be the second large house belonging to Mitsui, both striking objects in a bird's-eye view of the city.

A CORRESPONDENT of the *Nisshin Shinjishi*, writing from Ibaraki (Mito) Ken, dwells on the necessity of placing kept women on a different footing from common servants. They are not like servants necessities, but luxuries, and should be highly taxed accordingly. The writer's object seems to be, by this high taxation to reduce the evil.

## Provincial.

IN WATARAI Ken there has been a kind of murrain among the cattle, which has resisted the powers of the resident vets. It commenced at the end of July, and in a few days between 70 and 80 cattle died. The bodies were all burnt in a plain away from all habitations, but we regret to see that the disease has since extended to other provinces.

THE GOVERNMENT is about having a history of the Empire written, and materials are being accumulated rapidly. We hear of a samourai of Aitchi ken being rewarded with \$50 for presenting the Government through his Kencho with thirty volumes of great antiquity containing a history of the Emperors.

AMONG THE provincial news in the native papers, is a paragraph from Hamada Ken. Two persons were condemned to imprisonment with hard labour, for crimes committed. In the case of one, his son, a boy of 11 years of age, in the other, a daughter aged 17 years, petitioned that they might be allowed to endure the punishment for their respective fathers. The judge and Kenrei, happily were inexorable, and decided that the men should themselves bear the consequences of their transgressions, and refused both of the applications. But the filial affection of both the boy and girl are highly commended and held up to admiration.

It would be a grand country to live in, if all fellows who take a fancy to steal swords and attack foreigners, should be allowed to plead madness; and if ruffians could be released from punishment on condition of their children bearing it in their stead.

A SOMEWHAT amusing story is told in a native paper of the conversion of a district into beef-eaters.

It had always been most strictly forbidden that anything should be killed within the temple domains of Kokuzo Bosatz in the village of Yagitsz'-mura in Wakamatz' Ken, and no one in that district had ever been known to eat the flesh either of bird or beast; from fear of the vengeance of the Idol Kokuzo Bosatz.

It happened lately that a man named Kampei Higashi in the village, had a large tumour about 8 inches in diameter, in his loins; and the pain he occasionally suffered was extreme. One of the government doctors, a properly educated surgeon, came to an adjoining village, and was sent for by Kampei to see whether he could do anything towards curing him and alleviating his suffering. The doctor told him that if left to itself the tumour would enlarge continually, and his body become gradually thinner and thinner, until at last he would certainly waste away and die. And as the sufferer was already very thin and weak it would be impossible to remove the tumour by cutting because he had not strength to bear it. But if he would restore some of his vital power by eating meat, this with a tonic medicine might possibly give him strength to undergo an operation. At first the sick man was in despair, but on consideration he said—well I must die if I allow things to go on as they are and it is true that Kokuzo Bosatsu may slay me for eating flesh—so that any way I must die. But if it should so happen that I eat flesh and recover and am not slain, then it will be known for ever hereafter that there is no harm in eating it in sickness. Under any circumstances, though I die, others will know for certain in future and not desist from mere superstition. Commencing then with chicken broth and eggs, he went on until he felt sufficiently strong to undergo the operation, and no evil befel him. The tumour was successfully removed, and the whole village rejoiced and wondered. They are quite convinced of their former error, and are satisfied of the wisdom of the government in its proclamation on the subject issued long ago.

AN APPLICATION has been made by the Sakata Ken to the Religious department requesting, that as Yudonosan of Ujen is a very famous holy mountain, and has been so for 1050 years, and as many pious people visit the mountain annually, and as it has been ordered that Buddhist temples shall be altered into Shinto, yet because this mountain is so sacred it should be proclaimed the first national temple of Ujen country.

A LONG time ago a man of Awa country, in Noto Ken, named Masakichi, went to sea; and nothing was heard of him until lately, when the Japanese Consul in San Francisco informed the Foreign Department that a box had been delivered to him which had been picked up at sea, and on examination was found to have belonged to Masakichi. It has been returned to Japan and forwarded by the officials of the Ken to the mother and wife of Masakichi, whose fate it too plainly tells. The box contained clothes, money, and letters from the drowned man. It appears that his junk left Honomisaki some three years ago, and was driven by a gale far to the southward, and in his extremity he wrote the letters.

The native reporter takes the opportunity from this circumstance to dilate on the value of foreign intercourse. Had the box been so found in olden time it would never have made its way to his family; but now, such is the intimacy of the foreign relations, that it is no sooner picked up at sea, than it is sent, with all its contents, to those to whom it of right belongs. This is civilization.

FROM KUMAGAYE Ken, information has been received that the mountain of Arayama in Kotsuké country has twice during this year shewn violent symptoms of irruption. The vibration has been excessive and the roar from the crater very loud and alarming, followed by such rains that rivers and springs have been affected, and the torrents have washed away buildings. One hot-spring bath house at a distance of 12 cho from the ordinary river's course has been destroyed and a great deal of other damage done.

IN THE case of the rebellion of Fukuoka Ken, the official investigation resulted in this judgment:—

"The town of Fukuoka having been nearly destroyed by the farmers who rose in rebellion in June last; and as this was the fault of the government officers who performed their duty imperfectly; therefore Chinami Midzuno, the second officer of the Ken, and Naoshiji-Dan, the 3rd officer were asked to send in their resignations as they had acknowledged their fault.

They have been discharged accordingly; and moreover the circumstances having been closely looked into by the Court of Tokoi, they were denounced to be punished as follows:—

Though government officers in any province, who by neglect of duty cause the people to excite disturbances, ought to be committed to hard labour for the duration of a hundred days, according to law; yet the above-named two gentlemen have been permitted to make satisfaction for their crime by paying a fine of 7½ rios, according to the Ordinance of Redemption of the Military class, or Samourai."

THE *Nichi Nichi Shimbun*, a native daily paper published in Tokoi has the following:—

The firemen of Yedo have already abandoned many of their former foolish customs, but among the country people the old bad habits continue.

It lately happened that the firemen of Kamisawa in the province of Hitatsu, assembled and had a grand fête in honour of the Rising Sun. It has been the custom to raise the funds for such celebration from the members of the brigade by a small charge upon each of the townsmen. On this occasion the rate was three sen (cents); but Yeiske Shigaya one of those on whom the demand was made, objected to such follies refused to pay the sum, small as it was. Indeed we think Shigaya was quite right.

However the firemen were very much enraged against Shigaya, and one night they went to his storehouse, and siezed several bags of dried fish, and scattering some on the highway, threw the rest into the sea. They also committed other depredations breaking a large iron cauldron into pieces and smashing a cask containing oil, so that it was all lost.

Shigaya of course laid his complaint at the police office of the village, and the policeman at once went and captured two of the ring-leaders, who were taken to the station house, and their deposition was taken down.

It happens that the civil magistrate of the village, Shichiroyemon, is a foolish and obstinate fellow. When the policeman was on his way to the Kencho of Nicharu Ken. with the confession of the captured men, Shichiroyemon ran after him, and at the demand of the other firemen asked him to return the depositions, as if the principal government of the Ken saw them, the whole of the firemen would receive severe punishment. The policeman refused; and the foolish Kocho sprang upon him and tried to take it from him by force, at the same time reviling him contemptuously with his unfeeling conduct. This led to a free fight, between those who approved of the conduct of the police officer, and about twenty men who accompanied the Kocho the latter men crying out "Kill the policeman, quickly—and let the Kocho escape from here." Several farmers who were working in the fields now approached to learn the cause of the strife, and whilst some helped the policeman, some went and gave information at the police office, and the Kocho and many of his supporters were taken into custody.

Now see how much evil the foolish custom of the firemen has occasioned. We shall therefore be glad to hear that the fire companies in every province are abolished, and that the men are obliged to work diligently in some industry. And especially do we desire to see such officers as the Kocho, in town and country carefully elected, for that officer is the most important in civilizing the people.

FROM THE same paper we take the following "opinion," addressed by a "preacher" Shigawara to obstinate people in Yamagata Ken, who refused to let their hair grow in foreign fashion:—

It is a great error of such people to suppose they are only imitating European and American people in letting their hair grow in the present fashion. It is owing to their ignorance of the ancient history of the empire. In Japan it was always the fashion to let the hair grow, as well as to fold the right breast of the coat over the left buttoning it on the left. It was not until the study of Chinese was introduced that the government issued the command to tie up the hair in the 11th year of Hakuha epoch. Afterwards when the country was rent by the wars between the great Minamoto and Taira families, the military class began to shave off the hair from the top of the head, as the long hair inconvenienced them; and from that time we have called the shaven part 'sakayaki', meaning 'white moon.' This term was at first used in mere jest from the resemblance of the shaven part to the moon. About the beginning of the reign of the just Taicoon, Yoritomo Minamoto, the people began to shave off also a little of the forehead, and towards the close of the Ashikaga dynasty the military class introduced the fashion which existed throughout the whole of the Tokugawa dynasty.

It is thus quite a mistake for the people of Yamagata to suppose that it was the ancient custom to wear the cue on the top of the head,

and that it is a mere imitation of foreigners to dress the hair as ordered by the present government.

A FARMER of Okazaki, named Otozo, has sent to the *Nisshin Shinjishi* the following recipes:—

To preserve radishes from the ravages of insects—take the leaves and roots of the *Artemisia Chinensis*, boil them in water, and mix with one “to” of the concentrated juice two “sho” of wood ashes, a hundred “momme” of bad sulphur and one hundred “momme” of lime. When well mixed boil over again, and water the young shoots with the liquor.

To preserve Indigo and Tobacco from insects—take one “Kan” of lime, one hundred momme of bad sulphur and mix them in water, throw into the liquid a branch of the *Asobi* with all its leaves, and well boil. Water the young plants of Indigo and tobacco before the insects appear, the mixture need not be too strong. When the leaf is large a very moderate quantity of the liquid will suffice.

To prevent insects on grain, such as rice, barley, wheat &c. One ‘go’ of salt well dried in the sun to a picul of the seed. The fields should be fertilized some time before the rice is ripe.

The above mentioned having been proved by Otozo by three or four years experience may be relied upon.

It is at least a good sign when a farmer so appreciates the benefits likely to arise from this communication of his agricultural experiences, as to wish to avail himself of the wide circulation a newspaper affords, to give information to his fellow cultivators of the soil. It shows alike the extent to which the *Nisshin Shinjishi* is circulated, and the intelligence of the readers.—Ed. J. G.

THE FOLLOWING is a copy of the report of the crew of a small Japanese ship driven by stress of weather on to the coast of Formosa a few months ago. The men, four in number, were named Ribachi (the skipper), Heikichi, Gankichi and Jiske, all natives of Kashiwashima of Bishiu:—

To the Government office of ODA ken.

from the four sailors (abovenamed).

We departed on the 28th October last year from Tamashima in Bishiu, with a cargo of salt and mats to sell in Owase of Kii. Having sold our cargo we purchased 180 rios worth of powder for making incense sticks, and a kind of mushroom called Sintake value 80 rios; and we left Owase on the 9th of January this year. Shortly after leaving, a hurricane came on and forced us to anchor at Makishima; and for 18 days the weather detained us here. On weighing from Makishima the vessel was driven to the southward, and as we were ignorant what to do we let her drift. On the 4th February we saw a steamer in the distance, and made a great smoke as a signal, by burning the mats which formed the roof of our boat. It was seen, and to our delight the steamer approached us, but for what reason we could not tell, she stopped near us one single moment, and then without speaking went away, leaving us to our bitter disappointment. We now scarcely hoisted any sail, but continued to drift at the mercy of the winds and waves. On the 8th March an island appeared in sight, which, we believing it to be Japan, cheered us greatly. We roused ourselves and exerted the little strength we had left. (for we had been for four days without food), and soon arrived at the shore; when we found we had reached Mats’ke in the Island of Formosa.

Some 20 or 30 strange people at once came on board, and though we tried to keep them from robbing us of our cargo, some 200 or 300 more natives rapidly arrived, and each helping himself we had nothing left, and they began to break up the vessel, and looked as if they would kill us. They stripped us of everything, and with difficulty we retained a piece of old cloth each, and our wooden ticket with the government stamp, one 5 rio satz, and a charm of the idol Kompira.

There was but one out of all who had pity on us. A kind old native woman, 50 or 60 years of age rebuked the cruelty of the people, and took us to her own home, gave us some food and allowed us to stay during the night. The family in the house consisted of six persons: two children, their parents, grandfather and grandmother. The houses were very small and built of bamboo and straw. We observed that the soil of the country was very rich—far more so than in Bishiu—and the growth of wheat was very abundant. Large woods also abounded. Next day at 10 A.M. the old woman accompanied us to a place called Caneba, about a mile and a half from Maboke. Here were three houses in which Chinese lived, who were very kind to us. One of them went back to Maboke with Rikachi, and tried to get the people to return to us the things of which they had plundered us. They refused, much to his annoyance; and so, taking Rikachi back with him, we remained there a few days. Whilst here we were ordered to saw wood, which in our weak condition we were obliged to refuse, and the Chinaman was angry with us and threatened to tie us up with rope and make trouble—so we were obliged to obey him as well as we could.

On the 12th March, another Chinaman came named Ah Sen, from the village of Baragawo, about 10 ri distant (as we judged) from Caneba. There were houses all the way along, and some natives, compassionating us, gave us food: but whilst, some kindly stroked our heads, others, disliking us, threw us down and sitting astride of our bodies, beat our heads painfully. Of the inhabitants of Baragawo two thirds are natives, and one third Chinese immigrants: and though all the natives have weapons such as sword, spear or gun, the Chinese are so much stronger that they greatly oppress the natives.

We stayed with Ah Sen 100 days, and he told us that as soon as the harvest was in, he might go to Kiyo to sell the wheat and he would take us there to the Japanese official. We were very glad, and worked hard to help him, by chopping wood, keeping cattle, or in the fields, to try and requite his kindness.

On the 14th June we left Ah Sen in a ship of Baragawo and arrived on the 20th at Kiyo. Here we were received into the house of an European for two days; and afterwards a government official from Taiwan (the capital) took us there, and we remained nine days. Here we met Mr. Reiski Fukushima, a Japanese officer, and after enquiries, he gave us ten rios.

On the 30th June, we returned to Kiyo and remained six days. On the 5th July we went on board a steamer, and arrived at Fukushin on the 6th.

We were particularly well treated here. They gave us a meal of 5 or 6 pieces four times a day; and we had a bath daily. Beside this they gave us each—a piece of China Cloth; a pair of Chinese shoes, a handkerchief, two pieces of blanket and six rios. We embarked on board a steamer with two Chinese officials for attendants; arrived at Bichiu on the 20th July; and were sent to the Kencho of Oda Ken by the Chinese officers the same day.

Two OFFICIALS of Chikuma Ken as they passed along a public street saw a man and woman playing in a not very creditable manner before a few people who had stopped to see them. Disapproving of what they witnessed, they recommended them to cease, and to go to work. The idlers who were looking on took up the cause of the man and woman, and an altercation arose, in which at length, the people lost patience, and in the end the officers were so pelted with stones that they were obliged to retreat. Of course a complaint has been laid, but no examination had taken place, up to last advices.

A MERCHANT of Miyaki Ken thoroughly appreciating the value of the police has presented \$50 to the Ken as a personal contribution of \$10 a year for five years. If all others who can afford it would act as liberally there would soon be an efficient police force.

A PROCLAMATION of the Shimané Ken to its people winds up with these remarks:—

“The male population of the Ken numbers 175,434 persons, and from them there are only required to be raised for soldiers 220 to 230 men. The age must be between 19 years 2 days, and 20 years. These are allowed to return home after they have served for three years, and then they can occupy themselves as they like. Under certain circumstances even these men are exempt—as in the case of being too weak, or the master of a family, or an only son or grand-son, or any person on whom a family depends by reason of the weakness of the parents or elder brother. During service, all clothes and necessaries are paid for by government, and a regular pay is allowed monthly. At the end of three years the soldier who returns home is provided with whatever money he has saved during the period of service. Should he wish to become an officer, his merits will be considered, and soldiers who are strong and well skilled in military art, may be promoted to Konoyetai, —the Body-guard of the Emperor—a duty so honourable as to guard the person of the Emperor himself.

This Government provision which differs so wonderfully from that of the old Tokoguwa reign is excellent, and we have no reason to complain of the government. Indeed, we should be very grateful to it.

Ignorant people in distant parts of the Empire, do not understand this, but being in the dark, they rebel against the kind and paternal government which always acts for them as for dear children.

Not knowing the wisdom of the new government, you Shimané farmers fancied that it was selfish and cruel; and, like madmen, you inconsiderately rebelled against it. You not only forgot the benevolence of the government, but brought trouble to your father’s house. You obstruct good farmers and bring ruin on your native land. Your family be, comes poor as a well deserved chastisement.

“Are you not very foolish—all ye Shimané Ken farmers? Consider well the goodness of the government, and be careful for the future.”

WE HAVE had frequently to tell of late, of samourai giving up their hereditary allowances; but it seems that all are not of the same mind. The Shigaku samourai have petitioned that their allowance be raised on account of the dearness of Rice.

A TRAINING school for school-masters has been established in Miyaki Ken.

THE CATTLE disease has been very severe; far more so indeed than we were aware of. In Yohimé Ken and in Araigori Ken 246 oxen died from the last week of July to end of August. The doctor of the Ken hospital was asked to examine the animals and he found, that the first symptoms are extreme feverishness. Their bodies generally become swollen, and the extreme uneasiness of the poor beasts testifies to the pain they suffer. Diarrhoea succeeds, and the purging is so incessant that they soon succumb. The best remedy that has been tried is said to be bleeding. If the blood flows freely they are almost sure to recover—if otherwise they die.

FROM WAKAMATZ' Ken information has been received, that ever since March last, up to the present time, there has been a kind of epidemic diarrhoea which has seized hundreds of people and spread over all the villages. It is only lately that it became so bad that a representation had to be made to the Kencho. The officers at once saw that doctors were sent to the affected places, and there is now a slight improvement.

The official report says—"As these strong farmers have been so sick, attention to their farms has been neglected, and field hands have been very scarce. Soba and daiko are now too late, and scarcely any have been sown, although the farmers from adjacent villages helped each other as much as possible. Indeed it has been a great misfortune for all the farmers. Among 1,342 persons composing of 240 families, 593 are still sick, and 76 have died. This is in the single village of Kobayashimura.

IN A recent dreadful storm in the province of Yamato incalculable damage was done. Wind and rain, thunder and lightning, all did their work towards it; but, besides these there was a heavy fall of snow, followed by a severe frost—especially in the district extending from Uda-kori to Shikikami-kori—which destroyed the vegetables and the leaves of the mulberry trees. The storm was so fierce that the people dare not leave their houses while it lasted.

Before it came on in its fury, a woman named Rii, the wife of one Zenroku, residing in the village of Koshisemura went to her hair-dresser's house, taking with her a baby in arms, and two other children. The hair-dresser being absent she was returning, when the thunder storm overtook her; and just as she approached her own house, and was only few yards from it, the lightning struck her. Her piercing shriek was heard by her husband who rushed out; but found that she had been killed on the spot, and had fallen on the child in her arms. They were both quite dead. The two other children had the appearance of being choked, but they were revived after some trouble.

A STORY is told in the *Nichi Nichi Shimbun* of two boys about 8 years old who went out to play together, in Yedo. They got down by the water side and one fell in. The other frightened, immediately ran away and called for help—but coming back, his little playmate was not to be seen. He therefore supposed he was drowned, and afraid to go home without him, wandered up and down the stream, looking for him all night. Meanwhile his parents not knowing where or with whom he had gone—grew very anxious and applied to the police. It was not long before the little fellow was found, and on hearing his story and going to the house of the boy supposed to be drowned, behold, there he was. It is not told how he got out of the water; but the pluck of the little chap who searched for him, hoping against hope all night, is highly commended.

WE EXPECT to hear that the floods which covered all the plains for many leagues around Yedo and Yokohama, on Tuesday last, have greatly damaged the crops of all kinds. Much of the rice is in the ear, and some just beginning to ripen—but now much of it has been so soaked and blown about, that nothing but the finest weather can restore it.

In some of the districts which had been flooded in June and at the end of August, there are hopes that the damage will be less than originally anticipated. Mits'zawa Ken reports that ever since June, when its floods occurred, the weather has been splendid the temperature from the middle of July generally ranging about 80° to 87° but not exceeding 94° to 95° in the shade during the hottest days. This and the excellent soil have brought on the crops well, and the forebodings of scarcity are changed into the expectation of abundance. The rice plants are unusually strong, and average over 40 stems from each root—in some cases 50; and the length of the straw is from 4 to 5 feet; the ears being correspondingly heavy. All other grains and vegetables look as well as the rice. As the early part of the season was dry and suitable for the silkworm, a good crop of silk was secured; so that the year will be more than ordinarily profitable in that province. Whilst everything looks so hopeful, and the people are in good spirits, the Ken officials have taken the opportunity of publishing and explaining the new government orders; and they believe that they will be obeyed with alacrity.

IN IWAMI and Idzumo, where the inundations occurred so lately as the 29th. August, the rice seems to be recovering; and hopes are entertained of saving some of the cotton—but they can hardly say yet whether the average will be obtained or not.

THE FOLLOWING readings of the barometer at Tokei from the evening of the 22nd inst. shews the state of the atmosphere during the storm. It is from a good barometer of Negretti & Zambra, but has not been compared with others in this country:—

WE REGRET to hear of the illness of Kido, who accompanied Iwakura, as assistant ambassador of the first rank. He has had an attack of paralysis, and is not expected to live. His loss will be very great; for he is one of the foremost reformers in Japan, and full of intelligence. He was early in the field in giving his countrymen the advantage of newspapers, and the *Shimbun Zasshi* was started under his protection. From the accounts that have reached us, there can be no hope of his recovery.

CONSIDERABLE FEELING has been expressed by influential classes in Tokei, at the want of sympathy displayed by the inhabitants on the occasion of the death and burial of the Imperial prince. They say that although the death of a mere child was nothing to them, and admitting the probability of this one never coming the throne even if he had lived, still they ought to sorrow with their Emperor; and that the very least they could do was to obey the government order. Instead of that the streets were as noisy and bustling as on other occasions. Pleasure seekers went to tea houses as usual, and singing and dancing and feasting were continued, in spite of the authorities. It was not only disobedient and unfeeling on the part of the most civilized city in the empire, but it was impoliteness worthy of barbarism.

A NUMBER of samourai of Ashigaru Ken have lately commuted their annual allowances for three years' payment in advance. Perhaps this was to be the method of raising the capital for that Printing office of 10,000 proprietors of which we published the proposal last evening. The 10,000 samourai of Tokei were to pay \$50 each to make a capital of \$500,000. Without some such aid from government it is sure that not one-fourth of the 10,000 could supply their proportion.

A WRITER in the *Kobun Tsushu* is indignant with his countrymen, because so many millions (said of them) are studying western science and neglecting their own mother tongue; and leaving their own parents in the country, to come to Tokei or some other great city, to learn English, but are unable to write to their homes, because they have not learnt the Chinese and Japanese; and, for the same reason are unable to read the government notices which are published daily. We all admit that there are good grounds for his remonstrances.

THE PUBLIC schools in Wakamatz' Ken, (Aidzu), are 98 in number; of the pupils 7075 are male and 1247 female—altogether 8322. There are besides many private schools.

WE REGRET to hear that Kido, (the first assistant of Iwakura in his late embassy) still lies unable to speak or to move.

Iwakura himself has been rather indisposed ever since his return.

## Yokohama.

THE splendid summer we have just passed through has been one of the finest and healthiest ever experienced since foreigners come to Japan, and it seemed that it was to pass away quietly, without giving us any taste of the elemental war, with which the hot weather generally departs. This, however, was not to be, and yesterday we had a typhoon—moderate as compared with many former ones, but still a typhoon—accompanied by a storm of rain such as we very rarely have. The rain began to fall gently, on Monday morning early, and about mid-day increased to a heavy pour, which did not abate for one instant for 27 hours; and very few houses in the settlement or on the Bluff escaped the inconvenience of leaking roofs and the like. But we regret to tell, that the damage done by the rain has been very great. All the plains for miles round were flooded to the very tops of the rice plants; and the brooks, streams and rivers, were only dis-

tinguishable by the rapid flow of water in their course, amid the comparative stillness of the lakes formed by the inundation.

At the Homoco end of the Bluff a landslip took place, which buried several native houses completely, and of eight inmates, only six had been got out of the ruins up to 8 o'clock last night, all of whom were more or less hurt—but there is no doubt the other two have been killed. Numbers of men were engaged digging them out, and worked away by the light of fires which were kept up, with the determination not to stop until they found the bodies.

We hear of several other landslips—one at No. 23, Bluff, carried away the stables and betto's houses.

Several Japanese tenements were blown down at Ishikawa, but we hear of no loss of life from that quarter. The district of Hatchô was entirely flooded, the inhabitants having to use boats to get to their houses.

Carpenters, Plasterers, Tile-makers, Paper-hangers and others will remember this as a red letter day.

In the Harbour the only damage we hear of was caused by the M. M. steamer *Nu* dragging her moorings: she fouled the barque *Gauche* carrying away her Jibboom, Bowsprit, Figure-head, and Cutwater, and doing other damage.

Indeed on this occasion the floods have done far more injury than the wind, though that leaves plenty of evidences of it fury. The storm was at its height about noon, and had quite subsided by 3 P.M.

We have been favored with the following data:—

Time.	Baromet.	Anoid.	Symple.	Thermo-	REMARKS.
A.M.					
7.	29.36	29.63	29.24	67	Heavy rain and strong puffs.

6.30	29.14	29.33	29.05	"	Fine and calm. Glass steady.

23RD SEPTEMBER, 1873.

THE MEMBERS of the late Embassy say very little as to their experiences abroad; still adhering to the reticence which the *L. & C. Express* marks as their peculiarity. They have no hesitation in stating this, however:—that though their wonder was of a very different character, nothing abroad struck them more forcibly than the great changes which met their eyes on all sides in Japan.

THE FOLLOWING is the reply of the Emperor of Japan to the President of Peru:—

"I, the Emperor of Japan, whose dynasty has continued in a single line through all (thousands of) generations, reply to you the President of the Republic of Peru.

I have long ago heard of your country's fame, and now you have charged your Minister Post Captain G. y Garcia, with a letter expressive of friendship, and of your desire to make a treaty between our countries which shall be to their mutual advantage. This is also my own wish. The loyalty and ability of Captain y Garcia are equal to the heavy duties of Ambassador, and doubtless he will establish the friendship of both countries for ever. This is my reply to you. I pray for your health and happiness.

Given at the Palace, Tokyo, the 22nd day of the 8th month of the 6th year of Meiji (22nd August, 1873)—the year 2533 of the era of Jimmu, and sealed by me with my Imperial Seal,

MUTSUHITO TENNO.

The letter was transmitted by Gaimukiyo (Foreign Minister) Soyeshima Tanetomi.

THE ARRIVAL of a steamer under Chinese colours, is a feature of commerce well worthy of notice. The *S. S. Aden*, Captain Peterson, arrived yesterday morning from Shanghai, the forerunner of a regular line of steamers to be put on by the Chinese Merchants' Company. Japanese Merchants should take a lesson from their Chinese brethren—if not in opening a line from hence to China, at least in having the ships they run on their own coast, properly officered with Europeans. That this new company will be successful does not admit of a doubt; and it will be the means of greatly increasing the trade done by the Chinese themselves, who are likely to multiply rapidly—especially if the new treaties should permit them to reside in any part of the country.

MR. BINGHAM, the new U. S. Minister, arrived by the *Japan* from San Francisco. He is accompanied by his wife and two daughters; and by Mr. D. W. Stevens as secretary of Legation.

WE ARE happy to welcome back the *Iron Duke*, after its Northern cruise. We fear, however, that her stay here will be but short.

### Correspondence.

To the Editor of the *Japan Gazette*.

DEAR SIR,

A native friend who is well-known in this settlement brings the above paper to me and says he thinks it ought to be published to the foreign community of this place. He therefore requests me to try and get it a place in the columns of your paper. It is a proclamation issued by the Governor of Yokohama.

Yours faithfully,

VERUS.

### Public Notice—No. 87.

AT THIS PORT all servants in the employ of foreigners, hitherto not being registered, the profligate and dissolute have greatly increased almost beyond control.

Therefore Suzumura Yozo and two others having petitioned the government desiring to establish an employment office, their petition has been granted.

Henceforth all persons desiring to go into service in foreign houses must apply to them and get from their office the government *kansatsu* (wooden tickets).

Persons born in Yokohama or having relatives or intimate friends who have recommended them to situations in foreign houses, or if any have gone direct to foreigners and have entered into engagements of service without any "go-between," all such, in case they do not like to apply to the office of Mr. Suzumura Yozo for their *kansatsu*, may, in lieu thereof, make out a written contract with their master, and affix their own seal. They must also get the seal of their best friend, their father's seal, their uncle's seal, their brother's seal; after which they shall present themselves to the town Recorder who upon verification of all the former seals, and examination to see that the paper is in all particulars correct and in order, then the applicant shall next go to the office of the local magistrate who shall again examine all the seals; then the paper being in all respects in order and regular, the *kansatsu* shall be issued, and then only shall the applicant be permitted to enter upon foreign service.

In case any one without the proper *kansatsu* shall be found in the house of any foreigner as a servant he shall be at once arrested and shall be severely dealt with by the town magistrates.

Let all in fear remember and carefully observe this order.

Signed

OYE TAKU.

Kanagawa Kenrei.

September 19th, 1873.

Postscript.—

Servants already in the employ of foreigners, no matter how long or how well they may have pleased their masters, must at once all and in every case go either to the employment office, or else by the other process as before-mentioned, they must get the proper government *kansatsu*; otherwise they will in like manner as others be severely dealt with by Kanagawa Kencho."

Who is Mr. Suzumura Yozo?

He is one of the old coolie masters who thirteen years ago and from that time down has watched at the Hatoba and about town for opportunities to squeeze any and all who did any kind of service to foreigners. He with others has tried hard to keep up such a system of espionage over foreign servants that he could tell his masters, the government officials, what every foreigner had for breakfast and how many glasses of beer or wine were drank at dinner.

He has also long been known as a noted Hodogaya \*\*\*\*\* and in all respect may be classed among the \*\*\*\*\* of the low. And is all the foreign community to be made dependent upon the pleasure of such a man for household servants?

I am, Sir,

A JAPANESE, FRIENDLY TO FOREIGNERS

To the Editor of the *Japan Gazette*.

SIR,

I notice in your last issue a paragraph taken from one of the China papers, containing a reference to my son; in which it is stated that he has received an appointment in the Japanese Customs service. Will you kindly allow me to say in your columns that the foregoing statement with regard to my son is incorrect, as he is not in any way connected with the service of the government of Japan.

Yours very truly,

R. S. MACLAY.

Yokohama, October 1st, 1873.

WE HAVE refrained from offering an opinion on the Postal Convention which has been announced as concluded between the United States and Japan, because we had grave doubts as to the truth of its having been "concluded"; whilst if it has gone so far as to be even on the point of conclusion, the public opinion of Japan would not be heard at Washington until too late.

In a question of this kind too, we deemed it unlikely that the conclusion should have been arrived at without consultation with the other treaty powers—at least with Great Britain and France, who have hitherto shared the postal service with America. For although most undoubtedly either power is perfectly justified in entering on this or any other matter on its own merits, without communication with the others; yet we think it most impolitic, in this particular instance. Unless, therefore, it should hereafter transpire that the consideration of the matter has extended to other powers, we regard the conclusion of the Convention as premature.

We are not of those, however, who altogether disapprove of it. On the contrary, we very highly commend the Japanese Government for their energy as displayed in establishing this Postal service. They have seen clearly enough their duty; and that in this case their duty and interest coincide. Whilst we are all wishing that they would recognize the same fact in other directions, we are inconsistent in blaming them for acting promptly in this.

With regard to the apprehensions that have been expressed, that the service will be badly or carelessly conducted, we altogether dissent from them. There is but little similarity between an office conducted solely by Japanese, and one under experienced foreign supervision. Yet we would be disposed to approve of the principal of the establishment of a National Post Office, even were it exclusively under Japanese management. The present Post Office service is not so bad as regards the whole country, as our readers might suppose from the complaints they hear; or from their own experience. In all parts of the country letters and newspapers properly directed in Japanese, are delivered with as great regularity as can be desired—certainly greater than we expected when the service was instituted. The difficulty has only been with the delivery of foreigners' letters, and this, we are inclined to believe may have arisen from incorrect addresses being written on in Japanese characters.

Of course, we shall be told that this is the very point that affects us. Foreigners do not care for the regularity or irregularity of the letters between the Japanese themselves. Time has never been valued by them as it is valued by us. The delay in the delivery of an important letter—to a banker, for instance, or a merchant—though it be only of a few hours, may be the means of great inconvenience to many, or of heavy loss to individuals. We quite admit this; and therefore would urge upon the government the absolute and most stringent necessity there is for care that no such delays take place; and we are sure that they will see the necessity just as foreigners themselves do, and will engage proper persons to attend to the delivery.

But, if all be true that reaches us on the subject, it is not to be in the hands of the Japanese officers only. The foreign letters will be under a foreign officer; a man, too, who is represented as having had under his charge a correspondence probably a thousand times larger than he will ever have to control here. Why should we condemn such a man as incapable before we try him, and find him wanting?

Proofs enough are now before the people, that PUBLIC OPINION has great weight with the officials in the government and in every state department here. If Mr. Bryant be not competent, there will be means found of engaging some one who is so. On the other hand, if Mr. Bryant turns out to be all that is required, he will be assisted by the Japanese in every reasonable way; and should they oppose any regulation of his that is of importance to the success of the department, Public Opinion will support him, and the newspapers, foreign and native, will make the Public Opinion ring in the ears of the government.

Without therefore discussing the merits or demerits of the convention itself, we commend the government for its intended extension of the already established Post Office service; and believe that all impartial minds will do the same. At the same time, we would remind them, that, as, if properly conducted, this department is likely to yield a liberal revenue, it should be conducted on the most liberal system. If, through an insufficiency of men, or incapacity of those employed, or a niggardliness in the employment of proper means of conveyance or of delivery, the public have cause to be dissatisfied, the revenue will suffer diminution. It is only by the greatest possible care guided by experience that such an institution can be satisfactorily worked; but we see no reason to suppose that the authorities are unable or unwilling to take that care under good and efficient superintendence.

AT THE request of the American Bible Society of New York, Dr. J. C. Hepburn has transliterated the Gospel of Matthew; and an edition of this gospel has been published in double columns, having the Romanized Japanese on one side, and the English translation on the other. We have not heard whether the entire bible is to be issued in this style. If so, however, it will be another step towards clothing the Japanese language in a dress which makes its attainment by both natives and foreigners much more easy.

THE CLAIM of the Captain and Owners of the Barque *Gaucha* against the Messageries Maritimes Co., for damage caused by the S. S. *Nil* having fouled her through dragging her moorings during the late gale, has been settled by arbitration in favour of the former, who gets \$450 and the expenses. Nav. Lieut. Helby of H. M. S. *Cadmus*, and Nav. Lieut. of the French War Steamer *Casmas*, were the Arbitrators. Capt. Newell of the S. S. *Ariel*, Umpire.

## Law Reports.

Friday, 26th 1873.

DEVINE v. KIRBY.

JUDGMENT.

The judgment in this case, deferred on the completion of the evidence, on the 18th inst., was yesterday morning delivered by Judge Hannen.

His Honour said: In this case I have been induced to deliver a written judgment, on account of two subjects of importance to a community like that of Yokohama, being involved in it. It is of importance to know what the effect of an agent signing the name of his principal "per procuration" is: and it is of importance not only to the parties, but to other masters and servants to know whether I consider the circumstances of the present case reasonable grounds for the discharge of a servant.

The latter point is not really so important as the former, for it is generally the province of a jury to determine such a question, and the suitors are now at liberty, in proper cases, to have the verdict of a jury if they so desire.

Were I sitting with a jury, I should direct them to consider upon the evidence and upon the directions which I gave upon the law of the case, whether "the defendant was justified in losing all faith in the plaintiff." I use the words of the defendant's Counsel in thus putting the question, and I think that substantially they represent the question to be determined.

Before considering this question upon the evidence, I will explain what I conceive to be the legal effect and meaning of the use of the words per procuration in signing a principal's name.

Ordinarily speaking the powers of agents, and more especially of general agents, with whom business men are most often concerned, are derived from, and limited by the circumstances and usages of the particular firm or partnership, and their habit of doing business. In such cases as these the authority is, so far as third parties are concerned, of the widest description. Anything which the principal has, as a matter of custom, allowed his agents to do, a third party is justified in holding as within the agent's authority; and the third party has only to watch what the usual authority of the agent appears to be, and he is safe in dealing with him in matters which come within that authority.

Now the case is very different if, instead of a general agency the agency is one created by a written instrument, of the existence of which the third party is aware. In that case the third party must see that the acts of the agent are within the authority conferred by the written document, otherwise he will have no claim against the principal. And when a person signs another's name "per procuration," all persons dealing with him have specific notice that there is a written procuration at the back of the agent's power. As the point is of importance, I will give an extract from a work of the highest authority both in England and America, I mean Mr. Story's book on Agency. He says at § 72 of the 7th Edition:—

"Whenever an authority purports to be derived from a written instrument, or the agent expressly signs the contract or other paper, introduced with the words 'by procuration,' of A. B. (his principal) C. D. (the agent); in such a case the other party is bound to take notice, that there is a written instrument of procuration; and he ought to call and examine the instrument itself to see whether it justifies the act of the agent. For under such circumstances it is a but a reasonable precaution and exercise of prudence, and he is put upon inquiry. And if, from his omission to call for or examine the instrument, he should encounter a loss from the defective authority of the agent, it is properly attributable to his own fault, since he must know that he has no other security than his reliance on the good faith and credit of the Agent."

I will also quote this judgment of Chief Justice Erle, in *Stagg v. Elliott*, (31 L. J. C. P. 260). He says:—

"If an Agent, by permission of his principal sign his name without adding the words 'per procuration,' this is strong evidence of a general authority to bind the principal; but the addition of those words acts as an express warning to the party taking the bill that the agent accepts under the authority given to him by his principal; and the party taking the bill takes it at the risk that the agent is acting within that authority."

And Mr. Justice Byles says in the same case:—

"The words 'per procuration,' are an express statement by the person using them that he acts under a limited authority, and a person taking a bill so accepted, takes it at his peril. \* \* \* This mode of signature is recognised by mercantile persons both in this country and elsewhere as the legitimate way of informing a person that the bill is accepted by virtue of a special authority."

The distinction, then, seems plain. Where an agent signs the principal's name *simpliciter*, he binds the principal in all transactions within the usual scope of his business. Where he signs "per procuration" he only binds his principal in so far as he is authorised by his written authority—which written authority may be as contracted or as general, as the principal chooses to make it.

All this refers to third parties, and it must never be forgotten that as between the principal and the agent, the latter is bound to act within his authority, written or verbal, without any consideration as to the mode of creation of the authority, or the specific form of signature by which it is executed.

There is only one other point I need notice with regard to this portion of the case. There is absolutely no foundation whatever for Mr. Ness's contention that when a principal authorizes an agent to sign his name "per procuration," that agent has a right to sign it *simpliciter*. The contention is quite unfounded and seems to me as repugnant to reason as it most assuredly is to law.

I now come to the evidence in the case. It is quite plain that Mr. Devine had not power to sign the firm *simpliciter*. That power is not given him in his agreement or in the Power of Attorney. I am equally convinced Mr. Kirby did not think he had given him such power, but I am as strongly convinced that Mr. Devine was under the firm impression that he had it.

His whole conduct from beginning to end, seems to me to bear the stamp of *bona fides*, and although he was unquestionably acting under a wrong impression, I believe him to have done so innocently.

For four months he acts in a particular manner, and the first intimation that he has that what seemed before an almost unlimited confidence was entirely withdrawn, was a letter, telling him not to appear at the office after next day. Now, upon the whole facts of the case, sitting as a jury, I say that the determination of Mr. Kirby that he must lose all faith in the plaintiff, and dismiss him summarily, was unreasonable. When Mr. Kirby saw the signature to the cheque on the 25th of June, he says he was much astonished, and sat for ten minutes musing what could be the motive of the plaintiff in signing thus. In these ten minutes, and in the time he has since devoted to the case he has, no doubt, devised a series of acts and circumstances by which Mr. Devine might have gained an advantage, and inflicted damage upon him. But the question is. Were these suspicions so worked up reasonable? The defendant instructs his counsel to suggest that if he, the defendant, had gone home, and if he had died on the passage, the plaintiff would have sworn falsely wherever he could not be contradicted; would have destroyed any papers he had or could find making against his allegations, and would have fraudulently set up a claim to a partnership, which he had not a shadow of a right to, and which he has, as a matter of fact, never said one word to induce anybody to believe he intended making. It is to be observed that such a claim could only have been made if Mr. Kirby had gone home, leaving all his documents in the plaintiff's hands, and would never have been feasible unless Mr. Kirby died. Under the circumstances, in order to ensure the success of the plaintiff's fraud, the only means would have been for him to have poisoned the defendant; and I am somewhat astonished that, to make the thing complete, the defendant did not instruct his counsel to suggest that this would have been the final act of the plaintiff, but for his prompt dismissal. The truth is, that the whole of this theory about the contemplated fraud is the emanation of the defendant's brain, brooding upon the motives he chooses to assume actuated the plaintiff in doing that which the defendant did not think the plaintiff had the remotest right to do.

If, instead of brooding for ten minutes over the signature of the cheque, he had done what his correspondents recommended him to do, there would probably never have been anything heard of this case. Messrs. Cowderoy & Rainbow say very sensibly: "Your official of the 7th, announcing that Devine is authorised to sign *per pro*, is rather informal, inasmuch as Devine has signed your firm instead of putting *per pro*, E. C. Kirby & Co., W. H. D. I think you had better alter it; and if you mean *per pro*, tell D to sign accordingly." This is exactly what a reasonable man would have done. He would have gone to the plaintiff, and said, "You must sign *per pro*, and not the firm *simpliciter*;" and the chances are that after a little discussion the parties would have come to an arrangement.

But if the plaintiff had signed the letters and cheques against the express orders of the defendant, had not the latter a right to lose faith in him, and discharge him? Most assuredly he has, if the plaintiff acted thus wilfully and intentionally against his orders. I am, however, clearly of opinion that he did not do this wilfully and intentionally against the orders of the defendant.

I am bound to say that the defendant has completely convinced me of his *bona fides* and truthfulness, and I am inclined to believe that, notwithstanding its improbability, the real fact is that he did not see Devine's signature of the firm's name so as to notice that the *per pro* was missing until the occasion of the cheque; but until he had sworn it most positively, and until he had explained his habits of business at Kobe and here, I would not have believed it; and I think that the plaintiff was perfectly justified in believing that the defendant had seen his mode of signing, and did not object to it.

Under these circumstances, and seeing that there has not been a tittle of evidence to show that the plaintiff was incompetent or inattentive, or that he has ever exhibited a gross disregard of truth, or that he ever wilfully disobeyed the orders of the defendant, I think there should be a verdict for the plaintiff.

I must add that not only have these accusations put forward in the answer not been proved, but with

regard to the competence, the attentiveness, and the untruthfulness of the plaintiff, it has been amply proved to me that he was competent, attentive, and truthful; and I am astonished that the defendant should have instructed his counsel to maintain these accusations, even in his closing speech, after all the evidence had been concluded.

The only remaining question is, What should the damages be? On the one hand there is the wrongful dismissal; but the plaintiff says he has not endeavoured to obtain another situation. This makes it very difficult to assess the damages, and materially diminishes the amount I should be inclined to give, when taking into consideration, as a jury has a right to do, the persistence with which a series of accusations, which were not supported by any evidence, was maintained to the very last, and the fraudulent motives which were imputed to the plaintiff.

After giving as much thought as I have been able to the subject, I assess the damages at \$1,000, and the costs at \$250.

Gaimusho, Yedo.

## CLAIMS AGAINST THE OLD HANS.

Judge HANNEN and Mr. TAMONO.

Commissioners.

September 22nd, 1873.

J. M. SCOTT vs. TONAMI HAN.

On the resumption of this case before the Commission, this morning, the examination of the second banto of Mr. Scott's summoned at the request of the counsel for the defence from Kobe, was at once proceeded with.

Marthazo, examined by Mr. Hill: I am Mr. Scott's second banto. I have seen these letters. They are in my handwriting. I copied them all. I believe that about the date of the letter you produce I made copies of contracts; perhaps they were enclosed. There were two copies made at the time one for \$1,650 and another for \$2,000. The bonds were made afterwards. I recollect the first contract, but not the others. The one you produce was written by me from a copy: the date I cannot say. I cannot say who wrote the originals of those letters. The amount stated in that document is \$6,710 (in Japanese). I know nothing of the originals or any of the letters, nor do I know anything of the foreign writing on any of the documents. I know nothing of the red marks. A foreigner named Gutaves closed and sealed the letters to the Okurasho.

Cross-examination by Mr. Ness: I saw Saika at Kobe, at my master's office. I heard him ask my master for his original contracts with Tonami Han; several copies were at once produced by my master. My master said the originals were at the Saibansho. Saika told my master that he would be paid if he had Otonoske's seal on any of the papers. I am sure of this.

Hara Genshiro examined by Mr. Hill: About two years and a half ago I bought goods from Mr. Scott. I cannot say who was interested in the affair. I was not present at first. I heard afterwards that Satsumiya and Tatsogoro, were first concerned. I know of only the principal and guarantee Otonoske, Tanaka, Hara, Harimya, and Komeya are the names of the persons who signed the documents. Otake had nothing to do with this business. My impression is that the first contracts were given for the payment of goods. We were unable to pay and made many representations to Scott and got a delay. I was present at the Saibansho when the authorities told us to arrange with Scott. I afterwards went to Osaka. I cannot say where the originals are, I was at Osaka. I think Scott gave them to us. Kanazawa said that he gave them to Sanai himself. When new bonds were issued, I never saw the original contracts when they were given back. I think they were destroyed. Tanaka had them at Osaka. The seals were put on the new bonds at Osaka, after the destruction of the first contracts, and delivered to Scott at his office, Kobe. When the bonds became due, we were unable to pay and I had to appear before the authorities. I promised to pay by instalments, which was accepted. I gave a new bond in my own name for the amount. Takake was the judge officer. The amount marked on the third bond is \$4,666. [Copy of document handed to witness.] I believe that to be a document which says that the amount is to be paid by instalments. According to the document marked G. G., the responsibility of Harimya came to an end. As Scott refused to see any of us every-

thing had to be done at the Saibansho before the judge officer, and I am certain that I left one of the documents you mention with the authorities there. I cannot say whether Otonoske ever declared his rank to Scott, as for myself and Tanaka we had previously sent in a petition to become simple merchants. Otonoske was finance minister at Tonami Han. I do not think any officer could do business without permission. As a samurai I did not purchase goods from the foreigner. Otonoske was sorry for us, and applied to Scott. I only heard of this business after the goods had been received and it was too late. We had no authority to do business. When we had contracted for a steamer, Otonoske came to Osaka to get goods, he afterwards went to Kioto to settle the debts of the Han and to apologize to merchants and bankers for non-payment of their loans. Harimya assisted us with money and recommended us to use the Han's name with the authorities, to avoid getting into trouble.

Cross examined by Mr. Ness: When the first contracts were made I do not think Otonoske had power to sign for the Han. I put my seal on the documents after reading them. The statement that the contract was for the Tonami Han was false. Otonoske the finance minister of the Han, and Tanaka knew it to be false also. Otonoske was the man who did everything. Tanaka and myself wished to get off the contract but could not do so. We did not enter into any conspiracy. If Sanai and myself had known about the goods being delivered, we should have returned them to Scott.

The witness was here asked whether, on entering into the contract, he knew it to be a fraud?

Mr. Hill objected to the question.

Commissioner allowed that it was admissible, and ought to be answered. Question put.

Examination resumed: When I placed my seals on the contract I was perfectly aware it was a fraud; but I hoped to be able to pay the money in time. Otonoske has contracted on other occasions for goods on behalf of the Han. He did so fraudulently. I cannot say whether the Imperial Government has paid other debts contracted by Otonoske. I signed Twombly's contract as well as Otonoske. I have heard that the Government settled that claim. This contract was not fraudulently signed; yet we had no business to sign for the Han. Seeing that we had no right to the Han's name, we acted fraudulently. We did not buy the steamer for the Han. I think the reason why the Government paid this contract was that it had the names of Otonoske and Akebane Mesawa attached. When we stamped the contracts you refer to, we were pressed for money. After contracting with Scott, we did the same with Kirby. When at the Saibansho, we told the judge officer that it was a fraud, and that Otonoske had promised to assist us. We were reprimanded for having committed the fraud.

Yama Kawa examined by Mr. Hill: I am Gon dai Sanji of Tonami Han. I do not know Otonoske. I do not think he had power to contract debts for the Tonami Han. No one but two persons named Sage-ro and Akebani could do so at the time you speak of.

Cross-examined by Mr. Ness: I know that Otonoske had no power. I should have known of it if he had been so invested.

Takake examined by Mr. Hill: was formerly judge officer at the Saibansho. I think the original of the document you produce is in possession of Scott. I made the copy. The bonds in which it was stated that the affair was amicably settled are, I believe, in the hands of Scott.

Cross-examined by Mr. Ness: I consider Genshiro as liable for Scott's claim. I told the English Consul at the time that Scott's claim could not be paid because it had been sent to Tokei. Scott only made his claim against the people whose names are on the contract. Kanazawa gave me no report of this affair. When the second bonds were not paid I did not summon the defendants. Otonoske was relieved from his liability on the first contract at the request of Mr. Scott I believe.

This witness' evidence closed the case for the defence.

E. C. KIRBY & Co. v. TONAMI HAN.

September 29th, 1873.

The present action, instituted by the plaintiffs, E. C. Kirby & Co., against Kitamura Yoskadz, representing the Japanese Government as defendant, is for merchandize, &c., furnished at the early part of the month of June, 1871. Value \$15,000 being balance still remaining unpaid.

Mr. Dickens appeared for the plaintiff and Mr. Hill for the defendant.

Mr. Hill admitted the sale and delivery of the goods, except that of the steamer for \$3,500.

The first witness called was—

E. H. Hunter, examined by Mr. Dickens: In June, 1871, I was manager of Mr. Kirby's business, at Kobe. I made a contract with certain Japanese in the early part of June, 1871. [Contract produced.] They desired to buy goods to the extent of \$30,000. I told them that I could not sell to that amount on credit. I finally said some time afterwards that I would furnish the goods required if the officers could prove to me that they were properly authorised to act on behalf of the Han. Hyano introduced to me Tanaka Sanai, Hara Genshiro, and Nakayama Otonoske, and gave me the paper marked B, that I might make inquiries about them and their seals. They also wanted a small launch. I had not one ready, but afterwards got one built for them, which they agreed to take, at \$3,500; but owing to the money not being paid at the time specified, I did not deliver it into their hands. The banto went to Osaka, and from inquiries concluded that they were *bona fide* officers of the Han, and that their seals were genuine. From inquiries I made at the Custom House, I learned that the seal attached to the contract was the Tonami Han seal. At the time the contract was sealed \$4,000 was paid, balance in four months, three months without interest, last month 2 per cent. a month—a low rate of interest at that time. When the money fell due and nothing was paid, I sued in Osaka on a promissory note (F) for \$11,000. It was made by the four sureties to the contract. I sued through the English Consul. I got no satisfaction from the suit. I afterwards proceeded against the Tonami Han. I have constantly urged the present claims. The sureties never hinted to me that the Tonami Han officers were on private business. When I sued the sureties they said nothing to that effect. The defence to my claim to contract was want of authority and fraud in the seal. Otonoske was chief, and next to him Akabane Sanai. The court here adjourned to 2 p.m.

Examination resumed: The reason assigned by sureties for not paying the promissory note was their poverty. So far as I know, the Tonami Han officers were never examined regarding my claim. I have done business with other Hans. The contracts were similar to this one, only the stamps were not put on in the same way, although I took more precautions in this case than in the others. In regard to former contracts, I got no information from the Custom House; yet they have been paid. I sent up to Osaka to accept an offer to settle of \$3,000 cash, the rest in monthly instalments; but the officers had bent sent to Yedo. I don't recollect the date of this offer.

Cross-examined by Mr. Hill: I have no other copies of original documents with me, nor have I my books. This transaction was entered in them Hyano was the party who conducted the business on behalf of the officers. He was an interpreter at the Custom House. The items and prices of goods were settled by persons who came for the purpose, on behalf of the officers, one was a broker called Sozemon, the other was Sugai Kitchitaro. They acted through Hyano as interpreter. I made no other inquiries than those I have mentioned at the Custom House. I have made contracts with Morioka Ken, Seyama Han, and another, I don't remember the name. On them were the official stamps and seals. The finance officer was generally considered the one with whom it was safe to do business on behalf of the Han. I don't remember the dates of the contracts I have just mentioned. I do not know which officer showed me the Han seal on the first occasion; but it was voluntarily shown to me without my asking for it. I saw the piece of paper on which the Han seal is attached to the contract. The stamp was attached at my office, by Tanaka Sanai. I cannot say that even now I know the difference between an officer and a samurai. When I went to the Custom House, I understood sufficient Japanese to make myself understood by the officers. I made enquiries about the peculiar way of putting on the seal at the Custom House. It was in consequence of my suspicions that I exacted the promissory note I have mentioned before. At the time I had no doubts about the validity of the contract; for had I had any such suspicion, I should not have entered into it at all.

30th September, 1873.

E. H. Hunter, cross-examination continued: Saw no other seals put on the contract except the Han seals. The reputation of some of the sureties was unquestionable. The house of Tonajai Gohie is and was the first in Osaka; but of Minakata Gimpei was agent for the Steam Company Kuwaiso Kata. I would have dealt with the sureties with no other security than their names and seals to the extent of this contract. The goods sold by me were delivered to the order of the four purchasers—officers. I believe that the personal seal of an officer binds him in his official capacity also; but that depends on the nature of the documents. I have since received

neither money nor goods, except what was paid on delivery of goods. It took about four months to build the steamer. I heard of sale of goods to these officers by Scott, in the beginning of 1872. I never heard of any attachment by Scott of the goods I had sold. I cannot read the Japanese. The banto explained to me that when he went to Osaka he saw a sign on the house of the parties to the contract, explaining that they were officers of Tonami Han. This was explained to me at the Custom House, at the time of the investigation. I did not procure from the officers any written authority by which they acted. Do not know if they ever have any such authority, or only the stamp of their principal. I did not ask to see the stamp. I have never seen the authentication of an agency by means of a seal on a blank piece of paper, but I believe it is customary, from inquiries I made on the occasion of this contract.

Re-examined by Mr. Dickens: Hyano never acted in any other capacity than as interpreter in this transaction. The officers were present while negotiations were going on. None of the officers signed the promissory note; in consequence, I did not sue them. The seal being affixed to the contract in a way I had never seen before, I thought I would take extra precautions. The sureties made no difficulties about giving promissory notes. They did not appear to have any doubt about it themselves. They are still doing business in Osaka. I don't believe it is necessary that the Han seal should be on a contract when the seals of the officers are on it. I offered to deliver the steamer on receipt of the money due for her.—*Herald*.

October 3rd, 1873.

#### CABELDU vs. EWASAKI HAN.

The hearing of this case before the Commission was this morning resumed.

B. Cohen, examined by Mr. Dickens: I am a merchant at Kobe. I remember selling goods to the officers of Ewasaki Han, in March, 1871. One was Yamasaki Shozo, and the other Yoshida. Merchandise was sold on account of the Han to the value of \$3,700; \$700 cash, and balance secured by a promissory note. The seal of the chief officer was on it. I telegraphed to Osaka, and received a reply. Shozo was the head man, and authorised to buy goods. The promissory note, however, was never paid. Through the Consul, the Vice-Governor of Osaka said that the contract was in order, but that I should have to wait for my money. A few days after, the Shusanji of the Han arrived, and, at the Custom House, gave me a new note at fifty days for the amount due. On the termination of this time, the money was paid. The balance was paid by order on the Oriental Bank Corporation, given me by the Vice-Minister of Finance.

Tawaraya Manjiro, examined by Mr. Ness: I never went to Cabeldu's place at any time to purchase goods. I met him first at the Foreign Office. Senzo brought a contract to my house, and asked me to seal it, which I did. I made a contract with Cohen. Senzo signed the document, as produce agent for the Han. I signed merely as a witness, I did not think that I was liable for the goods purchased, if the Ewasaki failed to pay for them. Senzo told me that the contract was on behalf of the Han; but I afterwards found out that it was a piece of cheating on his part. I also learned some time after that he had absconded. After my house was sold to pay Cabeldu, there still remained \$500. I made a second contract to pay this, but I don't know now where it is.

Cross-examined by Mr. Hill: I held the position of Sanji at Kobe, from 1871 to July of this year. I examined the claim of Cabeldu when it was made. It would depend on the circumstances of the case, in the event of the principal not being able to pay, if the guarantor would be able. According to Japanese law, the principal was bound to pay up to the last; then came the surety. If the sureties make a second contract to pay alone, the former contract is null and void.

This closed the case for the plaintiff.

Asabea, examined by Mr. Hill: I am at present teacher in a school in Hiogo. In 1871, I was a foreign judicial complaint officer in the Hiogo Ken. Cabeldu's complaint was brought before me. Tawaraya Manjiro said that he could not see how, as a simple witness, he was liable to pay the demands of Cabeldu. Shozo was to have been examined, but he had absconded. A document was made out in lieu of the original one, according to the terms of which the two parties, Manjiro and Cabeldu, had arranged the affair amicably. In the event of the guarantor taking over the claim, the principal's claim becomes invalid. According to Japanese law, if the property of the principal is not sufficient to pay the sum total, the guarantor then becomes answerable in all cases for the remainder.

Examination resumed: Cohen's contract was signed by Senzo, who said that the goods were for Ewasaki Han, as well as Cabeldu's. I have always understood that Senzo was an official of Ewasaki Han.

Mr. Hill here handed in to the Commission the promissory note given by the Daisanji and Shosanji of the Han, to Mr. Cohen.

Ritamura Yaskadz, examined by Mr. Hill: I know nothing of the claim paid by the Government to Mr. Cohen. When the hans changed into kens, an order was issued by the Finance Department, calling for copies of all debts due by the different hans to foreigners; and the claim of Cohen was among those sent in by the Ewasaki Han.

Cross-examined by Mr. Ness: I do not know whether the Government has paid any other claims. I believe that the Han said that the document in question had been changed.

Senzo, examined by Mr. Hill: I was the year before last, in the service of Ewasaki Han. I wrote this document, but I know nothing of the piece of paper attached. Shozo's seal was attached by me, in addition to the three others. It was on a blank piece of paper, which I attached to the document to make it appear in proper form. I did so on my own motion. Cabeldu told me he wanted Shozo's seal attached to the contract. Shozo was in confinement at the time, so I attached a blank piece of paper, with a seal which had been given to me to facilitate the purchasing of goods the year previous. I did not get the piece of paper from Shozo. Several times, when Shozo wished to purchase anything, he told me that I had no authority whatever to purchase or transact business for the Han. I entered into a transaction with Cohen. Shozo was first; I was second. I was certainly under the impression at the time I purchased the goods from Cabeldu that they were for myself; and I endeavoured to make him understand so, being a foreigner. Shozo was in confinement. I don't think he knew that I had the piece of paper I have before mentioned. I do not think that I used deception either to Cabeldu or Manjiro.

Cross-examined by Mr. Ness: The goods that were purchased from Cohen were used by the Han; those purchased from Cabeldu I sold through a Kobe merchant. The proceeds of the goods purchased from Cohen were applied to the Han; whilst those arising from the sale of the goods purchased from Cabeldu were spent by myself. The seal was given to me for the purpose of making contracts, but I ought to have retained it.

Yamasaki Shozo, examined by Mr. Hill: I was, in 1871, Kussui of the Ewasaki Han, at Osaka. I knew nothing whatever of this document until I heard of it from the Foreign Bureau, at Kobe, in connection with the complaint. I did not make, or authorise any one to make, this contract. I never made contracts in this way; the paper and everything should be different. None but myself had power to make such contracts.

Cross-examined by Mr. Ness: I recollect giving my seal to Kinzo on a piece of paper, merely as a sample of the seal that would be attached to a document. I have been examined by the Judicial Board. I never said that I had given my seal on slips of paper to do business with Adrian & Co. My seal was only a specimen, and should not have been used on a contract. I ought to have got the seal back from Kinzo; but I was busy.

Mr. Ness requested that a copy of the depositions taken before the Judicial Board should be handed in to the Commission.

This witness's evidence closed the case for both parties.

#### French Consular Court.

Before OSCAR COLLEAU, Esq., Consul.

SEPT. 20.

PAUL CULTY vs. MESSAGERIES MARITIMES CO.

The parties to this suit were Paul Culty, plaintiff, merchant, of Yokohama, on the one part and the Messageries Maritimes Company, defendants, Paris, on the other. The latter failed to put in an appearance.

A. Gerard and B. Piquet, Esqrs., both of Yokohama, were appointed assessors.

The facts of the case adduced in court are as follows. It would appear that the plaintiff, Paul Culty, applied to the agents of the M. M. Co. for delivery of twenty-eight packages of merchandise variously marked, pursuant to two bills of lading produced issued at Marseilles, France, acknowledging payment of freight thereon in full, and designating the marks of the goods. M. Conil, the agent of the company, however, refused to deliver them. In justification of such refusal, the agent, on the 13th ult., forwarded to the plaintiff the following copy of a telegram

received on the 13th of July from the head offices of the company: "Marseilles, 5th July. Refuse delivery of the goods destined for Paul Culty, or his order Judgment for detention Signed, Talon."

In view of the refusal to deliver up to him the merchandise in question, the plaintiff, on the 16th ult., summoned the defendants before the French Consular Court, claiming restitution of the goods detained, \$300 for losses sustained up to date of summons, and \$50 for each day's additional delay from date of judgement.

The legal points considered by the assessors were, whether a shipowner or captain has the right to refuse delivery of merchandise to a consignee, for which he has delivered an acknowledgment to the effect that the consignee has paid freight, and fulfilled all necessary conditions.

Is it sufficient on behalf of those concerned, that the shipowner or captain should instruct his agent at port of destination not to deliver the goods because such delivery is opposed?

In the meantime, is it incumbent on the court, in view of the non-appearance of the defendants or their representative, to give judgment by default in favour of plaintiff on all the points; or ought the case to be dismissed; and with or without costs?

After a careful review of the facts of the case under consideration by the court, a decision was come to against the M. M. Company, and in favour of the plaintiff; seeing that on the 22nd June, 1873, twenty eight packages were delivered on board the M. M. Company's steamer *Tigre*, at Marseilles, for transmission to Yokohama on board said vessel, or any two following to M. Culty or his order, as proved by the bills of lading delivered same day;

That it appears from the tenor of these bills of lading, that the sum of £526.55 was paid in advance; Seeing that the packages therein designated safely arrived at Yokohama;

That Culty, the bearer of the two bills of lading, having demanded delivery, Conil, the agent of the company, refused; alleging as his reason the receipt of a telegraphic despatch from the head offices of the M. M. Company on the 15th July last;

Seeing that this despatch, of which a copy has been handed by Conil to Culty, has not and cannot have any legal force;

Seeing that according to law in such cases, provided had opposition been made, it would have been irregular; that it is at the place of destination and not at the place of departure that such opposition should be made;

That, as is usual in these cases, the M. M. Company, having received the freight due, had no right to refuse, as they have done, the packages designated in the bills of lading aforementioned;

Finally, seeing that the bills of lading were to order and transmissible by endorsement, and further passed into the hands of a third party in good faith, no opposition or judgment for detention regularly made on the first endorser could prevent the delivery of the goods therein designated into the hands of the third party;

That the goods in question have been arbitrarily refused delivery to Culty;

Seeing that this act, which is, moreover, the act of the agency of the M. M. Company of Yokohama, does Culty injury, in consideration of which he is entitled to damages;

The Court condemns the M. M. Company by default, within twenty-four hours after notification of present judgment, to deliver to Culty the twenty-eight packages designated in the Bills of Lading delivered to him or his order at Marseilles, on the 22nd June last, with reservation of Culty's rights, in case of damage accruing to said package.

In the event of the Company failing so to do in the time specified, they shall pay to Culty the sum of \$50 for each day's additional delay, as compensation.

And in consideration of the loss sustained up to present date, the Court condemns the Company in addition, to pay Culty the sum of \$300 damages.

The company is further condemned in costs in the sum of 165 francs for the draft, copy, and notification of the present judgment, together with registration of the two bills of lading, on the 22nd June, 1873, and the copy of the telegraphic despatch of the 4th July.

M. Kretzer, Chanceller of the Consulate, is entrusted with the notification of the present decision.

The Messageries Maritimes Company have since signified their intention to oppose the decision of the Court as above given.

#### In H. I. A. H. M.'s Consular Court.

Before H. S. WILKINSON, Esq., Acting-Consul.

Monday, September 29th.

Leon Spieller an Austrian was this morning charged with having, on the 4th instant assaulted a Japanese. Defendant pleaded not guilty to the charge

alleging that it was, rather the Japanese who had assaulted him. It appeared that, according to the Japanese evidence, the dispute first arose through defendant who was selling goods trying to get his boat in alongside the *Garibaldi*, before one occupied by two Japanese boatmen. The Japanese at the bow resisted, and was at once struck by the defendant. The plaintiff seeing the row rushed to the assistance of his friend, and was roughly treated in consequence.

The defendant declared that but for timely assistance he should have been seriously injured, and called a witness, a corporal on board the *Garibaldi* to corroborate his statement. The Witness stated that at the time of the dispute he was on board the ship. There were a lot of Japanese boats there also. He saw two Japanese strike the defendant with sticks. Then one of them took hold of him and turned him over and the other struck him with the stick. The commander of his boat had sent him to take defendant away. He had not seen the commencement of the affray.

The Consul admonished the defendant that he had not presented himself at the Court House at the appointed time for the hearing of the case this morning. He pleaded as an excuse that he was in his boat coming from the ship, and could not possibly arrive on shore earlier in consequence of the wind.

Owing to the delay ensuing, one of the witnesses whose evidence was, here necessary had left. The Consul therefore adjourned the case until ten o'clock to-morrow morning. The defendant in the meantime to be bound over in his own recognizances in the sum of \$50 to appear at the appointed time.

Tuesday, September 30th.

The case of a Japanese *versus* Leon Spieller an Austrian subject for assault, was this morning resumed.

Salomon Asslan, a witness for the defendant, said that he was alongside the *Garibaldi* on the 4th inst., when the circumstances connected with the present case took place. The Japanese boat was outside; Spieller's was inside nearest the vessel. He heard Spieller call out "Why do you shove my boat off?" Spieller pushing the man at the bow of the Japanese boat away, this man immediately set upon Spieller, and was soon joined by the plaintiff who took Spieller by the throat. Spieller did not strike the man who set upon him first. Between the two he would soon have been killed had he not been assisted.

This witnesses evidence concluding the case, the Consul after a careful consideration of the facts, dismissed the case.

#### In H. B. M.'s Consular Court.

Wednesday, 24th September.

William McLean, captain of the *Maria Luz*, was this morning charged with being drunk and disorderly, and destroying Japanese property.

It appeared that yesterday evening, about five o'clock, the prisoner went to the boathouse near the English Hatoba, and demanded a boat, saying that he wanted to go off to his ship. This was, however, refused, whereupon he began to abuse the boatmen, and smash the windows. He was at once taken before the Japanese authorities; but the offence was condoned on payment of two boos and a half. An hour afterwards he was brought back again, having redemanded a boat, abused the boatmen, and smashed a few more of the windows. He was this time turned over to the European police, it would seem, by whom he was taken in charge. In reply to His Honour, the prisoner said he believed that the best part of the windows (seven in all) were broken before he saw them. One of the constables deposed to his having been anything but of a peaceable disposition during his sojourn at the station. Two of the panes of glass also still remained to be paid for.

Fined \$10 and costs, and one boo for the broken windows.

Tuesday, 30th September.

Captain Rickaby, of the *Clausina*, charged Chas. Snow with exceeding his leave of absence. The defendant was granted leave of absence on Sunday night, on the understanding that he was to be on board on the following morning. According to the plaintiff he failed to present on himself board before Monday night.

Case dismissed.

The defendant was then arraigned on a charge preferred against him, by the Captain of the same vessel, of assault and abusive language. The evidence of the plaintiff was corroborated by two apprentices.

Sentence, fourteen days imprisonment.

## INTIMATIONS.

### NOTICE.

THE undersigned having re-sold the *Japan Gazette* to its former Proprietor Mr. J. R. BLACK, all subscriptions falling due on and after the 1st day of this current month will be payable to him.

A. VERNEDE.

Yokohama, 5th Sept., 1873.

### NOTICE.

THE undersigned having taken into partnership in the business of the *Japan Gazette*, Messrs. C. D. MOSS, and J. R. ANGLIN, the former will henceforward act as Sole Manager, and the latter as Superintendent of the Printing Department.

#### DEATHS.

At the Hospital, Nagasaki, on the 24th September, JOHN YOUNG, native of Leuchars, Fife, Scotland, Master of the British Barque *Witch*, aged 52 years.

On the 30th Sept., suddenly, ROBERT MEADOWS, M.D., at his residence in Hongkew, Shanghai.

On the 19th instant, at the General Hospital, William Clark.

OUR LAST *Mail Summary* was published on the 7th instant, for transmission by the P. M. S. S. *Quang Se*, which left on the 8th. All mails due to date have arrived.

Our latest telegrams are to the 17th October.

#### Summary.

THE REVISION of the treaties, which it was supposed would commence on the 20th of last month, has not yet been taken in hand, and until a report has been handed in by Iwakura of the proceedings of his embassy, it is unlikely any move will be made. It is reported that ever since his return, the chief ambassador has been very much indisposed and his next in rank, Kido, having been paralyzed, still lies in a very precarious state. It is supposed that even should his life be prolonged, he will never

again be able to attend to business; and naturally great disappointment is felt, that the valuable assistance Kido seemed destined to give to his country in her scheme of reform, will be lost.

HIS MAJESTY the Emperor, went in state on the 9th instant to open the Polytechnic School. The ceremony was performed at 10 A.M. The officials and professors assembled at 6.30 A.M., and His Majesty arrived a little before 8. A short account of the proceedings will be found later on.

ON THE 18th inst., Her Majesty the Empress Dowager—mother of the Emperor, paid a visit to Yokohama. Her attendants consisted of seven ladies and three or four gentlemen. The weather was most unpropitious—but Her Majesty and suite entered five carriages and drove slowly from the Railway Station through the foreign settlement; then through the native town and over Nogé Hill; and returned to Tokei in the imperial Saloon carriage, attached to the ordinary 3 P.M. train. They had arrived in Yokohama by a special train which left Yedo at 7 A.M.

H. R. H. the Duke of Genoa has not yet taken his departure, his ship—the *Garibaldi*, Italian frigate—on board of which he is a midshipman, not being quite ready for sea. He has formally taken leave of the Emperor.

On the evening of Tuesday the 14th H. R. H. was present at a ball, given in his honour, at the British Legation, Yokohama. Lady Parkes being absent, in Hakodate, to that extent only, the entertainment suffered. But in the excellence of all the arrangements, and the solicitude shewn by Sir Harry Parkes for the enjoyment of his guests nothing was wanting.

H. R. H. hardly missed one dance during the evening.

THE LATE Minister Plenipotentiary of American to Japan, the Hon. C. E. de Long took leave of the Emperor on the 9th inst.; and at the same time introduced his successor the Hon. John, A. Bingham. The speeches made on the occasion will be found in other columns.

COLONEL SHEPARD, U. S. Consul in Yokohama, takes passage in this P. M. Steamer, on leave of absence. He is expected to return in about six months.

H. E. TERASHIMA Tozo, lately Japanese Minister in London, arrived in the French steamer *Nil* on the 16th instant.

THE BRITISH authorities, having protested against the late decision in the case of the Japanese who attacked Inspector Blockley, a new trial has been commenced, at which the British Vice Consul attends, on behalf of his government, to watch the proceedings.

A MEETING of the Asiatic Society of Japan was held on the 8th October. A full report is given further on. The report of the Japanese Mint for the past year will also be found in our present issue.

AN INTERNATIONAL Boat race came off on the 9th between an American, an English, and a Scotch crew. The last named won. We are now looking forward to the races which come off on the 23rd, 24th and 25th of this month; and then to the Annual Athletic sports.

BUSINESS has in some respects improved; but the market for imports is too much overstocked to allow of remunerative prices being obtained.

WE HAVE mentioned the more than ordinary cordiality by which the last interview of Mr. De Long with the Mikado was marked. We are now able to lay before the public the speeches made on the occasion. We have taken pains to prevent them suffering through bad translation. In all Oriental countries, the sovereign remains so entirely isolated that it is impossible for the world to tell whether he is the great director of events transpiring within his nation: or whether he is a mere cypher idling his hours with wantons: a mere dummy, sharing not at all in the trials or triumphs of his Empire.

In no country is this more truly the case than in Japan. The Mikado, it is true, has on some occasions exhibited himself in public, and engaged personally in the reception of imperial guests; but this has been felt by some to be but a dumb show, which might mean everything or nothing.

If, at first sight, we were inclined to think Mr. De Long's address somewhat too long, second thoughts convince us that he had a definite object in view. In his farewell address, he has boldly struck a blow for progress and reform in the front of royalty itself, and obtained a response, giving proof that His Majesty has read and considered the ideas presented.

We now know that His Majesty has received some foreign ideas undiluted by transmission through ministerial channels, and we have in His Majesty's reply an assurance of his personal sympathy with the march of progress. We therefore feel that the thanks of all are due Mr. De Long for having thus conveyed to His Majesty this expression of foreign sentiment and obtained such an assurance in reply.

Introductory and farewell speeches are generally confined to complimentary platitudes meaning literally nothing. In this address and reply we are refreshed by hearing *ideas* advanced and responded to, and we can feel assured that His Majesty knows something of foreign sentiment. Mr. De Long may well feel proud of the flattering assurances extended to him personally, which we trust may for ever set at rest the question of his relations with this court which some reckless correspondents saw proper to misrepresent.

Mr. De Long first addressed the Emperor as follows:

"YOUR MAJESTY,

Having been relieved from my duty here I come to bid farewell.

In the name of the President, the Government, and the people of the United States, I beg to announce the earnest and united wishes of all for the health, well being, and continued prosperity of Your Majesty and the people of Japan.

I beg to assure Your Majesty that it is the most earnest wish and desire of the President of the United States to have ever continued the existing ties of amity which unite that Government to Japan in such close relations. I beg to bespeak in the name of the President, and in my own behalf, Your Majesty's confidence and support (so kindly yielded to me in the past), to be bestowed in turn upon the honorable and most distinguished gentleman who will succeed me.

His age, his great experience in public life, and his long service in the highest official circles of the United States Government, thoroughly qualifies him to meet in council with Your Majesty's Ministers.

It is my proud privilege to now state that during the entire period of my service here, I have met with nothing but kindness and courtesy at the hands of Your Majesty's Minis-

ters; and having received repeated proofs of Imperial favour I turn away with no feelings but those of gratitude and reverence for Your Majesty, respect and esteem for the ministry and kind regards for the Japanese people.

Venturing for a moment beyond the possibly proper limits of an adieu I beg to say that my government and people, rejoicing at the adoption by Japan of the policy of the Western States, hail with peculiar pride and pleasure the release of Japanese converts to christianity from their bonds of captivity and their being allowed to return to their homes; and the removal of the edicts against christian teaching and practices; as a friendly concession to the opinions of those nations in alliance with Your Majesty.

The recent action of Your Majesty's Government in earnestly joining with Western Powers in their efforts to suppress the 'Coolie Trade': the recent negotiation of a Treaty of Peace and Amity with China: thus helping to break down the barriers of seclusion; whilst Your Majesty's noble and distinguished Ambassador led the way to the presence of the Chinese Emperor: and the indicated policy of Your Majesty to compel the barbarian inhabitants of countries adjacent to Japan to treat with kindness and mercy distressed travellers cast upon their shores; all bespeak such a kindred sentiment to that prevailing amongst nations in the west that I venture to speak the thanks of the American people to Your Majesty.

The action of Your Majesty in sending forth to the nations of the earth the most distinguished Councillors, has met at the hands of those nations with such a hearty response that no words of mine are needed to picture the gratitude this action has given to Your Majesty's allies.

The sending out of young noblemen as students to learn and bear back with them a correct knowledge of the customs, manners and policy of Western States, also assures all concerned that the time is near when this lovely and picturesque Empire shall be as free for trade, travel and residence to the citizens and subjects of Western States as are those lands to Your Majesty's subjects.

God speed the hour that shall behold a consummation of these wishes. When it comes none will rejoice more with Your Majesty than will the American people.

Whilst the sure foundations were being laid for these developments I have been permitted to enjoy the confidence and association of Your Majesty's Ministry. I now step on one side to be henceforth no actor in this scene; but through life I shall ever remain a most friendly and interested spectator.

With all due humility I now bid Your Majesty, Adieu.

#### REPLY OF HIS MAJESTY TO MR. DE LONG.

"It is with much pleasure that I have heard on the eve of your departure the assurances you give me of the good wishes which the President of the United States vouchsafes for the prosperity of this country.

I doubt not your successor will meet with the same goodwill and confidence that has ever been extended to you.

It is a source of much gratification to me to know that the intercourse between our Ministers and yourself has never ceased to be mutually agreeable.

I fully appreciate the statements you make in praise of certain acts of this government but which I apprehend are possibly

overrated; although [it has been our constant aim to lead our people toward a higher grade of civilization.

I shall never forget your friendly sentiments for our country; and I am pleased to hear that they will remain unchanged after your departure.

I sincerely hope that you may ever enjoy the blessings of health—especially during the long voyage that lies before you."

Mr. De Long then introduced as his successor the Hon. John A. Bingham who addressed His Majesty as follows:

"Your Majesty,

Obedient to the instructions of my Government and to my own sense of duty as well, it shall be my endeavour by good offices to strengthen so far as I may be able, the friendship now happily subsisting between Your Majesty's Government and my own to advance the interests of each.

It is a pleasure to me to say that I but obey the instruction of the President who has commissioned me, when I assure Your Majesty that you have the good will of the President and people of the United States of America, and their best wishes for the prosperity of Your Majesty and of the people of Japan. The people whom I represent are not unmindful of the trust and confidence uniformly manifested by Your Majesty's Government towards the Government and citizens of the United States.

Thanking Your Majesty for the distinguished consideration shown me and sincerely desiring that this growing Empire of the east may continue to advance with the advancing civilization of the age, I have the honour to place in Your Majesty's hands my letter of credence signed by the President and authenticated by the great seal of the United States of America."

To which His Majesty returned the customary reply welcoming the new representative.

THERE ARE some men whose whole duty in life seems to be to grumble. Nothing pleases them; and nobody they meet has anything to be commended. The most lovely scenery is spoilt by other tourists looking upon it; the most perfect picture never hangs in just the right light; the most beautiful music is either too fast or too slow, too ponderous or too flippant, too crude or too studied; the most agreeable companion has peculiarities which mar all his better qualities; and even the discontented beings themselves are not absolutely perfect; as their poor unfortunate stomachs are incurably out of order, and their spleens almost unendurable.

This is no overdrawn description. Every day such grumblers are met with. They find fault with every one and everything; never considering that they render themselves most disagreeable to all who hear them; and that their chronic ill-humour recoils upon themselves.

We have conversed with many men who have been out on pleasure excursions during the late season; and we are bound to say that the majority of them took things as they found them, and enjoyed themselves to the full; but with those who were not so fortunate the principal complaint was that they met so many other foreigners. It has been the same thing in Europe ever since railways and steam boats have facilitated travel; and nothing makes a man seem more captious and silly than when he throws contempt on those whose fault, after all, lies in having similar tastes to his own.

But the most egregious specimen of the genus 'grumbler,' we take it, is he who may be called the professional grumbler—the newspaper writer—the hipped editor—the paid critic—the blasé and disappointed scribbler—and the youthful, ambitious and inexperienced copyist. Men who, forgetting the true ends of journalism, make the newspapers the vehicles for splenetic criticism of everything and everybody—and adopt "never praise" as the golden rule of their craft. Even with these, there is one exception to the rule—for they never lose an opportunity of glorifying themselves; not giving the public credit for the ability to see their excellence unless it is particularly pointed out to them.

A most amusing instance of this is before the eyes of the community, almost every day. Our amiable contemporary "No. 22," never tires of imparting to its readers the important information that it alone of the Japan press is A 1—and that all other aspirants for their suffrages are "off the letter." It will insist that the public does not recognise its merits sufficiently, and accords too much confidence to its rivals. This, however, is but an innocent hallucination, which, whilst affording to its own writers a little amusement, or acting as a safety valve for superabundant choler, does no harm to any one. But the same broadsheet has the most rabid habit of snapping and growling *promiscuously*.

This is the strongest reason for the indifference with which its emanations are received by the public. When no good can be seen in anything except self, there must surely be some defect in the sight. When Japanese and foreigners, ministers, missionaries, bankers, journalists, embassies, and all others appear alike distorted, there must be some mental obliquity. If there were some virtues in some of them; if they were not all sicklied over with a dull yellow; if a few at least were upright and sound looking, there might be less grounds for suspicion; but where everything is zigzag, and everybody painted in the same disagreeable colours, there must certainly be a shingle short.

The late embassy has come in for a little dose of reprobation in that quarter, because, after costing a sum "whispered" as "from first to last, approximating to nearly a million of dollars," "the political results are simply nil." It is rather early times to speak of results of such an embassy—before even the various members have sent in their reports. It is hard to say what political results were expected. Surely it was not supposed that the whole empire would by means of this embassy be instantaneously regenerated; or that on its setting its foot on foreign soil, all nations would change their policy; or fall down and worship Tensho Daijin. In truth, the more important results can only be revealed by time. No foreigner, knows what the ends originally proposed were, beyond those of cementing the friendship between the Mikado and other sovereigns; between Japan and other countries; and making inquiries into, and so far as time permitted, studying, the systems adopted by different nations in their government, jurisprudence, finance, education, national defences, and other departments. All these things have been effected. The Mikado has every reason to be pleased with the respect paid to him in the person of his ambassador; and the general bearing of the gentlemen attached to the embassy was such as to secure the good opinion of all with whom they were brought in contact. The foreign newspapers from time to time mentioned their movements, and they were always spoken of as prosecuting the enquiries for which they had been appointed. As to its requiring a long time to send in their reports, that cannot be

wondered at. But we by no means share the doubts expressed by the *Herald* as to "whether they have acquired information on any subject which they could not have obtained from books, or from foreigners in this country." An oft heard complaint is that the Japanese are going too fast, and making ignorant attempts to copy foreigners. Now if this be so, why is it? It is because they cannot here get that insight into affairs that they can obtain abroad. Here they seem unable to obtain the same degree of cordial assistance they meet with abroad. Most foreigners with whom they are brought in contact have only in view some benefit they themselves shall receive from the Japanese to whom they are introduced; they are too busy to give up much of their time, unless they are regularly engaged at a salary; and if money is to be paid, it is far better it should be spent at head-quarters, where even if it costs more, there can be no doubt better value will be received for it.

The impatience for results, expressed by so experienced and able a teacher as the *Herald*, is of itself a curious commentary on its opinion that the Japanese might learn as well from foreigners already in Japan. Perhaps he will be able to show us the practical results of his missionary correspondence; or of his extraordinary statements, daily reiterated, that the *Herald* is the only paper—&c., &c., and that it has the largest circulation, &c., &c. Results of great undertakings are rarely immediate; and those of the vast undertaking (for Japan) of this embassy, must be patiently waited for.

We should like to see this article have the pleasant result of inducing our contemporary to take a brighter view of things than he is in the habit of doing, and awaken him to the fact that the publication of the *Herald*—No. 22 in the list—is not the only oasis in the desert of our existence in Japan; and that many things he has commented on gloomily, are not half so black as he has painted them.

THE recent case of Devine *versus* Kirby was commented upon by the *Japan Mail* on Saturday last. Our contemporary surely must have been unaware that Mr. Kirby has appealed against the decision; and that the case was properly speaking beyond the pale of newspaper criticism for the present. We should not now allude to it, but that we think the article in the *Mail* was not so impartial as it was probably intended to be. It took in fact a very one-sided view of the evidence, and struck us rather as an attack on Mr. Kirby than as a candid review of the dispute. The case was one of those which are so difficult to decide: because evidence is so nicely balanced—so diametrically opposite, and yet given by witnesses of character equally beyond the suspicion of intentional misstatements. Consequently it had to be decided on probabilities rather than positive and well established facts. In its present stage we refrain from approving or questioning the Judge's decision. It was honestly given, and is entitled to all respect. But it would have been quite as easy to have merely altered the incidents and inverted the names, and to have decided in the contrary way. So much is this felt, that we are satisfied opinions are pretty equally divided on the point. It can only be left to the Judges to decide it; and whether Sir Edmund Hornby reverses or sustains the decision, he will have many in this community who will approve.

But the *Mail* makes Mr. Kirby appear as having acted hastily and unadvisedly. This is not borne out by the evidence; for it is stated that he went to Mr. Dickins, asked his advice, and without his advice took no action in the

matter. This, it appears to us, clears him from the imputation cast upon him—which really, in the way it is put by the *Mail*, makes him a monster of injustice, while Mr. Devine is upheld as a lamb led to the slaughter.

In the decision, we consider that the Judge went unnecessarily out of the way to ridicule Mr. Kirby's fears respecting possible contingencies. Any one can see that these were not represented by Mr. Kirby as actual apprehensions that Mr. Devine *would* act in the fraudulent way described, in the event of Mr. Kirby's death; but were merely mentioned as having occurred to his mind as to their possibility. This was in turning over in his mind what might be the effect of his passing over Mr. Devine's habitual exceeding of his powers; and as it is the duty of a counsel to do the utmost for his client, it was not inconsistent nor ludicrous for Mr. Dickins to allude to these possibilities. There is, however, a great difference between the way in which Mr. Hannen weighs the probabilities on both sides, and the didactic manner in which the *Mail* pronounces on the case.

“THE Physical basis of statesmanship” is the title of an essay lately published in the United States, which contains much information compactly stated, wherein it is shown that those who have held the leadership longest in the Senate and House of Representatives are men of good “physical basis.” In view of the present weakly physical condition of the Japanese statesmen, such a title as that of the above named essay is suggestive, and might be studied by them with profit. Looking at the physical condition of the leading men in Japan, the most devoted admirer of the Japanese can hardly take a cheerful view of the future. Sanjo is a weak and puny young man. Iwakura's health has been almost broken down by his trip through the world's various climates. Kido lies in a state of paralysis. Sawa was borne to the grave on Tuesday. Terashima has been obliged to resign his duties as Minister to England, and is on his way home. Soyeshima is frequently unwell, and never robust. All the members of the embassy have suffered severely from the long strain upon brain and gastric nerve, and the chief secretary is quite unwell. The death and sickness rate among the students under foreign instruction in Japan, as well as among those in the United States, is much higher than among English-speaking students. In this account, we take into consideration the effect of change of climate, food, habits etc., and remember that even robust Mr. Burlingame died from too many good dinners, excitement and mental strain. Yet, allowing for all the facts in the case, the Japanese physique is a weak one, and special attention to hygiene is necessary at all times. At the funeral of Sawa, on Tuesday, when almost every Japanese officer of rank was present in swallow-tails and chimney-pots, the most noticeable fact was their ghastly attenuated appearance. As the future Japanese statesman is to be pitted against the burly Briton, the wiry Yankee, the hot-blooded Frank the phlegmatic Teuton and the iron-bound Russ, where will the *Nippon-jin* be? Diplomacy is often a contest between stomach and stomach, nerve and nerve, as well as between brain and brain. Digestion can always beat dyspepsia in the long run, and rice cannot stand against roast beef, fresh air, cold baths, and crash towels; and exercise can put to rout pipes, tea-cups, boiling baths, cold feet and soft mats. All these things should be considered by the Japanese, and in all their

schools attention to hygiene should be of paramount importance. All of which is respectfully submitted.

AT the threshold of the business of revising the Treaties, it seems to us that a difficulty which is totally unprovided for—may arise for settlement by the negotiators—A difficulty which, so far as we are aware, has no precedent. It is this. The treaties simply provide that in 1872 they shall be revised in such respects as experience may have proven to be desirable; upon one party having given one year's notice to the other of a desire for a revision.

These notifications have been given by this government to all of the powers with which it has treaty relations; and we believe those parties have also notified this government of their desire for a revision. This having been done, all difficulty upon this score is obviated, but the stumbling block is, who shall judge the question, as to *what* experience has proven to be desirable in the event of the representative of one of the Foreign Powers and the Japanese authorities disagreeing? For instance, suppose the Japanese should declare that, in their judgment, experience had proved it to be desirable that they should be left free to regulate their customs dues for themselves; and the Foreign Representatives should declare that their experience leads them to decree it to be desirable that the treaties should retain in the future as in the past a scale of duties on imports and exports. Who would or could decide between the disputants? And if no agreement should be arrived at and no arbitrament could be agreed upon, what would be the result? Would the old treaty unrevised remain in force? And if so, for how long? An affirmative answer to this question clenches the doctrine that Japan, by the treaties she has entered into, is bound hand and foot *for ever*; or until her treaty relatives and herself agree to change or modify the same in some respects. To answer the question in the negative, or to construe the clause in the treaties to mean that they shall be revisable in all respects which experience may have satisfied *the Japanese* to be desirable. This is placing the boot again on the other leg; and leaves the Foreign Powers wholly at the mercy of Japanese discretion. Japan, if this construction should be accepted, might at once strike out the feature of extra territoriality and all other restrictive clauses and rise at once in privilege equal to an European power whilst maintaining in the treaties the present inhibition against foreign trade, travel, residence in the interior, &c.

Not wishing to agree with either of these ultra views, so unfair to the negotiators upon one side, we have been seeking some common ground equitable and fair to both; but so far in vain. We advance these suggestions to provoke discussion, that we may be aided in our enquiries; and that the serious attention of the negotiators be called to the subject informally, before they are called upon to deal with it formally. Another troublesome question has presented itself to our minds. Suppose the Foreign Representatives disagree amongst themselves, in respect to the revision, and Japan agreeing with some should revise certain of her treaties, leaving the others unrevised; would the nations whose treaties were unrevised derive the benefits secured by the others by virtue of the "most favoured nation" clause? For instance should the German Representative agree to give Japan the unrestricted right to charge such export and im-

port duties as she pleased to establish in the future, and should Japan in return agree to allow German subjects freely to travel and reside in the interior, and their treaty be revised accordingly, would British subjects, without a revision of the British treaty, be entitled to all the privileges conceded to the German? If so, it would seem to us to be the wisest course for a nation to have nothing to do with the business of revision—whereby it could claim all advantages accorded to any and be subject to no restrictions not contained in the original treaty. These matters deserve much thought and we hope they will receive the attention due to them.

#### Mr. Marsh's Concert.

WE HAVE never heard Mr. Marsh play more perfectly than he did on the Pianoforte, on Thursday evening. In the opening trio, by Beethoven, for piano, violin and violoncello, and in each of the subsequent concerted pieces he surpassed himself. His execution was clear and crisp, and full of the sentiment of the moment, and the feeling of the large audience was, that he had never been heard to greater advantage. His harp solo was also excellent, and deserved the applause it obtained—but the pot-pourri on Scotch airs which he played as an *encore* was too long, and the weariness it produced made one forget the success of the first piece.

The *début* of Mr. Chapman proves him a most valuable addition to our musical circle. In the opening trio his full round tones coming in fully and decisively, seemed literally the support of the whole. Mr. Howell took the violin part in the trio, and if he had nothing to bring out his performance prominently, he played his part so smoothly and correctly that it is not too much to say that the trio on the whole, was, so far as its execution was concerned, equal, if not superior to anything of the kind we have hitherto had in Yokohama. The violoncello solo was also charmingly played. To our ears there is no instrument so agreeable in its tones, as the violoncello when played by a master. We dislike the harmonies on any stringed instrument—unless played as we have only heard them rarely—but we are content to endure them for the sake of what we will call the natural sounds. Mr. Chapman's pure and steady style of playing is much to be admired; and in concerted pieces will always be invaluable.

The zither, in the hands of Mr. Ludwig, produced the same pleasurable effect as at Mr. Marsh's last concert; and Mr. Michel's Cornet solo was remarkably good. But of all the instrumental music of the evening, nothing surpassed in excellence of performance, and in the delight afforded to the audience, Mr. Wagner's solo on the Flute. With the exception of a slight sharpening of the tone in the *crescendos* on the notes in *alt.*, in the opening chords, which is most difficult for the very best flute-players to avoid, the rest was perfect. Piano and flute were like one instrument, both heard throughout as clear as a bell—and so crisp and true that in the most rapid passages it seemed as if there were but a single performer. In the double-tonguing and double octave passages, and in those in which the melody is *tipped* out in the higher octave, whilst an accompaniment is kept up on the lower notes, Mr. Wagner shewed how thoroughly he was at home. This we considered the gem of the evening—estimating it by the pleasure experienced by the hearers.

With regard to the vocal portion of the entertainment, if we except the song by Mr. Andersen "The Huntsman, soldier and sailor," with violoncello obligato; and "Loves request" by Mr. Townley, there is not much to be said. Both of these gentlemen are real acquisitions, their voices being at once agreeable and powerful. With Mr. Marsh at hand to direct the vocal studies of our Amateurs, we are sure more good singers might soon come to the front among us. The great thing required by them is good tuition and well directed practice.

Mr. Jaquemot was unfortunately suffering severe hoarseness, and his song was omitted. Mr. Pearson sang a capital song—"The Yeoman's wedding" by Prince Poniatowski,—but if not so effectively as is usual with him, it must be mentioned that he had been unwell all day; and but for the disappointment it would have been to Mr. Marsh, he would not have been present. Mr. Black was indebted to Mr. Wigram and the *Japan Punch*, for a palpable hit, in singing "Bonnie Prince Charlie," and if there is any gratitude in him he ought to acknowledge it. On the whole, we think the concert was superior to its predecessors in instrumental music, but not in vocal. Still, as the public say it was a success, we will not dispute the point. The attendance was very large; but general regret was experienced that neither the Duke of Genoa nor those who might have been expected to have accompanied him were present.

#### REVIEW.

##### Kuaiwa Hen.\*

NOTWITHSTANDING all the books which have been published for the use of students of the Japanese language, there is not one that can be taken up, which will give the learner all the instruction he wants. Much that is valuable is given in each of them; but that much still leaves more to be desired. Dr. Brown's "Colloquial Japanese" remains to this day one of the most useful books published for learners, in spite of some inaccuracies, and its comparative incompleteness; and it may be regarded as that which has helped more students of mere colloquial than any other. When Dr. Brown first came to Japan, no attempt had been made to form a grammar of the language, and it was a heavy task he undertook, when he sat down to reduce the chaos of words into something like system. It says much for the good sense of Dr. Brown that he saw the value to the plodders in the language, of such aid as he had himself felt the want of; and it speaks well for his energy and perseverance that he mastered the language so rapidly as to give his book to the world within four years of the opening of the ports. We most heartily acknowledge the indebtedness of the earlier students of Japanese to the author of this, the earliest grammar. But the public required far more than was given them by Dr. Brown, and it has often surprised us that his book remained for a long time the only class book available.

Dr. Hoffman's grammar, which was the next, is a work which evidences a wonderful amount of deep analytical study, combined with a patient examination of every form of expression and every shade of meaning. This grammar, however, is closed to the majority of English and American students, (who after all,

There may be some who, purchasing it under a mistaken idea that it is a grammar, find themselves disappointed in discovering that it is not. It is a book that requires to

In conclusion, we revert to the fact that we do not attempt to treat of the work critically. There are in every page plenty of sentences which if uttered to a common Japanese merchant, banto, or coolie, would call a laugh on

## Commissioner of the Mint.

Mr. Masuda, the late Commissioner, having recently resigned, Mr. Endo, the late assistant Commissioner, has been promoted to the office.

The conduct of this branch of the service will no doubt continue to be as well performed as heretofore, Mr. Endo having been connected with the Mint from the commencement, but the loss of such a valuable officer as Mr. Masuda, in any department of the public service, must always be a subject for regret.

## Agents and foreign Bankers of the Government.

The Oriental Bank Corporation continue to fulfil the duties devolving on them, in their capacity as foreign Bankers of the Government, in a most satisfactory manner. They are entitled to the thanks of the Government for the care and judgment exercised in the selection of the officers sent out during the past year.

## Coinage.

In the year ending 31st July, 1873, the following coins have been struck and passed for issue by the Director, as shewn by bullion office returns :—

10 Sen.....	4,658,132	463,813
5 Sen.....	5,768,541	288,426
	20,703,098	3,992,074
Total .....	26,151,206	29,154,688

The total number of pieces passed for issue was 26,151,206, and the real or nominal value, \$29,154,688, showing an increase on the previous year of 10,647,228 in the number of coins, and the increase, in value, \$8,976,022.

## Gold Coinage.

Some trifling alterations have taken place in the diameter of the coins, as follows, resulting in a great improvement in the appearance, as well as preventing the undue destruction of the coins.

## DIAMETERS OF GOLD COINS.

Denominations	Old Measurement English inches	New Measurement English inches
20 Yen.....	1.37	No alteration.
10 Yen.....	1.16	1.13
5 Yen.....	.97	.87
2 Yen.....	.72	.69
1 Yen.....	.55	.50

The increased number of gold pieces struck amounts to 3,251,942, while the decrease in the number of dies worn out is 1,023, this saving resulting from the altered diameters of the coins and the improved quality of the steel, combined with greater care on the part of the workmen.

Last year, to coin 2,190,256 pieces, 2,024 dies were used.

This year, to coin 5,442,198 pieces, 1,001 dies were used.

## Silver Coinage.

The coinage of silver has been limited to the production of subsidiary coins, in which con-

siderable improvements have been effected. The weight of each piece has been increased as follows :—

50 Sen.....	From 193.0 grains to 208.00 grains.
20 ".....	72.2 " to 83.20 "
10 ".....	38.6 " to 41.60 "
5 ".....	19.3 " to 20.80 "

The design of this coinage has been changed, so as to indicate the value in large Japanese characters on the reverse, whilst on the obverse the value has been introduced in Roman characters. The diameter of the pieces has been adjusted as follows :—

## DIAMETERS OF SILVER COINS.

Denominations	Old Measurement English inches	New Measurement English inches
50 Sen.....	1.25	1.22
20 Sen.....	.93	.90
10 Sen.....	.72	.72
5 Sen.....	.61	.55

The One Yen or trade dollar has not been struck during the year, but now a large supply of gold coins has been produced for the general commerce of the country, it is desirable some attention should again be devoted to the coinage of a silver trade yen, which, among other advantages, may probably become the chief source of permanent employment for the Mint.

In the memorandum of Mr. Dillon, the assayer, allusion is again made to the recommendation of last year for the remedy in fineness of the subsidiary coins to be increased to 3 per mil. Considering that, in addition to other cogent reasons given by Mr. Dillon, the remedy on English silver coins is 4 per mil, on American 3 per mil, and on the modern French coins also 3 per mil, it appears most desirable that the change should at once be adopted.

## Copper Coinage.

The copper coinage, for the production of which the preparations are nearly completed, will consist of the following pieces, viz :—

Denominations.	Diameter. English inches.	Weight. Grains.
2 Sen.....	1.25	220
1 Sen.....	1.10	110
1/2 Sen.....	.87	55
1 Rin.....	.62	14

The alloy will consist of :—

98 parts copper
1 " tin
1 " zinc

100

On these coins also the value will be indicated in large Japanese characters on the one side, and in Roman letters and numbers on the obverse.

## Trial of Pyx.

The test pieces have been regularly taken, in accordance with Mint Regulations No. 3, and await the orders of the Government.\*

## Director of the United States Mint.

I have here to express my regret for an error in the last Report, wherein the Honorable James Pollock, the Director of the United States Mint, was, through repeated translations of the despatch, referred to as "James Porlock, Esq., the Commissioner." &c. The mistake arose from the copy of the original document in English having failed to reach my office.

The following is the list of European officers belonging to the Director's department :—

Mr. Ed. Dillon, B.A. and F.C.S., *Assayer*.  
Mr. Wm. Gowland, F.C.S., Assoc. R.S.M., *Chemist and Metallurgist*.  
Mr. G. W. Hunter, *Assayer of Premelted Silver, &c.*

\* See Annual Assays, &c.

Mr. E. Atkin, *Superintendent of Gold and Silver Melting*.

Mr. Herbert Wheeler, *Director's Secretary*.

Mr. Henry Sheard, *Die Engraver*.

Mr. Ed. Wyon, *Foreman Coining Department*.

Mr. Robt. MacLagan, *Engineer, Foreman of Artificers*.

Mr. Wm. Smith, C.E., *Supt. of Weighing Room and Balances*.

Mr. N. Mancini, *Foreman Rolling Room*.

Mr. Roland Finch, F. C. S., *Foreman of Sulphuric Acid Works*.

Mr. T. Hackett, *Engineer, Foreman of Copper Rolling Mill, &c.*

Mr. T. Howlett, *Assistant Foreman Coining Department*.

The following remarks apply more especially to the various departments of the Mint :—

## Assay Office.

On the 29th April last, the contract of the late assayer expired, and he returned to Europe. Mr. Dillon, late of the Royal Mint, London, was appointed to continue the duties of the assay office, so far as the assaying of all gold tendered for coinage and the assaying of all bullion in the process of coinage, &c., whilst Mr. Hunter takes charge of all silver sent to the Mint to be premelted and valued; each officer assisting in other assays from time to time, as circumstance may render necessary.

In the recent change it is gratifying to be enabled to state there is no loss of efficiency in any respect, while there is a great improvement in the working of the office.

On the retirement of the late assayer, the apparatus for parting and refining gold and silver was resumed from the assay department; and arrangements were also completed for referring all questions on chemistry and metallurgy to an officer specially appointed for the duty.

In the Appendix will be found memoranda from Messrs. Dillon and Hunter, containing valuable information with reference to the details of the assay office.

## Chemical and Metallurgical Department.

To Mr. Gowland, the chemist and metallurgist of the Mint (who also superintends the various operations in refining the copper, &c., required for the new copper coinage), will in future be referred all questions connected with chemistry and metallurgy which may arise from time to time in the processes of coinage or in the examination of metals, &c., required in the various branches of the Mint. A memo. from Mr. Gowland, containing some interesting details, will also be found in the Appendix.

## Gold and Silver Melting Department.

During the current year the following weights of gold and silver bullion have been melted into bars :—

Denomination.	Ounces Troy.	Operative Loss per Mille.
	Ounces. Parts.	Parts.
Gold .....	3,468,316 58	.05
Silver .....	6,429,144 94	1.83

The losses will be considerably reduced by the unreclaimed metal in old crucibles, ashes, &c.

## GOLD AND SILVER PREMELTED.

Denominations.	Ounces Troy.	Loss per Mille.
	Ounces. Parts.	Parts.
Gold ... ..	437,744 17	.37
Silver.....	2,607,972 39	2.74

The higher losses on premelted bullion result from the impure state in which bullion is sometimes to the Mint.

**Rolling Department.**

Considerable improvement has been made during the past year in the rolling department, and the working losses are much reduced.

Four cutting out presses have been added to this department.

**Weighing Room.**

In the weighing of coins great accuracy has resulted than during last year; in fact, the entire coinage has been produced far within a very close working remedy or permitted deviation, the limits of which are infinitely less than the deviation allowed by the Regulations.

The gold coinage of the year proves to be within .03 per thousand ounces of absolute accuracy, and even this deviation will probably be reduced when the entire weighing is performed by automaton balances.

**Coining Department.**

Eight Uhlorn presses have been erected in the coining room, two more are under construction in Europe, and the old presses removed into the copper coinage department. The workmen have advanced in skill, and with the perfect machinery now in use, a coinage is produced which may favourably compare with the work of Mints much longer established.

**Engines, Machinery, Artificers' Department, &c.**

The engines have had the new cylinders added since the last Report, and the power increased in proportion.

It is satisfactory to report that the machinery and appliances throughout the Mint are in the highest state of efficiency. In the new workshops, some powerful machines have been recently erected, and with the addition of the new foundry, the repairs of the machinery of the Mint can be readily effected. The construction of most of our future requirements will be carried out on the spot.

One coining press has already been completed, and a portion of a number of these machines for the copper coinage are in a forward state. Not only will there be a saving of time in this arrangement, but a large saving in cost, besides the opportunity afforded of training the workmen in the construction of high class machinery.

The late foreman of this department having left the service at the expiration of his contract in November last, Mr. MacLagan, an engineer of considerable experience, was appointed to the vacant post.

**Die Department.**

The number of dies produced during the year is as follows:—

For gold coins .....	1,269
For silver coins .....	3,840

The number worn out compares very favourably with the former years, and there is a marked improvement in the dies in every respect.

In addition to the above, not only have the required new matrices been engraved for 50 sen, 20 sen, 10 sen and 5 sen coins, but 470 seals have been delivered for the Government offices; also 6,172 stamps, markers and brands for the Weights and Measures Department at Tokio.

**Mint Buildings, Works, &c.**

The Mint, residences and Works are good order, and all necessary repairs have been effected as required.

**Drainage.**

The drainage of the Mint and Government property has been greatly improved, but beyond these limits the drainage remains in the same

unsatisfactory state as heretofore, and the result may prove most formidable should any epidemic prevail in this district.

**Copper Coinage Department.**

The buildings for the coinage of copper, described in my last Report, are now completed, the barriers removed, the whole being attached to the Mint, and the various operations will be conducted under the same Rules and Regulations. Refining of copper has already commenced, and in a few weeks coins will be struck.

The chemical and metallurgical laboratories are in regular operation, and analyses of Japanese coals, copper, &c., have been completed with comparatively favourable results, which, with other subjects of interest, are given in the memo. from Mr. Gowland. See Appendix.

**Sulphuric Acid Works.**

The sulphuric acid works have been some time in operation, and acid of the best quality is now manufactured in quantities far beyond our present requirements. The demand, when the uses of acid are better understood, will doubtless increase, and when the public are aware that this article can be obtained in Japan, the importation from Europe will not be necessary.

**Nitric Acid.**

Nitric acid for the purposes of the Mint is also manufactured here.

**Gold and Silver Refinery.**

The production of acid at a moderate cost admits of the removal with advantage of the gold contained in silver bullion. In future all silver containing 6 grs. to the lb. troy and upwards will be refined.

The refinery is in perfect working order, and capable of undertaking for the public the parting of gold and silver, and also the purification of these metals, at very moderate charges.

**Chlorine Gas Apparatus.**

The chlorine gas apparatus, invented by Mr. Miller of the Royal Mint, Sydney, has been erected, but the quality of the gold sent in for coinage has been such as to give no opportunity for enabling us to benefit by the use of this invention.

**Gas Works.**

The gas works are in a satisfactory condition, and the "Yoriki-machi," the street on which the new buildings of the copper department are placed, is now lighted with gas.

**The Annual Closing of the Mint.**

During the current year the Mint was closed from the 1st September to 1st of October. Some dissatisfaction arose at the brief notice given to the public, and I then suggested, to prevent any future difficulty on this subject, it would be advisable for the Government to fix a period during which the Mint would be regularly closed annually. From subsequent events it is to be regretted this course was not adopted; for the future it would not only guide the public, but enable the Government to afford the necessary relaxation to the officials of the Mint. It should be borne in mind how exceptional has been the position of the European officials. Shut out as it were from the rest of the world and being so continually engaged, an occasional change becomes imperative, alike on the score of health as well as a relief from such ceaseless monotony and really hard work. In European Mints the work is not usually so continuous as it has been here, and little difficulty arises in obtaining any reasonable amount of leave. It is therefore hoped the Government will issue instructions to meet this requirement.

In conclusion. The increased test of another year proves the system on which the various operations of the Mint are conducted to result in efficiency and accuracy in all the details. It is encouraging to be able to report that the Japanese and European officials work harmoniously and that the operatives are well conducted, also very regular in their attendance. It affords me great pleasure to record my thorough appreciation of the highly satisfactory manner in which the European officials now attached to the Mint have performed their duties during the past year.

I have the honour to be,

Your Excellency's

most obedient Servant,

T. W. KINDER,

*Director of the Imperial Mint,  
Master of Her Majesty's late Mint,  
Hongkong.*

Osaka, 18th August, 1873.

**Memorandum by Mr. Dillon, assayer, Imperial Mint.**

I entered upon my duties as assayer on the 29th of April last, the day upon which the contract of the late assayer expired. My Report can therefore only cover the three months that have elapsed since that date.

I would call attention to an important change that was made in this department upon the occasion of the retirement of the late assayer. Mr. Hunter has now entire charge of the assay of silver bullion imported for coinage, and it may not be inopportune to mention that although over 700 ingots have been potted on the result of his assays, no pot has as yet been rejected in consequence of error on this head.

During the months of May, June and July, both gold and silver have been daily melted for coinage, and the following numbers give a summary of the work that has been done in this office:—

**I.—ASSAYS GOLD BULLION RECEIVED FOR COINAGE.**

Premelted gold ingots .....	170
Ingots from Mint refinery ....	18
San Francisco ingots .....	17
English ingots, melted by Messrs. Browne & Wingrove .....	421
Total .....	626

Of premelted gold ingots, eleven were rejected, being of too low standard to be received for coinage.

The English gold was accompanied by a "Trade Assay Report," on the basis of which I believe the gold was bought. My report was in most cases 2 or 3 tenths of a milliè below this. A similar over-calling of gold assays by Trade-assayers has caused much trouble in the English Mint, and last year gave rise to an arbitration, when the results of the Mint assayer were fully confirmed. For the causes of this over-estimation I would refer to Mr. Roberts, memorandum, appended to the Report of the Deputy Master of the English Mint, for 1871.

**II.—DIP ASSAYS FROM POTS.**

Gold .....	279
Silver .....	946

Three of the gold pots, potted from ingots received from the Mint refinery, and therefore not premelted, were stopped. They were of too low standard, although not out of remedy, and this arose, I believe, from the dirty condition the ingots were in when potted.

## III.—ASSAYS FROM INDIVIDUAL COINS.

Gold (5, 2 and 1 yen pieces) . . 152

Silver (50, 20, 10 and 5 sen pieces) . . . . . 305

The average standard of the different coins,

as calculated from the mean of these assays, is as follows:—

Gold, 5 yen.....	899.24
2 „ .....	899.95
1 „ .....	899.81

## ACCOUNT OF ALL GOLD AND SILVER MONEY COINED AT THE IMPERIAL MINT DURING THE PERIODS ENDING ON 31ST DAY OF JULY IN THE YEARS 1871, 1872 AND 1873.

10 „ .....	799.60
5 „ .....	800.26

In addition, a large number of coins have been weekly melted into ingots, the assays of which have confirmed the above results.

The low standard of the subsidiary silver coinage causes some difficulty to the assayer. This is not so much from the impossibility of obtaining a homogeneous alloy, for I doubt if the tendency of the silver and the copper to arrange themselves uniformly in a bar on cooling is greater, or even so great, as in the case of a 900 standard (see Leval's experiments in the Paris Mint on alloys of silver and copper). The difficulty in the case of an alloy of low standard arises from the changes in standard which the metal undergoes after leaving the melting room, the result of the more frequent annealing both of the strips and of the blanks, necessitated by the greater hardness of the alloy. As in the process of "pickling," where the copper and oxide of copper are removed from the blanks before these are converted into coins, a larger quantity of base metal is removed than would be the case with an alloy containing less copper. This elevation of standard during the process of coining is incidental to all mixtures of copper with either gold or silver (in the former case, however, it is small), and it may be said to be roughly proportionate to the amount of copper present. The irregularity of the change renders it impossible to allow for it with any degree of accuracy in the process of pitting.

These remarks are made to show that, however great the care exercised by the assayer and by the other officers through whose hands the silver passes in the processes of coining, there is likely to be a wider variation from the standard aimed at, in a silver coinage containing 200 parts of alloy in the 1,000, than would be the case where this alloy only constitutes 75 parts, as in the English coinage, or 100 parts, the proportion in the majority of other coun-

tries. The "remedy" for the English silver coin is 4 per mil, for the American 3 per mil; in Japan it is at present only 2 per mil.

We may, however, best compare with the silver coinage of Japan that which is now struck in France, Italy, Belgium and Switzerland, in accordance with the monetary convention lately concluded between these countries and upon the advice of the best European authorities on this subject. This is a token coinage of 2 franc, 1 franc and smaller pieces, containing 835 parts of silver in the 1,000, and the remedy fixed upon was 3 per mil. In France, however, the 5 franc piece, which, like the Mexican dollar, contains its own value of silver, is still struck .900 fine, with a remedy of two per mil, that of the whole French coinage so long as the standard was .900. It will thus be seen that on lowering the standard to .835 it was thought advisable to increase the remedy.

I think there are strong grounds therefore for the former recommendation that the remedy for the Japan-so silver coinage should be extended from 2 to at least 3 per mil.

I have frequently noticed a considerable quantity of gold in the silver coinage. I believe that the Government has been in the habit of receiving for coinage, silver bullion containing gold up to 6 grains in the pound as a limit. I may mention that in England silver containing over 2 grains in the pound may be profitably refined, and that it is proposed to extract the gold (some 4 to 5 grains) from the half-crowns struck in the beginning of the century, now being called in for recoinage.

The only examples of brittle gold that have come under my notice as yet were some bars cast from Californian ingots. These were quickly toughened by remelting with a little borax, according to the plan adopted by the late assayer, and as the elevation of standard was less than half a millième, the gold could be poured at once into bars for coinage. There has been, therefore, no opportunity of employing the

chlorine process that has proved so invaluable in the English Mint, in the hands of Mr. Roberts.

Two "sweep ingots," weighing together over 800 oz., cast from bottoms of pots, bar ends, &c., were found to contain a large quantity of iridium, and were therefore stopped from passing into work. I have now concentrated this iridium in an ingot containing under 100 oz. of gold, and the rest may therefore be melted for coinage.

In conclusion, I would call attention to the somewhat exceptional nature of the work in this office. The assayer has to be in great measure his own fireman, and can never trust his eye off an assay during the many processes it passes through before the final weighing.

(Signed) EDWARD DILLON, B.A.

Assayer.

August, 1873.

## Memorandum by Mr. Hunter, Assayer, Silver Assay Premelting Department, Imperial Mint.

The necessity for the existence of this department arises entirely from the exceptional nature of the work which devolves upon the assay department of this Mint.

In the minting establishments of other nations, all bullion is received accompanied by a reliable assay report of an outside assayer, and the bullion merely receives, as it were, a check valuation previous to being alloyed and passed into work. But whether from the inadequate knowledge of assaying at present possessed by native assayers, or from inattention in conducting the different processes, the variations between the out-door valuations of bullion and its actual value as determined by assays in the Mint, have been so wide that the original reports have afforded no assistance whatever in arriving at correct results. In some cases this variation has been as great as 11 per mil, and, where successive ingots were found to be reported alternatively either too high or too low, it has always been deemed the safest and quickest course to ignore outside values altogether, and to perform the different operations from the very commencement.

The total number of silver ingots for coinage assayed since the Report in August last amounts to 3,366. In addition to the valuation of silver bullion received into the Mint for coinage, this department has also been serviceable to the Imperial Government in other respects. For instance, during the period of last year when the Imperial Government, for commercial purposes, required a large quantity of silver bullion to be accompanied by a reliable assay report, the whole of this work was thrown upon this department. This silver was cast into ingots in native establishments; and the assay pieces, which were cut by native officials and forwarded through you for valuation, represent a total of upwards of 2,400 assays.

This department has also subserved the purpose of fixing the value of all so-called "parting bullion." When the Imperial Government decided upon assimilating their old metallic circulating medium to the system of coinage adopted by western nations, the original gold and silver coins in circulation were gradually withdrawn for conversion into coins of the new standard of value. Before, however, issuing the ingots obtained from melting these coins to the various refineries, that both the gold and silver in them might be made separately available for coinage, a report on the relative amounts of gold and silver in each ingot was

obtained from this department, and the figures show, since August last, a total of 1,650 assays.

(Signed) GEO. W. HUNTER,  
Assayer.

Assay Office, August, 1873.

### Memorandum by Mr. Gowland, Chemist and Metallurgist, Imperial Mint.

#### COPPER REFINING DEPARTMENT.

In the copper refining department I have erected a moderately large reverberatory furnace for refining crude Japanese copper, and producing therefrom ingots suitable for the subsequent preparation of the alloy for coinage. This furnace is capable of treating seven tons of the impure metal per day, although, on account of the untrained condition of the Japanese workmen, a heavier charge than four tons has not yet been refined. The furnace works most satisfactorily.

#### MELTING ROOM.

In the melting room fourteen crucible furnaces for the preparation of the alloy have been built, and all the necessary appliances are ready for the commencement of work. I have recommended the erection of a reverberatory furnace for the work of the department, as soon as the Japanese workmen have been trained in the manipulation of such a furnace, by practice in the copper refinery.

#### CHEMICAL AND METALLURGICAL LABORATORIES.

The laboratories in which all chemical and metallurgical questions apart from the assaying of gold and silver will be treated, are now almost completely fitted; the arrival of the remainder of the apparatus and Reagents being shortly expected.

Already the following work has been done:

#### REFRACTORY CLAYS.

A considerable number of different kinds of Japanese kaolin (impure) have been examined as to their suitability for the manufacture of fire-bricks.

Certain kinds have been found to be extremely refractory, comparing favourably in this respect with Stourbridge clay; other kinds, however, of almost identical appearance, undergoing fusion at the same temperature which the former resisted.

Vast deposits of this impure kaolin exist in the country, in some cases contaminated with large quantities of iron, and being then easily fusible, but in most cases, as in the whiter clays, the fusibility seems due to the presence of alkalis.

The varying refractory character of these clays, which resemble each other so closely in appearance that they can hardly be distinguished, will cause much difficulty in ensuring uniform results in the manufacture of refractory bricks.

#### JAPANESE COAL.

The amount of sulphur and of ash present in the coal used in the copper refinery, and in the various metallurgical operations of the Mint, being of great importance, determinations of these impurities have been made in several kinds of Japanese coal.

The following are the results:—The samples were dried at 100° cent. before analysis:—

	(1.)	(2.)	(3.)	(4.)	(5.)
Ash.....	12.760	6.487	10.595	9.877	9.557
Sulphur.....	654	435	461	588	383

It will be seen that the amount of ash is very large, the percentage of sulphur, however, being less than that present in average samples of ordinary British coal.

#### GOLD AND SILVER "SWEEP."

The gold and silver "sweep" I have carefully examined and proposed a method for the

recovery of the precious metals contained in it. Drawings for a furnace for its preliminary treatment have been prepared and the furnace has already been erected.

#### "BAD NIBUS."

Great difficulty having been experienced in separating the gold from "bad nibus" in the gold refinery by means of sulphuric acid, the matter was referred to this department. A chemical examination was made, when it was found that a modification of the process followed was necessary for their successful treatment.

#### TEMPOS.

I have made analysis of six different samples of tempos, and as will be seen, the proportions of the constituent metals are extremely variable:

Copper...	85.800	82.760	77.000	78.697	78.453	81.562
Tin .....	7.607	9.165	10.601	10.240	9.982	8.349
Lead.....	6.333	7.868	12.200	11.137	11.436	0.619

99.740 99.813 99.801 100.067 99.871 99.730

Of twenty-six of these coins the weights varied from 265.5 grains to 371.9 grains, the mean weight being 321.7 grains.

#### JAPANESE COPPER.

The samples of Japanese copper which have been examined have all been remarkably free from antimony, and generally also from injurious quantities of arsenic. One sample, however, contained .159 per cent. of the latter metal, an amount which would render such copper totally unfit for the manufacture of brass and several other alloys in which great toughness with tenacity might be required. Another sample contained 1.384 per cent. of lead.

Certain kinds of very crude Japanese copper, usually seen in more or less circular cakes, resembling in form the "rosette" copper of Europe, are sometimes exceedingly impure, in some cases containing so much iron that a modification of the ordinary method of refining would be required for their treatment.

I may state that so far as I have at present examined Japanese copper I have found it to be generally of such a character that, when properly refined in a suitable furnace, it can be used with advantage in most cases where a pure copper is required.

Some caution, however, is necessary, the interfering metals met with occasionally rendering it imperative that careful analysis should be made as often as possible.

(Signed)

W. GOWLAND, F.C.S., Assoc. R.S.M.  
Chemist and Metallurgist.

United States }	20 dollars .....	526.00	900	20.06
of America }	1 dollar .....	25.80	900	1.00

In the foregoing table the most important coins are selected from each country, the remaining coins being usually in proportion. The weight and fineness are assumed from the reported rates, and not from actual assay. Should such bullion be sent to the Mint for re-coinage, it could only be accepted on the usual conditions.

In the present state of silver in this country, it is scarcely possible to give an approximate table of the relative value of Foreign silver coins.

T. W. KINDER,  
Director, Imperial Mint.  
&c., &c.

August 27th, 1873.

### Annual Assay, etc., of Trial Pieces for the coins struck in the Imperial Mint during the year ending 31st July, 1873.

On the 4th day of September, 1873, by order of H. E. Sanji Okuma Shigenobu, H. E. Mutsz, Vice-Minister of Finance, accompanied by Mr. Mawatori, Chief Commissioner of the Treasury, with other officers of the Imperial service, assembled at the Mint for the purpose of testing the coinage of the past year.

His Excellency the Vice-Minister selected indiscriminately from the pyx pieces collected daily a certain number of gold coins of the respective dates stated below. These coins were then accurately weighed with the following rates:—

Denomination	Date of Selection	Weight	Standard Weight.	Deviation allowed.
20 Yen.....	None.	...	...	...
10 Yen.....	Nov. 2, 1872	257.28 grs.	257.2 grs.	0.5 grs.
5 Yen.....	Dec. 18, 1872	128.4	128.6	0.5 "
5 Yen.....	Jan. 6, 1873	128.2	128.6	0.5 "
5 Yen.....	May. 25, 1873	128.7	128.6	0.5 "
5 Yen.....	July. 26, 1873	128.6	128.6	0.5 "
2 Yen.....	Dec. 28, 1872	51.25	51.41	0.25 "
2 Yen.....	June 27, 1873	51.4	51.41	0.25 "
1 Yen.....	Jan. 25, 1873	25.82	25.72	0.25 "

A thousand pieces of each description of coin were then selected from the various packets, and carefully weighed:—

Denomination.	Weight of 1,000 Pieces.	Standard Weight of 1,000 pieces.	Deviation allowed.
20 Yen—Gold...	None.	...	...
10 Yen .....	535.72 oz.	535.83 oz.	0.1 oz
5 Yen .....	267.91 "	267.91 "	0.075 "
2 Yen .....	107.1 "	107.16 "	0.05 "
1 Yen .....	53.58 "	53.58 "	0.025 "
50 Sen—Silver*	433.30 oz.	433.33 oz.	0.15 oz
20 Sen .....	173.34 "	173.33 "	0.1 "
10 Sen .....	86.54 "	86.66 "	0.05 "
5 Sen .....	43.32 "	43.33 "	0.05 "

Assays were made by Mr. Dillon of the following gold coins:—

No.	1.—1 yen.....	899.9 parts of gold in 1,000
2.—2 yen.....	900.6	"
3.—5 yen.....	899.9	"
4.—5 yen.....	900.1	"
5.—10 yen .....	930.2	"
6.—2 yen.....	899.7	"
7.—5 yen.....	900.0	"
8.—5 yen.....	899.8	"
9.—5 yen.....	900.0	"

\* The silver subsidiary coins are "pounded" and not weighed separately.

Standard of above, 900/1000ths, with a remedy or permitted deviation of 2 parts in each direction.

At the special desire of the Vice-Minister of Finance, the whole of the remaining pyx pieces were melted into ingots, one ingot for each denomination of coins (except in the case of the 10 and 20 yen pieces, which were melted together). Pieces from each of these ingots have been assayed, and the result in each case is within the remedy.

#### Gold :—

Bar cast from 1 yen.....	899.9 parts gold in 1,000
" " 2 yen.....	899.9 " "
" " 5 yen.....	900.2 " "
" " 10 & 20 yen	899.4 " "

Standard, 900/1000ths, with remedy of 2 parts.

#### Silver (Subsidiary) :—

Bar cast from 5 sen.....	800.3 parts silver in 1,000
" " 10 sen.....	798.2 " "
" " 20 sen.....	799.5 " "
" " 30 sen.....	800.5 " "

Fineness, 800/1000ths, with remedy of 2 parts.

Portions of each coin assayed, also pieces from each ingot, have been, at the request of the Imperial Government, enclosed in sealed packets, and sent to the Right Honourable the Lords Commissioners of Her Britannic Majesty's Treasury, with a request that check assays may be made at the Royal Mint, London, and the Report thereon sent for publication in this country.

T. W. KINDER,

Director Imperial Mint.

September 8th, 1873.

## Dokohama.

### International Boat Race.

The Race for the Cup, presented by Mr. Howard Church, was rowed this afternoon on the one-mile course, from abreast Mr. Dare's house to a boat moored off the French Hatoba. Owing to the fine weather there were a great many people assembled all along the Bund; the windows of the International and Grand Hotels were crowded.

The boats took up their stations abreast Mr. Dare's house at 3.35 p.m., the American outside, Scotch in the centre berth, with English inshore.

A good start was made at 3.43. The English leading. Abreast the P. M. S. Wharf the Scotch held a slight lead; but here both Scotch and English crews put on a spurt, the latter gaining on the Scotch. The race was won by the Scotch crew. Time—6 minutes, 27 seconds, the English boat took 6 minutes, 37 seconds, and American 6.58.

The weather was all that could be desired, with not a ripple on the water.

WE ARE glad to hear that the Silver Medal of the Royal Humane Society, awarded to our friend Mr. Dowson, was received yesterday by H. B. M.'s Consul through Earl Granville, and forwarded to Mr. Dowson, who is now in Yokoska.

AT THE farewell audience of Mr. de Long, the proceedings were marked by a more than ordinarily cordial manner, and the Emperor addressed him most flatteringly. His Majesty also presented him with two vases of the celebrated and much coveted blue Owari ware, and also two rolls of splendid damask, of the kind used only by the Imperial family.

Yesterday an escort of U. S. naval officers in full uniform waited on Mr. de Long, and attended him to the U. S. S. *Lackawanna*, where he was received by the officers of

the vessel in full uniform. The marine guard was paraded and full honours paid as usually extended to a Minister Plenipotentiary. On leaving the ship a salute of 15 guns was fired, and an escort of officers accompanied the retiring minister to his residence. This very unusual compliment proves the estimate in which the officers of the U. S. Navy hold the services rendered by Mr. de Long to his country since he came to Japan, four years ago.

We will give Mr. De Long's address and the reply of His Majesty, the Mikado to-morrow evening.

IN ITS issue of the 16th instant—the *Japan Herald*—(ranked No. 22 in the list of newspapers published in Japan) mentions the fact that Arimori Meri, late Japanese Minister to the United States gave a collation on the 15th instant, at Hama Go Ten to a certain number of American guests. The guests in honour of whom the invitations were issued, were, the new American Minister and his family. A large number of Japanese officials were present, as well as many Americans. Among the latter were General and Mrs. Capron, General and Mrs. Williams, Messrs. C. O. Shepard, C. Wolcott Brooks and E. Peshine Smith.

A report is gaining ground that Mr. Mori is to be Minister for Foreign affairs.

## Tokai.

AMONG THE Japanese, we come occasionally on individuals who compel our admiration to as great a degree as good men of our own countrymen. Here is a specimen. The account we extract from a native paper.

A former Sanji of Niikawa Ken, Yetchiu, was named Miyoshi. On being appointed to the office, he went to his work, not as a matter of dull routine, but with a determination to work for the good of the Ken. He first, quietly and unostentatiously, won the friendship of the samourai, and imparted to them such an excellent spirit, that he could depend upon them under all circumstances to aid in upholding the law, and the power of the government.

He then took the Koehos, and went to the trouble to explain to them, kindly but firmly, the meaning and object of the proclamations issued by the government, in such a manner that they had no difficulty in explaining them to the people. On one occasion a slight excitement commenced among the farmers in certain villages, on the subject of the land-tax but he at once went himself, and talked to them with such kindness and to such good effect, that they dispersed thoroughly satisfied.

At last, it so happened that certain men, formerly Yetas, (the class until lately despised and tabooed on account of their trading in skins, leather, &c.), subscribed to establish a school in the village of Koromi in Yetchiu. Not one samourai or farmer would send his child, and on the school being announced, no young pupils availed themselves of it. But there was one pupil. Miyoshi foresaw the objections which would be felt; so he went and entered himself, and staid at a Yeta's house the night before the school opened. At first it was a mere matter of surprise to the people; but when they saw that he was really in earnest, and that he remained with the Yetas without feeling contaminated, a revulsion of opinion took place, and the school has since been prosperous.

If this were not a remarkable exception to the general run of Japanese officers, it would not be particularly worthy of notice. But it is. And it is satisfactory to see that such an

example is appreciated by many of his countrymen, though few have the moral courage to follow it.

## The Opening of the Polytechnic School in Tokai.

The new building devoted to the uses of the Polytechnic School, (Kai Sei Gakko) was formally opened by the Mikado in person, on the 9th inst. The new building is situated directly opposite to the old Nanko, on the grounds of the old Itakura yashiki.

The Emperor left the palace at Akasaka at a little past 7 o'clock this morning, and arrived at the school gate at 8.20. The usual body-guard of lancers accompanied him. The Japanese officers, foreign professors, and the students were in waiting on both sides of the street. The new building was gaily decked with flags, garlands, etc. The national flag and the distinctive flag of the school, hung from above the porch; and over the doorway was a fine representation of the front and ground-plan of the edifice.

The Emperor having proceeded to the room assigned for the Imperial use, was presented with the key of the building, the curriculum of studies, and the plan of the edifice. His Majesty read a speech which was translated. Dr. Murray, the chief foreign officer of the Mom Bu Sho, then addressed His Majesty. A procession was then formed, and all proceeded to the large lecture-room at the end of the central wing, when chemical and physical experiments were performed by the students and one of the professors. After this, the library, class-rooms, apparatus, etc, were inspected. Gymnastics followed, which His Majesty witnessed; then returning to the reception room, the foreign professors being assembled, the Emperor in a distinct voice read a speech conveying his thanks for their kindness and presence on the occasion. His Majesty then returned to the palace, and the Japanese officers, foreign instructors, and invited guests, sat down to a collation, at which His Majesty's health was drunk. Several heads of Departments, members of Sa In, Arisugawa no Miya, Saigo, Goto, Yoshida, and others were present. The Japanese officers present numbered several score in all. The entire programme was fulfilled as laid down, and everything passed off auspiciously. What is left of the old Nan Ko, after the Polytechnic school has been substracted from it, is now the "School of Foreign Languages."

THE CANINES of Tokai are beginning to play their old pranks again. In spite of the new era of civilization, they still relapse into barbarism, and behave like days of the dogs of Tokugawa. It is astonishing that these dogs with tickets around their necks, and taxes paid for them by their masters, do not realize that the eyes of the world are upon them. They must surely know that they now occupy an advanced grade of caninity, and hence are expected to comport themselves as canines living in the sixth year of Meiji ought to do. If the metropolitan dogs were not taxed, or if they were still, as of yore, the trial-flesh upon which young samourai tried their blades, their cruel deeds might be forgotten. To proceed to our story, on Saturday week a large dog attacked a woman with a child in her arms, on the Kudan. The child was so mangled by the fierce brute, that it died. The woman also, nearly died of fright, though she has now recovered. This is but a repetition of several very dreadful cases that have occurred in the North-western part of Tokai, within the present year.

HAD THE rainy weather continued, scarcely an embankment or bluff would have been safe to dwell upon or beneath. In Tokai the high embankments on the western side of the castle were severely damaged by several land-slides. On the south side, just north of the dwellings of the French military officers, a double land-slide took place. The stone wall, trees and sod which were high above the road slid down, and a hole about twenty feet in diameter was scooped out. The road was obstructed by a pile of mud and debris which had to be dug through to obtain a passage. Shortly after this fall, part of the road, the stone facing and part of the slope leading to the water was swept into the moat and lies there yet. Numerous other land-slides throughout the city are noted, though we have not heard of any loss of life.

SOYESHIMA TANEOMI, late the ambassador from Japan to China, has been nominated to the office of the Gaimu Sosai, as a preliminary to his becoming a member of the Privy Council of the Emperor. This change is of importance; as by it His Majesty the Tennen may be supposed to mark his approbation of his ambassador while at the Court of China, and to have given his adhesion to Soyeshima's policy relative to Formosa, Corea and Liu Chiu. If this be so we may reasonably expect ere long to see very decisive measures adopted with regard to them. Soyeshima Taneomi, as minister for foreign affairs, has secured the good-will of every member of the diplomatic corps—for his great earnestness and attention to business. His chief recommendation is the strictness with which he keeps his word. A promise once obtained from him, is promptly fulfilled in all cases. He is one of the most prominent recognised leaders of the liberal party, and during his administration most of the greatest reforms have been worked. We congratulate his country and himself on his well-deserved promotion.

THE *Mainichi Shimbun* of Saturday last relates the following:—

In the village of Itodamura, in the Kanagawa Ken, there lived a farmer named Tatsuzo, about 37 years of age. He was a good, quiet man; and his wife and he lived together quite happily for two years. Some time ago, he was at home, nursing himself for a cold, when suddenly he rose from the mats, and seizing a sickle which was hanging against the wall, he laid hold of his wife by her hair and tried to cut it off. She perceived that he was not in his true senses and called for help—not to protect herself, but to watch him whilst she went for a doctor. She also went to the temple to pray for him; and in a few days had the happiness of seeing him restored to his usual health. After this they moved to the village of Kitagata, the village beyond the Camp; and one night after they had supped they went to rest; but about midnight a mad fit came over him, and he made an attempt at his wife's throat and then tried to commit suicide by stabbing himself in the abdomen. She cried out and the neighbours came in; but the man came to his right mind quickly, and the neighbours took care of the wounded pair. It was then proposed that there should be a divorce, and to this the husband was fain to agree; but the wife would not think of it. She said he was a good husband when he was in health, and that it was the duty of the wife to cling to her husband through good and evil until death. She would not break the law of the gods.

The time came when they were so reduced circumstances that he went as servant in a

bakery, and his wife as nurse in the same house. On the 3rd of this month, whilst his wife was in bed, the man rose, got an axe and gave her a gash on the head measuring about three inches. She cried out loudly; and he gave her another wound about 6 inches long. Their master and others rushed in. Information was given to the Kencho, and an investigation took place. Her wounds were not mortal although very severe. The poor woman however will not leave her husband; but still says it was only the effect of sickness.

It seems to us that the officials ought to find means of taking care of such a fellow as this. He is either mad or a villain—and in either case requires looking after.

THE *Kobun Tsushi* says that the students who have lately (within what period is not mentioned) come to Tokai, from all provinces, number nearly 30,000 persons. Among these the children of the samurai of Hamamatsu Ken are the most numerous; more than 50 of whom came up in one batch; and the hope is expressed that as, at last, the country is awaking out of its long sleep, they will not only learn what is taught in schools, but also place themselves in a position to learn some trade by which they can render themselves independent.

A WRITER in the same paper find fault with the habit of women wearing hakamas, and men leaving them off; and suggests that both should adhere to their own proper modes of dress. He also expresses dissatisfaction at the different ways of wearing the hair, and thinks that foreigners must laugh at the varieties of fashion. We think foreigners had better look to themselves.

A CURIOUS phase of superstition has been exhibited since the formation of the lotteries of which we have more than once spoken, as having been established in Ts'kidji.

The temple of Oiwa Inari is one very much venerated by the citizens of Tokai; and is one to which, actors, geishas, and the like go to pray for success in their profession. Since the lotteries have been in vogue, it has been given out that this is the temple at which to pray for good fortune in the drawings; the fox Oiwa having such things under his special care. The consequence is, it is always crowded with poor people who have invested (many of them their all) in these lotteries; who bring Sekihan (made of rice and red beans) and Aburage (beans fried in oil) of which the fox is said to be very fond; and who pray incessantly for the favour of Oiwa. The crowd is everyday very great from morning until night; but particularly on the days of drawing.

A COUNTRYMAN who had bought a lot of last season's rice, in which he had invested all his money, brought it to Niigata, expecting that the present year's crop would be poor, and prices so high as to enable him to realize a handsome profit on his investment.

The weather, however, so improved that the prospects for this year's harvest began to brighten, much to the joy of the farmers, but not of our speculator. The latter, seeing day by day the hope of his gains dwindling away, went to a priest, and by promises of great reward induced him to offer up prayers that the adverse weather might return. This coming to the ears of the neighbouring farmers, they were greatly enraged; and engaging a number of boatmen to accompany them, they went to the priest's house, and made a general "smash up." They were interfered with and induced to cease for a time; but in the evening the

sendoes returned, and did not even leave one of the foundation stones in its place. Ultimately the police arrested the whole of the parties concerned—the speculator, the priest, the farmers and the sendoes. The popular fury sets most against the priest—as well it may.

THE EMBASSY is still "in commission." They are to submit a full report of their travels, expenditures, and achievements. The secretaries are all very busy in reducing their notes, and arranging their information, etc. This will take them some weeks. As soon as their report, enclosures, documents, etc., in short all the ambassadorial literature is handed in, and accepted, the embassy will be discharged with the thanks of the Emperor, and probably some lively criticism from the capacious ones who may have a desire to stick thorns in the sides of the "advanced" liberals. After the Embassy goes "out of commission," some of the members will receive furloughs to visit friends at home, etc. The chief secretary has not seen his home for eight years and a half, having been away in England and the States during the past eight years. The furlough over, the secretaries connected with the embassy will look forward to good appointments to office.

THE EFFECTS of the recent storm in Yedo, were even more severe than we had any conception of. Here is the official report:—

Drowned .. .. .	6
Wounded .. .. .	5
Houses carried away .. .. .	12

THE TIME is rapidly approaching for the transit of Venus to take place, and the astronomers of Europe and America are busy in

preparations. In December we shall have an influx of savants and scientists not often seen among us. Where the stations are to be located, is not yet settled. The primary object is to get such a location as will be most certain to have clear weather at that time. It is not at all likely that either Yokohama or Yedo will be chosen, as they are too near the sea, and the liability to cloudy skies is very great. Kioto, the table-land of Shinano, the plains of Tamba, or the centre of Kiushiu, all noted for their clear skies and high general average of fair weather have been pointed out, but as yet no spot has been definitely fixed upon. Dr. David Murray, now connected with the Mombusho, who was formerly professor of astronomy in America, and was connected with several scientific expeditions sent out by the U. S. Government, has been deputed by the United States Astronomical Commission to select a site for the astronomers who will visit Japan. Prof. E. Lepissier, of the College in Yedo, and formerly of the Paris Observatory, will attend upon the French expedition here. We have not yet heard concerning the local plans of the English, Prussian and Russian expeditions, but we wish to all the gentlemen composing them, a hearty welcome, pleasant sojourn, and above all perfect weather, a stainless sky, and no earthquake during the precious few minutes that Venus makes her "stately steppings" across the disc of the sun.

The first Annual Meeting of the Asiatic Society of Japan was held in room No. 19, at the Grand Hotel, on Wednesday, the 8th October, 1873, at 8.30 p.m.

On taking the Chair, the President, R. G. Watson, Esq., explained the reasons which had led to the deferment of the annual meeting till the present time; which was, however, in fact, the true anniversary of the Society's commencement of actual work. He called on the Secretary to read the minutes of last meeting—which were approved; and also the Report of the Council of the Society—which was as follows:—

#### REPORT.

In presenting their First Annual Report, the Council of the Asiatic Society of Japan are checked in the congratulations which they had hoped to present to their constituents, by the necessity for announcing the heavy loss sustained by the destruction, in a recent fire, of the printed matter intended for the first number of the Society's journal.

The loss however is not irretrievable, since it will be possible to reproduce most of the articles, intended for publication; though not without a delay of some few weeks. This will somewhat retard our entering into relations with other Societies of similar character, and obtaining their publications in return for our own; but no great harm to the Society need be feared from this slight check to our progress: certainly none will be felt if we are stirred up to greater determination that the objects we have in view shall be the more vigorously prosecuted.

As evidence that interest has not been lacking, the Council refer to the following List of Papers read before the Society at its regular Meetings during the past twelve months.

- 1.—On the Loo Choo Islands, by Mr. Satow.
- 2.—On the Hyalonema Mirabilis, by Dr. Hadlow.
- 3.—On the Streets and Street-Names of Yedo, by Mr. Grillis.
- 4.—On the Ascent of Fujiyama, by Mr. Hodges.
- 5.—Five Short Papers on the language of Loochoo, by Japanese Students.
- 6.—Notes of a visit to the Mulgrave Islands, by Officers of H. M. S. *Barossa*.
- 7.—On the Geography of Japan, by Mr. Satow.
- 8.—On Cyclones in Japan, by Lt.-Com. Nelson, U.S.N.
- 9.—On Russian Descents in Saghalien, by Mr. Aston.

The prospect of receiving valuable Papers during the coming twelve-month is good; and with the confidence that their successors will find little difficulty in carrying on the operations of the Society, the present Council beg to resign their offices.

Fifty-nine members have been added to the Society since the first Meeting at which it was organized;

the whole number at the present time being—Resident Members 64, Honorary 2, Corresponding 3. One has died and 5 are absent.

The newly-established German Asiatic Society of Yedo has courteously presented us with a copy of their Proceedings; and the Royal Asiatic and Geographical Societies of London have—through the good offices of Dr. Hadlow, promised to exchange their publications for ours.

A commencement has been made by ourselves towards the establishment of a Library and Museum, by the presentation of some few books and specimens—but this part of our operations requires a Building of our own before it can be expected to flourish.

The balance now in the Treasurer's hands to the credit of the Society is \$303.75.

On behalf of the Council,

EDWD. W. SYLE,  
Hon. Sec.

It was moved by Sir Harry Parkes and seconded by Mr. Bellamy—

That the Report of the Council be accepted, and the thanks of the Society be tendered to them for their services during the past twelve months.

On motion of Mr. W. H. Smith, seconded by Mr. Aston, it was resolved—

That the following gentlemen be the office-bearers of the Society for the coming year:—

President.—J. C. Hepburn, Esq., M.D.

Vice-Presidents.—Rev. S. R. Brown, D.D.,  
Sir Harry S. Parkes, K.C.B.

Treasurer.—R. B. Baker, Esq.

Recording Secretary.—A. Bellamy, Esq.

Corresponding Secretary.—Rev. Ed. W. Syle.

Curator and Librarian.—H. Pryer, Esq.

Council.—E. Satow, Esq.

A. J. Wilkin, Esq.

W. G. Howell, Esq.

Bayly Done, Esq., M.D.

R. H. Brunton, Esq.

Mr. Watson having announced the above result and spoken a few valedictory words, expressive of his satisfaction at having filled the office of the first President of the Society, vacated the Chair, which was then taken by Dr. Brown V. P.

A Paper, communicated by the Rev. J. Edkins, of Peking, on "The nature of the Japanese Language, and its Possible Improvement," was read by Mr. Satow.

A brief discussion followed; in the course of which the Secretary demurred to Mr. Edkins' objections against the use of *kami* as a translation of the word "God;" in which demur the Chairman Dr. Brown, emphatically concurred, and added that the suggestion contained in the Paper of importing into the Japanese language English prepositions would make great confusion.

In adopting the large amount of Chinese which is found in their language, as at present used, the Japanese had performed their difficult task in the best way; i. e. by arranging the Chinese words in Japanese order. In schools, at the present time, Chinese words are now taught, not Chinese construction; also, the Arabic numerals have been introduced.

Mr. Watson remarked that in Persian, which was a pure but meagre language, the same process had been employed. A large amount of Arabic words had been introduced, but the syntax is Persian.

Mr. Satow feared that the carrying out of Mr. Edkins' proposals, would result in the spread of nothing better than "pidgin" Japanese.

Mr. Aston considered the proposed scheme quite Utopian. No such thing ever has been accomplished, as changing a language by authoritative enactment. Changes in a language must be effected by the influence of writers of genius.

On motion of Mr. Howell, seconded by Sir Harry Parkes, it was resolved—

That the thanks of the Society be returned to Mr. Edkins for his suggestive Paper; and that it be recommended to the Council to place his name on the list of Corresponding members.

The Secretary announced, as New members, Professor D. Murray, C. W. Lawrence Esq., and Rev. W. B. Wright.

It was also moved by Mr. Syle and seconded by Mr. Watson—

That the Council be requested to take into consideration the subject of providing suitable accommodation for the Society's Library and Museum.

A specimen (contributed by Mr. Quin of H. B. M. Consulate, Nagasaki) was exhibited of what appeared to be the petrified bamboo-grass.

The following notice of an International Oriental Congress, at Paris, was read; and the Rev. Jas. Summers

(formerly of Kings College London, now Professor in the Mombusho, at Yedo) explained that the Organization was chiefly the result of the exertions of Professor de Rosny.

"An International Congress of Orientalists will hold its sittings in the great amphitheatre of the Sorbonne in Paris, from the 1st till the 9th of September next. Its purpose is to create personal relations among men interested in Oriental affairs. The following subjects have been set down for discussion:—1. What portions of Japanese literature would it be most useful to translate at this moment, and what are the philological resources for undertaking the publication? 2. Would it not be useful to establish a uniform orthography for the transcription in Europe of all Japanese texts? 3. What are the documents of a nature to facilitate the understanding to the special scientific, literary, and industrial works of the Japanese? 4. What is the nature of the actual movement of Japanese civilisation, and of its relations with European civilisation? 5. What are the characters of Japanese art at the different epochs, and what method is to be followed for studying them? 6. In what measure has actual Japanese literature, strongly saturated as it is with European ideas, interest for Europe? And may it be thought that the progress realised by the Japanese savants will be of a nature to contribute to the scientific movement of the Eastern nations?"

LAST NIGHT a fracas occurred between some jinrikisha coolies and a party of sailors of His Italian Majesty's Navy. It appears the sailors objected to pay the coolies, when the latter summoned the Japanese police to their assistance. The sailors used their knives freely in the scuffle that ensued, the police were only able to secure one prisoner, who will be handed over to the Naval authorities for punishment. Judging from his appearance this morning, the fight must have been pretty hot while it lasted.

FROM THE *Nisshin Shin-ji-shi*, we learn with regret that Sanjo Daijin has had a very sudden and severe attack of illness. He was siezed on Saturday morning about 3 o'clock with a kind of fit. Dr. Hoffmann was called in, and a very able Japanese doctor—and it is hoped he will recover—but he has had one or two convulsive fits since the first; and there is certainly grave cause for apprehension.

HER MAJESTY the Empress Mother visited Yokohama on Saturday. She left the palace at Akasaka at 6.30 A.M., taking a special train at 7, and arriving at Yokohama about 7.40. Her Majesty was attended by seven ladies and two or three gentlemen. Five carriages were in waiting to receive them. Her Majesty entered the first with one of her ladies; the remainder of the suite occupying the other carriages. After driving slowly through the foreign settlement, and then through native town and over Nogé hill, they went to the Okurasho building, near the railway station, and remained there until 2.30 p.m. when they were driven to the railway terminus, and entered the Imperial carriage which had been placed in the middle of the 3 p.m. train. They arrived at Shinbashi terminus, Tokai, at 3.53, and the ordinary carriages of the train were kept closed until the Imperial party had driven off to the Castle.

The rumour current here and reported by us in July last regarding the Formosa question, has been revived again by the natives as a topic of conversation during this week. It is said that a Japanese iron-clad bearing an admiral's flag will shortly call here *en route* for that island. A new semi-official native journal, it is reported, will make its appearance here shortly. Its proprietary embraces several well known names of local repute and it will be edited by a linguist. A Naval Academy is to be established at this port shortly; its site is to be on the opposite side of the harbour.—*Nagasaki Express*.

## STAPLE IMPORTS.

In Imports there has been an increased movement during the fortnight, but only in GREY SHIRTINGS has the improvement been to such an extent as to effect prices. The business in this staple has been very large, and prices have steadily hardened. In other respects the business done is not remunerative. SUGARS are firm, but without any large transactions.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.20 to 2.27½	} Very extensive sales.

Black ... .. „		} Nominal.
Raw Cotton (China) ... .. „	18.00 to 19.00	

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—The Silk market during the latter half of the fortnight has shewn much activity, and prices have advanced accordingly.

**SILK WORMS' EGGS** are now arriving freely, and about 530,000 cards have been sold, out of 800,000 offered; and against just double the number last year to the same time. Prices range from \$1.80 to \$3.50.

**TEA.**—Our market since the departure of last American Steamer has kept quiet but firm. Native holders being unwilling to make any concession and foreign purchasers not inclined to operate at current quotations.

Settlements for the fortnight amount to some Piculs 4,400; the bulk consisting of Good Medium and Fine classes at \$ 32 @ 34 for the former and \$ 36 @ 39 for the latter: Commoner grades seem entirely neglected.

Supplies are again coming in more freely and a fair business may be expected in course of ensuing month; our export to date, shews a decided deficiency in comparison with last season and this decline will not likely be filled up until the turn of the year unless a decided concession be made on the part of native holders.

The *Morro Castle* sailed for New York on the 15th instant, leaving the *Claussina*, now full on the berth for same destination: the *Tamerlane* is also reported to be laid on but as yet has not been publicly circulated. Rate of freight for New York, £ 3 per 40 cubic feet.

Per French str. *Menzaleh*, for Hongkong.

Silk, ..... 394 bales.

Per Am. str. *Costa Rica*, from Shanghai.

Treasure, ..... \$483,625.

## REPORTS.

The British Iron Clipper ship *Tamerlane* arrived here last night from Sydney N.S.W. after a very fast passage of 38 days. Reports left Sydney on the 30th August, had fresh easterly winds to 23 south from thence light variable winds from N. E. round to S. E. and S. W. as far as the Equator which was crossed on the 15th September, in 160° east longitude; she then experienced west and N. W. winds with violent squalls and heavy rain till she entered the N. E. Trades in lat. 15 30' north and long. 158.30 east on the 27th September.

In 25 north and 151 east the trades veered W. to E. and eventually a heavy gale set in veering S. W. west and N. W. with high seas which lasted 13 days

followed by a day's calm and incessant rain, when the wind sprang up from the N. E. and blew as heavily from that quarter as it had done from S. W. On the evening of the 6th instant, sighted Cape Mela light, next morning received a pilot on board and came to anchor in Yokohama bay the same evening. The *Tamerlane*, brings a cargo of Coal for the P. M. S. S. Co.

The P. M. Co.'s str. *Great Republic*, H. G. Howard, commander, left San Francisco Sept 16th at 12.20 p.m. October 2nd, Lat. 35° 53' N., Long. 173° 40' E. communicated with steamer *Colorado* all well, have had strong breezes from S. W. and W. with heavy westerly swell to Oct. 6th, thence to port fresh N.E. winds and fine weather; arrived at Yokohama Oct. 9th, at 12.40 p.m.

The American steamer *Golden Age* reports left Shanghai Oct. 4th, 9.19 a.m. clear weather with fresh N. E. winds, passed U. S. Flagship *Hartford* Oct. 5th, 8.30 a.m., U. S. ship *Yantic* 9.15 a.m. same day Company's steamer *Costa Rica* Oct. 6th, 12 a.m. all bound for Shanghai; arrived in Nagasaki, 8.38 a.m. same day. Left Oct. 7th, 12 a.m. rainy weather with N. E. winds, exchanged signals with Company's steamer *Oregonian*, 10.28 a.m.; same day, for Nagasaki; arrived in Hiogo, Oct. 8th, 5.36 p.m. Left again Oct. 10th, 7.35 p.m., pleasant weather; passed an unknown steamer bound southward, at 7.50 a.m., Oct. 11th; and Company's steamer *New York*, 11.50 p.m. same day, and arrived in Yokohama, Oct. 12th, 7.23 a.m.

The French str. *Nil* reports pleasant weather during the passage.

The Brit. str. *Medina* reports strong easterly winds during the passage.

The Am. str. *Ariel*, reports leaving Hakodate October 15th at 12.30 P.M., had light winds and a smooth sea throughout, arrived here this morning.

The Am. str. *Japan* for first three days out had severe weather; after leaving the China Coast experienced pleasant weather, up to Port.

The Am. str. *James S. Stone* experienced strong N. E. after leaving Kobe, latter part southerly winds and rain.

## INTIMATIONS.

## NOTICE.

THE undersigned having re-sold the *Japan Gazette* to its former Proprietor Mr. J. R. BLACK, all subscriptions falling due on and after the 1st day of this current month will be payable to him.

A. VERNEDE.

Yokohama, 5th Sept., 1873.

## NOTICE.

THE undersigned having taken into partnership in the business of the *Japan Gazette*, Messrs. C. D. MOSS, and J. R. ANGLIN, the former will henceforward act as Sole Manager, and the latter as Superintendent of the Printing Department.

J. R. BLACK.

Yokohama, 5th Sept., 1873.

## NOTICE.

ALL communications respecting the literary columns of the *Japan Gazette* should be addressed "To the Editor;" and all business communications "To the Manager."

C. D. MOSS, Manager.

Yokohama, 5th Sept., 1873.

Printed and published for the proprietor by JAMES R. ANGLIN, at the "JAPAN GAZETTE" Printing Office, No. 85, Main Street, Yokohama, Japan.

## \* REVIEW.

Mr. Dickens, in pursuing his argument, said the action of plaintiffs, in this case, affected the question of costs. The plaintiffs, after accepting the piston in April, came forward and instituted the present action. The casting required had been made by Messrs. Whitfield & Dowson, in conformity with the remainder of the machine. He submitted that his clients had done all they could in the matter. Counsel here read the contract made between plaintiffs and Messrs. Whitfield & Dowson, in which it was notified that there might be faults on making the new casting, but that these would be effectually remedied. The piston had been cast and, as he had said before, accepted by the plaintiffs. Had they refused it, it was likely that the defendants would have sent out for another from England, and the affair arranged without loss to plaintiffs, considering when they had commenced to use the press. In addition, the principal witness of his clients had left the country, and they were now reduced to the correspondence. He therefore suggested that the Court would rebut the demands of plaintiffs. In August last, if they had wished it, plaintiffs could have obtained the cost or value of the ram, or a new one from England. This view of the matter, he thought, affected the question of costs.

Court said that, after the loss of the ram, the defendants had decidedly admitting the liability. In so far as costs were concerned, he would consider the point.

Counsel for defendants had acknowledged their liability. It appeared to him, however, that the real question was whether the piston was well and properly made. He considered that it had been cast, delivered, and accepted, as a good production; and he therefore submitted that his clients were in no way liable at the present moment; and that the case should be dismissed with costs. Nothing had been said in the contract as to possible contingencies.

Court said it appeared that the plaintiffs, from the tenor of the endorsement on the Bill of Lading, had refused to accept the ram until it had been found to be in proper working order.

G. Whitfield, sworn, examined by Mr. Dickens. [Letter handed to witness]: He had written the document produced. Witness had seen the machine, taken the measurement and weight, and made out his estimate, as per letter. Had never seen a ram sheathed with copper, and did not consider it absolutely necessary. The new ram was in every respect the same as the old one, only it had no copper on it, of which, however, nothing was said at the time of its being constructed. The new ram was delivered about the beginning of Feb. last. The plaintiffs had complained of the length and, latterly, of the casting. There were "blow holes" in it, but they had been allowed for in the contract and repaired since, some eight or ten of them. The oxidation of the metal itself in water would fill up such holes. He had not seen the defects lately complained of. He had offered to remedy them; but his offer was not accepted by plaintiffs.

Cross-examined by Mr. Zembach:—I received no other instructions than to go with you to the English Hatoba to take the measurements from the cylinder. I remember your going with me to Messrs. Schultz, Reis & Co.'s godown to see if the press table rested on the shoulder of the ram. I, at your request, explained the use of the copper sheathing. I don't exactly remember your asking me the cost of the sheathing. It is likely that it will cost \$260.

J. P. A. Zembach said the piston, according to the contract with Messrs. Butterfield & Swire, was stipulated to be delivered in good order and condition, with the copper sheathing. Witness submitted that they had always allowed free action to Messrs. Butterfield & Swire in the matter; and whether they had had a ram cast in Yokohama or had sent for one out from England, it was not for them to refuse the one presented before it had been tried. The delay in mounting the press had arisen in consequence of their not having yet removed to their new premises.

Court thought that, provided the interval was a reasonable one, there could be no objection to the delay; but that would depend. In considering the merits of the case, his Honour considered that, according to the contract, the plaintiffs had expected the piston to be replaced, whence, it did not much matter. According to same contract, they had evidently waived their right of having one sent out direct from England. The question was, therefore, whether it had been properly fulfilled. Of the copper sheathing nothing had been said in the agreement. In that matter, the decision would be against the plaintiffs. As to the second point, whether the piston had been cast in proper order and condition, the evidence adduced was in favour of plaintiffs. The decision would, therefore, be that the piston should be repaired to the satisfaction of some competent person agreeable to both parties, within a month from present date. No costs allowed.

THERE ARE not so many students of the Chinese language in Japan, as to give hopes of any very extensive demand for a Chinese dictionary; yet there are doubtless some to whom such a book may be useful, and for them a short notice of a volume, kindly sent us by one of its authors, will not be thrown away. Not that we can speak critically of it. We cannot pretend to decide whether it fulfils all that is expected of such a work; but what we can say is that its arrangement seems to us very simple, and such as to be easily comprehensible to students. The authors are the Revd. Dr. Maclay and the Revd. C. C. Baldwin; and the preface tells us the share that each gentleman took in the work. The Chinese character is given, with its pronunciation in the mandarin dialect beneath it in Roman letters. The general meaning of the word is then given; next its use as common to the written and spoken language all over the empire; and finally as colloquially adopted in the Foochow dialect. One good plan has also been followed of not crowding the explanations with Chinese characters, but simply placing numerals, referring to the characters as given at the foot of the page; thus every purpose is served, and the eye is not confused as too frequently it is by the insertion of the characters in the text. The dictionary contains 8,000 characters, which comprise the majority of those in ordinary use. It is true that one well-known Chinese dictionary contains 40,000 characters; but of these more than half are admittedly obsolete, and more than half of those left are rarely used; so that practically this dictionary contains as much as it is likely any student can require. In the body of the work the arrangement of the characters is according to their sounds; but at the end is an index in which the radicals are the basis, with references to the pages on which it may be found. Notwithstanding all that has been said and written on the subject of the romanizing the Japanese syllabary, we are quite sure that a hundred years will not do away with either the Japanese Kana nor the Chinese character among the educated Japanese. We do not believe at all in romanizing the written language. On the contrary, we are satisfied that those who are most anxious for such a change will themselves find difficulties in agreeing as to pronunciation; and thus an obstacle opposes itself at the very outset. Besides, the pride of the people is in their knowledge of Chinese character; and the better classes flatly refuse, emphatically refuse, most resolutely refuse—to read even newspapers printed in Kata-kana or Hira-kana—they sneer at them, and will have the Chinese character. Then it is desirable for all who study the language at all, to study the Chinese character, and to such as do so, the "Alphabetical Dictionary" may be earnestly recommended.

We do not attempt to dilate on the labour and close study the production of such a work must have cost its authors—but we must acknowledge the public indebtedness to such labourers, with an honest desire that they may see the usefulness of their work in the advantages conferred on many students.

\* Alphabetical Dictionary in the Foochow Dialect by Rev. Dr. Maclay and Rev. C. C. Baldwin. Lane Crawford & Co.

IN YEHIME KEN the cattle mortality has been very great. In September and October 933 beasts have fallen victims, and the pestilence still continued at last advices.

AN ACCIDENT occurred at the Yokohama Railway Station this morning after the arrival of the 8 A.M. down train from Shinbasi, by which one of the porters attendance upon the platform was severely injured. After debarking the passengers the carriages were being shunted to the departure side of the platform in readiness for the return journey to Shinbashi at 10 A.M., and while in motion the man in question endeavoured to leap from the platform to one of the carriages, but missing his footing fell between carriage and platform, receiving injuries by being crushed by the footboard, from which he is not expected to recover. No one but the unfortunate sufferer was in any way to blame for the occurrence.

SANGI OKUBO TOSHIMITSU has been appointed head of the new home office—Naimu-kiyo.

A MAN named Kasaya Kinzo living near Nihonbashi, Tokoi, has erected a stone for the convenience of finding lost children. It is close to the Riyogoku-bashi—but whether it be a rendezvous to which all lost children are to be sent; or the children are expected to find their way to the stone to be found by their relations; or it is a mere idol to pray to for the restoration of lost children we are not informed.

WE SUPPOSE that the permission which Mr. Takashima Kayemon was said to have received last year from government to construct a railway northward, was either not sufficient for his purpose, or that for some other good reason, he was unable to avail himself of it. For we find he has recently laid another memorial before the Surveying Department.

"In the time of the great revolution, many nobles of the empire hanged their life upon war, and having escaped a thousand deaths, their great deeds remain. No sooner were their efforts successful, than they presented their dominions, which they had received from their forefathers who occupied them for a hundred generations, to the Emperor's government; and placed themselves at the disposal of "gun-ken" (the opposite to the feudal system). This could only be the deed of true patriots; and their nobleness must be admired by all.

Although I am but a clown, yet living in this civilized reign, I ought not to content myself with small private business. I am a citizen, and desire to be useful to my country, though I cannot repay one millionth part of its benefits.

In the 12th month of the year before last, I offered the tax of my commerce; last year, I reclaimed from the sea the land between Yokohama, Ishizaki and Kanagawa Awoki-machi, at my own private expense, and when it was finished I presented it to government for the railway. After this, I imported and erected gas works—nearly all at my own cost. And I built schools for the instruction of all who might desire it.

Still, I think these are very small things, and how can they compare with the greatness of the gift of the nobles who yielded all their dominion? Of course they are far, very far inferior; but they are calculated to excite and awaken the rich people of the Empire, who before this civilizing reign have lagged behind.

Last Autumn, I memorialized the government respecting the making of a railway to Awamori, Mutszu.

As this is a vast undertaking and much for the advantage of the country, it must not be done carelessly; yet, now, at the moment of opening the North, (Yeso), if this is done without having suitable roads the success can be but small, and the labour will be lost. For example, if a plant in a flowerpot is desired to bear fruit, its root must be properly nourished. As

the privileges of family rank, as *Karo*, *Daimio*, *Hatamoto*, &c., have been abolished, the samurai overflow the Empire, and whilst farmers and mechanics are increased in number, the means of employing them must be found.

The law now provides that vaccination shall be everywhere adopted, and so the young of our empire are saved from death. Human life is not now in danger for want of good doctors; but if the means of employment are not provided, the foolish and overflowing people will die from hunger. Then no doctor, however good, can save them.

I have heard that the people of Europe and America import numberless foreigners, and employ them to assist in opening the land.

Now *Awamori* is only about 100 ri N.E. from *Токеи*. The route is throughout uncultivated plains, so that in some parts no inhabitants are found. Although the people should become large possessors of the soil, yet I cannot silently disregard their inability to use it. Much more, then must I speak, when there are thousands of people to whom the fertile lands are not apportioned for cultivation. No steps are taken to let them have these lands to cultivate—or means are not provided in a practical way. "When there are many idle people, good government officers are rare." But at this time, there are many wise men in the government, and yet this subject is neglected. Perhaps the reason is that government is too busy to commence the work, and the means are wanting for raising the money.

There is a special way of raising money for the making of a railway to *Awamori*. It is, as I have already told the government, by means of railway scrip. This is the plan adopted in several European countries. The only difference is that they do not insert upon the scrip that the money shall be repaid as soon as the railroad is finished; which for us is necessary, as our views and theirs are different. What is necessary is the government guarantee of the scrip.

Having then laid the railway to *Awamori*, the communication thence to *Hakodadi* should be by steamer, and from thence to *Murorau*, from whence a railway should be constructed to *Sapporo*. By this means, the communication will be so easy, that if the multitudes who labour at the far north in the morning desire it, they may make sales in the east and west in the evening. There will be no barren land, putrefying fish, nor useless people in the country; and the work of opening *Yezo* will be easy.

People will travel, goods and money will circulate, and ignorant people will gain knowledge—all working the good of the empire.

The town school which I built last winter in *Yokohama*, in two months had over a hundred scholars—two tenths of whom are poor, and admitted gratuitously. The most excellent and valuable *Konbu* and dry fish of *Yezo*, will be sold in *China*, by good English scholars of these poor pupils; and we shall compete with the cunning *Chinaman* in all our harbours.

Finally, the expenditure for the hundred ri of railway should be redeemed by *Konbu* or dry fish, mulberry and tea. I wish the government to aid the great works of the Creator by all available human means.

If our government does not further delay this brilliant work for the grandeur of the empire, and for its civilization, the foundations of riches and strength will be laid; and the time with approach when we shall stand in a line with other nations.

Although I am unworthy, still I was engaged in the construction of the very first railroad in *Japan*; and I pray of our government to look mercifully upon my ideas of advancing the cause of civilization; and employ me, when the subject of making the N. E. railroad has been settled."

TAKASHIMA KAYEMON.

THE CONCERT last night was not so successful as usual. No less than four of the gentlemen whose services are ordinarily so valuable, were absent through illness, and the vocalists who were to the fore, were all more or less suffering from cold or hoarseness. The glees, however, were a great improvement on previous ones. The parts were doubled, and the voices better balanced. "Vineta," which opened the second part, was particularly well sung. Mr. Anderson sang, in addition to the song for which his name appeared in the programme, Schubert's "Wanderer," effectively; and his song "Hans Keiling," one of the best of Marshner's songs, was also well rendered. Mr. Townley sang a very pretty song, "My Queen of Love." If this gentleman would only give an hour a day to the culture of his voice, he would soon become one of the best singer, who ever appeared before a *Yokohama* audience. His voice is remarkably sweet, and he sings with much feeling; but at present he wants firmness, and is now and then a little uncertain as to intonation. Still he has all the materials for a fine singer. Mr. Black obtained some applause for *John Grumie*, but we never heard him to such poor advantage.

What the vocal music wanted, the instrumental quite atoned for; and this was fully appreciated by the audience. Yet, on the whole, the programme was a heavy one, and must have been rather a severe trial to a small but good-natured audience.

IN THE village of *Shiha-yama*, *Owaké Ken*, *Shigé*, the wife of a farmer, gave birth to a child, which *Fuji* the mother of *Shigé* was anxious should be taken to the priests in the temple to be presented to the *Kami*. *Shigé* seems to have taken great umbrage at her mother; for she made no reply to her, when she told her to make the proper preparations, but went out of the house with the child on her back. Presently she saw some neighbours running towards the river bank, and one came and told her that *Shigé* had jumped into the river with the infant. She rushed to the river's bank—the *Toshiri-Kawa*—and impelled by her maternal instincts went into the water to try and save her daughter—but she was unable to reach her; and all three were drowned.

It appears that *Shigé* was always a quick tempered girl, but since the birth of her child she had repeatedly been so light-headed that some called her mad.

IT WOULD be interesting to have a correct list of all the deaths that occur among the Japanese in one year, the manner of death, and the cause. It would surely upset our ordinary notions about the happiness and contentedness of the people, during their long isolation. We have, for instance, the subjoined from *Kaye*, one of the provinces of *Okitaka Ken*, as the list of deaths in that one province during the first seven months of the year:

Committed suicide by the sword	4
" " " hanging	8
" " " jump-	6
ing into the river . . . . }	18
Killed by a robber . . . .	1
Starved, or sudden illness on road	15
Burnt . . . . .	4
Drowned by inundation . . . .	4
	24
Total . . . . .	42

Those 18 suicides in a small district within seven months, and in these days when the old code of honour is obsolete, speaks volumes.

TWO CASES of gross ignorance on the part of native doctors are recorded in a *Tokei* newspaper.

In one case the wife of a particular friend of the editor of the *Nichi Nichi Shimbun* was seized with illness. A Japanese doctor was called in, who ordered certain medicine, but the woman resolutely refused to take it, and when they tried to force her to take it, she closed her lips firmly, and would none o't.

As she was in much pain, the doctor resolved to try acupuncture, but she writhed her body so violently that the point of the silver needle broke in her abdomen. The doctor then tried a gold needle, but the husband was anxious about the other one and asked whether it would injure her. The doctor replied "No; gold and silver are valuable medicines. It will melt in the body and cause her no inconvenience. If it had been an iron needle it would have been very injurious, as it would never have melted, and iron is a most deadly poison."

This editor says:—"Alas! the majority of our doctors are as ignorant as this one. Everybody ought to know that no metallic substance could be melted by the heat of the human body; and as to iron, so far from being a deadly poison, it is one of the ingredients of the blood, and often given when the blood is impoverished."

The other case is that of a woman, the wife of a tradesman at the back of *Quanon-sama*, *Asakusa*. She was seized with fever, and a native doctor being called in, could do nothing. A friend from *Yokohama* told them it was no use attempting to rely on the old nostrums of the native doctors, and said he would send a foreign doctor. Accordingly on his return to *Yokohama*, he saw *Dr. Simmons*, who at once sent one of his pupils to see the woman, and prescribe for her. The young doctor ordered a bottle of liquid medicine and three powders, with directions how to use them. He had hardly left, when the original native doctor entered and seeing the foreign medicine he said—"Oh these foreign medicines are all too strong" and he quietly proceeded to mix the bottle of medicine with one 'gō' of pure water. As to the powders, on looking at them, he pretended to know all about them, but said it was absurd to suppose such a small quantity as each of these papers contained could do any good, and putting them all in one, he gave the whole to the patient at once. The consequence was—almost immediate relief—the woman died.

The editor says:—"Is it not sad that our doctors still continue so ill-informed?"

THE FOLLOWING is a copy of the letter addressed to the people of *Shimané Ken* by *Sakayé* the *Gon-sanji*. He writes:—

"*Nakayama*, the Japanese Consul in *Italy*, has informed *Okurasho* (finance department), that a large company has been established at *Milan* in *Italy*, for the cultivation of *Silkworms* eggs. Henceforth, the *Italians* intend to produce the cards themselves instead of importing them from *Japan*, as those now imported have so deteriorated in quality, and the number of eggs hatched has become annually lessened. These results have arisen solely from the greed and thirst for rapid profit of our producers; who to make a present gain disregard the future. So, now, all you producers ought to be particularly careful in the pursuit of making cards, so as not to bring ruin on, or damage the character of, our most valuable production.

ONE OF the smaller *Yedo* papers has been crying out of late against the accumulation of street vendors of sham articles—such as ornaments for women's hair, &c., in *Tokei*. Silver and coral are so skilfully imitated that the unwary are often taken in. "Such cruel mer-

"chant, being here and there, the countryman or greedy man is said, for the most part, to be quite cheated by them."

A CLEVER dog, described by the native reporters as a man of magnificent appearance, has just managed to relieve a Yedo shopkeeper of four dollars. He called at the shop, bought some goods, but said they must send their shopman with them to his house, and give him four rios, as he had only a note to pay with, which would require that amount to be handed as change. On arrival at the house, the buyer said in an offhand way, "Oh, give me the four rios, and take the cloth upstairs, and they will give you the ten rio satsz. Unsuspectingly the lad ascended to the first floor, but found no one there who knew anything about the buyer, the cloth or the money. He saw at once that he had been taken in, and flew down stairs, but of course the "magnificent" fellow had made himself scarce. These petty thefts by such ruses are now becoming so common that every one is warned to be on his guard.

TSUGAWA RIYOZO, a samourai of Yamaguchi Ken, studied at the Hope College, Michigan, U. S., for six years—1867 to 1873. Having returned he was examined at the Kaisei Gakko, with the following result:—

	Questions.	Correct answers
English Grammar	9	5
Latin	10	3
Arithmetic and Algebra	6	2

Composition 75 marks—100 being standard. His English conversation is hardly equal to that of the best scholars on the 1st class in the college; and his knowledge of Latin rather better than that of the 2nd class in the Scientific School.

WE HAVE already published the list of punishments awarded to the rebels of Fukuoka Ken. The rewards for the service seem singularly disproportionate to them. After due consideration Okurasho (Finance department) has ordered 197½ rios to be divided as follows:—

10 persons each	..	10	..	100
10	"	..	5	.. 50
19	"	..	2½	.. 47½
Rios 197½				

In addition to these one man is to be specially rewarded with 30 rios, for his preventing the Kencho being destroyed, when attacked. We suppose this is the last we shall hear of that outbreak.

The *Aichi Shimbun*, tells of a hale old fellow of Aichi Ken, who is 83 years of age. His name is Jiuzayemon and his village is Nagakutō. His son is 62, his grandson 47 and his great, great grandson 28. We wonder there is not at least one more generation. The old boy has lately taken it into his head, that in age as in youth, it is not good for man to live alone, and he has become desperately enamoured of an interesting widow of 53. His undutiful child, grand, and great grand-child raised objections to the match, so the jolly old buffer made preparations to commit suicide, according to the manner of the Japanese when crossed in love, and it was only at the last moment, when the hard hearted descendants saw his earnestness, and that his intention was just fixed to become "a demmed moist unpleasant body" that they relented. So the gay and festive old fellow has taken home his *bell' alma innamorata*, and they live in a house apart from the junior generations.

AN OFFICIAL enquiry has been ordered by Okuma, minister of Finance, into the number of cattle which have died from disease in every district this year; as such mortality has never been known before.

THE *Hira-kana Shimbun* tells some amusing stories respecting mistakes arising from the alteration in the calendar. This year, the calendar was published with the old one side by side, so that farmers might not be puzzled as to their seasons, and that all might remember the days of their forefather's deaths, &c.

Many of the old Japanese festivals though nominally abolished were in reality observed, but in some places they were celebrated according to the new and in others according to the old calendar. But the best story is of a pair who were to be married, and a lucky day having been selected, the bride and her parents went to her future husband's house, and lo, and behold, it was shut up and all the family were asleep. No preparations had been made, and everything wore the everyday aspect. Explanations were required and given. The lady had gone by the new almanac; the young gentleman had looked up the old and so imagined he had a little more than a month's liberty, before he tied himself up for life. However, it would not have done to send the bride away. The necessary appliances were soon provided, and the marriage was celebrated.

## ADVERTISEMENTS.

### The New York Agent FOR

THE "JAPAN GAZETTE," published every evening in Tokei (Yedo) and Yokohama;

The "Japan Gazette Mail Summary," published for every United States Mail Steamer;

The "Nisshin Shinjishi," the Official Organ of the Japanese Government, published daily in Tokei, in the Japanese language;

The "Nippon Advertiser" a weekly advertising sheet, published in Japanese, and distributed gratuitously in all parts of the Empire—guaranteed circulation 5000 copies;

And,

The "Far East," a monthly Journal, published in Yokohama, illustrated by photographs;

IS

**Mr. Andrew Wind,**

133, NASSAU STREET, NEW YORK; who will receive Subscriptions, Advertisements, &c., for any of the above papers.

85, Yokohama, December, 1873.

## NOTIFICATION.

THE following Notification having been communicated to the undersigned by H. E. the Japanese Minister for Foreign Affairs, is hereby published for the information of Her Majesty's subjects in Japan.

(Signed) HARRY S. PARKES,

*H.B.M.'s Envoy Extraordinary and Minister Plenipotentiary.*

H. B. M.'s Legation,  
Yedo, Dec. 2, 1873.

## NOTIFICATION.

THE Tokio Banking Association \* being at present under reform, the notes for 25 ryo and 1 ryo issued by the said bank since 1869, will be withdrawn from circulation at the local Government offices, and at the office of the Banking Association in Kakigara Street, 14th ward of the 1st division, Tokio, from the 1st December, 1873, till the 28th February, 1874. Persons who hold these notes should be careful to present them for exchange within the above period. These notes will not pass current from the 1st day of March, 1874.

The notes issued by the Yokohama Banking Association resemble the above except that the latter bear on the obverse, under the seal, a stamp with the name of the place of issue on the right hand side by which they may be distinguished. This must be carefully attended to. The Yokohama notes have the stamp with the name of the place of issue on the left hand side of the obverse.

November 24th, 1873.

(Signed) OKUMA SHIGENOBU,  
*Minister of Finance.*

\* NOTE. Tokio Kawase Kaisha, also known as Mitsui's Bank.

## NOTIFICATION.

THE UNDERSIGNED publishes for the information of H. B. M.'s subjects the annexed note which he has received from His Excellency the Japanese Minister for Foreign Affairs, enclosing a notification under which the exportation of Flour made from Rice, Wheat and Barley, is henceforward permitted free of duty.

(Signed) HARRY S. PARKES.

Yedo, November 27th, 1873.

[TRANSLATION.]

November 24th, 1873.

SIR,—With reference to the permission granted some time ago to export rice, wheat and barley, I have the honour to inform you that it is now permitted also to export flour made from the same as you will see by the enclosed copy of Notification No. 385.

With respect,

(Signed) TERASHIMA MUNENORI,  
*Minister for Foreign Affairs.*

H. E. SIR HARRY S. PARKES,  
*H. B. M.'s Envoy Extraordinary and Minister Plenipotentiary.*

[ENCLOSURE.]

Notification No. 385.

With reference to Notification No. 246, of July last permitting the export of rice, wheat, and barley, it is hereby notified that the export of flour made therefrom is likewise permitted free of duty.

If circumstances render it desirable to change this notification, public notice of the same will be given two months previously.

(Signed) IWAKURA TOMOMI,  
*Udaijin.*

17th November, 1873.

**UNDER SPECIAL PERMISSION  
OF THE  
GOVERNMENT.**

**THE  
Japanese & Foreign Agency  
COMPANY.**

**CAPITAL—\$100,000.**

WITH POWER TO INCREASE.

**REGISTERED OFFICE:**

Takegawa-chio, Ichi-ban-chi.

**TOORI, TOKEL, JAPAN.**

**社會達用外内  
區九小區大一第  
地番一町川竹京東**

**GENERAL BUSINESS.**

**Communications.**

To translate letters and telegrams and distribute them to any part of the world through offices.

The Registry of address. To translate Agreements, Newspapers, Books, etc.

To be interpreter in commercial law, etc.

**Transportation.**

For securing Tickets for Travellers by sea and land.

To store goods, baggage, etc.

To receive and deliver goods, baggage, etc., from or to any parts of the world.

**Money.**

To exchange foreign money.

To cash and sell bank bills and other credits.

To give general information on and facilitate any money affairs.

**Commission.**

To sell or buy Japanese and foreign Goods, machines, newspapers, etc., through the samples deposited.

To execute orders small or large, for Japanese and foreign goods, etc., on commission.—Terms Cash.

To do all business beneficial to constituents.

**REGULATIONS.**

THE COMPANY, in accordance with its 4th article, have prepared large Show rooms at the above address,—which is in the most central and best commercial position in Tokei, or Japan—to receive large or small samples of all kinds of goods, machines or other articles, which are entrusted to them for sale.

The object of the company is to enable buyers and sellers, even of distant countries, to exchange articles, without the expense of storage or travelling expenses, and to facilitate the monetary arrangements of transmission, &c. So aiding the increase of home and foreign commerce.

The Company hope that merchants, producers and others having goods for sale, will send samples and particulars to the above address, and the utmost effort will be made to find good buyers.

1.—The senders of samples are particularly requested to name the lowest prices for articles; wholesale or retail. Otherwise there might be mutual loss on account of no business being effected.

2.—A commission of 1 per cent per month will be charged on the value of the samples sent in, to be deducted from the proceeds in case of sales being effected.

3.—Samples lost through inevitable accidents, such as earthquake, fire, &c., in which the company's own property is equally liable to loss, the company will not be responsible for. But things stolen after a receipt has been given by the company, will be made good.

4.—The senders of advertisements for the goods must pay the translation fee; and a commission of 5 cents per month, if the advertisement does not exceed 1 foot square. Exceeding this, according to size.

5.—The proper receipt for Samples sent or letters concerning them should have the company's seal affixed.

6.—All Sales will be accounted for twice a month.

The company invite all persons to visit their Show-rooms—and solicit the support of those who have business to place in their hands.

THE MANAGER,

By order.

Tokio, 10th Oct., 1873.

**THE  
“Nippon Advertiser.”**

(FOR ADVERTISEMENTS ONLY.)

DISTRIBUTED GRATUITOUSLY,

IN ALL THE

Cities, Towns and Villages in the  
EMPIRE.

TO BE PUBLISHED WEEKLY.

THE object of this publication, the first number of which will appear in a few days, is to serve as an universal advertising medium between foreigners and the whole empire of Japan.

It is quite clear that such a means of communicating with all classes throughout the country must be most useful; and is calculated to do more to make the natives acquainted with the infinite variety of articles which may be of service to them, with which they can be supplied by foreigners in course of post, than any other means that can be adopted.

The charges for insertions are fixed on a most moderate scale. The whole space of the paper will be divided into spaces of  $3\frac{1}{2}$  inches by  $1\frac{1}{2}$ , and each space will be charged \$1 a week; a space and a half \$1 $\frac{1}{2}$ ; 2 spaces \$2—and so on.

For long term advertisements, payable in advance, the following allowances will be made:

For 3 months ...	10 per cent. discount.
„ 6 „ ...	35 „ „
„ 12 „ ...	50 „ „

No charge made for Translation.

N.B.—As it is of much importance in the circumstances of such a commerce as that of Japan, that

**ALL FOREIGN MERCHANTS**

Should be known by name to all landed proprietors, financiers, producers and merchants in every province, a column will be devoted to those who may wish to avail themselves of this permanent means of keeping their firms before the natives—a charge of \$5 per annum being made.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Notwithstanding the large supplies, the prices of this staple, which at one time appeared likely to droop, have been well supported, and a large business has been done, amounting in all to 1300 Bales.

**SILK-WORM'S**.—The season export amounts to 1,400,000 Cards.

**TEA.**—Again our Tea market has shewn signs of increased activity, settlements since the departure of the American Mail steamer on the 20th ulto., exceeding piculs 5,000 for the period.

Classes most in demand have been Good Medium @ Fine grades, ranging from \$34 to 39 per picul and some 800 @ 1,000 piculs of "Finest" Teas changed hands at \$40 to 45 per piculs according to quality.

Prices are decidedly firmer but we can quote no marked alteration in figures; and on the whole our market has ruled somewhat irregular since last issue.

The conjoint cargoes of last mail steamer 298,256 lbs. and the *Tamerlane* which sailed for New York, direct on the 3rd inst., raise our total export from Yokohama to date to slightly in excess of 7 $\frac{3}{4}$  million lbs., shewing a decrease from this port in comparison with same period last year of fully 600,000 lbs.

The only vessel on the berth for New York is the *J. S. Stone* which will have despatch about the 25th instant.

The *Tamerlane* left on the 4th instant, with 736,403 lbs. from this port, about 185,000 lbs., from Kobe.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

As usual, there is a demand for goods not at hand, whilst with very few exceptions there is stagnation in those of which the stocks are large.

GREY SHIRTINGS:—the heavier weights have been very actively enquired for; and the stock being light and soon exhausted, large sales have been made 'to arrive.'

COTTON YARNS have also seen a strong demand for Nos. 16 to 24; good business has been done at improved rates.

Almost all other goods have been very quiet.

The *Ceylon* and *Glenlyon* from London, and *Jan Peter* from Hamburg, with general cargoes of the *Olympia* from Hamburg, and *Gange* from London, have been delivered.

Articles.	Price.	Remarks.
Cotton Piece Goods.

## FOR HIOGO.

A. H. McCaslin and F. W. Kiuder.

## FOR SHANGHAI.

Miss McLean, E. P. Blothen, Thos. J. Rosall, Alphonso Bovet, J. L. Taylor, A. Whiting and wife.

## FOR HONGKONG.

Miss Coffman, Mrs. Henderson and infant, Miss M. L. Woodruff, Hammond wife and child, Miss Noyes, Miss Couch, Rev. B. C. Henry and wife.

Per Am. str. *Golden Age*, for Shanghai.

Mr. and Mrs. Haskell, Mr. F. T. Hardy, Messrs Howard Church, Coryell, F. Siga, Naito, Shiga, and Mr. Hanabasa and friends.

Per Am. str. *Colorado*, for Hongkong.

Mrs. Marshall, Mr. Pollan, H. E. Viscount St. Januario, Messrs. P. G. Mesnier, A. C. M. de Carvalho, M. Piotti, Rear Admiral Parrot, and 4 in the steerage.

Per Brit. str. *Bombay*, for Hongkong.

Mrs. Monteiro, Messrs. Schwartz, Amam, and 10 Chinese on deck.

Per Am. str. *Oregonian*, from Shanghai.

Rev. Bishop Williams, Messrs. R. H. Boyce, W. Kilmer, Fm. A. O. Gay and servant, Joseph and servant, Harris, Brittlebank, E. J. Durny, Morima, eight Japanese officers and 68 in the steerage.

## FOR SAN FRANCISCO.

Messrs. Morse, wife, infant and nurse, Arch J. Little Francis Graham, John Brown, John J. Taylor, Thomas Harrington.

Per P. M. S. S. *China*, from Hongkong.

## FOR SAN FRANCISCO.

Dr. H. E. Davis and W. Bennett; and 142 Chinese in steerage

## FOR NEW YORK.

B. D. Smith.

## FOR YOKOHAMA.

3 in steerage.

## REPORTS.

The Brit. barq. *Ceylon* reports leaving London June 12th, passed the Downs on the 18th met with strong westerly winds down channel, and passed the Lizard on the 25th, crossed the Equator July 27th, in the Meridian of the Cape 23rd of August, had strong westerly gales and heavy sea. Running the Easting down passed St. Pauls, Sept. 13th, and came through Allas Strait, Oct. 4th, Light variable winds with a southerly current coming up through Macassar Strait, the winds continuing light up to 23 deg. North, afterwards light easterly winds up to 27 deg. Took a pilot on board on 18th, and anchored here on the evening of the 19th instant.

The German barq. *Jan Peter* reports light westerly winds in the north sea and down Channel; crossed the Equator August 6th in 24° West; 47 days out found the trade winds very scant; passed the Cape September 4th and had a good run up to Bali Strit; anchoring at Canjowanga on the 6th October to fill up water but could not get any; came up through Macassar Strait, met with light winds and a southerly current; entered the Pacific October 29th, had strong westerly wind which they carried over to the Loochoos; coming up along the coast of Japan had light northerly winds.

The Am. str. *Colorado* experienced very stormy weather during the last three weeks.

The Am. str. *Golden Age* reports leaving Hakodate at 3.53 a.m., on the 24th instant, had fresh S. S. E. gales with a heavy S. E. swell on the 25th afterwards moderate sea with N. W. winds and clear weather. Arrived here last night.

The Brit. brig. *Chow Faw* reports stormy weather with strong N. E. gales first part of the voyage, latter part S. W. and northerly winds.

The Am. str. *Oregonian* reports left Shanghai, Nov. 27th at 5.08 a.m., arrived at Nagasaki, Nov. 29th at 2.28 a.m., left Nagasaki, Nov. 30th at 12.21 a.m., arrived at Hiogo, Dec. 1st at 7.21 p.m., left Hiogo, Dec. 2nd at 8.35 p.m., arrived at Yokokama, Dec. 4th.

Per P. M. str. *China*, from Hongkong:—

Had heavy head winds and sea till Dec. 2nd, latter part of voyage rainy and light variable winds. Dec. 3rd at 3.18 p.m. 30 miles N.E. of Cape Toyi. Exchgd signals with P. M. S. S. *Colorado*, bound for Hongkong.—Flag ship of Russian Admiral arrived at Hongkong at 2 p.m. Nov. 27th, same day off Samtoo passed another Russian man-of-war, bound into H. K.—Dec. 4th at 3 p.m., passed a steamer bound North.—Bring 210 tons freight for Yokohama.

THE  
**International Hotel,**  
 No. 18,  
 ON THE BUND, & WATER STREET.  
**W. CURTIS,**  
 PROPRIETOR.

THIS HOTEL is the oldest established in Yokohama and is replete with every comfort desirable.

**The largest and best Billiard Room in the East.**

Suites of Apartments elegantly furnished, lofty, and airy Bedrooms, overlooking the sea.

The Proprietor from his experience as an Hotel-keeper, can undertake to maintain the high reputation the Hotel has so long held, and while thanking his numerous customers for past favours shewn, begs to assure his patrons, that the same care, and zeal for their comfort will be shewn as hitherto.

**THE CUISINE,**  
 is now under the direction of a first class  
**FRENCH COOK.**

AND  
**LIQUORS,**  
 of only the Best Brands provided.

**Hot and Cold Baths at all hours.**

BOARDERS per Day .....\$ 2.00  
 Do. per Month.....\$75.00 to \$50.00  
 For Board only \$30 to \$35 per month.

The best Carriages, and Saddle Horses. Boats, and Ginrickshas, at hand at a moments notice.

Yokohama, 30th Sept., 1873, tf.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 21ST OCT., TO THE 1ST NOV., 1873.

#### MARRIED.

On the 30th ult., at St. Saviour's Church, Hong Kong, by the Rev. R. J. L. McCall, M.A., the Rev. H. J. L. McCall, of London, and the late Joseph L. McCall, of London.

#### BIRTHS.

On the 21st instant, at No. 216, Bluff, Mrs. JOHN GRIGG, of a daughter.

On the 30th instant, at No. 157 Yokohama, Mrs. S. C. PASS, of a son.

#### DEATHS.

On the 19th instant, at the General Hospital, William Clark.

On the 13th instant, at "Forrest Lodge," Hong Kong, JOHN McDUGALL, Esq., Manager, Oriental Bank Corporation.

At Yokohama, October 27th, at the General Hospital, WILLIAM HARDING, third assistant Engineer of the U. S. S. *Alaska*, of small pox.

OUR LAST Summary was published for transmission by U.S. Mail, 22nd October. The Mails due since that date are all to hand.

### Summary.

SINCE OUR last a crisis has happened in Japan which was hardly expected. On the 24th October, the ministers of the Mikado with two exceptions, sent in their resignations which were accepted; though some have since been induced to withdraw them. The rock on which the ministry split was Corea. It had been resolved to send an expedition against that country in order to avenge the insults repeatedly offered by its rulers to Japan; but Iwakura, the late ambassador to foreign countries, opposed it so warmly and effectively that the Mikado was left with but

two advisers—viz. Iwakura, and Oki. Sanjo Daijin the Prime minister had been very ill, having been attacked with a kind of convulsive fits, from overwork. He is better and has withdrawn his resignation; as also has Okuma, the minister of Finance; and now Terashima, late minister to England is placed at the Foreign office; Ito, lately one of the ambassadors, is minister of public instruction, and Taniguchi and Kido—both of whom were connected with Iwakura as ambassadors are in the ministry, though Kido is so paralyzed that it is very doubtful whether he will be able to do much work. Soyeshima, the late ambassador to China is one of those who have resigned.

THERE ARE great apprehensions of trouble through the collapse of the Korean Expedition; but we do not fear any harm to foreigners nor to trade.

THE RACES have occupied the greater part of the public attention during the past week; and, owing perhaps mainly to the magnificent weather, came off with great spirit.

TWO SPECIAL meetings of the Chamber of Commerce have been held on the subject of the allowances to be made to purchasers of silk; which the Japanese Silkmen determined on altering from those long established. The reports are in later columns.

THE DEPARTURE of H. B. M. ironclad *Iron Duke*, with the *Cadmus*, *Salamis*, *Dwarf* and *Frolic* in company, on the 28th instant, leaves our harbour in a very bare condition.

H. R. H. THE DUKE of Genoa still remains here with his ship, the *Garibaldi*; which we understand is to cross the Pacific for her next port.

A RACE ball took place on the 27th instant, at the Yokohama United Club. It was one of the best public balls ever given in Japan.

MR. G. M. DARE's yacht *Breeze*, built in Yokohama, on the lines of the renowned yacht *Corisande*, the full particulars of which were supplied by Mr. Rattray of Cowes, is now ready for a trial trip. For beauty she surpasses anything we have had in these parts. Much interest is felt among our few aquatics, as to her sailing powers, and already she has been challenged to a trial by one of our yachtsmen. She is yawl-rigged.

THE NEW Japanese Town-hall is up in frame at the corner of Honcho Dori, and promises to be a building of considerable pretensions. The new custom house is now occupied.

THE EMPRESS lately spent a day at Hama Goten. It is pleasant to report that the hopes of the loyal are raised by Her Majesty's condition.

H. R. H. HIGASHI FUSHIMI-NO-MIYA, the uncle of the Emperor, who was for some time residing in England, has applied to be allowed to join the army or navy, as young nobles do in other countries.

THE ASIATIC Society of Japan had a very interesting meeting on the 22nd ult.,—at which were read a translation by Mr. Howell by Captain Deschamps's report in the Warm spring of Kusatsu, and a paper by Mr. R. G. Watson on Kaempfer's history of Japan. It is a subject for regret that the society is about to lose Mr. Watson, who has been its president during the first year of its existence. He will ere long leave for Europe.

A CHANGE of ministry in any country is a matter of much importance; but when that change is brought about not by a parliamentary adverse vote, but by dissensions among the ministers themselves on vital matters of policy, the importance is greatly enhanced. In the case of Japan or any country in similar circumstances, such differences of opinion as lead to an abrupt disruption are dangerous, because the nation is not sufficiently advanced to agree to differ and let the opinions of the majority carry the day, but they are apt to end in appeals to the warlike propensities of the people; and we all know how such appeals are met.

On Friday evening we told our readers that events were under the notice of the Emperor. One of those events, those things which had happened, was the entire collapse of the government through differences of opinion on foreign policy, notably with respect to Corea—and another of the events was the actual resignation of all the Sangi but one—the staunch, and loyal Oki.

We said also that the progress or retrogression of the nation will depend on the course His Majesty may decide upon with regard to these events.

Of course, in writing the daily news, or commenting upon the daily occurrences of a nation's life in mere paragraphs of half a dozen lines it is not supposed that we are expressing opinions of far distant days, or of that period which may be designated as "the future." The present progress or retrogression of Japan is what affects us, and there can hardly be two opinions as to these being the alternative of the present conflict among the Sangi. It is only to look behind the mere paper screen which serves to keep out of view the real feelings of the samurai, and there will be seen a most intense desire, a positive burning to go to Corea to avenge the insults repeatedly hurled at Japan. It has been, as we have formerly told our readers, extremely difficult for the government to restrain the old fighting men; and at the close of last year a crisis from this circumstance was only averted by the prompt and very decided measures taken by the government. This is now the rock on which the government has split; and the state of feeling may be seen by the resignation of all but one of the ministers, including the Daijo Daijin. The firmness of Iwakura produced this result.

For the present we will not say more on this subject, because where there is much secrecy, there is always much uncertainty; and we do not wish to state more than we absolutely know.

At the same time we ask our readers specially to remember the attacks which have been made upon our veracity by our two pleasant contemporaries Nos. 2 and 22. The former as recently as Saturday last, alludes to "one of the daily papers which certainly has never gained any credit for the accuracy of its information." The *Japan Gazette*—No. 1—being the journal which contained the information subsequently taken exception to, must necessarily be the paper alluded to. But happily the cap does not fit. We have endured the contradictions, the taunts, the sneers, of our amiable, generous and gentlemanlike contemporaries, and we have left our case in the hands of the safest lawyer we know—Old Time; and now he rights us. From the original letter we published from the *Nisshin Shinjishi*, to the latest we have said about the Corea, all has been authentic. If there be any justice in this community, all the hard words and "slashing" comments uttered against us will recoil upon those who wrote and published them. It is proved, so far as it can be, that what we have

written is true—and much of what they have written and published on the subject now culminating, is false; the more shameful and the more damnable, by reason of the malicious bitterness with which both indulged their satire upon us and our statements.

LITTLE DID we think when we first transferred to our columns from the *Nisshin Shinjishi*, the insolent letter sent by Corea to Japan, how deeply felt among the samurai, was the wound that letter had made. When we look back to that time and call to mind all that was revealed to us of the real state of feeling in Japan, by the immediate effect of the publication, and of all that followed in connection with it, we wonder that so much time has elapsed before such a rupture occurred as has now taken place.

Circumstances gave us a particular knowledge of the wishes of the samurai and the action of the government in this Corea affair; but for reasons best known to ourselves we wrote of them far more guardedly than we should have done had we been dealing with a similar affair, in regard to any nation but Japan. All we did was to announce baldly the excitement that existed and the difficulty of allaying it; and the intention to go for Corea when all was ready. The time seemed now to have ripened, and the majority of the Sangi were for the expedition. It may truly be said that the opposition of Iwakura alone has prevailed against the determination of that majority.

There are many who will consider the action of Iwakura worthy of all praise; and so it may be. But before we join in that sentiment we should like to fathom his motives. Probably within a few weeks these will reveal themselves, and until then we withhold any expression of opinion, and forbear from printing details which have been given to us. There are some men of ability and not wanting in experience now in power, and most likely they will be able to prevent any such policy as would lower Japan in the eyes of the world, such as is attributed to him.

But a time of very great anxiety has arrived. As we write, no one can tell what will be the immediate effect of the doings of the last few days. All sorts of rumours are flying about, no doubt—but there are facts to be realized also; and among them that the soldiers are so dissatisfied, that many have thrown up the service, and in one instance where about fifty did so, and the rest were told to take them prisoners, the order was met by a direct refusal.

It was declared on Sunday that Saigo Kichinoské had only resigned his office as Sangi, and still continued to be a minister of war. But we do not clearly see how this can be, as the soldiers say they will follow him; and yet these desertions take place. Be that as it may, it is not so much of the regular army that we think, as of the samurai throughout the empire. We are quite certain that nothing but the promptest and the most resolute action on the part of the government will keep them from a general rebellion; and if anything of the kind fairly gets under weigh, the question will no longer be as to what shall be done with Corea, but as to what shall be the form of the government in Japan.

There is throughout the country a very strong feeling towards republicanism; and though the monarchists may be numerically stronger than the republicans, the latter are the most energetic. They consist principally of those clans who were most prominent in the revolution, in opposition to the Tokugawa

régime; but they are by no means confined to these clans; and were any able leader to appear and raise the standard of revolt, he would immediately find himself surrounded by a host of determined warriors, ready to do or die. It is true that if the disciplined army remained faithful, they might put down with their rifles and long range guns, any forces that came upon them with the old armour and weapons of Japan; but our belief is that the soldiers would fraternise with the enemy.

The country, therefore, is now going through a crisis, which we most earnestly wish may terminate without bloodshed; but it is just as well to be prepared for whatever may happen.

So far as foreigners are concerned, we do not think they will be much interfered with in any case, because it is unlikely that they will take part with either side, but simply accept the government established by the people.

## Token.

THE *Nisshin Shinjishi* has a very long letter from a citizen, who wishes to enquire how it is that samurai are permitted, if they like, to wear swords, whilst firearms are forbidden? Or, "by a parity of reasoning," why, if firearms are forbidden, swords should be permitted? The sword has been frequently used for killing, wounding or for robbery; but the gun has not yet been so used. "The original reason why samurai wore their swords, was, that they were supposed to be always soldiers on active duty; but now they are relieved from military service, except as they may be selected with others, and allowed to enter into any business, whether trade, manufacturing, or farming. Why then this distinction between samurai and others? Some may say they must be worn for protection—but we have now the army and navy, and the six head-quarter camps, with their thirteen branch stations of regular troops in case of war; and in every Fu and Ken we have court houses to judge the criminals, and police to guard our lives and property. And it is a most excellent state of things that we can go upon the high roads by day or night without fear. Then why carry swords? Let Government issue an order of prohibition and all will obey, but if any be disobedient let them be punished."

The writer then inveighs against the samurai giving exhibitions of fencing, &c., like play-actors, wrestlers, and the like.

He does not, however, object to swords being carried by Government officials or on occasions of ceremony. But for all other persons and occasions, they should be laid aside.

One of the Tokai newspapers has an article on the subject of certain tea-house attendants.

"There are many visiting places called midzu-chaya in the grounds of Ueno, Asakusa, and other places, where the attendants are girls, pretty, and nicely painted, for the purpose of attracting guests.

See, when any young fellow enters how the damsels try to beguile him, talking cheerfully and smiling sweetly, all to draw money out of his pocket.

Although this treatment is apparently only to sell the guest a little refreshment it is in fact like that of avowed disreputable characters. If the guest gives as payment but a small sum see how different the behaviour becomes."

We need not give the whole article, which is a lecture to those who allow their daughters to belong to such places: but however excellent the theorising, we fear the views will obtain no practical weight, and we shall have to put up with all those winning ways as hereto-

fore, to the extraction of our loose ishius, but probably not much to the disturbance of our peace of mind. Only fancy what a Japanese tea-house or even a midzu-chaya would be, if only old women or dirty boys were the attendants!

A CURIOUS tale is published in the *Kobun Tsushi*.

In Totsuki Ken, there was a rich farmer, who being at the point of death, called his wife to his side and asked her to listen to his last wishes. He said he had, by his hard labour, made a good deal of money which he had hoarded; and now he was at the point of death, the fact that he could not enjoy it as he wished disturbed his mind, and he could not die happy. He wished her, therefore, to take it after his death and place it in his coffin beside him.

The man having given up the ghost, his relations, friends and neighbours assembled to bury him, and before the coffin was closed, the widow was about to place the money beside him, privately; but the relatives asked her what was in the bag? and she told them the whole of the facts. They objected to her burying the money, and so she put a favourite tobacco pouch that had belonged to her husband in the coffin instead. And the body was interred.

Shortly afterwards a man who had heard of the above circumstances opened the grave and took out the tobacco pouch. He then painted his face to resemble a dead man, and managed to look like Yemma-o, the King of Hades. He now went to the house of the widow, and said that though she had been commanded by her husband to put his life's earnings into his coffin, she had not done so, and consequently the soul of her husband could not rest in Hades, from whence he came as a messenger, to receive the money; as the king was grieved to see the man's soul wandering. As a proof of his statement, he produced the pouch from under his mantle.

The poor woman really believing the story, burst into tears, and said that she had handed the money to one of the relations, and she must go to him and get it.

So saying she went out. The visitor waited a long time but as she did not return, he looked around and saw some things that looked like cakes, some of which he proceeded to eat. When at last the widow, accompanied by the relative with the money, returned, they found the messenger from Hades vomiting violently, and seemingly about to die. On going to him and examining him, they perceived he was a farmer from an adjoining village. The fellow died, and then it was discovered that the cakes had been poisoned. Some were given to a dog and it died at once.

The officers were sent for, and the affair was to undergo a strict enquiry.

THE GOVERNMENT of Yamanashi Ken have issued a very long notification on the value of newspapers. Kocho are instructed to make themselves acquainted with their contents, and circulate them as much as possible for the perusal of the people. Reading rooms are recommended, and the farmers strongly urged to read themselves and tell the news to those who cannot read or obtain them. The two papers particularly recommended are the *Nisshin Shinjishi* and the *Nichi Nichi Shinbun*.

AN ATROCIOUS murder with robbery, was perpetrated at No. 4 Nishi Fukuda machi, Tokei, a few evenings ago. A farmer named Yamada Iuzo, of Hamamatsu Ken, came to Tokei with his servant Tomekichi, and put up

at the house of a woman named Yamamoto at the above address. On the evening of the 9th Yamamoto saw his body lying in one of the rooms, with blood issuing from several wounds. She ran to call the servant but he was nowhere to be found. She at once went to the police; and it was found that the money which the woman knew to be in possession of the murdered man, was missing. It thus became evident that the servant had committed the vile deed, and made off with the money. Up to Saturday, the man had not been captured.

ON THE 14th instant, the house of Tanaka Chobei in Kita Koga Cho, Tokei was entered by three thieves who demanded money, which Tanaka was not slow to give them. His servant, however, slipped out to the house of an officer of Keihoriyo, a department of Shihoshō, who immediately accompanied the man to his master's house. Seeing him approach, the thieves lost no time in making off, but the officer was evidently a more active fellow than either of them, and overtook them so quickly, that they were obliged to stand at bay. All had swords, but the officer did not hesitate to attack them. A tough fight ensued in which he received no less than nine wounds, some of which were in his head; and the blood ran down into his eyes and mouth so that it was impossible to continue the unequal struggle, and the thieves escaped. The brave fellow was conveyed to the hospital in Daihiyo-in, where his wounds were promptly attended to.

WAKAMATSU' KEN has notified the people that as foreigners only like fine silk, and that the coarse silk is difficult of sale, in future they are only to make fine silk. The thread is to be reeled of five cocoons only.

IF THERE be no religious "revival" in Japan, it is not the fault of the Kiyobusho—judging from the reports that reach us from the provinces. From Yamanashi Ken, a letter informs us that the preaching is extremely active; and at Ichirenji temple in Kofu, crowds attend daily. A priest called Chiukoji Takabayashi is spoken of in terms which give one the idea of a Japanese Spurgeon. When he preaches, the people throng so to hear him, that the temple is far too limited to contain them. Such is the *furor* to listen to his sermons, and such the good effect likely to follow from them, that the Kencho gives a holiday to hard labour criminals that they may have the benefit of them.

But all the preachers are not equally popular. One in Koshu has rendered himself hateful to the people, because he preaches nothing but the praises of Soshi—to which sect he properly belongs—and rarely, if ever, mentions Shintoism; excusing himself on the ground that he is not worthy to speak of the forefathers of the Emperor. The people say it is absurd for Kiyobusho to employ such a man, as he only labours for the good of his sect, and not of Shintoism at large.

IN THE town of Kofu there seems to be a remarkable desire to avail of the new lights which the times are presenting to them. First the desire for instruction is so great, that no trade has benefitted so greatly as that of the booksellers. Chairs, tables, jin-riki-shas, and various machines are so greatly in demand, that the common carpenters, box makers, coopers and such like artisans are all changing their occupation to supply the demand. The poor grumble a good deal at the enhanced price of ordinary household articles, which is the necessary consequence of the change.

THE HARVEST is likely to be so abundant in Koshu, as to make up for the several bad seasons, they had previous to the two last years.

JITSURE KAWASE—the chief of Jijiu, is appointed Japanese minister to Italy and Austria.

IT HAS been notified that as the American government will send an astronomer to Yokohama and Nagasaki in December next "to observe the planet Mercury," a few students will be allowed to take advantage of the opportunity of accompanying him, to receive instruction.

A FEW days ago an actor named Okutaza belonging to the Hongo Theatre, Tokei, was killed by one of the fixtures on which he was sitting, giving way, and precipitating him from a considerable height on to the ground.

### JAPANESE RECIPES.

TO MAKE HENS LAY ALL THROUGH THE WINTER.—Feed them on dry hemp seed. The finer the quality, the better the result.

TO FATTEN POULTRY.—Give powdered charcoal with their food. The flesh becomes beautifully white and rich.

TO KEEP MEAT FRESH IN SUMMER.—Put it in a clean porcelain bowl, and pour very hot water over it, completely to cover it. Then pour oil on the water. The air is quite excluded and the meat preserved.

ONE OF the officers of Kiyoto Fu, named Ikai, has for some time past been falsifying his accounts, and pocketing from \$50 to \$200 a month dishonestly. He might have continued his pilfering; but conscience which "makes cowards of us all," found him out, and he managed among his friends to raise the sum abstracted, and restored it to Kiyoto Fu, expressing his regret. His self-accusation was not at once believed, and an examination of himself and all others whose duties are connected with the distribution or payment of the public money were ordered to be examined by Shihoshō. The result of the examination has not yet transpired.

A CURIOUS accident lately occurred at Saihoji-mura of Owake Ken. A farmer named Sato Takisaburo having heard that a certain bamboo grove was much resorted to by wild boar, he took a rifle he had in his possession, and waited for his coveted prey. Presently as it was getting dusk he heard the bamboos rustling as if an animal were forcing its way through them, and not waiting to see the animal he supposed to be there, he fired; when to his astonishment he heard a groan as from a human being. It turned out that a farmer belonging to the same village had gone with the grove to get young bamboo shoots (Takenoko), which ate a favourite article of food to the Japanese, and so was taken for, and received the bullet intended for, a wild boar. The authorities say if he had not gone to take the Takenoko without leave he would not have been wounded; and no blame is attached to the would-be sportsman.

OUR READERS will remember our account of the floods in the Shimané Ken at the end of August. Great as was the damage done to the growing crops, some shewed signs of recovery—but the rain of the 2nd inst., banished all the rising hopes, and destroyed everything. The Ken authorities have been obliged therefore to ask Okurasho (finance department) for assistance.

H. R. H. HIGASHI FUSHIMI-NO-MIA has made application to be allowed to serve his country either in the Army or Navy. His letter is as follows :—

To KUNAIKIYO TOKUDAIJI SANEYORI,

from NŌHON HIGASHI FUSHIMI YOSHIKIRA;

Although I, Yoshiakira, belong to the imperial family, and have so far grown up, I have learned nothing perfectly. I am really sorry to be idle; and consider it a crime to continue so.

I recently travelled in Europe, where I saw all high noblemen devote themselves to the Navy or the Army from their youth. I feel the utmost shame when I reflect upon this; but I think that if I devote myself to a military life and learn the art of war, I may yet make amends. This therefore is my desire, and I pray you to grant me permission speedily. If I become a soldier, of course I become a 'combatant,' and can never receive the treatment of a member of the Imperial family. My mind overflows with this my earnest desire.

THE Chiji of Tokai Fu has issued an order respecting the dimensions of rafts on the rivers. It is often the case that rafts measuring in length from 300 to 400 feet lie in the water for months, often obstructing the traffic; and damaging the posts of the bridges when they are being taken down stream. In future rafts are not to be longer than 90 feet or broader than 12; and in small rivers 30 by 6. The rivers Tonegawa, Arakawa, Nakagawa and Tanagawa are excepted. No raft may stop on the way for more than one hour at a time, and only three hours are allowed for loading.

ON THE 24th inst., between 8 and 10 o'clock the Japanese Police made a raid on all the Lottery Houses which have latterly been such a nuisance and the cause of much indolence and consequent poverty.

A few days ago an order was made that no Lottery tickets should be sold outside of Shimabara. By this the quarry was cleverly driven into the net, when the police pounced upon them simultaneously from all quarters, making a wholesale seizure of the sellers of tickets, and everything connected with this gambling nuisance. Even the *bakuchi* or common gambling pedlars were taken to the police station.

THE FOLLOWING is the list of the punishments accorded to the rebellious people of Owaké Ken.

Capital punishment, ... ..	8
(Ringleaders or murderers of officers)	
Banishment for 10 years, ... ..	7
Hard Labour, ... ..	521
Degraded from rank of Samurai	312
do " " Priests	3
Fined (52.253 yen 25 sen between them) ... ..	26,514
Fined (410 yen 25 sen between them) ... ..	535

(Of all who were taken, 3 people got away, 5 died, and 9 were pronounced not guilty.)

SOME WISEACRE has been writing to Sa In, saying that "The Owari and Hizen porcelain are so improved both in shape and painting as to equal that of foreign countries; but the artists use real gold upon them. In a year a great deal must be used and so the available quantity for circulation is materially lessened. To avoid this loss to the country other painting material might be used, but then the quality

of the article must suffer in estimation of foreigners. Old money is now out of circulation, and therefore those who have it should sell to the potters and others who use gold. Sometimes people hoard their money in fireproof godowns, and are content to consider themselves rich; but money ought to be circulated, and I think an order should be issued to the makers of porcelain not to use real gold, and to the rich men to allow their money to be circulated. If the most valuable things are hoarded in a fire-proof godown they are of no more value than stone or dirt." SA IN's reply was, that it had nothing to do with what people did with their money, and as to the porcelain makers, the quantity they used is so small as not to be worth consideration.

THE *Kobun Tsushi* reports that the Empress is "as ladies love to be who love their lords." We sincerely trust the information is correct, and that her fondest hopes will be realized for the happiness of the Imperial house and the good of the country.

THE LATE Prime minister Sanjo, Kido, Okuma, Saigo Kitchinoske, Etoo, Goto Shojiro, Okubo, Itagaki and Soyeshima, having sent in their resignation, the Mikado accepted it. We believe Okuma has since been induced to recall his. Iwakura is to replace Sanjo, with Terashima as Minister for Foreign affairs.

Katsu Awa and Ito Shimuske have been appointed Sangi, and this has decided the victory of those who were against sending the expedition to Corea. It remains doubtful what the action of those who supported the expedition will be. Katsu Awa as Kaigun taiyo, the head of the Navy Department, has always opposed the movement, but the military authorities were not so unfavorable. It is reported that many military and Naval officers have sent in their resignation.

SANJO DAIJIN still continues to be in a very deplorable state. His illness is the effect of overwork. Never of a robust frame, he has attended to the duties of his office to an extent none supposed him capable of; and the result is complete physical and mental prostration. The five years during which he has been prime minister of the empire have been calculated to try the most able statesman and the strongest constitution, and we are not surprised, though we very much regret, to learn that his health has utterly given way. It is impossible that he can attend to business of any kind for a long time even should he recover; and for the present, as during his absence in August last, Okuma and Goto jointly act in his stead. His Majesty sent his own physician to attend on Sanjo, and has been an anxious and constant enquirer as to his condition.

SANJO DAIJIN is going on favourably. Perhaps our contemporary the *Japan Mail* is not aware that his illness had its seat in the brain. Dr. Hoffmann has indeed given hopes of speedy convalescence, and a probable return to work at no distant day; but considering all the trouble the Prime Minister has had to encounter of late; considering that if he were to return to office, he would have to endure the same annoyances; and considering that his illness was occasioned solely by his hard work and anxiety, his friends consider that it would be real madness for him to attempt to work, even though permitted by his physicians. However, his resignation with the other ministers seems to promise him plenty of rest.

IN the absence of any particular news in the city, over and above that which, although most deeply interesting, develops but slowly—the changes in the Government;—we will give a few extracts from the native press. They will show the direction in which the minds of certain writers run, under the strict prohibition of comments upon political subjects.

The *Kobun Tsushi* says:—A pretty long time has elapsed since treaties were entered into between our empire and foreign countries; and since the revolution the Government has changed to the ancient form, and all proclamations emanating directly from the imperial centre. The Daimios also have been discharged from the office of Han-chiji or Governor of their provinces, and all provincial governments have been united in one. But while these changes and others naturally springing from them have gone on, there is one thing neglected in the general confusion which ought not to be left doubtful: I mean etiquette. This ought to be established so that all may understand and practise it.

For instance, there are six classes among the Japanese: viz., Emperor, Imperial relations, Kuazoku or nobles, Shizoku or Samurai, Sotsu or class of foot soldier, and common people such as merchants, workmen and farmers, who are all now of one class.

Well now! There are many different styles of dressing the hair: as,

Hampatsu, (half hair) the dressing and gathering into aene on the crown, the forehead being shaven.

So-hatsu, (all hair) dressing it into a cue, but no part being shaven.

Chasen, (tea stirrer made of bamboo) gathering it at the top but not in a cue.

Sam-patsu (scattered hair) dressing it like that of foreigners—among whom the hair is cut and combed to part to the right or the left or in the middle; or worn long and combed back; or as in some cases dishevelled and disorderly. Again! There are many kinds of clothes; such as:—

Japanese garment with long collar and loose sleeves. Hanten—coat worn by workmen.

Happi—Coat without sleeves.

Haori—Coat worn by gentlemen.

Hakama—trousers worn by samurai and a great many others.

And for the feet:—

Setta—sandals armed with iron heels, with hard leather at the bottom.

Wooden clogs—high or low.

Straw sandals—and many others.

Now, why are not all these things—the hair dressing, the clothes and the shoes, not regulated to the several classes?

But besides these matters, the rules of personal etiquette ought to be established.

See, the majority of our people, when they meet an acquaintance, first bow; then talk about the weather—fine or rain, warm or cold; and they make enquiries as to the health.

Or anyone who has his head covered, first removes his hat, and then bows to his friend.

And when one calls at another's house, he stands at the entrance, and cries—"Tanomu;" and is answered from within "Doré?" And then the visitor begins to speak of his business or the cause of his visit.

Yet, when we meet our Emperor, or Daijo Daijin, or the Sangi, on the street, we have no rule for saluting them. We don't know what to do?

From what country or at what time, the ceremonial rules came to us I know not. Nor in what reign the practise of sending letters with the addresses "Sama," "Dono," "Také," "Rô," according to class. But I have heard

that a clever ruler of ancient times made these rules in order to govern quietly by letting all persons distinctly understand their relative position; and to enforce politeness.

At present—when persons wearing hats meet, they do as they please—either taking it off, raising it slightly from the head, or merely touching it with the hand, or even raising the hand without touching it. And those who wear gloves, either take them off or not.

These are but examples. There are many other ceremonies, of which I have not space or time to write.

It were well if the social distinctions could be recognised by the hair, the clothes or the shoes; but if these may be left for awhile, the regulations of etiquette ought to be settled at once.

As the nation is now fast advancing in civilization, how must we appear before foreigners if we have no established rules on so important a matter?

The following, from one of the native papers, may have more than a passing interest to some of our readers:—

The most valuable of our productions is raw silk, and the next is tea. As the quality of our tea leaf and our skill in making it is well known, a great quantity is bought for foreign countries. But of late certain of our people, thirsty for gain, and regardless of the future, have lowered the quality of the make, and brought ruin on their own reputation and on all, even honest dealers in the article.

The Government has paid a good deal of attention to silk manufacture, and made stringent rules in connection with it, but the preparation has been entirely overlooked by them.

This is a matter of very great importance, and we are glad to hear that a man named Asai Riyoho, taking it very much to heart, has established a large company under the title of Sengi Kwaisha, at No. 18, Ise machi, Tokio, by government permission. The company professes to be desirous of making profit by preventing the evil above deprecated. The rules therefore will be:—

1st.—That as a guarantee that the tea examined by this company is of the best selection and manufacture, the stamp of the company will be given, one per cent. of the price being charged for it.

2nd.—That if the manufacture is inferior the stamp shall not be given.

3rd.—If the tea, after examination, be slow of sale, and the owner shall want money, an advance will be made to him.

4th.—The rate of interest shall be 3 per cent. for over 1,000 yen, 4 per cent. for over 100 yen, and five per cent. below 100 yen, the period being for 30 days from March to August, and for 60 days from September to February.

5th.—The tea may be fired at any time after examination, even when deposited. The expense of firing shall be charged when the tea is redeemed.

6th.—Should the tea deposited be not redeemed at due date, it will be sold by tender letting the owner be the “go-between”; and if the price obtained be greater than the indebtedness, the surplus will be returned to the owner.

MOMBUSNO (Education Department), has issued instructions to all Ken and Fu to furnish lists of all mineral springs within the limits of their jurisdiction; the department being desirous of obtaining full information respecting all mineral springs throughout the country. The information is to include the exact nature of the spring, and as to its temperature at all seasons, and the average number of visitors *per*

*mensem* or *per annum*. Also, how much of the water is sold, and what is paid for it. The average of the last three years is to be taken.

THE *Mainichi Shimbun* (Yokohama Daily News) tells that on the 8th August this year one Okada Hayzo, a very generous man living at Kugidana, Nihon-bashi, Tokei, visited a silver mine in Akita, in company with his partners. Inouyé Kaora, Inouyé Masaru, Musda Takashi Tominaga, and one or two others, with an American named Janin. They returned on the 14th October, with several kinds of minerals, which are to be analyzed at Okada's house. The American mineralogist is 34 years of age, and has visited mines in England, France, Germany and Spain; and even speaks the languages of those countries.

A SAD tale is told in the same journal of a young woman who having been married to a man with whom she led a most wretched life, was at last obliged to return to her family. The father, greatly enraged, ordered her to apply to a doctor who should produce abortion, but the result of the treatment, whilst unsuccessful as to the end proposed, was that her mind was quite upset. Her father then increased his cruelty, and at length, on the 18th of this month, whilst her parents were absent, she destroyed herself by jumping into well.

By the carelessness of the breeders, the quality of silkworm eggs has of late years declined, to the loss of our own people and foreigners. Consequently the Government ordered that this year only 1,250,000 cards should be exported, and men were appointed to regulate what should be for export and what for home use, in each district. This silkworm business is the most important in Japan, but foolish people ruin themselves because they selfishly wish to do a great trade. Now, our Government having made certain rules, the trade began to flourish. Many foreigners visit us, and good prices were expected this month; but to our surprise we see it fall day by day. The cause is partly this. The government regulator in Shimamura, Joshii, for his own profit requested government to be allowed to export a quantity which had been appropriated for home use. Had this been granted the prices would have fallen still lower. In the same village a man named Ishii brought 9,000 cards of those intended for country use, and the report got abroad that they were intended for sale to foreigners. Thus foreigners hold off, and the Japanese being anxious sellers, they have to take low prices. It is a pity they have no patience. For by waiting they could yet better prices.—*idem*.

A FRACAS lately occurred between some samurai and farmers in the town of Okuchi belonging to Kagoshima Ken. All the inhabitants of Kagoshima were ordered by Shimadzu to abstain from worshipping Shinshiu, but as they believed in Shinshiu, a good many of the farmers opposed the prohibition, became very devout worshippers, and attended constantly the sermons and ministrations of its priests. The Okuchi men hearing what was going on resolved that they would not be dictated to in the matter of their faith, and sending for the priests engaged them to preach, and were very attentive and eager listeners.

About thirty samurai belonging to the Ken, perceiving what was taking place, in an excess of zeal rushed into the place where the preaching was going on and carried off the priests by force, taking them to one of their own houses.

striking them, and charging them as breakers of the law. The farmers assembled to the number of about 500 and attacked the samurai, with the object of getting the priests out of their clutches. The samurai, expecting the attack, had provided themselves with guns, and these quickly dispersed the farmers, though not before several were killed and more wounded.

The following is the reconstructed ministry up to last night:—

Sanjo is not removed, he remains Prime Minister of the Left, and may be on duty in two weeks.

Iwakura is now called Prime Minister of the Right, and is acting for both.

Okuma is Sangi and Minister of Finance.

Ito Shiunské is Sangi and Minister of Public Works.

Kido and Okubo are both Sangi with no departmental rank.

Terashima is Minister for Foreign Affairs with Yamaguchi and Uyeno as assistants.

Mori Rinnori is not assigned to any place, he may return to America as Chargé d'Affaires. Soyeshima out entirely.

Saigo relieved as a Sangi and appointed General has disappeared.

Corean and Formosan projects abandoned.

## Correspondence.

To the Editor of the *Japan Gazette*.

DEAR SIR,

In your Saturday's paper appeared the following paragraph:—"When the tea is packed in half-chests, it is packed while still hot, as it then *packs closer*, and keeps its flavour. But it is found that tea in cooling gains weight, *even if soldered down*, the usual increase being about  $\frac{1}{2}$  per cent."

Will any of your readers favour me with the evidence on which such a statement is made?

If the tea becomes bulkier on cooling, it ought also to become lighter. Those who have learned the rudiments of Chemistry or Natural Philosophy know that a mere change in the temperature of a body is not accompanied with a change in weight.

I am

respectfully yours,

D. H. MARSHALL.

Tokei, 20th Oct., 1873.

To the Editor of the *Japan Gazette*.

SIR,

I think you have heard all that I will write to you, but if not I think you will be glad if I write to you the following fact:—

Saigo, Kido, Itagaki, Goto, Soyeshima and Yéto have all resigned and are no longer Sangi. I do not know whether Okubo has resigned or not. But as he surely asked to be allowed to, like the others, I think he has. I think too that Okuma has been confined at home sick, though I think it would be surely a nominal sickness, so he has not at present left office, but he is not on service.

Oki has been appointed doubly the office of Sangi and Shihosho-kiyo, Katsu Awa has been appointed both Sangi and head of Navy department. And Ito, Sangi and Kobu-kiyo.

It is told that all has been done by Iwakura, because he is not agreeable to attack Corea. He seems to have resolved that he alone can do all affairs of government, though Saigo and others draw back from the service. This accounts for the quick acceptance of their retirement.

H. R. H. HIGASHI FUSHIMI-NO-MIA has made application to be allowed to serve his country either in the Army or Navy. His letter is as follows:—

To KUNAIKIYO TOKUDAIJI SANETORI,

from N'hon HIGASHI FUSHIMI YOSHIAKIRA;

Although I, Yoshiakira, belong to the imperial family, and have so far grown up, I have learned nothing perfectly. I am really sorry to be idle; and consider it a crime to continue so.

I recently travelled in Europe, where I saw all high noblemen devote themselves to the Navy or the Army from their youth. I feel the utmost shame when I reflect upon this; but I think that if I devote myself to a military life and learn the art of war, I may yet make amends. This therefore is my desire, and I pray you to grant me permission speedily. If I become a soldier, of course I become a 'combatant,' and can never receive the treatment of a member of the Imperial family. My mind overflows with this my earnest desire.

THE Chiji of Tokei Fu has issued an order respecting the dimensions of rafts on the rivers. It is often the case that rafts measuring in length from 300 to 400 feet lie in the water for months, often obstructing the traffic; and damaging the posts of the bridges when they are being taken down stream. In future rafts are not to be longer than 90 feet or broader than 12; and in small rivers 30 by 6. The rivers Tonegawa, Arakawa, Nakagawa and Tanagawa are excepted. No raft may stop on the way for more than one hour at a time, and only three hours are allowed for loading.

ON THE 24th inst., between 8 and 10 o'clock the Japanese Police made a raid on all the Lottery Houses which have latterly been such a nuisance and the cause of much indolence and consequent poverty.

A few days ago an order was made that no Lottery tickets should be sold outside of Shinabara. By this the quarry was cleverly driven into the net, when the police pounced upon them simultaneously from all quarters, making a wholesale seizure of the sellers of tickets, and everything connected with this gambling nuisance. Even the *bakuchi* or common gambling pedlars were taken to the police station.

THE FOLLOWING is the list of the punishments accorded to the rebellious people of Owaké Ken.

Capital punishment, ... ..	8
(Ringleaders or murderers of officers)	
Banishment for 10 years, ... ..	7
Hard Labour, ... ..	521
Degraded from rank of Samourai	312
do " " Priests ... ..	3
Fined (52.253 yen 25 sen between them) ... ..	26.514
Fined (410 yen 25 sen between them) ... ..	535

Of all who were taken, 3 people got away, 5 died, and 9 were pronounced not guilty.

SOME WISEACRE has been writing to Sa In, saying that "The Owari and Hizen porcelain are so improved both in shape and painting as to equal that of foreign countries; but the artists use real gold upon them. In a year a great deal must be used and so the available quantity for circulation is materially lessened. To avoid this loss to the country other painting material might be used, but then the quality

of the article must suffer in estimation of foreigners. Old money is now out of circulation, and therefore those who have it should sell to the potters and others who use gold. Sometimes people hoard their money in fireproof godowns, and are content to consider themselves rich; but money ought to be circulated, and I think an order should be issued to the makers of porcelain not to use real gold, and to the rich men to allow their money to be circulated. If the most valuable things are hoarded in a fire-proof godown they are of no more value than stone or dirt." SA In's reply was, that it had nothing to do with what people did with their money, and as to the porcelain makers, the quantity they used is so small as not to be worth consideration.

THE *Kobun Tsushi* reports that the Empress is "as ladies love to be who love their lords." We sincerely trust the information is correct, and that her fondest hopes will be realized for the happiness of the Imperial house and the good of the country.

THE LATE Prime minister Sanjo, Kido, Okuma, Saigo Kitchinoske, Etou, Goto Shojiro, Okubo, Itagaki and Soyeshima, having sent in their resignation, the Mikado accepted it. We believe Okuma has since been induced to recall his. Iwakura is to replace Sanjo, with Terashima as Minister for Foreign affairs.

Katsu Awa and Ito Shiunske have been appointed Sangi, and this has decided the victory of those who were against sending the expedition to Corea. It remains doubtful what the action of those who supported the expedition will be. Katsu Awa as Kaigun taiyo, the head of the Navy Department, has always opposed the movement, but the military authorities were not so unfavorable. It is reported that many military and Naval officers have sent in their resignation.

SANJO DAIJIN still continues to be in a very deplorable state. His illness is the effect of overwork. Never of a robust frame, he has attended to the duties of his office to an extent none supposed him capable of; and the result is complete physical and mental prostration. The five years during which he has been prime minister of the empire have been calculated to try the most able statesman and the strongest constitution, and we are not surprised, though we very much regret, to learn that his health has utterly given way. It is impossible that he can attend to business of any kind for a long time even should he recover; and for the present, as during his absence in August last, Okuma and Goto jointly act in his stead. His Majesty sent his own physician to attend on Sanjo, and has been an anxious and constant enquirer as to his condition.

SANJO DAIJIN is going on favourably. Perhaps our contemporary the *Japan Mail* is not aware that his illness had its seat in the brain. Dr. Hoffmann has indeed given hopes of speedy convalescence, and a probable return to work at no distant day; but considering all the trouble the Prime Minister has had to encounter of late; considering that if he were to return to office, he would have to endure the same annoyances; and considering that his illness was occasioned solely by his hard work and anxiety, his friends consider that it would be real madness for him to attempt to work, even though permitted by his physicians. However, his resignation with the other ministers seems to promise him plenty of rest.

In the absence of any particular news in the city, over and above that which, although most deeply interesting, develops but slowly—the changes in the Government;—we will give a few extracts from the native press. They will show the direction in which the minds of certain writers run, under the strict prohibition of comments upon political subjects.

The *Kobun Tsushi* says:—A pretty long time has elapsed since treaties were entered into between our empire and foreign countries; and since the revolution the Government has changed to the ancient form, and all proclamations emanating directly from the imperial centre. The Daimios also have been discharged from the office of Han-chiji or Governor of their provinces, and all provincial governments have been united in one. But while these changes and others naturally springing from them have gone on, there is one thing neglected in the general confusion which ought not to be left doubtful: I mean etiquette. This ought to be established so that all may understand and practise it.

For instance, there are six classes among the Japanese: viz., Emperor, Imperial relations, Kuazoku or nobles, Shizoku or Samourai, Sotsu or class of foot soldier, and common people such as merchants, workmen and farmers, who are all now of one class.

Well now! There are many different styles of dressing the hair: as,

Hampatsu, (half hair) the dressing and gathering into a cue on the crown, the forehead being shaven.

So-hatsu, (all hair) dressing it into a cue, but no part being shaven.

Chasen, (tea stirrer made of bamboo) gathering it at the top but not in a cue.

Sam-patsu (scattered hair) dressing it like that of foreigners—among whom the hair is cut and combed to part to the right or the left or in the middle; or worn long and combed back; or as in some cases dishevelled and disorderly.

Again! There are many kinds of clothes; such as:—

Japanese garment with long collar and loose sleeves. Hanten—coat worn by workmen.

Happi—Coat without sleeves.

Huori—Coat worn by gentlemen.

Hakama—trowsers worn by samourai and a great many others.

And for the feet:—

Setta—sandals armed with iron heels, with hard leather at the bottom.

Wooden clogs—high or low.

Straw sandals—and many others.

Now, why are not all these things—the hair dressing, the clothes and the shoes, not regulated to the several classes?

But besides these matters, the rules of personal etiquette ought to be established.

See, the majority of our people, when they meet an acquaintance, first bow; then talk about the weather—fine or rain, warm or cold; and they make enquiries as to the health.

Or anyone who has his head covered, first removes his hat, and then bows to his friend.

And when one calls at another's house, he stands at the entrance, and cries—"Tanomu;" and is answered from within "Doré?" And then the visitor begins to speak of his business or the cause of his visit.

Yet, when we meet our Emperor, or Daijo Daijin, or the Sangi, on the street, we have no rule for saluting them. We don't know what to do?

From what country or at what time, the ceremonial rules came to us I know not. Nor in what reign the practise of sending letters with the addresses "Sama," "Dono," "Také" "Rô," according to class. But I have heard

that a clever ruler of ancient times made these rules in order to govern quietly by letting all persons distinctly understand their relative position; and to enforce politeness.

At present—when persons wearing hats meet, they do as they please—either taking it off, raising it slightly from the head, or merely touching it with the hand, or even raising the hand without touching it. And those who wear gloves, either take them off or not.

These are but examples. There are many other ceremonies, of which I have not space or time to write.

It were well if the social distinctions could be recognised by the hair, the clothes or the shoes; but if these may be left for awhile, the regulations of etiquette ought to be settled at once.

As the nation is now fast advancing in civilization, how must we appear before foreigners if we have no established rules on so important a matter?

The following, from one of the native papers, may have more than a passing interest to some of our readers:—

The most valuable of our productions is raw silk, and the next is tea. As the quality of our tea leaf and our skill in making it is well known, a great quantity is bought for foreign countries. But of late certain of our people, thirsty for gain, and regardless of the future, have lowered the quality of the make, and brought ruin on their own reputation and on all, even honest dealers in the article.

The Government has paid a good deal of attention to silk manufacture, and made stringent rules in connection with it, but the preparation has been entirely overlooked by them.

This is a matter of very great importance, and we are glad to hear that a man named Asai Riyoho, taking it very much to heart, has established a large company under the title of Sengi Kwaisha, at No. 18, Ise machi, Tokio, by government permission. The company professes to be desirous of making profit by preventing the evil above deprecated. The rules therefore will be:—

1st.—That as a guarantee that the tea examined by this company is of the best selection and manufacture, the stamp of the company will be given, one per cent. of the price being charged for it.

2nd.—That if the manufacture is inferior the stamp shall not be given.

3rd.—If the tea, after examination, be slow of sale, and the owner shall want money, an advance will be made to him.

4th.—The rate of interest shall be 3 per cent. for over 1,000 yen, 4 per cent. for over 100 yen, and five per cent. below 100 yen, the period being for 30 days from March to August, and for 60 days from September to February.

5th.—The tea may be fired at any time after examination, even when deposited. The expense of firing shall be charged when the tea is redeemed.

6th.—Should the tea deposited be not redeemed at due date, it will be sold by tender letting the owner be the "go-between": and if the price obtained be greater than the indebtedness, the surplus will be returned to the owner.

MOHARUSHO (Education Department), has issued instructions to all Ken and Fu to furnish lists of all mineral springs within the limits of their jurisdiction; the department being desirous of obtaining full information respecting all mineral springs throughout the country. The information is to include the exact nature of the spring, and as to its temperature at all seasons, and the average number of visitors per

ensem or per annum. Also, how much of the water is sold, and what is paid for it. The average of the last three years is to be taken.

THE *Mainichi Shinbun* (Yokohama Daily News) tells that on the 8th August this year one Okada Hayzo, a very generous man living at Kugidana, Nihon-bashi, Tokei, visited a silver mine in Akita, in company with his partners. Inouye Kaora, Inouye Masaru, Musda Takashi Tominaga, and one or two others, with an American named Janin. They returned on the 14th October, with several kinds of minerals, which are to be analyzed at Okada's house. The American mineralogist is 34 years of age, and has visited mines in England, France, Germany and Spain; and even speaks the languages of those countries.

A sad tale is told in the same journal of a young woman who having been married to a man with whom she led a most wretched life, was at last obliged to return to her family. The father, greatly enraged, ordered her to apply to a doctor who should produce abortion, but the result of the treatment, whilst unsuccessful as to the end proposed, was that her mind was quite upset. Her father then increased his cruelty, and at length, on the 18th of this month, whilst her parents were absent, she destroyed herself by jumping into well.

By the carelessness of the breeders, the quality of silkworm eggs has of late years declined, to the loss of our own people and foreigners. Consequently the Government ordered that this year only 1,250,000 cards should be exported, and men were appointed to regulate what should be for export and what for home use, in each district. This silkworm business is the most important in Japan, but foolish people ruin themselves because they selfishly wish to do a great trade. Now, our Government having made certain rules, the trade began to flourish. Many foreigners visit us, and good prices were expected this month; but to our surprise we see it fall day by day. The cause is partly this. The government regulator in Shimamura, Joshii, for his own profit requested government to be allowed to export a quantity which had been appropriated for home use. Had this been granted the prices would have fallen still lower. In the same village a man named Ishii brought 9,000 cards of those intended for country use, and the report got abroad that they were intended for sale to foreigners. Thus foreigners hold off, and the Japanese being anxious sellers, they have to take low prices. It is a pity they have no patience. For by waiting they could yet better prices.—*idem*.

A FRACAS lately occurred between some samurai and farmers in the town of Okuchi belonging to Kagoshima Ken. All the inhabitants of Kagoshima were ordered by Shimadzu to abstain from worshipping Shinshuu, but as they believed in Shinshuu, a good many of the farmers opposed the prohibition, became very devout worshippers, and attended constantly the sermons and ministrations of its priests. The Okuchi men hearing what was going on resolved that they would not be dictated to in the matter of their faith, and sending for the priests engaged them to preach, and were very attentive and eager listeners.

About thirty samurai belonging to the Ken, perceiving what was taking place, in an excess of zeal rushed into the place where the preaching was going on and carried off the priests by force, taking them to one of their own houses.

striking them, and charging them as breakers of the law. The farmers assembled to the number of about 500 and attacked the samurai, with the object of getting the priests out of their clutches. The samurai, expecting the attack, had provided themselves with guns, and these quickly dispersed the farmers, though not before several were killed and more wounded.

The following is the reconstructed ministry up to last night:—

Sanjo is not removed, he remains Prime Minister of the Left, and may be on duty in two weeks.

Iwakura is now called Prime Minister of the Right, and is acting for both.

Okuma is Sangi and Minister of Finance.

Ito Shiunské is Sangi and Minister of Public Works.

Kido and Okubo are both Sangi with no departmental rank.

Terashima is Minister for Foreign Affairs with Yamaguchi and Uyeno as assistants.

Mori Rinnori is not assigned to any place, he may return to America as Chargé d'Affaires.

Soyeshima out entirely.

Saigo relieved as a Sangi and appointed General has disappeared.

Corean and Formosan projects abandoned.

## Correspondence.

To the Editor of the *Japan Gazette*.

DEAR SIR,

In your Saturday's paper appeared the following paragraph:—"When the tea is packed in half-chests, it is packed while still hot, as it then packs closer, and keeps its flavour. But it is found that tea in cooling gains weight, even if soldered down, the usual increase being about 1½ per cent."

Will any of your readers favour me with the evidence on which such a statement is made?

If the tea becomes bulkier on cooling, it ought also to become lighter. Those who have learned the rudiments of Chemistry or Natural Philosophy know that a mere change in the temperature of a body is not accompanied with a change in weight.

I am

respectfully yours,

D. H. MARSHALL.

Tokei, 20th Oct.. 1873.

To the Editor of the *Japan Gazette*.

SIR,

I think you have heard all that I will write to you, but if not I think you will be glad if I write to you the following fact:—

Saigo, Kido, Itagaki, Goto, Soyeshima and Yéto have all resigned and are no longer Sangi. I do not know whether Okubo has resigned or not. But as he surely asked to be allowed to, like the others, I think he has. I think too that Okuma has been confined at home sick, though I think it would be surely a nominal sickness, so he has not at present left office, but he is not on service.

Oki has been appointed doubly the office of Sangi and Shihosho-kiyo, Katsu Awa has been appointed both Sangi and head of Navy department. And Ito, Sangi and Kobu-kiyo.

It is told that all has been done by Iwakura, because he is not agreeable to attack Corea. He seems to have resolved that he alone can do all affairs of government, though Saigo and others draw back from the service. This accounts for the quick acceptance of their retirement.

Well, now, a disturbance is being raised in the army by Saigo's retirement. All military commanders and soldiers who have been chosen from the samurai of Kagoshima are very indispensed for above matter, for they are all very obedient to Saigo, and seem to refuse to be ruled over by another's command. Therefore, a great many of the commanders chosen from Kagoshima petitioned to retire from the service, and also all soldiers from the same province are ready to follow after Saigo and to go home together with him.

How will Mr. Iwakura manage upon these army commanders and soldiers from Kagoshima? I am very anxious about that matter indeed.

Mr. Sanjo is said to be a great deal better now, but he is not quite well yet; so he shall be, by and by, on the service. I hope he shall soon be recovered from the disease.

Yours truly,

H \* \* \*

Tokai, 26th October, 10th month.

\* \* \* The above letter which appears to have been a long time reaching us, only tells what we have already told our readers. We insert it, however, to give a genuine Japanese account of affairs up to the 26th instant, without any European colouring.

## Yokohama

"MEDDLING and muddling." Truly the amenities of a certain portion of the Yokohama press are improving. How fortunate it is for us that we have two flagellators to watch over and whip poor erring meddlers and muddlers. Our contemporary, No. 22, calls us savagely to task about our remarks relative to the private bearing of Mr. Shepard's case. It is quite possible that we were mistaken in the views we took of the case, but as we felt interested in it in common with some others, we were surprised to hear that it had been heard with closed doors. And we did not think it fair to Consul Shepard that it should be so; for thereby many who had heard the charge did not know either the reply or the verdict. We still therefore refuse to admit the justice of our monitor's abuse, until a statement of the case, the judgment that was delivered, and a list of the witnesses called, have been published. Should this be done, if we find that we have been in the wrong we will frankly avow it, and the *Herald* may pour out the vials of its wrath upon us to its heart's content.

WE ARE SORRY to see that the official enquiry instituted by one U. S. official against another has been conducted with closed doors. The charges brought by Mr. De Long against Colonel Shepard are not clearly known to the public, but report asserts them to be of such a character as we are quite sure the accused himself would desire to have publicly refuted; and we feel that whether they can be absolutely and unequivocally disproved, or satisfactorily explained, Colonel Shepard, especially on the eve of his departure, should have the opportunity of dispelling the doubts and repelling the accusations. We have no hesitation in affirming our belief that he can do both.

The charges are in connection with his consular conduct and the U. S. Postal Agency.

The enquiry has been held at the Grand Hotel; and we wonder that an astute lawyer and man of the world, such as the new U. S. Minister is said to be should have imagined that it was possible to keep the fact from the public ear.

We are not aware whether secrecy in such cases is usual in America, but it is certainly

foreign to our idea of judicial proceedings. Our information on a matter conducted in such a manner may be imperfect, but we learn that Mr. De Long, who brought the charges, was not present at the hearing. It is a mystery therefore all through; and we think it an injustice to Colonel Shepard.

It is believed that the question of the opening of the interior is settled;—we cannot pretend to say in a manner that recommends itself to us. Foreigners, on getting permission from their Minister, and depositing \$200, will be provided with a passport. It is but the thin edge of the wedge—perhaps it may be driven home some day, and the whole country opened—but when? If this be carried out strictly, it will put a stop to all our pleasure excursions among the hills, and on the coast beyond the 10 ri radius.

## Yokohama Races.

It was a great delight to many eyes, on awakening this morning to see a beautiful bright sunrise, giving promise of what was fully realized, a beautiful bright day; and the first of the race day holidays saw plenty of excursionists on the road, at an earlier hour than is usual to see such life. The races, however, were the attraction for the multitude, and a little before noon the road to the race-course began to show signs of the business of the day. Ponies that were to share in the contests of the afternoon "dressed in their braws" and attended by their private and particular bettoes, walked slowly and steadily towards the paddock, and equestrians, pedestrians, jinrikis, shandrydians, and carriage folk gradually increased, until the string from the town to the course was unbroken, and continued so for some hours. The rain of the early part of the week had lain the dust, and there was not a drawback of any kind. At the Grand Stand the attendance was fair, and enjoyment was the order of the day. There were not a few who missed old familiar faces of other days and who spoke together of the past, and of the men who had been the life and soul of those gatherings; but the bulk of the visitors cared for none of these things, and, as was meet, gave themselves up to the sport of the passing hour. The admiral and officers of the *Iron Duke* had lent their hand, and the selection of music and its performance added greatly to the pleasantness of the day.

### FIRST DAY.

Thursday, 23rd October.

The following are the names of the winners:—

#### 1.—The Yokohama Plate.

Value \$100.—For China Ponies. Winners at last Meeting excluded. Weight as per scale. Entrance \$5. Once round.

Mr. Alfred's ...	<i>Edgar</i> ...	1
Mr. Edward-Ola's ...	<i>Carrots</i> ...	2
Mr. Lloyd's ...	<i>Daybreak</i> ...	3

#### 2.—Maiden Stakes.

Value \$100.—For Japan Ponies, that have never won a race. Weight as per scale. Entrance \$5. Half a mile.

Dr. Wheeler's ...	<i>Zephyr</i> ...	1
Mr. John Grigor's ...	<i>Monte Cristo</i> ...	2
Mr. Edward-Ola's ...	<i>Akum'e</i> ...	3

#### 3.—The Club Cup.

Value \$100. For China Ponies. Weight as per scale. Entrance \$5. One mile.

Mr. Lloyd's ...	<i>Crusader</i> ...	1
Mr. Edward-Ola's ...	<i>Ak'ea</i> ...	2

#### 4.—The Yedo Cup.

Presented by F. O. Adams, Esq. For Japan Ponies that competed for this event at the Spring Meeting, 1873, and for Ponies that have never run previous to this meeting. To be won at two consecutive meetings by the same Pony or Ponies, the property of the same owner. Weight, 10st. 7lbs. Entrance, \$5. Three quarters of a mile. Entrance Fees to go to the winner, excepting when the Cup is won, then Entrance Fees to go to the Second Pony.

Mr. Nicolas' ...	<i>Ma-htotz</i> ...	1
Dr. Wheeler's ...	<i>Zephyr</i> ...	2
Dr. Wheeler's ...	<i>Boreas</i> ...	3

#### 5.—The Visitors' Cup.

Presented. For China Ponies. Weight as per scale. Winners at this meeting, 7lbs extra for each race won. Entrance, \$5. One mile and a half.

Mr. Lloyd's ...	<i>Crusader</i> ...	1
Mr. Edward-Ola's ...	<i>Polo</i> ...	2

#### 6.—The Nippon Champion.

Value \$150. For Japan Ponies. Weight as per scale. Entrance \$10. One mile.

Dr. Wheeler's ...	<i>Typhoon</i> ...	1
Mr. Nicolas' ...	<i>Ma-htotz</i> ...	2

#### 7.—The Nankin Cup.

Value \$100. For China Ponies. Weight as per scale. Winner of No. 3 excluded, of No. 5, 4 lbs. extra. Entrance \$5. Three quarters of a mile.

Mr. Alfred's ...	<i>Dibs</i> ...	1
Mr. Lloyd's ...	<i>Calabar</i> ...	2
Mr. Edward-Ola's ...	<i>Carrots</i> ...	3

#### 8.—The Press Cup.

Presented.—For Japan Ponies. Weight as per scale. Winner of No. 6 excluded. Winners of one race 4 lbs., of more than one race, 7 lbs. extra. Entrance \$5. Three quarters of a mile.

Mr. John Grigor's ...	<i>Tim Whiffler</i> ...	1
Mr. Lloyd's ...	<i>Friar Luck</i> ...	2
Dr. Buckle's ...	<i>Massaki</i> ...	3

#### 9.—The Scurry Stakes.

For all Ponies. A Sweepstake with \$50 added from the Fund. China Ponies 11st, Japan 10st. Entrance \$5. One quarter of a mile.

Mr. Douglas' ...	<i>Loup Garou</i> ...	1
Dr. Wheeler's ...	<i>Simoom</i> ...	2
Mr. Lloyd's ...	<i>Calabar (late Spite)</i> ...	3

## SECOND DAY.

Friday, 24th October.

#### 1.—The Bluff Cup.

Value \$100. For China Ponies. Weight as per scale. Winners on first day excluded. Entrance \$5. One mile.

Mr. Lloyd's ...	<i>Chanticleer</i> ...	1
Mr. Edward-Ola's ...	<i>Carrots</i> ...	2
Mr. Edward-Ola's ...	<i>Polo</i> ...	3

#### 2.—The American Cup.

Presented. Value \$150. For Japan ponies. Weight as per scale. Two ponies from opposing stables to start or no race. Entrance \$10. Three quarters of a mile.

Dr. Wheeler's ...	<i>Typhoon</i> ...	1
Mr. Lloyd's ...	<i>Friar Luck</i> ...	2
Mr. John Grigor's ...	<i>Tim Whiffler</i> ...	3

#### 3.—The Ito Cup.

Presented. For China ponies. Weight as per scale. 7 lbs. extra for each race won under a mile. Entrance \$5. Half a mile.

Mr. Edward-Ola's ...	<i>Carrots</i> ...	1
Mr. Lloyd's ...	<i>Crusader</i> ...	2
Mr. Douglas' ...	<i>Loup Garou</i> ...	3

#### 4.—The Challenge Cup.

Value \$150. For China ponies. Weight as per scale. Two ponies from opposing stables to start or no race. Entrance \$10. Two miles.

Mr. Lloyd's ...	<i>Chanticleer</i> ...	1
Mr. Edward-Ola's ...	<i>Polo</i> ...	2

**5.—The Stirrup Cup.**

Value \$75. For all ponies not entered in any other race, excepting Nos. 1, 3, and 4 on the 3rd day. China ponies weight as per scale, Japan ponies 10st. 2lbs. Entrance \$5. Last pony to pay second pony's entrance. Once round.

Mr. Osborne's ...	<i>Seismograph</i> ...	1
Mr. Sandwith's, R.M.,	<i>Kingcraft</i> ...	2
Mr. John Grigor's	<i>Hant-ton</i> ...	3

**6.—The Storekeepers Plate.**

Value \$150. Presented by the Storekeepers of Yokohama. For China ponies. Weight as per scale. Winners at this meeting, of one race 4lbs., of more than one race 10lbs. extra. Three Ponies from opposing stables to start, or no race. Entrance \$5. One mile and a quarter.

Mr. Lloyd's ...	<i>Crusader</i> ...	1
Mr. Shepard's ...	<i>Yankee Doodle</i> ...	2
Mr. Edward-Ola's...	<i>Khira</i> ...	3

**7.—The Exchange Cup.**

Presented. For Japan ponies. Weight as per scale. Winner of No. 8 first day excluded. Winners of one race 7lbs and more than one race 10lbs. extra. Entrance \$5. One mile and a quarter.

Mr. Lloyd's ...	<i>Friar Tuck</i> ...	1
Dr. Wheeler's ...	<i>Typhoon</i> ...	2
Dr. Wheeler's ...	<i>Zephyr</i> ...	3

**8.—The Handicap Plate.**

Value \$100. For China ponies. To be Handicapped after race No. 6 has been run. Ponies entered for previous races and not running, to be handicapped up to top weight. Entrance \$5. Three quarters of a mile.

Mr. Lloyd's ...	<i>Calabar</i> ...	1
Mr. Alfred's ...	<i>Libs</i> ...	2
Mr. Shepard's ...	<i>Yankee Doodle</i> ...	3

**9.—Japan Welter.**

Sweepstake with \$50 added. For Japan ponies. Winners at this Meeting 10lbs. extra. Weight 12 stone. Owners up. Non-starters to pay a fine of \$5, and fines to go to second pony. Entrance \$5. Half a mile.

Mr. Wheeler's ...	<i>Boreas</i> ...	1
Mr. John Grigor's ...	<i>Tim Whiffler</i> ...	2

**THIRD DAY.**

Saturday, 25th October.

**1.—Hurdle Race.**

Value \$75. For all ponies. Over six (6) Hurdles. Weight China ponies 11st., Japan 10st. 7lbs. Entrance \$5. Once round.

Mr. Alfred's ...	<i>Edgar</i> ...	1
Dr. Buckle's ...	<i>Massaki</i> ...	2

**2.—The Grand Hotel Cup.**

Value \$200. Presented. For all winners at this Meeting, Entrance compulsory, optional for beaten ponies. Weight, China ponies 11st., Japan 10st. Entrance \$10. One mile and a quarter.

Mr. Lloyd's ...	<i>Crusader</i> ...	1
Dr. Wheeler's ...	<i>Typhoon</i> ...	2
Mr. Lloyd's ...	<i>Friar Tuck</i> ...	3

**3.—The Solace Cup.**

Value \$75. For all beaten Japan ponies at this Meeting. Weight as per scale. Entrance \$5. One mile.

Mr. Cassambrook's...	<i>Chisai</i> ...	1
Mr. John Grigor's...	<i>Monte Christo</i> ...	2
Dr. Buckle's ...	<i>Massaki</i> ...	3

**4.—The Consolation Cup.**

Value \$100. For all beaten China Ponies at this meeting. Weight as per scale. Entrance \$5. Once round and a distance.

Mr. Shepard's ...	<i>Yankee Doodle</i> ...	1
Mr. Edward-Ola's ...	<i>Polo</i> ...	2
Mr. Lloyd's ...	<i>Daybreak</i> ...	3

**5.—The Italian Cup.**

Presented. Value \$— A Handicap for all Ponies to be handicapped at the close of the second day Entrance \$10. Non-acceptance half forfeit. Three, quarters of a mile.

Mr. Lloyd's ...	<i>Calabar</i> (late <i>Spite</i> ...	1
Mr. Osborne's ...	<i>Seismograph</i> ...	2
Dr. Wheeler's ...	<i>Typhoon</i> ...	3

**7.—The Members' Cup.**

Value \$50 to first pony; \$25 to second pony, and \$10 to third pony.

For all ponies that have never run at any meeting, to be ridden by members, who have not ridden at this meeting except in No 9, second day; catch weights. Entrance \$5. Once round.

Mr. Winkle's ... *Envoy* ... Walk over.

**1st.—Bettoe's Race.**

<i>Typhoon</i> ...	1
<i>Friar Tuck</i> ...	2
<i>Polo</i> ...	3

**2nd.—Bettoe's Race.**

<i>Dibs</i> ...	1
<i>Tim Whiffler</i> ...	2
<i>Boreas</i> ...	3

THE JINRIKISHA RACE.—Round the Course. Time of winner 6 minutes.

**Asiatic Society of Japan.**

A SPECIAL MEETING of the above Society was held in room No. 19, at the Grand Hotel, on Wednesday, the 22nd October, at 8.30 P.M., the chair being taken by Vice-President Sir Harry S. Parkes, K.C.B.

After reading of the minutes of the last meeting, a Paper by Captain Deschermes, of the French Military Mission, on "The Warm Spring of Kusatsu" was read by Mr. Howell.

In the paper the writer enters into details of the nature of the country passed through on the journey from Yedo to Kusatsu, a distance of 46 to 47 miles, and describes in a precise and interesting manner the geographical features of the district lying between the two points, at the same time describing the character of the road traversed and the many objects of interest on the way with a minuteness that cannot fail to be appreciated by any who may have made the journey and interesting to those who may contemplate it.

The various properties, temperatures and conditions of the springs are explained at length, and accounts given of the high reputation of the waters at the present time and for centuries past among the Japanese.

A list of the diseases benefited by waters and their mode of treatment was appended to the paper, but being of a purely technical nature it was not considered necessary to read it at the meeting as it would, perhaps, not be generally interesting and it would, in due course, appear on the publication of the paper.

Mr. Watson, having remarked upon the great care and trouble taken by Mr. Howell in the translation of the paper.

Mr. Satow considered that the thanks of the meeting were due to Captain Deschermes for his kindness in giving the paper, and thought it would be well if other travellers would, in the same way, make notes of their experiences and afterwards publish them for the information and benefit of the public at large.

In this Sir Harry Parkes fully agreed, suggesting that all tourists should give to the society narratives of their travels, which should be kept where access might be had to them by visitors to this country, who would learn and see more of all that is so interesting in Japan if they had any means of ascertaining "What to see and how to see it." He considered that the thanks of the community were due to Captain Deschermes for bringing to their notice a place within such easy access, with a climate essentially such as Europeans require in the summer months, and at which much benefit might be derived in a sanitary point of view.

The Chairman concluded his remarks by moving a vote of thanks to Captain Deschermes

for the very interesting paper he had given to the Society, and to Mr. Howell for his care and pains taken in the excellent translation thereof, which was seconded by Mr. Watson and carried unanimously.

A second paper was then read by Mr. Watson on "Dr. Kämpfer's History of Japan," a work published in Germany in the year 1727 and containing an exhaustive account of Dr. Kämpfer's travels, in and about Japan, from September 1690 to the year 1692, and his studies of the country and its people during that period. Considering the little that was known of Japan at that time the work is regarded as one of great merit. The general geographical description of the country is accurate, though modern researches correct some statements set forth, more especially regarding the island of Nippon.

The author dissents from the theory of the Japanese being descended from the Chinese or Koreans, considering them to be of an entirely different character and asserting them to have been originally descended from Babylon, whence he brings the nucleus of the race by the shortest and fastest possible route, without apparently an impediment of any kind, to the shores of the land they were destined to people. He enters to a considerable extent into the histories of the former Emperors of Japan, histories which are in the main simply legends dating back thousands of year before the birth of Christ and even before the creation of the world; the histories of the Mikados, their customs and ceremonies and those of the court; the form of religion of the country; and much valuable and interesting information is given concerning the animal and vegetable life and the mineral products of the country.

At the conclusion of the paper Mr. Satow, who considered the public were much indebted to Dr. Kämpfer at the present time for the work placed before them, corrected certain statements which appear therein with reference to the revenues of the country, which should rather be considered as its products.

Sir Harry Parkes after passing compliments upon Mr. Watson's interesting abstract, remarked that Dr. Kämpfer had evidently derived his information from a very close observance of the Japanese character; but although we were much indebted to him, he could not be considered a perfect authority especially in his theory of the Japanese descent from Babylon. It would be well for all interested in the subject to read the Doctor's work and compare it with the present state of affairs.

Rev'd. Mr. Syle moved a vote of thanks to Mr. Watson for the paper he had just read, referring to the interest always taken by him in the Society and the services he had rendered it as its first President, and regretting that it would so soon lose his valuable co-operation.

Admiral Shadwell seconded the motion which was carried unanimously, and there being no further business before the meeting it separated.

**Chamber of Commerce.**

October 22nd, 1873.

An extraordinary General Meeting took place this afternoon to discuss some important changes and alterations in the Silk trade; contemplated, and even actually in course of execution, by the native dealers.

A. J. Wilkin Esq., Chairman.

Messrs. Geisenheimer, A. Winstanley, Jacquemot, White, Barnard, J. Mackrill Smith, Barlow, Milsom, Heinemann, S. Evers, Sitwell, Bavier, Breut, Johnson, Pistorius, Dell Q10, Barthe.

The minutes of previous meeting of 17th September were read by the secretary, and approved.

The Chairman, after stating that the meeting was called per advertisement, said:—It will be known to us all, that commencing with this season, the Japanese have made up their Hank silk with a light and uniform paper tare; which, with the strings, may be assumed to weigh a trifle under 2 per cent; and this is an improvement which deserves our recognition. Some buyers have been content to deduct a tare of only 2 per cent but generally I believe buyers have stipulated for 2½ per cent. It has also been the custom with those buyers who weigh off their silk in Shirting bags, to deduct 1lb, for the bag—it's actual weight being half a lb, or a little over, the balance standing as a kind of tret; and these two allowances give the buyer, say about 1 per cent to set off against the loss sustained by the tare and tret taken in London, the 'drying in' on the way, or the deduction for moisture when the silk is conditioned in France; and it seems to me that some such small set off is a very reasonable claim on the part of buyers.

The Silk guild has now banded together to refuse to sell except with a tare of 2 per cent, and deducting only the actual weight of the Shirting bags, and the last few days much annoyance has been caused thereby.

I may say, however, that some silk-men now assure me that they will not insist on fixing the tare, so long as the Shirting bag question be conceded to them.

When it was bruited abroad that these measures were in contemplation, Mr. Jacquemot called a meeting of the Silk trade on the 3rd instant, to consider what steps should be taken by foreign buyers. I suppose about twenty attended that meeting; and as I was present, I may just state what passed then. The speakers were unanimous in condemning the arbitrariness of the manner of proposing these changes; and it was generally agreed that some little allowance such as has hitherto been obtained by individual arrangement, was both reasonable and necessary. At the same time little hope was entertained that buyers could be got to combine against these measures; and it was difficult to give any practical expression to the feeling of the meeting. Just as the meeting was dispersing, and after some of its members had left, a deputation from the Silk-guild came up, consisting of the heads of the principal houses. Those of us who had not left brought them up to this room, and heard what they had to say. They stated that the Silk-guild themselves were indifferent about the matter, but that the country dealers had applied to the guild to make these changes compulsory. They assured us that these changes were not yet determined upon, and that they were open to discuss them with us. We accordingly then and there acted upon the resolutions passed at the meeting; told them what had taken place, and put the matter before them in its various aspects, viz:—

That it was very discourteous to the foreign buyers to make such arbitrary regulations without previous reference to them. That some allowance in weight was a very reasonable custom, seeing that the Silk was often damp; that it dried in, on the way to London; or was conditioned in Lyons; and that it was the custom in London to take a considerable allowance for tret. That it was, lastly, quite unnecessary to make these arbitrary regulations. Each seller could settle with each buyer the allowance to be taken, in conjunction with the price. These considerations were placed strongly before them, and they expressed their desire to be in accord

with foreign buyers; but it really seems doubtful whether the matter had not then already been settled by them. I understand that some gentlemen are now more sanguine of a successful attempt at combination among foreign buyers, and that a resolution to that effect will be brought forward.

Mr. Winstanley of Messrs. Cornes & Co. mentioned a case in point. On the 14th October, our silk buyer purchased 18 bales silk, but no mention was made of the new conditions of sale till after the purchase had been concluded. Then the question was raised and objected to by the buyer as the bargain had been already concluded. The buyer was then allowed to mark the bale but the same day Ichinoya sent word that they did not intend to deliver the silk unless the allowance for tare was made; and to this day it has not been delivered. Ichinoya afterwards sent a messenger to say that if the buyer would consent to a tare of 2 per cent he would deliver, but as the matter had been put in the hands of the Consul, nothing further had taken place. Mr. Winstanley remarked that according to common practice Ichinoya should deliver up the silk.

Mr. Bavier then stated that some short time back, being unwell, his Silk Inspector had received an agreement from a Japanese silk merchant from whom he had purchased silk, stating that he, the silk merchant, would return the tare for paper and bags, should any other Japanese silk merchant do the same. He however has declined to purchase on these conditions, and in the case in question has had the cheques given for the silk stopped; as the agreement made by his Silk Inspector was, that unless all the other European merchants bought on the new conditions the bargain should not be completed, which is different from what the agreement given by the seller proved to be upon translation.

Mr. Jacquemot said, the Silk Merchants must take a decided stand. The Japanese have never given any official notice of the alteration of terms. The question of ½ or 1 per cent was a small matter; but if this were allowed now, where would they stop? If the foreign merchants were anxious buyers, the Japanese were quite as anxious to sell. Now as trade is slightly improving the Japanese are trying to squeeze all they can; but by and by if this were allowed they would insist on more severe terms; and unless we were prepared to state firmly the conditions of our trade, there would be no end to these encroachments.

He then proposed a resolution to which an amendment was made: and after a lengthy discussion as to the impossibility of binding buyers of silk not to enter into any transactions,

Mr. Barlow remarked that, a simple resolution of this kind could not bind the whole trade of Yokohama; as in the event of any firm receiving an order to purchase silk, they would buy regardless of it; particularly as the whole Silk trade of the place was not represented at this meeting.

Mr. A. Winstanley said, it would be impossible to carry out such a resolution; and that he, for one, certainly would not abide by it.

Mr. Geisenheimer suggested an amendment which was seconded by Mr. Bavier, and carried by the meeting; as follows:—

"That in order to check the tendency of the Japanese Silk Guild to override arbitrarily the established usages of trade, the following houses be invited not to enter into any transactions in silk upon other conditions than the customs of the trade ruling hitherto, until an understanding has been arrived at between

a Committee appointed by the Chamber of Commerce and the Native Silk dealers."

Mr. Bavier said it was a question whether we should put up with a little temporary inconvenience, and keep out of the market for a time; as the difference of 1½ per cent. would amount to large sums in the course of time. His firm having orders in hand delayed to execute them on account of the present difficulty; and he felt quite sure this course would be approved by his constituents at home who otherwise would have to suffer by the change as the cost of the silk would be enhanced in proportion.

Mr. Winstanley thought the difference would not be more than ¾ per cent.

Mr. Jacquemot declared that the Silk this season was damper than ever he had known it; and that the loss through dampness was 4 per cent.

Mr. P. Heinemann thought the Chamber should object strongly against the arbitrary manner of the Japanese silk guild, but that any resolution made now would not be binding on all members.

Mr. Milsom opined that 3 per cent should be allowed instead of 1 per cent.

Mr. Geisenheimer objected, on the principle that in asking too much, we should get no concession at all; and proposed the following resolution which was seconded by Mr. E. Bavier.

"That a committee of three be immediately appointed by the Chairman, to communicate with the native silk dealers, and in order to facilitate an understanding, as also to establish the customs of the trade upon an uniform and sound basis, the committee be empowered to make to the guild, the following proposition; that for the weight of paper and strings of Hanks as it actually is at present the tare be fixed at 2½ per cent. That 1 per cent upon the net weight of the silk sold, be taken as a compensation for dampness; and that no other allowance be taken from the sellers." Carried unanimously.

The Chairman proposed Messrs. Bavier & Co., Cornes & Co. and J. M. Jacquemot to form the Committee; but on Mr. Winstanley objecting to serve, the Chairman nominated Mr. F. W. A. White of Messrs. Macpherson & Marshall.

Mr. Geisenheimer hoped the Committee would inform the Chamber the result of their labours as soon as possible.

After a vote of thanks to the Chairman the meeting separated.

OCTOBER 30TH, 1873.

Adjourned Special Meeting to receive the report of the Special Committee (appointed at the meeting of the 22nd inst.) on their conference with the Silk Guild.

A. J. Wilkin, Esq., Chairman. Members present:—Messrs. Bavier, Jacquemot, A. Winstanley, Sitwell, Heineman, Kingdon, Piquet, Pistorius-Barthe, Jackson, Vouillemont, Trulzi, Giammi.

The minutes of the last meeting having been read and approved. The Secretary read the report of the Special Committee.

YOKOHAMA, Oct. 23, 1873.

To A. J. WILKIN, Esq., Chairman Yokohama General Chamber of Commerce.

SIR,—We, the undersigned, acting as your Committee, beg herewith to hand you a report of our proceedings in the matter of the difference with the Silk Guild of Yokohama. Immediately after the conclusion of the meeting on Wednesday, 22nd inst., we repaired to the godown of the Kiito Aratame Kaisha, accompanied by an interpreter; and after a little delay were brought

into direct communication with the heads of the silk houses of Nosawaya, Gumayah, Itoyah and Kumatzuyah. We at once informed them of the result of the meeting at the Chamber of Commerce and laid before the representatives of the above houses in a plain and concise way, the full import of the resolution passed, at the same time informing them that it was not within our province to discuss the matter, and at the same time added that what had been detailed to them verbally should, in due course, be handed them in writing with a translation attached. We, in continuation, begged the Japanese representatives to meet us at their earliest convenience, and to save time, to bring with them their answer in writing. To this they at once assented, and appointed a meeting for the next evening, the 23rd, at six o'clock, naming Mr. Jaquemot's office as the rendezvous. In accordance with this we, your Committee, met at the appointed hour, to find that the Japanese representatives did not put in an appearance, but instead, sent up a brief message to the effect that 8 o'clock the next morning, the 24th, would suit them better. There being no help for it we again acceded only to be treated in a like manner, for again the Japanese did not appear. Finally, they sent us a written answer, as per copy herewith. This answer speaks for itself. In closing this brief report of what passed, we, your Committee, cannot refrain from making mention of the very high handed and discourteous way in which we were treated whilst carrying out the duties imposed upon us by the Chamber of Commerce.

We are, &c.,

J. M. JAQUEMOT,  
BAVIER & Co.,  
F. W. A. WHITE.

YOKOHAMA, 23rd Oct., 1873.

To the Members of the Kiito Aratame Kaisha.

GENTLEMEN,—We, the undersigned, having been appointed by the General Chamber of Commerce of Yokohama with a view to come to an understanding with you in order to put the Silk-trade of this place upon an uniform and stable basis, beg to inform you in writing (as we have already done verbally) of the terms which were unanimously adopted by the Chamber of Commerce of Yokohama at the meeting which was held yesterday for that purpose.

"From and after this date for all kinds of Silk sold the actual weights of the Shirting bags or baskets in which the Silk weighed shall be deducted. The Tare to be deducted for the papers and strings of Hank Silk of such weight as they actually are at present, shall be fixed at  $2\frac{1}{2}$  per cent.

"The Tare for paper and strings of other kinds than hanks shall continue to be settled by mutual consent of both buyers and seller.

"Upon the net weight of the Silk after deduction of all fares, one per cent shall be allowed to the buyer as a compensation for dampness.

"That allowance of 1 per cent. shall be made on all kinds of Silk whether made up in hanks or otherwise.

"No other allowance whatever shall be made by the sellers to the buyers either for musters or anything else."

Please submit the above terms to your Corporation as the future rules of the silk trade of this place, and inform us as early as you possibly can, of their being accepted by your Guild so that business may no longer be delayed.

We have, &c.,

J. M. JAQUEMOT,  
BAVIER & Co.  
F. W. A. WHITE.

The Chairman said the Japanese Silk Guild refused to grant the allowance asked for for

dampness, and he should like to hear the views of the meeting on the subject.

Mr. Jaquemot stated that the Japanese Silk Guild admitted that they thoroughly understood what was proposed by the Committee, and that it appeared to him a foregone conclusion of theirs. He asked what guarantee had we to bind the Japanese to their agreements? The Japanese deny dampness in the silk. If we are to be in the power of the guild the sooner we admit it the better, but he was determined to resist to the last, and hoped the silk trade would combine to do the same. If every one would give up a little of his personal interest we may carry our point, but we must refrain from buying or inspecting silk for a time. He had just bought a parcel of silk and was requested to inspect it but refused, and would not give way to weigh the bags. He hoped this had a good effect on the seller. He would put the following to the meeting.

Whereas the Kiito Aratame Kaisha is a Japanese institution connected with and under the control of the Japanese Authorities; and whereas the Kiito Aratame Kaisha issues rules, edicts and ordinances by which the whole of the privileged Silk merchants of Yokohama are governed; and whereas the Kiito Aratame Kaisha has the power to impose fines on or otherwise punish the native merchants whenever the latter act in opposition to the wishes or ordinances of the Kiito Aratame Kaisha; considering that in consequence of the power thus possessed by the Kiito the native merchants individually are afraid of entering into any commercial operation which might subject them to the penalties alluded to above:

Considering that the system of intimidation thus exercised by the Kiito is in direct contradiction with Article XIV. of the British Treaty which provides that, "British subjects may freely buy from Japanese and sell to them any articles that either may have for sale without the intervention of any Japanese officers in such purchase or sale;" considering that it is by a body of men acting under the authority and sanction of the Japanese Government that the pressure is exercised the result is practically the same as if it had been done by the Government itself, in virtue of the old axiom *quis facit per alios facit per se*; and whereas the Kiito has in two recent circumstances imposed upon the native dealers certain rules interfering with usages of trade, which have been in existence for a long time, whereby commercial operations have been considerably perturbed and impeded; and whereas the best if not the only practical means of counteracting the power of the Kiito would be for the foreign merchants to form a combination of their own with a view to resist the Kiito; and whereas the laws of all the foreign powers prohibited all such ways and manners of intimidation as are resorted to by the Japanese, considering that a combination on the Japanese system is illegal as far as the foreign merchants are concerned and cannot be adopted by them; considering, besides, that the foreign silk merchants possess no means of effectually resisting the aggressive tendency of the Japanese Silk Guild and are at a loss how to protect their interests which are now in abeyance; I therefore move:—

That the circumstances in which the silk trade of Yokohama is situated constitutes an infraction of the Treaty, and that an appeal be made to the Foreign Representatives with an earnest request that their attention may be drawn at their earliest convenience to the above grievances.

Mr. Bavier seconded the resolution.

Mr. Kingdon demurred to Mr. Jaquemot's remarks, and said the imposition was not so great as he would lead us to suppose. The Japanese were quite right in charging for the actual weight of Silk sold which hitherto they had not got. Shirting bags vary much in weight. The usages of trade ought to be specific. The weight of the bag or basket should be fixed.

With regard to the dampness it had only cropped up lately, many things lose in weight, in transit, as:—Rice, Shirtings, &c., &c. If the Silk is damp we must look out for this ourselves. With regard to the  $2\frac{1}{2}$  per cent tare he had weighed the papers and strings, and had been allowed 2 per cent before, and as far as the bag question is concerned he would go no further. He would put the following resolution to the meeting.

That in regard to the tare, either we should wait until the receipt of account sales from Europe, or that we should weigh the tare and deduct the true weight.

This was not seconded.

The original resolution on being put to the meeting was carried.

The Chairman remarked the shirting bag question was already settled.

Mr. Bavier said the bag question was already settled; but this was a question as to the Kiito Aratame Kaisha and the infraction of the Treaty.

Mr. Bavier proposed it should be left to the Chairman to bring the matter to the notice of the Foreign Representatives.

The Chairman remarked that perhaps too much stress was laid on the tone of the guild's reply. Translation of Oriental languages was a difficult task, and more than probably no brusqueness of speech was intended by the guild.

Mr. Bavier proposed the following resolution:—

That the Committee appointed at the last meeting answer the *Kaisha* to the effect that the matter remains in abeyance at present, the whole question having been referred to the Representatives of Treaty powers.

Seconded Mr. Sitwell.

Carried.

Mr. Kingdon said it was not wise to push this question too far. We already had an advantage conceded in the shirting bag question. As to the matter of tare and dampness we had better wait till we get accounts from home and in the meantime give the Guild to understand we are perfectly willing to meet them on fair terms.

Mr. Winstanley and Mr. Heinemann remarked the tare was settled; it was now only a question of dampness.

Mr. Jaquemot thought Mr. Kingdon had gone beyond the question. When we agreed with the seller we took our chance. The question was not one of *per centage*, whether large or small, but whether we were free agents to do as we thought best, or as the Japanese Silk Guild ordered us.

Mr. Kingdon did not see why we should want to take  $2\frac{1}{2}$  per cent. tare when we are certain the real tare is less.

Mr. Bavier said if we proposed to the Ministers to act hostilely, we must suspend negotiations altogether ourselves in the meantime.

After a vote of thanks to the Chairman the meeting separated.

The following is a translation of the reply which has been received by the Sub-Committee appointed to confer with the Silk Guild upon the subject of deduction and tare:—

"On the 22nd instant, you came to the Kiito Aratame Kaisha on the part of the Chamber of Commerce of Yokohama. We have well understood what you spoke about and have consulted the silk owners of the various provinces. There is one point that we cannot grant, which is that upon the net weight of the silk sold, after deducting and tare, one per cent shall be allowed to the buyers as a compensation for dampness.

For the weight of papers and strings of Hank silk  $2\frac{1}{2}$  per cent are deducted; but in reality there is only 1.6/10 per cent. The balance is therefore a compensation for dampness. Consequently we cannot allow the buyers the one per cent extra you ask for.

Should you accept this point we shall grant you the others.

Please consult the Chamber of Commerce and give us a reply.

NEBARA SHIROZAIMON, } on duty for this  
SUZUKI YASUBEI, } month at the Kiito  
Aratame Kaisha."

## Law Reports.

### Gaimusho, Yedo.

#### CLAIMS AGAINST THE OLD HANS.

Judge HANNEN and Mr. TAMONO,

Commissioners.

October 17th, 1873.

E. C. KIRBY & Co. vs. TONAMI HAN:

This action, adjourned from the 3rd inst., owing to non-appearance of witnesses from various causes, was this morning resumed.

Hayano, for the plaintiff, examined by Mr. Dickins: In June, 1871, I was interpreter to the Saibansho in Kobe. Knew Hunter. I was asked by Hara Genshiro to act as interpreter for some Han business, but it is now so long ago that I cannot really recollect distinctly. I had met him before, but Sanai and Otonoski I saw for the first time in regard to this affair. I never saw Akabane. I believe that Genshiro came in the suite of a high officer. What he was in 1871, I cannot say. I do not think there was any sign outside the hotel, at Osaka. I was asked by Genshiro to explain to the foreigner that he wished to buy goods on credit, and subsequently that he, Genshiro, would procure sureties, at the same time giving their names. I was asked to explain the bond, after which I did not see Genshiro again. This is all I had to do with the affair. I considered Sanai to be the chief of the four men from the manner in which he was treated. I had no reason to believe or think that those men were doing anything beyond their powers. I know nothing of the steamer mentioned in previous evidence. [Document A shown to witness.] I only saw a draft of this document. I have lived in Kobe about four years, but have only been to Osaka now and then for a few days at a time.

Cross-examined by Mr. Hill, for the defendant, witness deposed: I cannot say that Genshiro was an officer of the Tonami Han in 1871. I believe that he and Sanai were samurai. The names of the parties to the purchases were Sanai, Genshiro, Otonoske and Akabane. I only acted as interpreter between Hunter and the officers of the Custom House. I do not remember Hunter coming to the Custom House with contract A, to make inquiries. I never said that the men before mentioned were authorized to act for Tonami Han. I cannot say when I first heard that it was Han business. I have never seen any proof that these men acted for the Han. For my own part I never received any remuneration for my trouble in the affair. In my previous evidence, I meant to say that to me there was no appearance of fraud in the acts of the parties to the purchases, that is why I said they did not seem to be going beyond their powers.

Doyi, examined by Mr. Dickins: I was up to the year before last (Japanese Calendar), an officer at Osaka, from the revolution of 1868 to the 11th month of year before last. It was usual for samurai coming to Osaka to report themselves, otherwise they were punishable. The innkeeper would be sure to mention the arrival to the ward officer, who fortnightly notified same to Municipal Government. They could not know of arrivals and departures at private y-shikis. There were, year before last no police as now, at Osaka. The house of Senojiya has a good reputation. I first saw the names of the sureties on the bond when I examined. The case brought against the sureties was never decided, the statements of the two parties differed. I suspected the contract, not so much the note, on which the action was brought. The way of attaching the Han seal was suspicious. The defendants were called on to pay the note, but said they were unable to do so. I remember no other sort of defence made. The Court informed Hunter of this. I cannot say whether any record of the proceedings was kept at the time.

Witness, cross-examined by Mr. Hill, said: I was in June, 1871, Sho-sanji. The Osaka Fu was the place of registration for strangers. I cannot say whether Sanai and the others were reported to the officer of said registration office. If so, Hunter could have ascertained all that was necessary about them. I have never heard of attaching a seal on a separate piece of paper. In the spring of 1871 I did not know of any of these men alluded to being at Osaka.

Re-examined by Mr. Dickins: Officers sent by the Han to Osaka on business have written orders, which I never saw in the hands of these men.

Bichinya Jinski, examined by Mr. Dickins, deposed: In July, 1871, I was living at Zakube, in Osaka. There were some Tonami Han officers there a short time, named Tanaka Sanai, Hara Genshiro, and

Nagayama Otonoske. Touching their dress I cannot say, but they wore, I remember, two swords each. They went abroad day and night. I remember a sign, on which was inscribed "Tonami Han Geshiku" meaning lodging for such Han. I reported having these people to the proper office.

On cross-examination by Mr. Hill, witness stated: I cannot affirm that these men were officers of the Han. I reported them as persons of Tonami Han. All samurai were then entitled to wear two swords. I cannot speak as to any difference of dress between officers and samurai.

Minakata Jimpei, cautioned, deposed: I am a merchant in Osaka. I am not trading at present. The parties named in document A, were officers of Tonami Han.

Cross-examined by Mr. Hill: In only saw Genshiro and Sanai. I was told that the men in question were officers of the Han by said Sanai and Genshiro, and so believed it to be a fact.

Kudo Tamamori, examined by Counsel for the plaintiff, said: In 1871-2, I was officer in charge of complaints at Osaka. I know Osaka well, having lived there some time. I know the name of the house Tenojiya, but nothing of these men. I remember the complaint made on the promissory note. The result was that all were to be sold up, which was subsequently the case.

Cross-examined by Mr. Hill: The paper you produce was placed with the other documents relating to the case. The proceeds were handed over to the Osaka Court I suppose they remain there subject to plaintiff's order.

Oct. 18.

At the commencement of the proceedings, considerable annoyance was manifested by the Commission at the absence of one Gazayemon. On inquiry, it was ascertained from his son, Omai Gohei, who was present, that witness was absent purely through age and sickness, when the case was at once proceeded with.

Omai Gohei, examined by Mr. Dickins: I am a merchant at Osaka. I know nothing of the contract produced. Have never heard of the firm of Kirby & Co. My father's seal was handed to me in 1868. I know nothing of the names of the four men whose signatures are on the contract.

Cross-examined by Mr. Hill: I have been the sole manager of the Tenojiya house since 1868. The seal on the document produced was transferred to me by my father. I know nothing of the other.

In reply to Mr. Tamono, concerning the bankrupt estates, witness stated that the goods had all been sold.

Akke Shinkero, examined by Mr. Dickins: I was not an officer of the Tonami Han in 1871. I was a student wandering about. I belong to the Tonami Han. I have lived with Sanai and Genshiro. I don't know what they did at Osaka, and while there I saw Hunter's banto first. I afterwards went to Seikichi's house to see if some arrangement could not be made in regard to the money payment.

Cross-examined by Mr. Hill: In 1871 I was in the employ of E. C. Kirby & Co. I remember the contract being made between the officers of Tonami Han and Mr. Hunter. I made enquiries concerning them I was informed by the landlord of the house in which they were living that they were really officers of the Han, and wanted to make a contract. Omai Gohei was to have put the seal on the contract, but he was in the Isu-sho-shie. Minakata Gimpei came to inspect the steamer while she was building, not the father. They were to make part payment, and the balance as due by the Tonami Han, and not by the officer personally. Shinkero came to Kirby's house at Osaka and entered into an agreement to the effect that \$3,000 should be paid down, and \$3,000 should be credited for three months. Shinkero was a samurai of the Tonami Han. I saw him at the house of Gozayemon at Osaka. He said that he was from the Han, and had come about the money.

Cross-examined by Mr. Hill: The sureties acted as the middle-men in the transaction. I believe Sanai drew up the document you produce, first of all in the shape of a draft. Hunter made or suggested some alterations, but not in the meaning. The seals were already on it. Among the articles purchased there was cordage, sail cloth, &c., &c. The parties present were Genshiro Sanai, Otonoski, the clerk of Gohei Minakato, Gimpei Oishya Soyemon, and Hyano. It was the son of Gimpei. I cannot say whether the seal as affixed in this instance is genuine, but I looked upon the men as coming on behalf of the Han. The stamp affixed to the document is identical to those of officers carried at that time, merely to show their place of domicile. The stamp you indicate, I think could be used for any purpose on behalf of the Han. At the time of the transaction Akabane was Kussui. Otonoske was Finance officer of the Han. I was told

this by the sureties. The seal stamped on the top of the document A is the seal of Sanai. A merchant of the Han going to Osaka would not be furnished with such a seal. I belong to the samurai class, and was to have received money on the completion of the contract; but without Hunter's knowledge; my share amounted, I believe, to 130 or 140 rios.

Re-examined by Mr. Dickins: I should think that Minakata has considerable property in Osaka. I cannot say whether, in 1872, the property was in Gimpei's name or his son's. Such information could be obtained from the registrar of the ward.

Mr. Dickins requested that a copy of such register should be produced.

Mr. Tamono was not aware of the fact.

A discussion further ensued concerning certain affidavits, which were objected to by Mr. Hill. Finally it was agreed that the documents went to prove that the officers had made a contract with the China and Japan Trading Co. for the purchase of the steamer *Rising Sun*, and had since been compromised by the Government. To be handed in as evidence for the plaintiff, as in Scott's case.

Yanaka Hiroshi, examined by Mr. Hill: I was formerly Gon-dai-sanji of the Tonami Han. I have seen the four men mentioned in the contract alluded to. They had no power to make such a contract. The seal given to samurai is for the purpose of showing that they belong to the Han when on a journey, and for no other object. The only parties having power to make contracts are the Chief of the Finance Department of the Han, the Dai-sanji and Sho-sanji.

October 20th 1873.

Yamakawa, cross-examined by Mr. Dickins for the plaintiff: I was formerly Gon-dai-sanji of Tonami Han. As previously stated, my business as such was to assist the Chiji to conduct the business of the Han. There were about 2,500 samurai in the Han, of whom a register was kept.

Mr. Dickins here requested that a register of same for 1871 might be handed into court for inspection.

Mr. Tamono assured counsel that registers for 1871 and 1872 should proximately be placed at his disposal.

Cross-examination resumed: The reason why the four men alluded to in the evidence had no power to make a contract is, that I had not delegated to them such power. I could have given them the power, by observing certain rules, to make contracts with foreigners. Of the *Rising Sun* I know nothing. It was a generally accepted rule that no one but the Gon-dai-sanji had the power I before alluded to. Such rule was enforced by the general Government of the Han. There was not written rule in this respect, nor was the fact notified to foreigners. I am not quite sure that I gave instructions in 1870 to charter a ship. I afterwards signed an original contract. The first instructions I gave were not signed with the seal of the Tonami Han. I wish to correct a former statement I made. I did not know Nagayama Otonoske, only the other three. I know that the four mentioned men in this action went to Osaka before 1871. I am not sure whether there is a record as to when Tanaka and Sanai ceased to be samurai.

Re-examined by Mr. Hill: I know of no other contracts entered into by Tonami Han, otherwise than the character I have referred to. During my absence at Yedo, in 1871, there was no one who had the right to empower others to make contracts for the Han.

Hara Genshiro, next examined by Mr. Hill deposed: In the 4th year of Meiji I was an ordinary samurai. [Document handed to witness.] I do not recognise this document, although I was a party to it. Shoyemon first arranged the business with Scott. He also introduced us to Hunter's banto, who said he was an officer of the Kishiwa Han. Gimpei's son urged us to do this present business, and the banto saw two copies of the contract before it was sealed. Those who affixed their own seals were myself, Sanai, and Otonoske. Sanai borrowed the seal of Akabane and affixed it to the document. The banto knew perfectly well that we were not authorised by the Han to do the business; we had previously told him so. Hunter wanted the seal of Odake S yemon, who was then in Kobe, on the Han's business. It was explained to him that it could not be procured for that purpose. In consequence, at Hunter's request, Gimpei's seal was attached to a separate document. The passport produced is mine, and was only used to show what Han I belong to.

Mr. Tamono, on the re-opening of the Court, observed to Mr. Hannen that as Counsel for the plaintiff did not wish to examine the remaining witnesses, he thought that the defendant, on his side, would not require them.

Hara Genshiro, examination continued: It was, I think, at the desire of Hunter that the statement was

inserted in the contract that the goods were for the Han. I went with Hunter to the Foreign Bureau, at Kobe, in order that he might inquire whether the seal I used was the seal of the Tonami Han. I did not go a second time. We were alone.

Witness, cross-examined by Mr. Dickens: I am not a samurai, yet I can wear the hakama. If the words written on the contract, stating that the goods were for the Han, are considered as fraudulent, than it must be considered that I committed fraud. I did not tell Hunter directly that the goods were not for Tonami Han, but I told his banto.

Mr. Dickens, counsel for the plaintiff, here requested that the passport alluded to in witness's evidence might be produced, as well, also, as the register of the number of such passport issued.

Re-examined by counsel for the defence: The original contract was for \$15,000, minus the steamer, which was to cost \$3,700. The steamer alluded to was never delivered, nor anything in its place.

In reply to Mr. Dickens, witness said the steamer was ready for delivery, he believed. According to the original contract, the vessel was to have been delivered in forty days.

Gosaki, examined by Mr. Dickens: I was aware that it was of no utility when I placed my seal on the contract. The reason that I so placed it was, that I received assurances from Tonami Han that I should not get into any trouble through it. I did not tell my brother Gohei of the contract, for there was no necessity to do so, it being my own act.

Cross-examined by Mr. Hill, witness said: I am a ward, and it is not customary for such to have seals. The seal I used I got from a seal engraver. The document guaranteeing me against any trouble arising through my action in this case was taken away from me by the Foreign Office at the time of trial.

On the conclusion of this witness's evidence, two letters were handed in by counsel for the defence, to the Commission: one from Mr. Enslie, and the other from Messrs. E. C. Kirby & Co., addressed to the native authorities. Mr. Hill also requested that certain documents mentioned yesterday by the complainants might be produced.

Mr. Dickens said that one had been handed in, but that the other was missing.

After some discussion, the Commissioners decided that a day should be set apart for the production of all documents alluded to in evidence. Such as were not forthcoming would be noted.

According to the arrangements of both parties to the suit, this concluded the case of Kirby v. Tonami Han.

### Italian Consular Court.

Before F. BRUNI, Esq., Acting Consul.

October 18th, 1873.

NAGAI SINSKE vs. F. MEAZZA.

This was an action brought for the recovery of \$3,711, remainder of the payment for 1,827 silkworm egg cards (annual), sold or consigned to the defendant at different periods in the year 1870.

To the demand of the plaintiff, however, the defendant pleaded that 1874 of said cards were covered with eggs of a quality different to those bargained for to wit, polivoltine instead of annual. In consequence, he prayed the Court to absolve him from the payment of the residue of the price agreed on, \$3,851; and further, that the Court would see fit to order that he should be reimbursed all moneys already unduly paid, with compensation and costs.

The plaintiff, Yamashita Yosaburo, representing Nagai Sinske, head of the house of Oscioya & Co. The pursuer was assisted by officers of the Judicial Court of Kanagawa Ken.

Sig. Ferdinand Meazza, merchant of Milan, at present residing in Yokohama, was the defendant.

Both parties to the suit were present in Court.

Sigs. Joseph Consouano and Gaetano Agrati were appointed assessors.

On proceeding to consider the case before the Court, seeing that Sig. Meazza had entered no plea against the existence and validity of his obligations towards Nagai Sinske, and that plaintiff and defendant recognised the exact terms of the agreement between them;

That the plaintiff or deputy of Nagai Sinske had not contested the identity of the cards produced in Court by the defendant, as forming part of those on which defendant's liability rested;

Seeing that it is proved by the remarks on the backs of the said 1,784 cards affixed by the Italian authorities delegated to this office in the communes where they were cultivated, and by the cocoons which have been procured from them, that they were all of a polivoltine quality;

That the complaints addressed to defendant from the different cultivators among whom were divided the cards in dispute, tend to establish his case; as well as the verbal testimony Signor Hippolyte Parravicini, cultivator himself of some fifty of said cards, and mayor of the commune of Tornavento, where many of them were formed;

Seeing that the plaintiff has been unable to prove that the cards, of which specimens have been presented to the court, and which he had recognised as part of those previously sold to the defendant, had really been covered with annual silkworm eggs;

Taking into consideration that the price paid for the said cards by the defendant, and received by the plaintiff, a very high price at that epoch even for annual silkworm eggs; clearly proves on both sides that it was a question of buying or selling annual eggs; and that for the rest it was this quality Signor Meazza agreed, by his written obligations, to purchase;

Seeing that Nagai Sinske, through his clerk, in the year following that in which the contracts were made, gives evidence of having been aware of the bad success of the greater part of the silkworm eggs sold to the defendant in the preceding year, offering to reimburse him, as is seen by the written attestation of M. Jean Steniz, of the Japanese Consulate, and above all, of that of M. Van der Polder, who, as Japanese interpreter, could not be mistaken in regard to the exactitude of the terms used by the banto of Nagai Sinske, as the latter would now wish it to be supposed;

That in Italy the bad success of the silkworm eggs imported at that time by the defendant was notorious; and that, besides the documents cited, it is proved by many of the principal silkworm egg merchants who come annually to Japan; Seeing that the plaintiff has proved nothing impeaching the authenticity or veracity of the documents produced by the defendant; and that, in regard to written or verbal depositions, he advances nothing but his own verbal denial, and without bringing forward a single document or other evidence in support of the truth of his assertion;

Taking into consideration the fact that the plaintiff has maintained that he knows how to distinguish annual from polivoltine eggs, he must have known perfectly the nature of those he was selling to the defendant.—the more so as he had put on the cards the usual red stamp, as a guarantee of the quality called annual, and that this shows a want of fair dealing;

That no notice can be taken of the remark made by the plaintiff that, Signor Meazza having examined and chosen the cards, the seller ought for this reason to be absolved from all responsibility towards the buyer, seeing the special character of the merchandise in question; as well as from results arising in regard to the period at which they were bought;

Seeing that it is admitted by the two parties to this action that the price paid by Signor Meazza for 1,884 cards was to be \$6,352, of which the defendant, having already paid \$2,571, pays fully for all the consignments of cards bought, although all had given good results, and that without prejudicing the question of consequential damages demanded by the defendant;

Further, legally, the seller is always bound to guarantee the thing sold from hidden flaws or defects, which render it unfit for its destined use, or which so diminish its value that the buyer, had he known of them, would not have bought it or would have offered a lower price for it. Such is precisely the terms of the agreement made by the parties in dispute according to which Nagai Sinske was to guarantee the annual quality of the Silkworm eggs sold to Meazza;

It being understood that wherever the *actio redhibitoria* takes place, in the event of hidden defects in the article sold, the seller is always bound to restore the value he has derived from it; and it being proved that, in the present case, the seller knew of the polivoltine quality of the eggs on the cards sold, for he has declared he could not deceive him; If in this respect, he is also bound to restore a part of the purchase-money, as well as to pay consequential damages to the buyer;

It is legally understood that a contract is not valid when the object therein stipulated is different from what was intended. Taking this view, Sig. Meazza is not bound to pay the remainder of the purchase money of the 1,784 cards covered with eggs of a quality different to those agreed upon in the contract.

Taking into consideration the 78 articles of the law regulating the Italian Consular Service, and 239 of the Regulation for the execution of the said law; as well as articles 89, 104, 252, of the Commercial Code, and articles 1,101, 1,123, 1,124, 1,131, 1,137, 1,498, 1,500, 1,501, 1,502 of the Civil Code;

The Court pronounces the following judgment.—

1stly, the Court absolves the defendant, Ferdinand

Meazza, from the obligation of paying to the plaintiff the sum of \$3,781 residue still remaining to be paid of the cards of silkworm eggs bought from him as annual but proved to be polivoltine.

2ndly, the Court authorises Sig. Ferdinand Meazza to withdraw the legal deposit he has made at the Italian Consulate at Yokohama, amounting to \$3,553, as a guarantee of his obligations to the plaintiff, in case the Court should decide in favour of the latter;

3rdly, that the defendant Sig. Meazza shall claim from the plaintiff the reimbursement of \$2,571 as part of the purchase money already paid to him; in addition, interest on this sum at the rate of 6 per cent. to date, from the 27th October, 1870;

4thly, is decreed to the defendant the right to consequential damages in such proportions as he may think fit to claim before competent authority;

5thly, that the defendant shall not be bound to pay the plaintiff the whole amount he owed him to complete the price of the cards, a though they may have succeeded agreeably to the specified quality of the silkworm eggs, until he has been reimbursed by the plaintiff the sum of \$2,171 interest, and compensation.

The court hereby declares the present judgment provisionally in force, notwithstanding opposition or appeal, and without security.

The defendant, Signor Meazza, has this day commenced an action in the Japanese courts, claiming \$18,000 as compensation for losses sustained by him in consequence of non-fulfilment of contract.—*Japan Herald.*

OF THOSE Japanese who are the greatest advocates for learning and progress among the people, there is no name stands higher than that of Fukuzawa. For years he has persistently striven to teach his countrymen, and to encourage them to learn. He has either himself translated foreign books, or caused them to be translated by others, and many of those who are attaining eminence among the well-informed native gentlemen, owe a great deal to his kind and judicious care. He is a man of very advanced views, and has endeavoured to make his countrymen feel that they are not mere plugs to fill a hole from which they cannot move; that it is no reason for a man to continue in a low station because he was born so; but he tells them, that education will put within their reach the means of climbing; and that a man, who by his merits raises himself, raises his family also.

His name is brought prominently before us by a writer who signs himself "Fujiwara Take-mori," a farmer of Nagoya, Aichi Ken, now living in Tokai. His letter appears in the *Nisshin Shinjishi* of the 30th instant, and a free translation of it will give readers an idea of the feelings with which undoubtedly the great majority of the people regard the subject on which it treats. The writer alludes to a book lately published for young people, and says:—

"I have read the book of Gakumon-susume, published by Mr. Fukuzawa. In his first chapter he says that Heaven created all men equal; that it is not birth but education which makes them unequal.

"I think this is a great mistake, and that the difference is natural. In the holy writings it distinctly appears that Tenshio Daijingu appointed her own descendants for ever to govern the land of Ashiwara no Mizuho Kuni, and gave her son the three holy symbols to descend from one to another. The imperial generations are one single line, and thousand of generations must be as a single day. So the holy Emperor governs us, together with Heaven, Earth, Sun and Moon. As he governs by the commands of the several celestial gods who ordered Jinmu Tenno to govern, as Tenshio Daijin had done, so he rules instead of the heavenly gods, and his duty is celestial.

"From the first emperor who received the command from the gods to govern Japan until

the present emperor there are a hundred and twenty generations. We are the descendants of Izanagino Mikoto and Izanamino Mikoto; and when the gods ordered the Emperor to rule over Ashiwarano Mizuho Kuni, they also commanded our forefathers to obey him; and we, their descendants must not forget the command. Our duty revealed from heaven is to serve our Emperor with the utmost fidelity; and this the strict law which the gods settled in the beginning for us the descendants of Izanagi and Izanamino Mikoto.

"From the holy record it is clear that the differences of rank are not formed by the degrees of knowledge, and I have never heard that a man became Emperor by knowledge. For instance, Taira no Masakado esteemed himself Emperor of Japan, but he was very soon beheaded.

"Mr. Fukuzawa is a very famous teacher; and why is he so ignorant of the beginning and the end? Probably he is in the dark as to national law, and so he cannot put aside foreign law. I wish for future students of foreign learning, that they devote themselves to Japanese law as settled by the gods; but if they do not attend to that, it is of no use their reading thousands of foreign books.

"I feel very angry about Fukuzawa's opinion; and indeed I cannot cease clenching my teeth and doubling my fist. I only wish every reader to see what is right and what is wrong, though I cannot teach them Japanese law. Do not laugh at my foolish words; but there was never such reasoning as Fukuzawa's. Never! No, Never!"

Whether this letter is written by a mere farmer of Aichi Ken, we leave our readers to judge for themselves. It is a genuine one so far as the newspaper is concerned, and it presents a picture of the kind of belief which has to be got over by those who would undertake to teach the people.

The conflict of opinion is now, by the means of publicity afforded by the Press, certain to be very constant, and probably very fierce; and the close alliance between church and state, renders it impossible to deal with one irrespective of the other. The letter at its very opening reveals the fact that the simple assertion that "all men are born equal," in the minds of the Japanese, strikes at the root of the Imperial power; and yet this is now accepted as an axiom by many of the leading minds in Japan. The effect upon the correspondent produced by Mr. Fukuzawa's book—that he "cannot cease clenching his teeth and doubling his fist," shows the intensity with which he and those who have the same superstitious faith, are likely to hate the more enlightened of their countrymen; and points to the most unscrupulous means of eradicating them and their opinions from the holy empire.

Taken in connection with the unsettled and wavering condition of the samourai at this present juncture, the letter is worthy of consideration.

UDAIJIN IWAKURA, on the 28th inst., issued a notification to the effect that the treaty which was made with China in the 7th month of the year before last, having been only temporary, it is replaced by the treaty which was made in July this year.

ON THE same day he published the decree that officers connected with national temples, if they are dismissed or die after serving the full term of four years, shall themselves or their representatives, receive an amount equalling half a year's salary. The government will pay it into the hands of the Cho Yakunin.

A SAMOURAI in the employ of the Kaitakushi, writes the following sensible letter to the *Nishin Shinjishi*;

"I see from many newspapers, that Samourai of several ken are desirous of returning their hereditary allowances to government, considering it an evil that they should take government support without earning it. Yet they are unable to turn merchant for they have no capital; and they cannot be farmers because they have no land, nor mechanics because they are without the necessary cleverness. They are therefore obliged to continue to be Samourai even against their will. I also see that several samourai have become merchants, but they are easily taken in by cunning fellows who perceive their inexperience; and they are finally obliged to break up their families, the females to go out as servants and the men to hard work.

For these reasons, samourai are afraid of changing their condition. But I can tell them, that in Yezo, is plenty of very good and fertile land which will gladly welcome them. Here, millet, rape, beans, hemp, barley, wheat, buckwheat and sorghum repay the industry of the husbandman. They are just the same as in Oshiu, the hemp in particular being longer than that of foreign countries.

It is well known to every one that Yezo is the northern gate of Japan; and Kaitakushi is very anxious for the occupation of the land, that the Russians, who have often broken or will break international law, may be kept out.

To remove the anxiety of Kaitakushi, colonists must be encouraged. And as colonists increase in number, the contempt of the Russians will disappear. If those samourai who are only prevented turning farmers for want of land come here, and turn to upon this fertile land, the government will not only rejoice, but it will exactly fit in with their wishes.

Let such samourai make up their minds. Let them come to this fertile land of Yezo. Let them not delay, but come over quickly. I assure them that it is a firm foundation for their family and descendants. Delay not—Come to Yezo,

IYUSA.

Kaitakushi, Awoyama,  
Tokei, 29th October, 1873.

A row recently took place at one of the theatres in Tokei. A play called "Momoyama Monogatari" was being performed, the principal person in which is Kato Kiyomasa—the nephew and protégé of Taico sama. The actor who impersonated the character is a very clever man named Kawarasaki Gonnosuke; and so lifelike was his acting that it seemed as if the real Kiyomasa was himself there. The theatre was very crowded, and whilst all seemed delighted with the performance a few suddenly burst out laughing and said contemptuously that Kawarasaki was not equal to his part; on which a regular quarrel ensued among the audience, and the performance was obliged to be stopped.—*Mainichi Shimbun*.

WE PUBLISHED yesterday the report given by the *Mainichi Shimbun*, respecting the mineral specimens brought from Akita, Oshiu. It appears that among others one mine is loadstone. They also visited in Sekimura in the same province an iron mine, the quantity of which is good. A gold mine in Shirone not now in work, but which formerly yielded largely. A copper mine at Okowase which Japanese miners reported to be poorer than that of Ani, but might be profitably worked. A copper mine at Ani which is great and prosperous looking. (The reporter adds "but I am too lazy to describe it minutely.") A silver mine at Kosaka, being that lately discovered by Oshima, an officer of Kôbusho, is the best ore in Japan. All the above were visited by the party.

H. R. H. THE DUKE of Genoa received on board the *Garibaldi* on Wednesday, the 29th inst., the noble Kuzé Jijunochô; Ohara Shigezané, an officer of Gaimusho; and Oye Taku, Gonnokami of Kanagawa, who went to take leave.

FROM our Shipping report it will be seen that the heavy weather of late extended well to seaward. Amongst the casualties we have yet heard of at sea is the loss of Mr. W. P. Lindgren (a native of Sweden) second mate of the str. *Washi*, who was washed overboard about 20 miles from Rock Island.

To the Editor of the *Japan Gazette*

October 31st, 1873.

SIR,—We beg to inform you that we received a letter from Captain Newell, of the S. S. *Ariel*, dated 28th inst., wherein he informs this Agency of the total loss of that steamer upon a reef four miles N.E. from Toyama Point, which is about 110 miles from here, on the 27th, at 9.10 p.m.

Passengers and crew were all landed safely. At daylight the steamer slipped off the reef, when nothing but her mainmast-head could be seen above water, consequently she with cargo is a total loss.

Captain Newell writes that the Japanese have shewn them every kindness, and they all start overland for Yokohama on the 29th.

Yours, Respectfully,  
GEORGE E. LANE,  
Agent.

MR. McLEOD, of the P. M. S. S. *Ariel*, arrived in town this morning, having come overland. We have no further particulars of the wreck. Everybody must sympathised most sincerely both with the P. M. Company, whose losses in ships have been severe during the last two years; and with Capt. Newell, who is well known, and universally respected.

THE *Mainichi Shimbun* says:—"In Josenji temple, Yoshida Shinden, Yokohama, there is a stone idol, we know not when or by whom established; and those who worship it are accustomed to hope for the removal of ailments in their own bodies, by dipping a brush in the water of a well close to it, and washing the idol on that part of the body where their own pain is. The idol is so believed in that we never pass by but we see foolish people at their devotions. We really feel quite ashamed that foreigners should see such things—not that we blame the mere praying but the baby-play of washing the image we object to as folly that the Shinto priests ought to put a stop to."

WE HEAR that a number of loyal officers of the Japanese Army have made a kind of counter demonstration, by notifying the War Department of their readiness for any service the government demands of them. All is quiet in Tokei at present.

TAKASHIMA KAYEMON, a large merchant in Yokohama, has been sent, by the Saibansho, to prison. Particulars hereafter.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—The difference between the native Silkmen and the foreign buyers continues, and pending its settlement the business is much retarded. The native Silk-guild of Yokohama having given an unfavourable reply to the Committee appointed by the Chamber of Commerce, respecting the allowances for tare, &c., several buyers hold off altogether from purchasing. This added to the firmness of the sellers in their demands for higher rates, has prevented a large business. Settlements in all amount to about 600 bales.

**SILKWORM EGGS**, the sales have been very large but prices have receded. The sales are very close upon 1,000,000 cards. Prices from \$1.30 to \$3.

**TEA.**—Business on our Tea market has been on an important scale since the departure of last steamer on the 22nd ulto., and settlements for said period reach the large total of 6,000 pls. An advance of some \$2 to \$2.50 has been established on all grades, but is most marked on Good Medium and "low fine" classes, which have attracted most attention.

To-day's prices rule as under, the market well supported, and arrivals only on a limited scale.

Our total export from Yokohama shews a decided falling off in comparison with that of last season, it only amounting to some 6,100,000 lbs., against 6,900,000 lbs. at same date last year, and we believe that this deficiency will be carried on until far in coming year.

The *Claussina*, with 400,000 lbs., will have despatch for New York in a day or so; the only other vessel which has been circulated is the *Tamerlane* (iron), which has obtained promises of half her cargo, at rates which have not yet transpired.

Total, .....	263 Bales.	
Silk-worm Eggs, .....	2,483 Cases.	

## REPORTS.

The Brit. str. *Madras* reports fresh N. Easterly winds and cloudy weather.

The German barq. *Mathilde* reports very stiff monsoon and drizzling weather throughout.

The Am. str. *Oregonian* reports left Shanghai, Oct. 18th at 9.26 a.m., arrived at Nagasaki, Oct. 21st, at 8.40 a.m., left Nagasaki, Oct. 21st, at 1 a.m., arrived at Hiogo, Oct. 22nd, at 5.45 p.m., left Hiogo, Oct. 24th, at 6.35 p.m., arrived at Yokohama, Oct. 26th, at 7 a.m., experienced fine weather the entire trip.

The Brit. str. *Maud* experienced strong northerly winds during the passage. The Captain reports having used during the voyage, some coal taken on board in London *Powell Dufferin* (Welsh), which turns out so bad, that it will not generate steam enough to drive the vessel more than half speed.

The Am. str. *Alaska* reports left San Francisco, Oct. 1st, at 12 a.m. with 19 bags U. S. Mails, 10 passengers cabin, and 705 steerage, 4,542 pkgs. freight, 338 3/4 tons, and 85 packages Treasure, valued at \$260,386. Experienced light winds, and fair weather all the way over. A fatal case of small-pox occurred on board the *Alaska* on her voyage to this port from San Francisco. Three Chinamen who were suffering from the disease were brought ashore yesterday afternoon and were transferred to the hospital.

The Brit. ship *Tamerlane* went down to Yokoska yesterday.

The Brit. str. *Washi* reports, experienced very heavy weather during the passage. Yesterday morning at daybreak, about 20 miles beyond Rock Island, a heavy sea broke on board, carrying away the Port quarter boat and davits, and washing the second mate overboard, but as he was not missed for some minutes afterwards, no attempt could be made to save him.

The Am. barq. *Burnside* reports light winds and calms, during the entire passage of 65 days.

The Am. str. *Great Republic*, reports left Hongkong Oct. 23rd, at 3.20 p.m. to Oct. 20th had strong N. E. gales and heavy sea; then to Oct. 29th, strong gales from South to E. S. E. with heavy rain and sea; thence to port fresh gales from N. W. and squally. Oct. 30th, at 10.59 a.m. off Bougainville Channel passed Str. *Alaska*, bound south; same day at 11.5 a.m. passed French Mail Str. bound south; arrived at Yokohama, Nov. 1st, at 8.45 a.m.

Printed and published for the proprietor by JAMES R. ANGLIN, at the "JAPAN GAZETTE" Printing Office, No. 85, Main Street, Yokohama, Japan.

## STAPLE IMPORTS.

This market which last month we were able to speak of as having so improved as to give hopes of large business has again become quite quiet; and it is useless to mention any demand for anything. It is altogether lifeless, and the suddenness with which a demand arose last month, and the quickness with which it was satisfied only proves how limited a market that of Japan is.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.20 to 2.27½

## STAPLE EXPORTS.

**SILK.**—Has continued to command attention notwithstanding the determination expressed by buyers to hold off until the question of allowances was satisfactorily settled. A good trade has been done amounting in all to about 1,200 bales, and prices have hardened considerably.

**SILK WORMS' EGGS** are now closing for this season; the export being as nearly as possible the same as last year, — viz., 1,275,000 cards, against 1,280,000. The producers in the interior are highly dissatisfied with the Government interference this year, and complain much of their losses therefrom.

**TEA.**—Since the departure of American mail on the 1st inst. our Tea market continued active at last quotations, and an extensive business was done for the first ten days at quotations; later telegrams conveying an adverse state of affairs in New York coming in, buyers withheld, and settlements fell off. Some few small lots have been picked up on advantageous terms, but as a rule native dealers are unwilling to make such concessions as would lead to a free resumption of business.

Settlements since the 1st to date amount to 4,900 piculs, and arrivals being in excess of deliveries we have an increasing stock. To-day's prices rule as under, market closing weak.

The *Tamerlane* will have speedy despatch for New York, and the *J. J. Stone* has been laid on for same destination. Current rate of freight £2 15s. per ton of 40 cubic feet.

## ARRIVALS.

Nov. 3, Brit. barq. *Jan s Paton*, Cotter, 394, from Sydney N. S. W., Coal, to Pittman & Co.  
 Nov. 3, French str. *Menzelch*, Mourrat, 1,008, from Hongkong, general, to M. M. Co.  
 Nov. 3, Brit. barq. *Lord Ashburton*, Moosey, 798, from Sydney N. S. W., Coal, to Wilkin & Robison.  
 Nov. 7, German barq. *Xaca*, Callsen, 132, from Takow, Sugar, to Walsh, Hall & Co.  
 Nov. 8, Brit. str. *Avoca*, Andrews, 1,006, from Hongkong, Mail and general, to P. & O. Co.  
 Nov. 8, Russian Gun-boat, *Sobol*, Sedensner, 460, from Hakodate.  
 Nov. 10, Am. ship, *Golden State*, Berry, 944, from New York, general, to Smith, Archer & Co.  
 Nov. 11, Am. str. *China*, Cobb, 4,000, from San Francisco, general, despatched to P. M. Co.  
 Nov. 11, Brit. str. *Maud*, Brittain, 843, from Kobe, Rice and S. ki, to Captain.  
 Nov. 11, German barq. *Mikado*, Lempfert, from Hamburg via Kobe, general, to Van Oordt & Co.  
 Nov. 12, Am. str. *Golden Age*, Coy, 1,870, from Shanghai, general, to P. M. Co.  
 Nov. 13, Brit. ship *Windhover*, Findlay, 846, from London, general, to Strachan and Thomas.  
 Nov. 14, Russian str. *Courier*, Lemerofsky, 590, from Hakodate, general, to Walsh, Hall & Co.  
 Nov. 15, French steamer *Volga*, Flambeau, 960, from Hongkong, Mails and General, M. M. Co.  
 Nov. 16, Am. str. *Alaska*, Morse, 4,010, from Hongkong, general, to P. M. Co.  
 Nov. 18, Am. str. *Costa Rica*, Williams, 1,917, from Shanghai, general, to P. M. Co.

## DEPARTURES.

Nov. 1, Brit. str. *Gordon Castle*, Holmes, 1,280, for Kobe, general, despatched by Cornes & Co.  
 Nov. 1, Brit. str. *Maud*, Britton, 843, for Kobe, general, despatched by Simo Evers & Co.  
 Nov. 2, Am. str. *Great Republic*, Howard, 4,300, for San Francisco, general, despatched by P. M. Co.  
 Nov. 3, Brit. barq. *G. T. Roy*, Fraser, 335, for Newchwang, ballast, despatched by Walsh, Hall & Co.  
 Nov. 3, Japanese barq. *Gipsy*, Hescroff, 267, for Hakodate, ballast, despatched by E. C. Kirby & Co.  
 Nov. 3, Brit. barq. *Clausina*, Kickaby, 461, for New York, Tea, despatched by Cornes & Co.  
 Nov. 4, Brit. str. *Madras*, Pernaud, 1,185, for Hongkong, general, despatched by P. & O. Co.  
 Nov. 5, Brit. str. *Washi*, Coster, 221, for Hiogo, general, despatched by Hudson, Mac'coln & Co.  
 Nov. 6, Am. str. *Relief*, Corning, 705, for Shanghai, general, despatched by P. M. Co.  
 Nov. 7, German barq. *Mothilde*, Dan, 236, Seeking, ballast, despatched by Chinese.  
 Nov. 8, Brit. barq. *Parmenio*, Abbott, 369, for Hiogo, ballast, despatched by Captain.  
 Nov. 9, Swedish barq. *Amoy*, Helsing, 283, for Kobe, ballast, despatched by Captain.  
 Nov. 10, French str. *Nil*, Samat, 1,010, for Hongkong, general, despatched by M. M. Co.  
 Nov. 11, Brit. ship *John Nicholson*, Grierson, 585, for China, ballast, despatched by Gilman & Co.  
 Nov. 12, Am. ship *Endeavour*, Warland, 967, for Foochow, ballast, despatched by Walsh, Hall & Co.  
 Nov. 12, Am. str. *China*, Cobb, 4,000, for Hongkong, general, despatched by P. M. Co.  
 Nov. 13, Am. str. *Oregonian*, Harris, 1,920, for Shanghai, general, despatched by P. M. Co.  
 Nov. 15, American steamer *Golden Age*, Coy, 1,870, for Hakodate, General, P. M. S. Co.  
 Nov. 17, Ger 3-masted schr. *Caroline*, Paulsen, 274, for China, ballast, despatched by Captain.  
 Nov. 17, Brit. str. *Maud*, Brittain, 843, for Kobe, ballast, despatched by Captain.  
 Nov. 18, Brit. str. *Avoca*, Andrews, 1,006, for Hongkong, general, despatched by P. & O. Co.

## PASSENGERS.

Per Am. str. *Great Republic*, for San Francisco.  
 Mrs. E. P. Capp, Mrs. Crosset, H. A. Whaley, Geo. Smith, Jas. Harvey, Lawrence Pastnatt, Jno. O'Brien, Anthony Rogers, Jas. Harker.

## FOR NEW YORK.

Lieut. A. G. Paul, U. S. N., Lieut. F. H. Delano, U. S. N., Lieut. J. W. Carlin, U. S. N., W. A. Windsor, U. S. N., Benj. Juners, U. S. N., Jas. Barrett, U. S. N.  
 Per French str. *Menzelch*, from Hongkong.  
 Messrs. Faber, D. Arfeuille, Battann, and E. Ricco.  
 Per Brit str. *Madras*, for Hongkong.  
 Revd. M. Edwards, Signor Rignoli, Fornacra, Gattaroni, E. Pini, Facchi, Scazzola, Bonetti, Pizzigatti, and Mr. G. F. Johnson.

Per Am. str. *Relief*, for Shanghai.

Lieut. Tremain U. S. N., Lieut. Ola U. S. N., Lieut. Porah R. M., G. L. Harris, Madame Delacrou, Mr. Beveridge, R. Campbell, and 1 in steerage.

## FOR HIOGO.

Dr. James Harris, and 50 in steerage.

## FOR NAGASAKI.

1 Japanese in the cabin, and 102 in the steerage.

Per Brit. str. *Avoca*, from Hongkong.

Messrs. S. Naganiza, E. Holtham, R. Eager, Walber, J. W. Parish, Netto, Reh, Rymet Jones, Hahnemann, G. Smidt, Bolmida, H. Ihl, H. J. Nicholson, and Commander H. R. L. et Ret.

Per *Golden State*.—Frank Woodworth, Chas. Gibbons.

Per Am. str. *China*, from San Francisco.

## FOR YOKOHAMA.

Messrs. George Grenville, A. Stirling E. G. Prince, U. S. N., W. H. Taylor, J. A. Spoor, H. D. Littlefield, Arthur C. Macley, G. Mayer, Rev. H. H. Leavitt, H. Nakai, H. E. Kawamoro, Tanemoto, Gayekawa, T. Matsumura, R. Kuki, Henry Powell, Tocka Hoshe, David Robertson, Robert Holburn, Mrs. Geffney and 3 Children.

## FOR SHANGHAI.

Rev. C. J. Blanchet, Rev. W. B. Cooper, Rev. Jno. Hykes, Rev. W. F. Walker, Wife and 2 Children, Rev. J. H. Pyke and Wife, Rev. A. J. Cook, H. H. Plagge, Miss Buller, Rev. B. E. Edgill and Wife, R. A. Garside, C. T. Bayton, Miss Edith Freeman, Miss Eddie Mayfield, W. B. Pryor, Mrs. J. A. Perkins and Child, Mrs. E. C. Hart and 3 Children, Mrs. F. F. Hardy, E. G. Lapham, Tjokitsi, Miss Onatsu, and Chas. H. Fisher.

## FOR HONGKONG.

Wong Shing and 5 Children, Julia Leatch and 500 Chinese.

Per French str. *Nil*, for Hongkong.

M. M. John Reith, Ch. Maas.

## FOR SAIGON.

19 Soldats et Marins.

## FOR MARSEILLES.

M. M. Bastians, Jonyal, Rouriere, Berthezere, Civetta, Durand, Toubert, Nghes, Orgeron, Soulie, Lafont, Valentin, N'colas, G. Vigan, Causse, Labalme, Court, Meazza, Thomas, P. Vigan, Pellet, Milonath, Simon, Daina, Breschana, Guidetti, Reboul, Raoux, Agratti, Velini, Fakomagas, Cazet, Maillet, Faye, L'orel, Gengero, Inselvini, Ingno, Kodier, Farnaguly, Charpenes.

Per Am. str. *Golden Age*, from Shanghai.

H. E. Viscount St. Januario, Portuguese Minister to Japan, Mr. P. G. Mesnier, Secretary, and Mr. A. Moran Carvalho, Attaché, Bishop Zanoli, Rev. N. J. Plumb, Rev. Dr. Brown, Messrs. Platon, W. H. Talbot, Mr. and Mrs. Godfrey, Rev. J. Evrord, Mr. and Mrs. Minami, Mr. C. Rasch, and 5 Japanese, in the cabin; 3 Europeans, 49 Japanese, and 7 Chinese, in the steerage.

Per Am. str. *China*, for Hongkong.

Three Chinese.

Per Am. str. *Oregonian*, for Shanghai, &c.

Messrs. H. McGregor, Rev. V. C. Hart and family, H. Foes, Lt. H. A. Digby, Rev. W. F. Walker, S. Churchill, Kuhn, wife and servant, Rev. M. D. Plumb, Keg. T. Thomas and family, F. Haskell and wife, Mr. Hunter, Rev. H. D. Cook, Rev. John Hykes, Rev. H. Iike and wife, Mr. Hunter, Rev. B. E. Edgell and wife, Lt. Com. Shephard, U.S.N., Mr. W. P. Mangum, Miss Freeman, Mr. Perkins and son, Geo. C. S. Southworth, Ed. W. Southworth, M. L. Southworth, Bayfield, Mr. Joseph, Rev. H. Leavett, and 3 Japanese, in the cabin; and 14 Japanese, in the steerage.

Per M. M. *Volga*, from Hongkong:

M. and Madame Thissen, Messrs. Macpherson, Namoura, Dubousquet, Larragrec, Nishimona, Sec, Y. See, Kondo, Isuda, Dumortier, De Groote, wife, sister-in-law, and four children, M. le Baron d'Aethur, M. de Brissonade de Fontarabie, M. Hammanstade, Ichibana, Yuzagaka, James, Sieur Mathilde, St. Ephraim, St. Marthe, St. Gregoire, M. Vesterviel, wife and child, Zamada Uchina and Nezawaga.

Per *Golden Age* for Hakodate:

Messrs. F. C. Spooner and J. Albinson, one Chinese.

Per Am. str. *Alaska*, from Hongkong.

## FOR YOKOHAMA.

Mr. and Mrs. Heaton.

## FOR SAN FRANCISCO.

Messrs. Chalmers and Agatz.

Per Brit. str. *Avoca*, for Hongkong.

Messrs. Sala, Ghiradotti, Vuccetichi and native servant, Dandioli, Martinetti, Boffi, Orienti, Arcellazzi, Biffi, Pini, Consonna, Mazzochi, Radaelli, Maltecca, Thomas Smith, and Achoy.

Per Am. str. *Costa Rica*, from Shanghai.

Ed. Malet, Secretary of British Legation, China, Miers Coryell, Superintendent of Shanghai S. N. C., J. F. Twombly, E. C. Kirby, W. H. Short, H. Macgregor and servant, J. Parry and servant, Sheppard and servant, Roppard and servant, Van Weckherlin, 2 Japanese, 1 European, 4 Chinese, and 42 Japanese.

## FOR AMERICA.

Capt. C. H. Wills, Jno. Hardy, and 3 Europeans.

## REPORTS.

The Brit. barq. *Lord Ashlurton* reports fine weather and light winds. The passage of 61 days.

The German barq. *Xaca* reports moderate N. W. Northerly and variable winds During the passage.

The Brit. str. *Avoca* reports strong monsoon gales as for as Tung Zing; thence to port, moderate northerly winds and fine weather.

The *Parmenio* is to load for Australia at Kobe.

The *Golden State* reports having crossed the equator July 28th. Passed Cape of Good Hope Sept. 2nd; South Cape of Van Diemen's Land Sept. 28th, and crossed the equator in the Pacific October 21st. Sighted Cape King on the 8th inst. Spoke the following vessels during the passage:—

July 6th, lat 35°, 28 N. long, 48° 12 min. West, British barque *Albany*, Iquiqua to Cork, July 9th, 33° 21 min. N. long., 48° 55 min. West, French barque *Jean Paul*, Montreal to Monte Video. Aug. 24th, 32° 42 min. South long., 16° 56 min. West, American whaler *Charles Colgate*, cruising. Aug. 24th, Dutch barque, *Ada*, Amsterdam to Batavia. Aug. 24th, Dutch barque, *Twee Coneilles*, Cacliff to Singapore. Oct. 8th, 24° 25 min. South, 170° 10 min East, American ship *Cashmere*.

The Am. str. *China* reports had pleasant weather and Easterly winds the entire passage.

The Am. str. *Golden Age* reports left Shanghai Nov. 4th, 10 17 a.m., arrived at Nagasaki, Nov. 6th 7 35 a.m., left same day 11 13 p.m., passed through Shimonoski strait Nov. 7th, 2 20 p.m., passed H.B.M. ship *Iron Duke*, *Cebu* and *Salamis*, same day 8 30 p.m., arrived in Hiogo, Nov. 8th, 4 37 p.m., found Co's str. *Relief* in harbour discharging cargo. Left again Nov. 10th, 5 02 p.m., stopped Nov. 11th, 5 a.m., at Oosima Lighthouse and landed stores for Lighthouse proceeded on our voyage 7 a.m., passed Japanese str. *Sakura* 12 noon; same day arrived at Yokohama, Nov. 12th 6 31 a.m. Had pleasant weather with light variable winds throughout the voyage.

The S. S. *Washi* returned to Port last night, her engine having broken down after leaving here 3 days since. The accident happened near Vries Island and after driving along the coast near to Cape King, she was finally brought to anchor in Tatiyama Bay, on Sunday morning, and was towed up here last night to the Yokoska Bay.

The Brit. ship *Windhover* reports left London on the 5th July Pilot left the ship off Portland 10th July, in Channel westerly winds; crossed the Equator 6th August. Light variable S. E. trades, rounded the Cape 31st August, strong gales from thence to St. Pauls Island with a heavy confused sea, passed St. Pauls 11th Sept. from thence to Christmas strong winds. Sighted Java Head 22nd September, 11 p.m. Up the China sea light northerly winds and calms. Passed through the Palawan passage, ship averaging about 30 miles per day. From abreast of Manila a continuation of strong N. E. winds. Passed through the Bullingtery Channel. Strong westerly currents to the Loochoo Islands and from thence to Yokohama strong gales at times with heavy gusts, lost several sails. Off Cape Sagami 12th November, 5 a.m. Anchored last night inside of Lightship 130 days Port to Port.

The Am. str. *Alaska* reports pleasant weather during the passage, Passed S. S. Co. steamer *China* on the 14th.

The Am. str. *Costa Rica* reports the Brit. squadron in Nagasaki.

Printed and published for the proprietors by JAMES R. ANGLIN, at the "JAPAN GAZETTE" Printing Office, No. 85, Main Street, Yokohama, Japan.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 1ST TO THE 19TH NOV., 1873.

#### BIRTHS.

On the 3rd November, at No. 5, Legation Building, the wife of Mr. T. COLE, of a son.

On the 10th November, at No. 155, Yokohama, the wife of Mr. F. E. WHITE, of a son.

At Kobe, on the 7th November, the wife of Mr. J. BRAGA, of a son.

At the Hiozo Hotel, on the 11th inst., the wife of E. J. DURNY, Esq., of a son.

#### MARRIAGES.

On the 26th ult., at St. Ternan's Episcopal Church, Muchalls, Kincardineshire, by the Rev. W. Hatt, J. HAMILTON HODGSON, Lieutenant, 10th Regiment, to LETTIE, only daughter of the Hon. John Joseph Barry, M.L.C., Cape of Good Hope.

At Nagasaki, on the 8th Nov., 1873, by Marcus Flowers, Esq., H. B. M. Consul, and the Rev. H. Burnside: MARY TEE, of Portsmouth, England, to M. G. ADAMS, Esq., of Nagasaki.

#### DIED.

At Shanghai, on the 21st October, 1873, Mrs. SARAH E. C. ANDERSON, aged 27 years.

August 22nd.—On board the P. & O. steamer *Pekin*, on her passage to England, SARAH WESTLE MARIA, wife of the Hon. Mr. JUSTICE BALL, of Hongkong, aged 46.

On Sunday night, November 2nd, of Pneumonia, BAYLY DONE, Esq. M.D., aged 28 years.

At 2 P.M., on the 5th November, 1873, at his residence, Oura Hill, Nagasaki, KENNETH ROSS MACKENZIE, Esq., of Scotland, aged 70 years.

### Summary.

THE Pacific Mail S. S. Company's Steamer *Great Republic*, took our last Mail Summary dated the 1st instant. We are since in receipt of all mails due to date. Latest telegrams from London reach to the 15th idem.

POLITICAL AFFAIRS are for the moment quiet, and we are hoping that the Emperor's new minister may succeed in carrying on the govern-

ment smoothly; though it will be impossible for some time to come to feel perfectly easy on that point: as symptoms have already appeared of sympathy, on the part of some who have accepted office, with the views of those who retired. Looking, however, only to what is outward and visible, we have no fresh facts of importance to communicate.

AN ACCIDENT of a very serious character befell the Empress and her mother on Friday, the 7th instant. They were in a close carriage, and had been taking a drive round one of the suburbs of Tokei. As they returned, when near the Public Works Department, a portion of the harness gave way, the horses became unmanageable; and the carriage, horses, and all were precipitated down a steep bank into a pond at the bottom. Fortunately the ladies escaped quite unhurt; but one, if not both, of the horses was killed, and a betto was much injured.

A MEKAKI of the Emperor gave birth to a princess on the 13th instant; but the child hardly survived its birth.

AN ACCIDENT happened to Sir Harry Parkes a few evenings ago. He had returned from Tokei to Yokohama by a late train, and it was dark when he mounted his horse to ride from the railway station to the Legation on the Bluff. As he proceeded through the native town, his horse stumbled over a heap of gravel that had been thrown out of a trench and Sir Harry was thrown into the trench. Fortunately no greater injury than a good shaking was experienced.

A BANQUET was held at the Grand Hotel, Yokohama, on Saturday evening the 15th instant, in honour of Mr. De Long, late Minister of the United States to Japan. The largest room that could be found in any of the Hotels or Clubs was found to be too small to admit of all who wished to attend, and as a consequence, the committee, who would have been glad to have seen all nation-

alities represented at the feast, were obliged to limit the subscribers to Americans and Dutch; the latter being included, because after Mr. Van der Hoeven went home, Mr. De Long officiated as Dutch minister until Mr. Van Weckherlin arrived. The banquet was in every way a success, upwards of 90 persons being present.

Although other nationalities than those specially were excluded, Mr. De Long may rest assured that he carries with him the respect of all foreigners in Japan. For the press we may say that although he fancied sometimes he was hardly criticized, their appreciation of him was shewn in this—that when he was traduced in one of the leading papers of New York, every newspaper in Japan indignantly repelled the slanderer of his good name; and showed the absurdity of the charges brought against him.

We are heartily glad to see that the King of Holland has considered his services, whilst acting as Dutch Minister, worthy of special honour; and we believe that if his ambition continues in the line of politics, his name will frequently be borne to us across the waters as that of an earnest and energetic worker for his country's good.

H. E. THE Viscount de San Januario the Governor of Macao, and Envoy Plenipotentiary from the King of Portugal to China and Japan, arrived at the beginning of last week. He is lodged at Hama Goten, the palace now invariably placed by the Mikado, at the disposal of members of foreign royal families, or the diplomatic representatives of foreign countries, on their arrival.

A MANIFESTO of considerable interest has been issued (in a newspaper established and supported by himself), by Kido Takayoshi. We intended publishing it ere this, and sending it home by this Mail—but it has been crowded out, and must be held over until our next. Its interest lies simply in the fact of its being the first appeal of the kind to the people of Japan ever published by any of those who took part in the late revolution.

TWO DAYS of most agreeable sport were afforded to the Yokohama community at the close of last week by the Athletic Association of that settlement. The weather was perfect, and everything went off well.

THE *Japan Weekly Mail* of the 1st instant has made the *amende honorable* to this journal, in the following terms:—

"Some months ago the *Japan Gazette* published the translation of a despatch said to have been recently addressed by the Korean to the Japanese Government, and written in terms of no common discourtesy, declaratory of intention to refuse in future the annual tribute which had marked its dependent relations to Japan, and desiring the Japanese, if they would still have it, to come and try to collect it.

There were many excellent reasons for doubting the authenticity of this despatch of which a careful analysis appeared in the *Japan Mail*, together with an account of the relations existing between the two countries and the manner in which they were conducted. But it should be allowed that the *Japan Gazette* was right in this matter in spite of the extravagances of last week—the 40,000 men &c. The Government, however, at the time strenuously denied the authenticity of the despatch and addressed the journal which published it a communication to that effect. But recent events prove conclusively that the relations which formerly subsisted between the two countries are destroyed, and, unless the national feeling should be so roused by the decision of the Cabinet as to reverse its policy and force the Government into active coercive measures, Korea will henceforward cease to acknowledge any tributary relations to this country.

We can well believe, indeed subsequent remarks in the same paper reveal plainly enough, that the above was written in no spirit of generosity, and with no wish to rectify or remedy what might have been, and what was intended to be, a heavy blow aimed at this paper. But whatever the motive, we accept the simple acknowledgement it contains,—“it should be allowed that the *Japan Gazette* was right,”—and forgive everything the *Mail* published on the subject, for its sake. Yet we call to mind that the writers in that journal not only violently contradicted our assertions, and affected contempt of ourselves, but impugned our motives in the most offensive manner.

Now having said that we forgive all, we would not recall these last facts, but that the same character attaches to remarks on other facts we have published.

After quoting the statement we made in an article on the 29th ulto., the *Mail* adds:

“We shall not waste time in confuting this statement, but as it is calculated to do a great deal of injury to the prospects of this country, in the minds of all thoughtful students of its history and well-wishers of its progress, we may stake such credit as this Journal possesses as a fairly correct authority upon Japanese questions, on an unqualified contradiction of the statement in question, which is, in our opinion, most pernicious, most misleading and most unwarranted.

In this country every one has an opportunity of estimating the value of the opinions expressed by a journal, but people at a distance cannot be supposed to do this, and it is for them that we now write these few words.”

It seems to us that “such credit as the *Mail* possesses as a fairly correct authority upon Japanese questions” was staked on the subject of the Corea; and an admission of the *Gazette*’s correctness in that matter is tantamount to an admission that the *Mail* is not infallible; and that at the best it is but fairly correct on all Japanese questions. Under these circumstances, and considering the vehemence of its utterances on the Korean business, we ask the editor whether it is judicious to give “an unqualified contradiction to assertions made by this paper, on subjects which he has no personal knowledge of?” We have every respect for the source from whence the *Mail*’s Japanese information is derived, and should be very pleased to receive information from the same quarter. We are obliged to depend for the most part on our own observations and our own personal knowledge; but even were it possible that we could receive information from the same source as the *Mail*, we should not consider ourselves obliged to accept it as gospel, if it displayed an ignorance of facts well known to us.

The statement, made by us, and which has met with the unqualified contradiction of the *Japan Mail*, we still adhere to, as we did adhere to our statements about the Corea. The government and the Press alike denied our correctness on that occasion; and we still unwaveringly, and in no ambiguous language told them and the public, that we were right, and that Time would decide between us. We were better informed than the *Mail* on that, the most important question that has occupied the minds of Japanese statesmen for a long time past; on some occasions our information on Japanese subjects is in advance of our contemporaries; and, as a general rule, it is equally correct. Any one who has experience of the difficulty of gathering information of a reliable character from the Japanese, must be aware that, at the best, the information is but fairly correct; and that oftentimes it is very incorrect—the Korean business, to wit. There is much that can only be published for what it is worth. But for our part, when we make a positive statement and ask our readers to rely upon it, we take care to be sure of our ground before we commit ourselves.

Let our contemporary consider what it cost us to adhere to our statements respecting the Corea. Not only had we to submit to the contradictions of our rivals, and their comments which went far beyond fair criticism and became personal attacks upon us; but we had to witness the most strenuous efforts in quarters we should not have expected them, to do a great injury to that Tokei newspaper which all knew to be the source from which we obtained the original letter on the Corea. Yet in the face of all we maintained our ground.

Thus our contemporary and the public have seen that we do not plant our colours and run away and leave them to fate. We have protected them; and although the assaults upon us have been fierce and oft-repeated we still wave them—ourselves unhurt, our colours unsullied. We therefore are in a position to make advances to our contemporary. We do not ask for favour or affection—neither of which, in all probability, would be accorded to us if we did. But we do propose that personalities may cease on both sides, and that each of us should give the other credit for purity of motive and honesty of purpose. Let unqualified contradictions appear only when there can be no doubt. On Saturday the credit of the *Mail* was staked upon an unqualified contradiction of a statement the truth of which is known to many of the readers of both the *Mail* and *Gazette*, (although it is not likely that it would be acknowledged in official quarters; and probably would be denied in the same manner as the Korean difficulty was). And finally let us not lower the dignity or impair the usefulness of the press, by bickerings unworthy of our profession and of ourselves.

To the public we say that the publication of facts of importance however extravagant they appear, is one of the duties of a newspaper. The statement of 40,000 men being about to be sent to Corea, was the mere information respecting the proposed scheme. We gave no opinion, nor did we question where the men were to be found. All we did was to tell our readers what was the plan which would have formed the basis of the expedition, had it not been upset by Iwakura. Again, the publication of such a fact as the *Mail* has given an unqualified contradiction to, is neither “pernicious, misleading” or “most unwarranted.” To be forewarned is to be forearmed; and as well might we object to the home papers publishing the movements of republican sympathisers in England, as so stigmatise a similar proceeding here. It is not because we agree or disagree

with such movements that they are published—but simply as information for the public, and as data on which they may form a correct judgment.

AN ACCIDENT to the Empress and her mother, must, under any circumstances arouse the sympathies of the public; and all foreigners will rejoice that the injury to their majesties in the accident that occurred to them yesterday was not even more serious than it turned out to be. As well as we can ascertain, it appears that the carriage in which they were seated was upset over a bank close to the Kobusho, or department of Public Works; and that the carriage should be much broken, one of the horses killed, and the other so much damaged that we are told it is since dead, and yet that the two imperial occupants of the carriage should escape comparatively unhurt, does seem little short of a miracle. We most heartily congratulate the Emperor and themselves on their preservation. They were naturally much shaken, and the Empress’ mother seemed more alarmed and more hurt than the Empress; but we trust we shall not have to record any further ills as arising from the accident.

It occurs to us that out of this mishap some good may come, as it is a practical illustration of the necessity of putting in positions of responsibility persons who have the requisite skill. It is quite admitted that such an accident might happen to the best driver who ever held reins; and we do not wish to cast any reflections on the coachman in this instance. Still, it requires something more than a knowledge of stable work to enable a man to drive, whether it be but one horse or a dozen; and yet the only qualification that some of these who drive for the imperial family possess, is, that they were bettoes of some experience. Our belief is that as coachmen they could hardly be less experienced than they were when they received their appointments. To drive a pair of spirited horses at a snail’s pace through such streets as that in which the accident occurred is particularly difficult; and our wonder is, not that this accident happened, but that we have not before had to chronicle something of the kind.

Our object now is to argue from small things up to great. The failing of the Japanese natives lies in a most devil-may-care confidence in their own abilities. They see and they fancy they know; not considering that what looks so easy to them from the comparatively facile manner in which they see foreigners operate, it has cost those foreigners years of study, theoretical and practical, to attain.

This is apparent in almost every direction in which knowledge and skill combined are called into action. The proofs are all around us. Look at the houses they build without foreign superintendence. Look at the native engineers they employ ashore and afloat, and the state of the engines under their charge. Look at the ships they send to sea, even with foreign sailing masters and foreign chief engineers on board. Look at the abortions of buildings the houses in the main street of Tokei are which have been built under native superintendence—i.e. by builders who have no scientific acquaintance with the principles of the reciprocal supports of the various parts of the edifice, but who fancy they build a foreign house when they make something like one in shape, and with the materials used by foreigners. Look at their road-making; at their financing; at their courts of Justice. It matters not what it is—in everything in which they wish to imitate foreigners, they make most deplorable

blunders—simply because they will not recognise their own inexperience.

Only this week the loss of a Japanese steamer, the *Columbine*, has been announced, arising from the Japanese captain refusing to listen to the remonstrance of the foreign sailing master. And so it is all through. The happy-go-lucky way in which they act, quite disregarding the great responsibility the safety of life, ship and cargo casts on them, may be learnt from any one who has ever had the misfortune to be employed or to take passage in a merchant vessel under the Japanese flag. There is not one Japanese on board, as a general rule, who realizes any sense of responsibility. Every man is as good as the captain; and as for the foreigner expecting any kind of obedience, unless he be a man who is able and willing to enforce his own orders, it is absurd.

Now this accident that we have had to record as happening to the Emperor's wife and her mother, may be made the means of impressing on the government the folly of continuing to employ inexperienced persons in posts of responsibility, requiring both skill and science. A carriage accident may be thought but a small affair. Yet we see very frequently how sad are the effects: and the one of which we are now treating was quite sufficiently disastrous to give point to our remarks. Only ignorant people would say that "any fool can drive a pair of horses." We would not dispute it, so long as there are no intricacies in the road, and the horses and harness are reliable; it is otherwise, however, when the road is difficult, and anything goes wrong. But we do not lay stress on the ability or otherwise of the coachman in this case; we only use it as a warning to the Japanese nation, that failures and mishaps must be expected where incompetence exists; and incompetence is now the rule rather than the exception in most directions in which foreign appliances are being introduced, without efficient superintendence properly maintained.

THE Athletic Sports for this year are over, and the committee may well be satisfied with their success so far as they have gone. Lovely weather, a capital ground and good arrangements, with a fair number of competitors what more was wanting? Everything—was spirited; and we neither saw nor heard of any hitch whatsoever.

And yet to our mind there *was* something wanting.

When our Swiss friends get up their rifle meetings they manage to make them partake of a cosmopolitan character not only in name but in fact. They have competitors of all nations for all prizes but one; and the consequence is the competitors are very numerous, and hail from every country that has representatives among the residents in Japan. The Yokohama Rifle Association, with every desire to accomplish the same end, does not succeed in it to the same extent; and even the Regatta does not find so much of this international spirit as might be expected.

Why is this? Why should there not be as much fraternizing in all these things that are got up with a catholic intention, as there is at the Swiss meetings? It is hard to give a reason, and yet if no reason be discovered, how shall a remedy be found?

It is always distasteful to us to see international jealousy exhibited in our community, and taking one period with another, we think there is as little of this feeling as can be expected in settlements formed as ours are. We are quite unwilling therefore to attribute the failing to this cause. Yet it is very remarkable

that the games just concluded had no competitors but English and American; and very few of the latter. There were no Swiss, French or German; and yet there is another Athletic Association in Yokohama, the majority of whose members are or used to be of those nationalities. None of us can forget how a young German, Mr. Ahrens, carried off prize after prize at one of the athletic meetings, held on the race-course; and we are not to suppose that he was *lusus nature*, and that no others of his countrymen are fit to contend for the honours he secured. Why then were there no entries from the sister athletic association? Why was there not a single name of any nationality, except America and England, among the competitors? Can the committee answer the question? It is one worthy of being considered and of being answered.

Our own opinion is that the variety of competitions is not sufficiently great; and that there might on subsequent occasions be prizes for certain kinds of feats of skill, strength and endurance, which are among those most practised in the Gymnasium, but not thought of among the ordinary games of Englishmen. The expense of the necessary apparatus for these could perhaps not have been borne by the funds this year, as they have had a prodigious drain upon them for the course, ground, buildings and fences; but next year they might be added, and an interest given to the sports such as gymnastics always supply. If this be done, we cannot doubt we should find that international jealousy had nothing to do with the games having been hitherto confined so closely to the Anglo-Saxon race; and in the new elements introduced probably there would be plenty both of Americans and English ready to contest the palm with their fellow residents of other nationalities.

The games of the present season have suffered materially from the non-entry of those we could all have wished to see. The "high jump" and the "throwing the hammer" were failures only for want of competitors. There were plenty of entries, but some of those who could best have "shown" in these, held back, and thus there was no emulation, and much disappointment.

Among the spectators we heard comments freely passed as to the ability of this or that person to excel in this or that sport which was going on. Why did not such persons enter? Why do they not join the association? All who profess to excel in such sports should give them not only the *moral support* of their presence as spectators, but practical interest by their active participation. Unless they do so they fail in their duty to their brother athletes, and throw on the shoulders of a few, a burden which might be quite light if borne by the many.

Our remarks are intended as an incitement to the future and not to find fault with the past. We have a right to make these suggestions, for our readers are aware how we wrote article after article upon the desirableness of these sports long, long before anything was done by the community to get them up; and we have never ceased to support them, and to encourage all those whose efforts were in the direction of these manly exercises.

Our simple recommendation then is, that in future all classes of athletes and athletics be considered; and whatever can add to the pleasure of the spectators, the spirit of the competitions, and the general interest of the proceedings should be added to the programme.

WE HAVE received the following letter written unofficially from two officials in the government service:—

*To the Editor of the Japan Gazette.*

We take the opportunity of writing you that we read your paper the *Japan Gazette* daily and that it is generally correct; but there are one or two errors in the letter relating to our great officers; and believing that you would like to correct them in your paper, we write this letter.

Sanjo is sick now, but will return to his duty. Okuma, Kido and Okubo did not resign. Saigo resigned from Sangi, but still remains commander of the military. As he is not now busy, he has been allowed to visit his province at his own request. We suppose these are the mistakes of the writer to you.

Soyejima, Yeto, Itagaki and Goto have resigned. Saigo resigned from Sangi only. Okuma was appointed to Okurasho beyond his original duty of Sangi. Oki was appointed Shihokio beyond his duty of Sangi. Terashima was appointed Sangi and Gaimukiyo; Katsu Sangi and Kaigunkio; Ito, Sangi and Kobukiyo.

\* \* We thank our correspondents for their letter.—[Ed. J. G.]

FROM OUR good friends whose letter we inserted yesterday we have another to-day, in which they say:

"In your paper of 29th we read that there was irritation among the soldiers, 50 of whom left the service, and others being ordered to take them prisoners refused. Again you say there is a strong feeling towards republicanism; and express a doubt as to Saigo continuing to hold his military office.

These are without good reason, and we would not notice them but that Japanese and foreigners may have their doubts set at rest. We therefore explain these errors.

A few soldiers have been allowed to return home at their own request. This must be the foundation of the first error. The second we have not heard of. As to the third we have seen it very often in the writings of foreigners—but, as you know, there is one emperor, and one imperial family, ever since the revolution. Our people therefore do not think about it. It is too late now to do so. Consequently there is no source for a republican band, among those of whom you say it was most active during the late revolution. This is a great mistake. They were active indeed—but there will never be a republic we assure you. About Saigo we wrote to you yesterday. There is no doubt on the matter."

\* \* Again we thank our correspondents; and we are glad to give their letter publication. It will be seen on reference to our article of 29th ultimo—that we mentioned the story of the military irritation as "one of the rumours flying about;" and these were so universal that we are sure our correspondents cannot have been ignorant of them. It is useful to publish such rumours as these, as it not only puts all parties on their guard—but may lead, as it has done in this case, to an explanation. Our readers will see that they are admittedly so far correct as this:—that soldiers requested to retire from the service, and were permitted. With regard to the remarks respecting republicanism, our correspondents say they have read such reports in the writings of foreigners. We do not call them to mind in any foreign paper published in Japan. But the usefulness of publishing *the fact* in this case, is proved by the spirit in which our correspondents reply. "They were active indeed; but there will never be a republic we assure you."

Nothing that we could say would show more clearly the advantage of our having written as

we did; (for, of course we are mere relators of the passing occurrences); and our mention of this fact respecting republicanism has roused the spirit of watchfulness, and called forth an expression of zealous determination, which it delights us to see. If the country is to prosper, let there be no more revolutions. But it will be wise of the government not to close their eyes to facts because they are unpleasant; for if they do, an evil day may come when they are not prepared for it.

We hope our correspondents will always communicate with us upon any errors, or aid us with any explanations which may tend to correct or modify statements, they may find in the *Japan Gazette*.

To the Editor of the *Japan Gazette*.

SIR,—At your request I give you a brief account of the loss of the S. S. *Ariel* on the night of Oct. 27th, 1873. We left Yokohama at 5 p.m. 26th, with nothing occurring of any special note till about 9.10 p.m. of 27th. We had strong N. N. W. to N. W. blow throughout the day, and the ship kept up, to get under the lee of the land, and in smooth water.

Passed Cape Nokuno at 8.30 when changed course off shore to N. E. by N., judging myself at least five miles off shore. At 9 the most eastern part of land to be seen was bearing N.  $\frac{1}{2}$  W. and I judged the land four miles off. Took some casts of the hand lead with no bottom at eleven fathoms. Changed the course to N. N. E. leaving, directions to the officer of the deck and went to my room. In a few minutes the ship struck. I ran to the engine-room to see if she was making any water. It was reported no. I ordered the engines ahead, thinking for a moment that we were over the reef, but by the peculiar roll immediately after, I knew she was on the reef, so ordered the engines to back, but the report came that the water was coming in from forward and that it was up to the fires.

Stopped engines and ordered the Engineers and crew to assist Deck officers in lowering boats.

The boats were lowered safely and filled with the passengers and crew as soon as possible.

The officers and men of the Deck and Engineer's Departments acted with great promptness and coolness, the men obeying orders without of trying to save for themselves. At half past 9, the ship was deserted, the stern entirely under water.

After landing, the officers and part of the crew returned to the ship in three Japanese fishing boats which were ready manned. A few succeeded in getting on board and saving a few clothes then returned to the boats and to the shore.

At daylight nothing could be seen but one mast head and what appeared to be a portion of the hurricane deck floating away to the southward.

The Japanese authorities promised to assist us to get to Yokohama overland, and I decided to accept their kind offer, and started on Tuesday noon, 28th instant. We received every kindness from the officers on the route, everything being done for our comfort which could be. Arrived in Yokohama on the 3rd November, after travelling through the country about 150 miles.

R. N.

WE ARE indebted to the courtesy of Captain Newell for the following extracts from his log:—

October 28th,—Left Toyama the scene of our wreck at noon, proceeded on foot and what baggage we had on pack horses to Ewasaki Ken, where we arrived 4 p.m. 75 of us all told. Providentially there were no Ladies or Children. Here we were met by six Government officials who had comfortable quarters prepared for us and who secured all the pack horses procurable in the vicinity ready for an early start on the following morning.

October 29th.—Left Ewasaki Ken at 8.30 a.m. some on pack horses but mostly on foot. Arrived at Kameoka-mura at 5.30 p.m. when it commenced to rain heavily. Here as before the Government officials had prepared tea houses for our reception.

Oct. 30. Left Kameoka-mura at 8 a.m. in the rain, travelling as before, the roads were very bad, the pack horses were changed at every station (about four or five miles distant apart) which caused much delay. Arrived at Eshingani at 7 o'clock p.m.; here again we were indebted to the Government officials for comfortable quarters as before; indeed every possible attention was paid us.

Oct 31st. Left Eshingani at 7.30 a.m. The rice crops were looking splendid; this day we met a few jinrikishas but could not engage any. At noon crossed a large river where we were met by some officers from the Governor of Mito, who wished to present us to that officer. On our arrival the Governor who was unwell excused himself from seeing us, but sent word that he would treat us well should we come there again. Here we were enabled to engage about a dozen jinrikishas which was a great relief to many who were very tired after walking so far. Arrived at Takawarra at 5.30 p.m., stayed for the night in very comfortable Tea Houses. The Mito country appeared very rich, well timbered, and highly cultivated.

Nov. 1st.—Left Takawarra at 7.15 passed through Eso Oka, a large well-to-do looking town, also through T'sura, another large town. Here, for the first time, we saw some beggars in the street, they appeared to be afflicted with leprosy. Arrived at Fujisiro at 5 p.m., put up as before for the night in tea houses prepared for us by our kind mentors.

Nov. 2nd. Left Fujisiro at 7.15 a.m., some walking, some in jinrikishas, others on pack horses. At noon crossed a large river, the Torridogawa, on large flat-bottomed ferry boats. This river was navigated by large canal boats. The rice crop looked very well. Arrived at Shinzi, the N. E. part of Yedo, about six miles from Asakusa at 4 p.m.

November 3rd.—Left Shinzi at 7 a.m. for the Yedo Railway station which was left by the 10 a.m. train, arrived in Yokohama at 11 a.m.

### Loss of the "Ariel."

#### OFFICIAL ENQUIRY INTO THE LOSS OF THE P. M. S. "ARIEL."

In the matter of an inquiry into the loss of the Pacific Mail Steamship Co.'s Steamship *Ariel*.

Before GEO. N. MITHCELL, Esq. Vice Consul.

J. D. CARROLL, } Assessors.  
J. M. BATCHELDER, }

Charles McDougal, Commander U. S. N. Senior officer present assisting.

Court met at 10 a.m. Nov. 6th 1873 and adjourned until 10.30 a.m. Nov. 7th 1873.

November 7th, 1873.

Court met at 10.30 a.m.

Assessors approved and sworn.

Capt. Richard Newell called and sworn:—I am a master mariner, have been at sea nearly 18 years, was in Command of the S. S. *Ariel* on 26th and 27th October.

Left Yokohama at 5 p.m. Oct. 26th nothing of especial note occurred. Passed Cape King 10.20 p.m. the weather was clear owing to moderate northerly winds. Passed Cape Inaboye at 9.30 a.m. Oct. 27th. After sunrise, the wind increased from the N. N. W. After passing Inaboye, the wind was still increasing, and sea rougher. On this account I deemed it advisable to keep closer in to the land. Kept the ship on a northerly course, and continued on that course until 7 p.m. After this hour, I changed the course of the vessel one point to the eastward. Made the high land, as I supposed, off Cape Nakuna, close upon 7 o'clock when I changed the course one point to the Eastward. At half-past eight we were abreast of the cape aforementioned. As I judged, in referring to the chart, and by the bearing of the land, I was about five miles off. At half-past eight changed the course to N. E. by N. Kept on this course until a few minutes to nine o'clock was abreast of Toyama Point. I judged we were at least four miles off. As a precaution, ordered the hand-lead to be cast. The first cast, the leadman, reported thirteen fathoms. But subsequently he got no bottom at all. Then changed the course to N. N. E. This was about nine o'clock I left directions with the officer of the deck to note the time Toyama bore west. Cautioned him to keep a good look out. I then left the deck and went to my room this was about 5 minutes past 9 p.m. Was sitting in a chair reading the newspaper when the ship struck, it might be some eight minutes after entering the cabin. I immediately went on deck, straight to the engine-room and enquired if the ship was making any water. I thought by the feeling that the ship had slid over a reef. The engineer reported that she was making no water. I, in consequence, ordered him to go ahead. Almost immediately after having given the order "to go-a-head," I felt sure she was on a reef by the peculiar rolling.

To Court: I could not say positively whether it was a reef or a sand-bank. At the time I thought it was the latter. The Japanese said it was a reef.

On finding she was on the reef, I countermanded the first order, and ordered the engines to be backed. Had been backing some two minutes, perhaps, when the engineers reported that the ship was making water very fast. I ran to the engine room door, and I believe it was the chief engineer who reported that the water was up to the fires. Ordered the engines to be stopped, and all to assist in getting out the boats. All assisted, and the boats were got into the water. I meant by "all," the whole crew. Everyone was on deck running about. The boat the second officer had charge of, was down first. I ordered some 15 or 20 persons into this boat; I did not count them, telling them to pull in to the land, and try and get assistance. We fired rockets when the ship first struck, and burned blue lights. No gun was fired. Next followed immediately after a boat in which was the purser, and interpreter, and some passengers. The last boat which was lowered was the gig. Just as she cleared the davits, the stern went under water. There were in this boat two sailors, the first officer, and some others, but could not say who they were. Told the first officer to take some people still remaining on board, and transfer them to the other boats those which could hold them. Just as they left the deck, as I said, the stern went under water, and as the men ran forward, the water followed them up as far as the paddle-box.

To the Court: All the passengers except one, Capt. Blakiston, had left the ship by this time. He ran forward as the others had done.

I expected the vessel would soon settle down by the bow, off the reef, and so I slid down a rope and got into the boat and left her, three boats had gone on shore and there were three remaining near the ship. As soon as all were in the boats, I told them to pull to the shore. They found a landing on the south side of Toyama Point—a small fishing village, called Toyama. The boat I was on board was the fourth to get to the land. The two behind me could not find a landing place at first. Found the second officer had discovered some fishing boats and their crews lying into the land. Saw him take the few sailors he had in his boat, and some of these men, and go off to the ship again. He had just started when I arrived. I took a fishing boat, and went off also, with two quartermasters. Just outside the shore there is a line of rocks. It was here I first saw the chief officer. It was difficult to get the boats through the rocks to the land. But soon after the Japanese lighted fires, and we could see the way better. I told the chief officer to get into another boat and go off to the ship, to try to save anything he could, which he did. When he got to the ship again, he found the second mate was there in his boat; but he could not get his sendoes to go alongside the ship. I, however, induced sendoes boatmen to go alongside,

by catching hold of a rope which was hanging over the bow. The two quartermasters, three sailors, and myself, succeeded in getting on to the deck by the bow. None of the other boats would go alongside at all. I supposed it was because the ship was rocking about a good deal. I told the quartermasters to enter the rooms and take all the clothing they could. At this time there was an easterly rolling swell prevailing. After getting what clothing they could out of the forward rooms,—the only ones which were out of water—it was thrown down into the boats; they next got some beef, which was hanging up beneath the hurricane-deck, and passed that down also in to the boats.

To the Court: The after end of the ship was under water at this time. This was about two hours and a half after the had struck; after they had got back to her a second time.

Continuing, witness said that the ship was making some very heavy rolls, and he was much afraid she would go down, so descended to the boats. Remembered when they landed, looking at his watch; it was three o'clock in the morning. Never saw the ship afterwards. Went out again about the break of day, and at sunrise discovered one of the mastheads.

To Court: I have been in the service of the company since the month of August, 1866. Did not receive, on leaving this port on the 26th, any instructions. Had made some twelve passages between here and Hakodate. Made no difference in steering on this occasion, except in going a little to the northward on account of the breeze. Had observed no currents setting in-shore only one that, on the contrary, put them off. They were, when the ship struck, about two and a half miles from shore. Could see the land, it was a starlight night. Could not see any rock visible. In coming down, should steer about the same. Passed Inaboye about two miles to the eastward. The current after passing Inaboye is lost. After passing Inaboye, in summer, there is a little southerly current in-shore. Was going some eight knots at the time; had not much confidence in the report about there being thirteen fathoms, going as we were at that speed, so kept the lead going. After passing Cape Nakano, could see the land all the way until the ship struck, or slightly so. The third officer was on deck when I went below. The officer could see the land.

To Com. McDougal: Had no special instructions as to the distance to be kept from the land.

To Court: Kept nearer in to the land on account of the rough sea, so as to get smoother water. Did not think I had ever been so close in to the land in going up before; might have been in coming down. It was not more than half a minute before he got to the engine room. Afterwards I started forward. There was not a breaker to be seen at this time, but a swell. As the ship struck, had the lead hove, and found two fathoms, near the fore-rigging. Twenty minutes after the ship struck, every one had left the ship.

2 P.M.

Captain Newell, to the Court.—I left Yokohama on the 26th October. At noon next day was in lat. 35.36, long. 140.58; then steered due north to get under the lee of the land. At 8.30 P.M. was about five miles east of Nakuno Point, and at 9 P.M. abreast of Toyama Point. After heaving the lead I considered ship's course quite safe; the land was very high with steep bluffs. I thought I could see ten or twelve miles ahead. At 9 P.M. hauled in one point, so as to pass six or eight miles outside Kinkasan. When I left the deck I was aware of my position. I heaved the lead from force of habit, as a matter of precaution. I was intending to change the course one point in shore and thought I would try the lead.

Mr. John James Grant, sworn, stated:—I have been going to sea 18 years. Have been in P. M. S. service 11 months. Was 3rd mate of the *Ariel*. Was officer of the deck on the night of the 2. th. Went on watch at 6 P.M. Land was sighted when I was on watch. It was a pretty clear night not cloudy but a little hazy. Sighted Cape Nakano about 8 P.M. The moon set about 8.10 P.M. The captain did not retire. He was on deck at 7, and I saw him on deck several times afterwards. Could see land on the port bow, for a considerable time. The ship struck about 9.10 P.M. The ship's course was altered when I took the watch, and at 7 o'clock to N. by E. till we got to Cape Nakano. It was altered before we saw the cape. The course was altered afterwards before the ship struck. Changed course to N.E. by N. at 8.30 P.M. The course was changed again a little after 9 P.M., to N.N.E. About 6 or 7 minutes after this the ship struck. The captain gave order to change the course. The ship was bearing about W. of Cape Toyama when she struck. The lead had been thrown from a few minutes before to a few minutes after 9, but no soundings were obtained.

The captain ordered the leadman into the chain stand. There was one man at the wheel. A cross sea was running. Northerly sea, easterly swell. I was on the bridge when she struck. I could see the land distinctly. After the ship struck no breakers could be seen between the ship and the shore. The wind was N. to N. by E. and to N. by W. I consider the ship was 4 miles off the land when she struck. After she struck I was on the bridge. The captain ran up and told the quartermaster to put the wheel hard a port. I heard the captain's order to reverse the engines, and he gave me orders to get the boats ready.

I heard an order given to go astern. I got the boats ready to lower away, and then was ordered by the captain to lower. I then saw that too many did not get into any one boat. I have made about 7 trips to Hakodadi—one a month since last April. I know how the currents set. That night a strong current set to the southward. The discipline on board was very strict. I have never seen better on any ship I have sailed in. Every man was in his place. In my opinion the captain did everything for the ship and company that he possibly could. I have not sailed to Hakodadi in any ship but the *Ariel*. I have been once or twice at that particular point, closer in shore. The ship was drawing 14 ft. 3 in. when she struck. George King was at the wheel.

William Kluth, sworn, stated:—I am a quartermaster. Took the wheel at 6 P.M., left it at 8 P.M. Altered the course once during that time. I steered N. from 6 to 7 o'clock, and was then ordered to steer N. by E. After being relieved I went forward on the look-out. I could see land on the port bow. I was ordered into the chain stand by the captain at about 9 o'clock. Reported 13 fathoms. I took 5 or 6 casts of the lead, and then went forward. Was on the look-out when the ship struck. Saw no broken water between the ship and the shore. There was not much sea on, but a big swell. A fresh breeze was blowing. I got soundings at 13 fathoms, but afterwards got no bottom at 11 fathoms. I think the ship was about 4 miles off shore when she struck. Have been 12 months on board the *Ariel*. I cannot say whether or not the ship has been nearer in shore on other trips.

George King, sworn, stated:—I am quartermaster in the P. M. S. service. Have been at sea 16 years. I was at the wheel from 8 till 10 on the night of the 27th. I got a N. by E. course at 8 o'clock. Was at the wheel when the ship struck, about 10 or 12 minutes past 9. The course was changed three times after 8 o'clock. The first course was N. N. E. At about 8.25 the Captain changed the course. The second course was N. E. by N, also given by the Captain at about 8.40. The next change was to N. N. E., at about 15 minutes before the ship struck. The course was then changed again to N. N. E. I remained in the pilot-house until 9.21 P.M. I was ordered by the captain immediately she struck to put the wheel hard-a-port. When I left the pilot-house I went for a life buoy I could see no broken water between the ship and the shore. I have been in the *Ariel* six months, and one trip to Hakodadi aboard the New York. On this trip we were about as far off shore as usual. I don't know how much water the ship was drawing. We struck very hard—slid along the rock.

Richard Gabaratta, sworn stated:—I was 3rd Assistant Engineer on the *Ariel*. I have held this position since 3rd April. I was on watch on the night of 27th Oct. I had charge of the Engine room and was there when she struck. After she struck the captain came to the engine-room and asked if any water came in. I replied "Yes, sir." When she struck the engines stopped for a moment, and then went ahead again. I was ordered to 'go ahead' by the captain. I was then ordered to 'back her'. She stopped about half a minute after she struck. She struck with a bump, and then seemed to slide. I remained in the engine room about 10 minutes, afterwards. I left the engine room to see what was the matter and when I came down again the fires were out. There were 5 feet of water on the floor when I first left the engine room. There was no excitement on board—every one was in his place.

Capt. Newell:—It was during the first mate's watch below.

Joseph Orr, sworn, stated:—I was chief engineer. Had just turned in and know nothing of the occurrence until she struck. I turned in at 9 o'clock or shortly afterwards. Was on deck 15 minutes before she struck. It was a clear starlit night. I think no moon. I think I saw high land just before dark, but am not certain. When the ship struck, went in less than a minute to the engine-room. The captain gave me orders to back—went hard astern for three or four minutes. The engine was in motion when I got to the engine-room. I stopped the engine, and was then ordered by the captain to go ahead. Went ahead

about 5 minutes. Was then told I might as well stop the engines as we could do nothing more. There were 6 or seven feet of water in the engine room. Bilge injections were on at the time. I left the engine room about ten minutes after the ship struck. The Captain told me to get on my clothes. I had no clothes on at the time I went on deck. I took no notice of our position and saw no broken water until I was in the boat and close to the shore when I saw the breakers. Every man in my department was at his post; and the deck officers were at their posts so far as I could see.

Mason S. Cooper, sworn, stated:—I was chief officer of the *Ariel*. Have been in P. M. S. service since October 1866. Have been at sea 11 years. Was chief officer of the *Ariel* on 27th October. The weather was clear. Strong N. W. breeze, moderate sea, with a heavy swell. Left the deck at 8 P.M. went to my room and to sleep. Have made about five trips to Hakodate. Was not on deck when the ship passed Cape Nakano when I retired. I judge the land to be 4 or 5 miles off. It was a bright starlit night. Not much sea but heavy swell from N.W. When the ship struck I ran to the pilot-house and heard the captain say 'hard-a-port.' Tried the wheel and found the helm was 'hard a port.' The shock woke me up. I looked towards the shore, saw the point but did not know what point it was. Could see no broken water between the ship and the shore. All the officers of the ship were at their posts. The ship has passed on two occasions quite as close in shore on previous trips. I have twice in other ships gone about the same distance from the point. I never heard of a reef or rock off the point. About 20 minutes after she struck her stern was under water. The order was given to get boats ready to lower; but not to lower away till ordered. This was promptly obeyed. I judge from my knowledge of the coast that the ship was at a safe distance from the shore. No captain I have ever sailed with has hesitated about running even closer in shore at that particular point.

November 10th, 1873.

The Court met pursuant to adjournment at 2 P.M.

#### FINDING.

The Court of Enquiry called at the request of the Agent of the P. M. S. S. Co. at this port, to enquire into the loss of the steamer *Ariel*, having heard and carefully examined the testimony adduced do find as follows:

That the steamer *Ariel* left this port on the afternoon of the 26th October, 1873, at 5 o'clock, P.M., bound for Hakodadi.

That the usual northerly course was steered after leaving this bay, and until Cape Ineboye was passed, but at what distance from the shore the Court is unable to find.

That after Cape Ineboye was passed, the shore line was closely followed until off Toyama point.

That the same or nearly the same course, had not only been steered by the *Ariel*, but has been pursued by other vessels.

That during the voyage moderate winds, sea, and currents were experienced.

That at the hour of 9.10 o'clock on the evening of the 27th October off Toyama point the steamer *Ariel* struck on an unknown reef, and became a total wreck.

That at the time the steamer struck she was from  $2\frac{1}{2}$  to 4 miles from the land.

That within 20 minutes after the vessel struck her entire stern was under water, and that the rapidity with which she filled and the danger of her immediately sliding off the reef prevented the saving of property of any considerable value.

That the reef upon which she struck, is not laid down in the Marine charts.

That from the time the steamer struck, and until all the passengers and crew were safely landed, excellent discipline was maintained.

And the Court is therefore of opinion. That in view of the fact, the same, or nearly the same course had been taken before; not only by the *Ariel*, but by the other vessels, and in view of the fact that the reef which the

*Ariel* struck is not laid down in the Marine Charts, the Court is of opinion that no blame can attach to Captain Newell. But while it exonerates him, it cannot but think that upon a coast so little known, and so poorly surveyed as the coast of Japan, unless so compelled by stress of weather, Captains of vessels cannot be too careful in keeping a good distance from land even where the charts do not indicate danger.

The Court is also of opinion the conduct of the Captain, which resulted in saving of every person on board the steamer at the time of the disaster is very praiseworthy, and also that the discipline maintained on board his vessel, and his zeal in trying to save property, is commendable.

#### BANQUET TO THE HON. C. E. DE LONG.

A large number of the American and Dutch citizens now resident in Yokohama and Yedo assembled at the Grand Hotel on Saturday evening for the purpose of entertaining the late Representative of the United States in this country, the Hon. Chas. E. De Long, at a farewell banquet prior to his departure by the *Alaska* on Thursday. The following is the text of the invitation.

YOKOHAMA, 11th November, 1873.

TO HIS EXCELLENCY CHAS. E. DE LONG,  
*Late Envoy Extraordinary and Minister Plenipotentiary in Japan.*

The undersigned citizens of the United States desire to offer to you, before your departure from Japan, an united expression of their esteem for your character; of their appreciation of the energy and fidelity with which you have defended and advanced American interests in Japan during the last four years; of their personal regard for a Minister who has been so invariably considerate and friendly towards his fellow-citizens; and of their regret at your withdrawal from the position which you have filled with so much advantage to your country and so much honour to yourself.

It has occurred to them that such an expression of their sentiments towards you might be most conveniently made by means of a public dinner, and if this would be agreeable to you, they would suggest Saturday evening, the 15th inst., as a time at which they would be happy so to entertain you, if you would kindly promise your presence with them.

(Signed)

George E. Lane, *Chairman of Committee.*  
Henry Allen, Jr.,  
J. D. Carroll,  
Howard Church,  
Gustavus Farley, Jr.,

C. A. Fletcher,  
George Hurlbut,  
H. P. Lillibridge,  
P. E. Pistorius,  
P. A. Ramee,  
E. A. Schoyer,  
John G. Walsh, and Subscribers.

To which Mr. De Long replied as follows:—  
Yokohama, 15th Nov., 1873.

To George E. Lane, Esq.,  
Chairman, and Members  
of the Committee.

Gentlemen,—I have the honour to acknowledge the receipt of your courteous invitation to partake of a public dinner with you on to-morrow evening, which invitation I gladly accept.

In response to the generous sentiments you have expressed in connection with the invitation permit me to say: that you as my immediate constituency have enjoyed superior opportunities to judge of my career as the Representative of the United States in Japan; practically you represent the bulk of the commercial interests I have had subject to my charge; your commendation must satisfy all uninformed persons, and forms for me a testimonial of exceptional worth which I shall for ever treasure.

The pain caused by separation from you is alleviated in a great degree by the knowledge that I shall be remembered by you with respect; and by the further consideration that I leave your interests in most able hands; when they will be even more jealousy guarded than they have been by myself.

Accept Mr. Chairman and gentlemen the assurances of my high consideration.

Yours most truly,

C. E. DE LONG.

At half-past seven o'clock the company numbering some ninety gentlemen sat down to table, Captain Lane of the Pacific Mail Steamship Company's service in the chair, supported on either side, by the guest of the evening, the Hon. Mr. De Long; the Hon. Mr. Bingham; Mr. Banduin, Representing His Netherlands Majesty, and Capt. McDougall, U. S. Navy, commanding U. S. Warship *Saco*.

After due justice had been done to the excellent dinner,

The Chairman rose to propose the first toast "The health of the President of the United States of America and that of H. M. the King of the Netherlands." Drank with cheers.

The Chairman next proposed the health of Mr. De Long in the following terms:—

GENTLEMEN,—We have assembled this evening to bid farewell to a Minister who has long been known to all of us; whose public acts have won for him respect of men of all nation; whose private character we have learned to esteem, and whose intercourse with us has been marked by the cordiality and an earnest desire to promote our happiness and prosperity which has made us all his friends. It is now more than four years since Mr. De Long arrived among us to assume the duties of American Minister. He then had little knowledge of this country and he found it just emerging from the disorders of a revolutionary change in its system of Government, and in great uncertainty about its policy towards foreigners. Without much diplomatic experience, armed only with his own earnestness and ability, and with the confidence of his Government, he had to undertake the difficult task of practically re-establishing American relations with

Japan under unforeseen and embarrassing circumstances. The old Treaties were his only guide, and these he had to maintain with a Government composed of men who had but recently gained power, and whose real purpose with regard to Treaty obligations were but imperfectly known. This task was arduous enough, but he brought to it the energy and clear-sightedness which he had acquired in our Western Mountains, where life and fortune depended less on the protection of Society than on individual courage and ability, and where every circumstance combined to develop a man's inherent superiority rather than to favour his accidental advantages. Among the strong men who composed that community he was a leader by common consent, and it was for this reason he was selected for the honourable position of United States Minister in Japan. As Minister here he has honourably fulfilled the task which he undertook, and has more than met the expectations of his friends. He has conducted American affairs with so much devotion to his country's honour, with so much untiring zeal for her best interests, and such willing sacrifice of his own ease and comfort, as to restore American influence to its just position in this country and to earn for himself the esteem of all his countrymen. At the same time he has been so considerate and just in his dealings with the Japanese Government, that he has made personal friends of many of the chief men of the Empire, has persuaded them of the sincerity of American friendship to this nation, and taught them to confide in the character of an American Minister. And, if there were formerly, in this little community, some severecritics who could find little worth praise in such a man, it must be very agreeable to Mr. De Long, to know, that to-day, as he is about to leave these shores, he so fully enjoys the respect of all foreigners here, that some of them now only complain that it has not been possible to admit them to participate in the honours which we this evening offer to him. So much of success ought to console our friend for whatever disappointments have attended his career here. Let us hope that in the future as in the past, difficulties and discouragements will find him always with force and patience to overcome them, and that his path may be as prosperous everywhere as it has been in Japan. He is leaving us at a moment when his experience and intelligence, could not fail to prove valuable to all concerned in the welfare of this country and of the foreigners living in it; and we cannot but regret his departure, however high may be our hopes of his distinguished successor. As a Minister who had laboured most faithfully and most earnestly to advance and defend American interests in Japan, as a man who has proved himself worthy of his high office, and as a friend whom we have all been glad to have among us, we could not allow him to leave us without expressing to him our hearty respect and regard, and our sincere wishes for his future happiness. We have met to-night with purpose. Let us now drink to his health and prosperity and to that of his family, wish him a safe and pleasant voyage across the ocean, and in saying farewell to him, express the hope that he will not, in the warm welcomes which await him at home, wholly forget the faithful friends he will leave behind him here.

Mr. De Long, in reply, said: Mr. Chairman and Gentlemen. Words are inadequate to describe the emotions which animate me now. A little over four years ago I landed in Japan, a stranger to you all—a stranger to the people—to this Government,—and inexperienced in the duties which lay before me. I then met

many who meet here to-night to greet me, who were kind enough then to welcome my arrival. Upon that occasion I asked of those who were there, that they would give me their confidence and lend me their counsel. I am here to say to-night that those who were present then have done so with the cordiality and honour that is becoming to men. I promised in return that if they would so do, I would put forth my best energies and devote my time to advancing American interests in Japan. By this assembly here to-night, by the speech which your Chairman has made, and which I hear you so unanimously applaud, I am led to understand that you consider I have redeemed my promise to the best of my ability. (Hear! Bravo!) The pain of the occasion which calls for friends to bid each other "good-bye" is materially palliated whenever we can drown the thought of separation in a scene of joy, and to-night we are doing so. I feel that though I am no longer empowered to speak for and represent your interests in this land, I leave them safe in the hands of my most worthy and honoured successor. We are all of us in a strange country and amongst a strange people. Before I take my leave of you, however unpopular may be my views, however much alone I may stand in the expression of the opinions I am about to utter, I feel that this is the time, perhaps the last occasion on which I may be heard, when I should speak the convictions which are in my heart.

I discovered upon my arrival here, this strange condition of affairs in Japan: that this the last of all the nations on the earth to enter into international relations with other states was, by the agency of steam and electricity, to be placed fully in the pathway of progress, that this people had felt its thrill through the core of their hearts, that they were awaking, as it were, to its march, but yet that they were like men dazed by too sudden light, that they were groping in the dark, and reaching out on every side for assistance—and some of them, grasping at broken reeds, and unworthy supports. I so consider them to-day, and they have my fullest sympathy.

There are those who complain of Japan, because she has not advanced fast enough. There are others who complain of Japan because she has advanced too fast. Between the two I stand as their advocate and moderator. I have found that every material advance that we have made in this land has been by the united efforts of the gentlemen who represent the various powers, and I deprecate any act either on the part of the press or an individual which would attribute to one the credit for acts which are certainly the offspring of the labours of us all. (Applause) I found that America had in this land no interests that were not common with those of other nations of the world, and that what I had to do, was, first to win confidence and respect, and then act conjointly with my associate representatives of other foreign interests. Next to win the confidence and respect of Japan, and then I should have accomplished all that could be expected. That has been my aim; and I believe that I leave Japan with the confidence and the respect of my colleagues, and with the confidence and respect of the Japanese. One means I took to gain that respect was this:—I never assumed to know anything I did not understand. I never gave any advice on any subject that I was not familiar with; then I endeavoured to give such advice in every case as I would give to my brother. (Hear! Hear!) In short I have attempted to gain success here by an example and programme

of honesty, and willingness to work at all times—as I believe most of my friends will admit. I had rather stand for the time being in the opinion of the Japanese as knowing less than they expected I ought to know, than assume a knowledge of matters about which I was uninformed. Now there are those who say we have made no progress. Let me draw you one or two little pictures. When I arrived here and requested an audience with his Majesty it was with very considerable difficulty I obtained it. With the co-operation of my honoured predecessor, General Van Valkenburgh, a very worthy and distinguished gentleman, it was at last granted. How do you imagine I obtained it? I was told I might have an audience, but that His Majesty would not be observable. He would be behind screens or tapestry. How then was I to know that he was there? (Laughter.) I replied by stating that I held a letter from the President of the U. S. A. which was addressed to the Mikado, that I understood it to be my duty to deliver it into the hands of the Mikado of Japan, and that I could not deliver it unless the Mikado was there. Therefore I must insist on his "receiving me in person." I must "see" him.

After a long time this course was conceded. He was to appear. Then the next innovation was that the Prime Minister was to take the letter at a certain place. They had had a programme drawn out shewing the whole palace, shewing how you were to get in and how you were to get out, and where everybody was to stand. I said "No, my instructions were to deliver this letter to the Mikado, and if I cannot I am going to keep it. You understand what "keeping it" means. That means suspending relations. If you think you can afford that now, all right." After great deliberation I was granted an audience. I went to the old castle (which is now no more) and on entering it I threaded through corridors to an extent unknown, to the sound of the most weird and dismal music that ever saluted the ears of man; and, when, finally I reached the audience chamber, I found the whole building filled with courtiers abasing themselves on the ground with their hands upon their swords, his Majesty sitting upon a throne backed by a perfect arsenal of weapons immediately within his reach, and his sword-bearer having his sword about three inches drawn out of its sheath. That was the nature of that reception. A few days ago it was my fortune and my pleasure to present my successor, the Hon. Judge Bingham. I say this for the purpose of shewing what Japan *was* and what it *is*. On the first occasion I was escorted to the palace by perhaps five hundred troops; the corners of the streets were protected by ropes to keep back the thronging multitude, and as my predecessor and myself passed in their midst, we heard numerous uncivil remarks addressed to us and to foreigners in general. Let us now compare the circumstances of the recent audience. Judge Bingham and myself proceeded to the palace without any escort. There were no ropes necessary to confine the people at the corners of the streets, foreigners mingled with the crowd, mechanics pursued their callings undisturbed at our approach, we reached the castle safely and were there received by the Ministers—all in foreign dress, and afterwards by the Mikado, standing on the same level as ourselves dressed in an uniform like that of an hussar in foreign service with cocked hat and plume. Only a few days before, too, it was my pleasure to be at the Palace with the Duke of Genoa, who was similarly received by the Mikado, who himself escorted us through the grounds, promenading for several hours

with us, and finally took breakfast there, when the Emperor, who a few years ago was too great to be seen, sat down with us in foreign style with foreign knife, fork and spoon, and the same musicians who had made such hideous noises formerly were playing "Wearing o'the Green," the "Marseillaise," and "Sherman's March through Georgia." Now I turn to a more serious subject. I claim that there has been all the material and political advancement in Japan any practical man has a right to expect within the length of time that her people have been subject to foreign intercourse. Let us take their religious question. Here I touch upon a question on which men change more rarely than perhaps upon any other. Less than four years ago, my colleagues and I attended a convention at Yedo to endeavour to persuade this government not to persecute 4,000 people at a place called Urakami on account of their religious faith. The President of that convention was Sanjo Daijin, the present Prime Minister. The second was Iwakura the present U-Daijin. After all our arguments had been used, we were finally told by Mr Iwakura that this Government rested upon the Sintoo faith which taught the divinity of the Mikado: that the propagation of the Christian faith and religion tended to dispel that belief, and that consequently it was the resolve of this Government to resist its propagation as they would resist the advance of an invading army. In other words, it was none of our business what they did with their own people, and that they had determined to persecute, slay and crush any Japanese who became a convert to the Christian religion. Since then, nearly four years have rolled by, and now we know that this same Iwakura was the man who recommended this Government to release those same Christians, to restore them to their homes and liberty, and to allow them freedom of conscience; that this same Prime Minister is he who signed the decree restoring them to their rights; (Hear, Hear); that those same officers were those who ordered that the hateful edicts which stood at every corner in the streets of cities and at every cross-road in the country, denouncing Christianity and threatening punishment to those who avowed it, should be taken down out of regard to the feelings of their foreign friends. But the success did not end there. There is another and more important proof of it. We further were told at the time that these Christians should be restored and the edicts should be removed, that no man should hereafter be punished in Japan for professing the Christian religion. A short time afterwards the Rev. Mr. Ballagh called my attention to the fact that a Japanese had been arrested and punished for no other offence than having become a convert. I drew the attention of the government and called upon them to either make known what the offence of the man was or else fulfil their promises. In reality this was a full, square test. That man was unconditionally released. I claim upon that one circumstance that every man, I care not what his faith may be in religious matters, will admit that as a more substantial proof that more progress has been made than could be shewn to have been made in the same length of time than in any other country on the globe. There is a spirit of impatience in dealing with this people shewn by some. Some say "How is it that Iwakura and the other Japanese who have travelled round the world and who have seen the advantages of civil and religious liberty should come back here impressed by them, and yet that we see no evidence of progress?" Please view this for one moment from a Japanese standpoint

and imagine that these men have come back, convinced of the superiority of our civilization over theirs. Then remember that they have thirty millions of men to convince of the same thing before they can move in the line we would wish them to move. Give these men time. Japan must fall into the path of progress and march with its advance. The rosy fingers of Progress are pulling aside the dark curtains of ignorance and shewing her what true progress is, but it cannot be expected she should march as rapidly as we possessing our fuller ideas of civilization. We come here seeing them slow to adopt our opinions. We find them saying "Mionichi!" when they ought to do something to-day. (Laughter.) I have obtained such a suspicion of mind that I shall hereafter mistrust any man who tells me he is "very sorry" about anything (renewed laughter) and when any individual shall hereafter draw a very long bow I should not wish to offend him, but I shall feel very much like saying "Nara-hodo." Still I look upon their theory of action as somewhat similar to the action of two men running a race. I can't possibly outstrip you, and I know it, still it is my duty to endeavour to do my best and perhaps I may succeed in retarding you. I think these men profess to be ignorant of several things which they fully understand but feel it impossible to admit. I say then, Be charitable, be kind. Give these men a chance, and you will yet see developed in Japan results which will encourage and perhaps astonish us. In speaking to you, I speak to you as men who are performing a part in the history of this country. A minister may come into contact with the higher class, but the merchant and tradesman in their relations with the lower classes, equally affect them, imparting education in business and teaching them our own idea of it. We have a great work to perform here, and our great stumbling block is the fact that this people are brought up according to Oriental ideas, and that the Government is unjust to the people. They farm out monopolies, and impose restrictions on trade, and it is the duty of a minister to teach them that they are following a false system, that true government is the success and the happiness of the people and not the slavery of the labouring classes, that instead of taxing them one half their earnings, instead of interfering with trade, instead of debasing coinage, they must withdraw from the channels of trade, and by equitable laws levy equitable taxation, bearing upon all alike. And when they have learned that great lesson, then I hope the tradesmen and merchants of Japan will have become qualified to discharge their respective trusts in accordance with the laws which govern trade. You have been kind enough to allude, Sir, to my having been one of the pioneers on the Western Coast. So I am, I am happy to boast. And if there is any one lesson taught a pioneer by his life it is that of generosity to the weak. You are pioneers in Japan, and I trust will hereafter look back upon your history here with pride and pleasure. Now, try to be generous to these men, acknowledge that whilst they may appear at times stupid, at times unwilling to keep up to what we would have them do, they have yet to teach 30,000,000 of men what they themselves have become convinced of. In a short time you will see the schoolbook and the Bible carried into Eastern Asia under the flag of Japan. We have already seen her envoy in China, the first to be received at the Court of that power. Who would have thought that possible not long since? How can one be dissatisfied with the progress of to-day? I understand that this is a great

nation, a good nation, a country filled with great resources, and (if we will be patient and kind, honest and just,) with a great future before it. I have already detained you too long, but I had become interested in my theme ("No! No!, keep it up.") No, I can't do it, my judgment protests against it. The curtain has dropped, so far as I am concerned, upon my connection with Japan. I am no longer representing anybody but Mr. De Long, and I feel fully competent to represent him on all occasions, but I little dreamed when I entered upon the discharge of these duties four years ago I should ever achieve such success as would entitle me to a noble meeting of gentlemen like this, representing not only one, but two powers. No matter how long or how brief my life may be, this meeting here to-night will always be treasured by me as one of the greatest joys I have experienced and as one of the richest honours that have ever been conferred upon my name (applause). If I can point to no other signal success in the world I can point to this assembly. Contrast it with what could have been assembled four years ago. You could not have assembled a corporal's guard of this meeting then. In leaving Japan in turning over to my distinguished friend Judge Bingham and retiring from the duties which have been in my hands, I say that I have behind me no feelings of anything but friendship and goodwill for any man on this soil. I thank you for this generous honour, for your attention, your kindness, your confidence in me as your Minister, and your friendship when I ceased to be such. (Loud and continuous applause.)

The Chairman next proposed the following toast:

GENTLEMEN,—I have now the honour to introduce to you the Honorable John A. Bingham who has just arrived among us to represent the American Government in this Empire. Since it was necessary to replace the Minister to whom we this day bid farewell, we can but felicitate ourselves that one so worthy to succeed him has been chosen.

Our guest's distinguished career at home, his acknowledged ability and experience in public affairs, his intimate acquaintance with our National policy and legislation, and his high personal character, all qualify him for the eminent office which he has recently assumed, and we may depend on these qualities for the maintenance of the honourable position which our Country now holds in Japan. No one of us can be more anxious to have that position maintained than the retiring Minister who has so faithfully laboured to establish it, and we have his authority for believing that in his successor's hands it is in no danger.

Let us now, in the presence of the Minister whom we would have been glad to retain among us, heartily promise to his honourable successor whatever support our united and cordial goodwill can afford him, and assure him that we, citizens with him of a country to which we all look with love and pride, are ready with him to maintain the honour and good name of that country here as elsewhere, and that, under his guidance, we will make every effort to lighten his task, and by all our actions induce him to regard us with the respect and confidence that we now cordially extend to him. I propose, Gentlemen, the health of the Honorable Mr. Bingham and success to his mission to Japan.

Judge Bingham replied in the following terms:

Mr. Chairman and Gentlemen; the flower of my manhood has been given to the service

of my country, the land which you happily said, Mr. Chairman, is dear to us all. During the years of my public service, whether I stood at the bar of the Senate, or before the tribunals of justice, pleading for the vindication of violated law; or whether I stood in the Assembly of the Commons of the people, witnessing and aiding the enactment of their laws; or whether I stood in the presence of assembled thousands of my countrymen, giving assurance anew of their readiness to surrender all things save their trust in God and the hope of a life to come, rather than surrender that sacred and beautiful heritage, our common country; never have I stood in any presence which more deeply impressed me than that before which I stand to-night. (Applause.)

Here in this distant "Land of the Morning," are assembled an hundred men, who would grace any board in Christendom, syllabing the words of my native land, pledging their goodwill to the retiring representative of their country and my country, and assuring his successor of their hearty support in every endeavour to maintain the honour and good name of his country. It is a good name. It is a name above every mere earthly name. America! the child of the earth's old age, the hope and the stay of the struggling nations! the days of the years of whose life are no more than the days of the years of numbers of her citizens. America! the first realization of what had been foretold by the tongues of prophets, and had been seen only in the vision of seers—a nation born in a day. Centuries are but the years of national growth, and national development under the constitutions of the old world. But four and eighty years have come and gone since that day when Washington, first of Americans and foremost of men, took the oath, never before administered, to preserve, protect and defend that constitution of Government which placed America in the family of nations, and made the American colonies one people, with one country and destiny. On that day America numbered no more people than London numbers to-day. They were gathered upon the Atlantic slope, beyond the crest of the Alleghanies. Since that day the children of the old world have come annually by tens of thousands and hundreds of thousands, to join in the grand experiment of representative Government. In this new immigration of the nations, the people have recovered their liberties. In these eighty-four years France and Germany, Austria and Russia, the Netherlands, Sweden and Norway, England and Wales, Scotland and Ireland, all have sent their tribute of good men and true, who, casting their lot with us, and with us following the sun westward have borne our banner and the symbols of our civilization and religion into the wilderness, and have founded new commonwealths, until the republic, which eighty-four years ago, numbered but three millions, to-day numbers forty millions and covers a continent, keeping watch and ward for Liberty and Justice, looking out upon Europe from her eastern end and upon Asia from her western shore. (Applause.) All honour, then, to my honourable predecessor for bearing himself so well as the representative of America, the youngest and one of the foremost of nations, in this land, awakening, we trust, to a new and nobler life. I tender to him my grateful acknowledgement for having by his labours made my task here as his successor so much the lighter. I also think the good people here assembled, citizens of the United States of America, for their words of cheer, and for their assurance that it shall be their endeavour to aid me in main-

taining the honour and good name of our common country. I have lived long enough to know that though the citizen must perish, the state may endure. The Apostle of American Democracy, when his race was run and he was about to enter into his rest, uttered a thought that should live forever, when he said, "I commit my spirit to God, and my child to my country." He understood right well that the citizen is but for to-day, while the commonwealth is for all time. For myself I would have my country to be, in some sense, immortal, so that when we are gone, those who are dear to us may have a country surviving us, to watch over them to be to them father and mother, and to shelter them with her impenetrable shield. (Loud and continued applause.)

The Chairman again rose and said:—

GENTLEMEN,—The desire of the subjects of His Majesty the King of the Netherlands to recognize the services of Mr. De Long as Acting Minister for their country during some time past, gives us to-night the pleasure of seeing many of them here, and allows me now to introduce to you, Mr. Bauduin, the Dutch Consul at this port, and Mr. Van Den Broek Chancellor of, and representing, the Dutch Legation; and I am sure you will heartily join in drinking the health of His Excellency Mr. Van Weckherlin, His Netherlands Majesty's Minister in Japan, now absent from Yokohama, and those of our guests who represent him.

This was replied to as follows by Mr. Bauduin:—

Mr. Chairman and Gentlemen—I rise in order to thank you, Mr. Chairman, most sincerely for your kind toast to H. N. M.'s Minister in Japan, and to those representing him here, and you, Gentlemen, I express to you also in the name of Mr. Van Weckherlin and Mr. Van den Broek our gratitude for the friendly way in which you have responded to the invitation made by the Chair on our behalf. We feel much flattered by this distinction.

Please allow me, Mr. Chairman, to address myself also to Mr. De Long, to whom I wish to communicate some information which I hope may also be received with pleasure by the company here present.

Mr. De Long, when you handed to Mr. Van Weckherlin, the charge of the Dutch Legation, I had the pleasure of writing to you an official letter expressing to you the thanks of the Dutch residents, of myself and other Dutch Consuls officers in Japan for the faithfulness, zeal and kindness with which you had been watching over their interests. That letter is still of such recent date that I may remain convinced that its contents may yet be fresh to your memory. I am thankful to the Committee of this entertainment for having invited me and I wish to renew verbally before all here present the expression of our sympathy with your acts.

During the time you were in charge of the Netherlands Legation, many interesting incidents happened in Japan. Your reports on them to the Home Government were found, I am told, so full of interest that some of your despatches have been brought to the more direct notice of His Majesty. This, however flattering it may be for the author, would be in the eyes of many from the side of a Government a cool recognition of valuable service, and I am glad that H. M. Government has done more. I have been informed on good authority and I have no doubt but that the news will reach you within a few days, that it has pleased

H. M. the King to confer upon you the Cross of Knight Commander of the Neth. Lion, and I sincerely hope that this distinction may be agreeable to you. This decoration I beg to inform you is one not lightly bestowed. It is a *reward of merit* only granted upon recommendation of the Cabinet and as such I trust you will receive and appreciate it. Allow me to congratulate you upon this mark of satisfaction of the Neth. Government and Gentlemen, you will please join me in giving three cheers in honour of the new Knight Commander.

This was replied to by Mr. De Long as follows:

Gentlemen, I beg to assure you this is a night of pleasant surprises. When a fortunate accident left me in charge for a time of the affairs of H. N. M.'s subjects, I felt more than a usual degree of hesitation in assuming that position. The extraordinary correctness with which the affairs of that Government are administered must be gratifying to its representative, everything being conducted in most methodical and business-like manner, so that I might have feared as a Western American diplomat in Japan lest I might suffer by contrast when my acts became criticized at such a Court as that of the Hague. But I undertook it, though, beyond the desire to do right which generally runs through the American composition, I had nothing to guide me. I esteem myself extremely fortunate to have gained the friendship of the Dutch subjects in Japan; and, of the Dutch Government and above that, of the King himself. I can only say that I feel I have now some little heritage in that nation, and when I see the Dutch flag floating in some other country wherein my lot may fall, I shall imagine that I discover a smile of recognition in its glance, and that I have really been so fortunate as to win my spurs of knighthood. (*Long cheers*). Gentlemen, I don't know how this will be understood in the Valleys of Nevada. I tell you it will be a hard thing to explain. I shall feel I have won them by fair service and I shall always endeavour to wear them with honour—both to them and to myself. But I shall have to ask the consent of the great American government about this affair. ("We give it you.") There's a little principle which runs through the constitution of the U. S. about legality and so forth, and it may be a question how an American can take any prize or decoration if he is true to his own party and his Government. When a man has a boy who has gone to school and brings back a prize, that is *prima facie* proof his boy has been a good boy while there. I shall consider this as a *prima facie* proof that I didn't abuse the trust of my own government, and I consider they ought to trust me as the best boy. I feel deeply grateful for this. I beg also to call your attention to another thing. There's a little touch of romance, of poetry, in this united gathering of the Dutch and American in Japan. It was from the Dutch that Japan received her first touch of civilization away back in the misty centuries, but the attempt did not prove completely successful, nor hold out bright hopes till the arrival of Perry's fleet when we became pioneers with them to conquer this country for Christianity, civilization and progress. So the Dutch and Americans are the true pioneers in Japan. Am I right? For if so, those two flags should float together in Japan. Gentlemen, I thank my Netherlands friends, I deeply appreciate the honour extended to me, and I shall endeavour to deserve it in the future as well as I have striven to earn it in the past. (Applause.)

The Chairman rose to give the next toast:—

GENTLEMEN,—We have the pleasure of seeing here to-night Officers of the United States Navy, who desired to unite with us in honouring a Minister whose good offices and hospitality their service has frequently enjoyed; and at their head is one whose name recalls that of his gallant father who as Commander of the United States *Wyoming*, made many friends in Japan some years ago, and, at the Straits of Shimonoseki showed very strikingly that he also knew very well how to deal with those whom he had to regard as enemies. I beg leave to propose to you success to the American Navy and the health of Captain McDougall.

This was thus responded to by—

Captain Mr. Dougall: Mr. Chairman and gentlemen.—In response to the last toast given, I rise with mingled feelings of pleasure and regret—pleasure at the high esteem in which the Navy is held by all present; regret at my inability to make a proper response. It is right that I should take this opportunity to express to Mr. De Long now that he is about to leave us the sentiment towards him of the Navy. He has endeared himself to the hearts of all naval officers by his kindness, his hospitality and more especially by the attitude he showed at the time of the sinking of the unfortunate *Oncida*. Let me assure him that in leaving here, he carries with him the good wishes of all the naval officers who are here, or have been on the Asiatic Station during the last four years. In the allusion to my father Commodore McDougall I feel great pride. At that time his services were acknowledged and appreciated in a substantial manner by the residents in Japan, and I feel peculiarly gratified to find them so vividly remembered at this late date. At the Naval School the art of speech-making was never taught, and since leaving it I have not cultivated that accomplishment: I will therefore conclude by simply returning thanks for the great honour conferred upon the U. S. Navy, and myself as one of its humblest representatives. (Applause.)

The proceedings then concluded by Dr. Brown pronouncing the blessing.

A telegram was received by the Chairman from General Le Gendre in the course of the evening, announcing his regret at his inability to attend and expressing his sympathy with the object of the Banquet. The Rev. Mr. Ballagh also wrote a letter of excuse, testifying his appreciation, and that of the entire body of American Missionaries in Japan, of the conduct of Mr. De Long.

THE "Amateur Athletic Association of Yokohama" has been fortunate in its first day. The weather was precisely what was wanted, both for the comfort of visitors and for the competitors, and it was a very cheery sight to see the gathering together of a large assembly of spectators, every one of whom appeared to feel an interest in the several events far greater than is generally exhibited at the more pretentious horse races.

We must compliment the association on the completeness of all their arrangements. Only a comparatively small number of those present were aware of the preparations that had been made; and considerable surprise was expressed, when those who had not been on the road by the rifle range lately, when they saw the "ground" so well laid out to serve permanently for the association's purposes.

A capital running path has been carefully made round the wide end of the rifle range.

and the ground within it is appropriated for other uses, such as throwing the hammer, putting the stone, quoits, and other games that require no great amount of space. A small bungalow has been erected on the S.E. side for the competitors, and opposite to it a "Grand Stand." The only mistake that has been made is in placing the latter so that the sun is in the eyes of its occupants during a large portion of the afternoon.

On the whole the highest credit is due to the committee and the honorary secretary. To the latter, Mr. Walter Brent, we believe, more than any one else, the local athletes are indebted for the possession of a "ground" on which they can practise with comfort; and exhibit their feats with élat.

#### FRIDAY, 14th NOVEMBER.

##### 1.—Throwing the Cricket Ball.

Open. One Prize. An Opera Glass.

E. Abbott	..	..	..	1
H. F. Abell	..	..	..	2

Distance, 87yds. 2ft.

##### 2.—100 Yards Flat Race.

For Members only. Presented by N. P. Kingdon, Esq. (First of each Heat to run in the final.)

###### FIRST HEAT.

W. Brent	..	..	..	1
J. J. Dare	..	..	..	2

Time, 11 seconds.

###### SECOND HEAT.

A. T. Watson	..	..	..	1
Lieut. Sandwith, R.M.,	..	..	..	2

Time, 11½ seconds.

###### THIRD HEAT.

E. Abbott	..	..	..	1
H. B. Henley	..	..	..	2

Time, 11¾ seconds.

##### 3.—One Mile Flat Race.

1st Prize, \$ 10; 2nd Prize, \$ 7; 3rd Prize, \$ 3.

For Non-commissioned Officers and Men of the Army and Navy. Five competitors to start or no race. Entries on the ground.

Corpl. Dunn	..	..	..	1
Private Barret	..	..	..	2
Private Coombey	..	..	..	3

Time, 5 min. 44 sec.

A capital race, Corporal Dunn, ran, as last year, last and easily, until he saw his time for a spurt, made it 150 yards from home, and won easily.

##### 4.—Throwing the Hammer (16 lbs.)

Open. (any style). One Prize. A Fish Slice.

J. P. Reid	..	..	..	1
A. J. Smith	..	..	..	2

Distance—first, 64ft.; second, 55ft.

##### 5.—150 Yards Flat Race.

For Members only. (First of each heat to run in final.) One Prize.

###### FIRST HEAT.

J. J. Dare	..	..	..	1
A. H. Dare	..	..	..	2

Time, 18 seconds.

###### SECOND HEAT.

E. Abbott	..	..	..	1
Lieut. Sandwith, R.M.,	..	..	..	2

Time, 17¾ seconds.

##### 6.—Running High Jump.

Open. One Prize. An Aneroid.

Mr. A. H. Dare walked over with 4 ft. 8 in. as none would jump against him.

A. H. Dare	..	..	..	1
Height.	4ft.	8in.		

##### 7.—One Mile Walking Race.

For Members only. First Prize, an Epergne. Second Prize, an Opera Glass.

Won easily by Watson. No other had a chance with him. Although there was no one near him, he put on a spurt at the finish, and then skipped away to the dressing bungalow as if he were taking a preliminary stretch.

A. T. Watson	..	..	..	1
J. H. Longford	..	..	..	2

Time, 8 min. 35 sec.

##### 8.—Ladies' Purse.

880 Yards. For Members only. Presented by the Ladies of Yokohama and Yedo.

W. Brent	..	..	..	1
A. Ouston	..	..	..	2

Time, 2 min. 18 sec.

Five competitors to run or no race. Entries on the ground.

A fine race. Abbott many yards behind at start, made running and passed all at the half distance, and seemed to be winning, when Ouston spurted and passed him. It seemed his race until within 50 yards of the post, when Brent came up like a hind and passed him about five yards from the post. Miss Bingham presented the purse, offering Mr. Brent her congratulations.

##### 10.—Steeple Chase.

J. J. Dare	..	..	..	1
W. Brent	..	..	..	2

About 1 Mile and a quarter. Open (with 2 Ditches and a Hurdle.) One Prize. A Butter Dish.

THE Steeple Chase was started from the dressing Bungalow, was once round the running course, then up the side on the grass over a water jump 12 feet wide; away up the Rifle Range and over the hills on the left-down, across the range to the hills on the right; then back across the water jump, and so on the running course to the winning post. Julius Dare was the only one who cleared the water going out, and he, his brother Alfred and Mr. Hall cleared it on their return. The chase was well won by J. J. Dare, with Mr. Brent second, Alfred Dare third and J. C. Hall fourth.

#### SATURDAY, 15th NOVEMBER.

The day was perfect in every respect as was yesterday. The attendance was larger, and the meeting as satisfactory. The only event omitted was the Sack Race. The final heat of the 100 yards and the 150 yards were both won by Mr. Abbott, who astonished all by his running, considering that he had no idea of entering before Monday last, and has had no more training than that short interval gave him. A. H. Dare won the mile race well, though Mr. Ouston would have given him harder work, but that he let him get too great a lead, imagining they had to go round again. The Champion Race was splendidly taken by Mr. Brent, Abbott contesting it hotly until within some 25 yards from the post. The "Consolation" was a good race between the two leading men, Hall and Sandwith, but the little 'un had the best from the beginning and kept it.

At the conclusion, Mrs. Brent presented the Champion Cup to the winner, amid much applause. Mrs. Grant presented all the other prizes to the winners, who were severally cheered as they bore off their trophies, Mr. Abbott being absolutely borne down by the load of his. Three cheers were then given for Mrs. Grant, for Mrs. Brent and all the ladies, and a most pleasant meeting was brought to a close.

##### 1.—Final Heat, 100 yards Flat Race.

Prize, a Silver Cup.

E. Abbott	..	..	..	1
W. Brent	..	..	..	2
A. T. Watson	..	..	..	3

Time, 11 seconds.

##### 2.—Running Long Jump.

Open. One Prize. A Carriage Clock.

A. H. Dare	..	..	..	1
J. J. Dare	..	..	..	2

Length, 16 ft. 6 inch.

##### 3.—Final Heat, 150 yards Flat Race.

Prize, a Despatch Box.

Abbott	..	..	..	1
J. J. Dare	..	..	..	2

Time, 16¼ seconds.

##### 4.—Sack Race.—60 yards round a Post.

1st Prize \$ 6; 2nd Prize, \$ 4.

For Non-commissioned Officers and Men of the R. M. Battalion. Entries on the ground. Five Competitors to start or no race. No entries.

##### 5.—Flat Race, 440 yards Handicap.

For Members only.—One Prize presented. A case of Dessert Knives and Forks.

E. Abbott	..	..	..	1
Lieut. Sandwith, R.M.,	..	..	..	2

Time, 56½ seconds.

##### 6.—Hop, Step and Jump.

Open. One Prize. A Pocket Flask.

A. T. Watson	..	..	..	1
J. J. Dare	..	..	..	2

Length, 38 feet 6½ inches.

##### 7.—One Mile Flat Race.

For Members only. Presented by Arthur Brent, Esq. A Silver Cup.

A. H. Dare	..	..	..	1
Ouston	..	..	..	2

Time, 5 min. 36 sec.

##### 8.—Strangers' Race.

(For Non-residents only. Entries on the ground. One Prize.

Sterling	..	..	..	1
----------	----	----	----	---

Time, 17¼ seconds.

##### 9.—Hopping Race—75 yds.

For Members only One Prize. A Pedometer.

Ouston	..	..	..	1
Henley	..	..	..	2

Time, 13 seconds.

##### 10.—Champion Stakes—300 yds. Flat.

Presented by W. H. Talbot, Esq. For all winners: optional for non-winners. Entrance \$ 3. Compulsory for winners. Prize, a Silver Claret Jug.

Brent	..	..	..	1
Abbott	..	..	..	2

Time, 38 seconds.

## 11.—Consolation.

Once round, One Prize. For all Non-winners at this Meeting.

Hall .. .. .	1
Sandwith .. .. .	2

Time, 66 seconds.

## Tokei.

FROM SEVERAL parts of the country we hear of the rejoicings which took place on the Emperor's birthday. At Kofu they took a very practical turn. Fireworks of admirable devices were let off, one being a representation of the sun rising—when it got to a great height there was a sudden movement, by which a salute of 121 guns was imitated, in honour of the occasion. But one of the fireworks was called "The distributor of literature." From it fell a number of scraps of paper each with the name of a school book upon it; and whoever caught or picked one up was entitled to the book named. Surely none will deny the anxiety to see that instruction is the lot of all the people where it takes such a form as this.

THERE IS in Omi province a village called Nakaizumi-mura, from whence good accounts have reached us more than once. We have heard of the people as being singularly hospitable and liberal-minded. The farmers are prosperous; and their well-doing arises from their intelligent recognition of the improved state of things in the country, and their consequent vigorous endeavours to raise not only crops, but the largest and the best crops possible of tea and silk. Looking also at the demands of foreigners, they breed cattle and horses to meet them; and their character as told to us, is that whatever they do they try to do well. If this be true we can well believe that much may have been derived from the spirit and energy of a Shinto priest who lives in the village.

He has a very large garden, worthy of going a long distance to see. There are in it many natural undulations besides springs and a good sized lake, in which are scattered, irregularly, several islands all ornamented with hundreds of cherry trees. In one direction a slight alteration in a natural rise has been made the means of presenting "a distant view" of Fuji-yama to visitors. In the garden there are seats thrown about as if carelessly, and there are small coffee houses and a miniature theatre. The priest has generously offered the use of the garden to the Kencho, for the use of the people, and they now frequent it much as our parks are frequented in Europe. This priest's head seems to be screwed on the right way. When will there be such a place as this in Tokei? The province of Omi is right in the centre of Japan, and the village above alluded to is just 140 ri from the capital.

AMONG THE "things that have been" in Japan are almost all the old festivals. For instance—the 3rd day of the 3rd month, the 5th of 5th month, and the like, are to be discontinued; but the following are still to maintain their ground:—Shichi-ya (seventh night) celebrated on the 7th day after the birth of a child; Kamioki (growing hair) when the child has reached the age of 5; Hakamaji (trousers day) at 7 years old, when the young samourai assumes his privilege of wearing the much desiderated hakamas, or loose trousers. These are still permitted, and still observed.

FROM YEZO we receive information of an encouraging character. In all the provinces of the Hok-kaido the changes being wrought

through the colonization from the larger island of Nippon, are becoming very noticeable. The Ainos themselves are partaking of the change, and there will soon be little difference, if any, between the habits of these people and of the Japanese who have located among them. They are now adopting what has been hitherto quite unknown among them—family names:—thus Irimura Kisaburo, Koniwa Hanzo, in each case the first being the family or surname, the other the distinctive name by which heretofore they have been known.

This year has been a very favourable one for rice and other grains; and all the villages, but particularly those round Satsharo, the Kaitakushi head quarters, are full of rejoicing and of confidence in the future. Our correspondent tells us that to appreciate the present, it should be known what the district was up to two years ago. The land was barren; the Ainos wild, and living solely on their fisheries. If things continue as they have begun, the money spent on Kaitakushi will not have been thrown away.

WE REGRET to have to report that more reliance is still to be placed on the tidings of uneasiness and discontent among the national defenders, than on those which cry Peace, Peace. There is anything but unanimity on the subject of Corea, even where unanimity is most to be desired; and a circumstance which happened in the privy council, in the presence of the Mikado himself, only a few days ago, reveals how much may now depend upon the personal bearing of his Majesty. Notwithstanding all that has been said and written, there is still great heaviness in the political atmosphere of Japan, and we can only hope that there may be amongst those now in power, some who are strong enough to cope with the difficulties before them. With regard to the foreign question—that of course is settled long ago. Unless anything unforeseen should turn up, there need be no apprehensions of any hostility to us. On the contrary, all parties will desire to secure us as friends. The great bugbear still continues to be what it has been all along—Corea. Foreigners smile when Japanese say they can deal with Corea; and Japanese laugh when they see the smile. Iwakura has to prove himself more than any one man in Japan has yet been able to do since the revolution; and if he should succeed in this, peace will not be disturbed. If there be any weakness, any wavering, on his part, the days of conservatism are numbered, and no one can prophesy what may follow.

ON THE 28th October, a fire broke out in the house of a farmer at Ukawamura in Akita Ken. The farmer and his family were ploughing in the fields some little distance from the house; but two children and a very aged grandmother were in the house. The children ran out dreadfully frightened but the poor old woman was unable to move. The fire caught the next door; but the wife of the owner of that house, hearing the children's cries respecting the grandmother, thought life was more important than property, and rushed through the flames into her neighbour's house, took the woman up in her arms, and carried her out; not however without being severely burnt herself. Neighbours and officers came to the scene very quickly but only in time to see the end of this act of heroism, and not in time to save anything for the brave woman herself. The Kencho have presented her with some money and reported her conduct to Okurasho, so we hope she will not be a great loser by her generosity.

THE RESULT of the examination of the rebel in Fukuoka Ken has been published. There were

Beheaded .. .. .	3

The total number of prisoners was 63,939. Of these 23 died before sentence; and 52,000 were fined a sum amounting in all to 16,627 yen and 25 sen.

THE EMPEROR's fête day—Tenchosetsu—was kept in Tokei with great rejoicings. The officials Chiyokunin (all above the rank of Sonin) called at the palace—Kishiu Yashiki—to offer their congratulations, and "drink the Emperor's health." Sonin called at their respective departments for a similar purpose.

At 11 o'clock A.M. an inspection of troops took place at Sakurada parade-ground, in presence of His Majesty. All nobles now in Tokei called at the palace.

It is now no uncommon thing to have to report the efforts of the Japanese in the direction of inventions, though hitherto candour compels us to say, they do not seem to have hit upon any very brilliant novelty. We hear of a samourai of Akazaki, named Akita, having invented a machine for spinning silk, which is a great improvement on previous ones.

TAKASHIMA KAYEMON who was imprisoned by orders of the Saibansho on the 30th October, was liberated on the 31st.

WE ARE very glad to have to report that a movement has been inaugurated here to establish a Sailor's Home on the same principal as that recently established at Shanghai. Its primary object is to provide a house to which sailors many resort, and find themselves able to get as much amusement as, and more enjoyment than, they can obtain at the grogshops and other resorts that have been alone open to them hitherto. In connection with the "Home," there is also a temperance society, which those who feel so disposed can join, and a branch of the "Good Templars" will also have its local habitation there. The house taken is the new one on Lot 114. It is quite probable that some small assistance may be asked from the public at the start, but we suppose it will ultimately be self-supporting.

MITSU's new silk store in Tokei which has been in progress of construction for many months is now open. It is a two story black fire-proof building, and is a noticeable feature on the street. Judging by the large stock of goods displayed in the various shops along the Tori, business is rather brisk this year. The wearers of foreign clothes seem to increase in number. The only place where dry goods seem to be short is at the end of the trousers of the native tyros in European dress. Eight inches from the sacred soil of Dai Nippon to the extremity of the trousers of the sons thereof, seems to be the average length. Even when tied down by straps of white tape, the unmanageable bifurcated garments will ride high above the ground. One pities the economy that shrinks from generosity towards the feet, when such wanton extravagance is displayed in the glove tips. Each attenuated finger seems to be on a vain chase after the distant glove-end. As for the other eccentricities of the

dress of the sixth year of Meiji, we cannot expatiate upon them. Roses do not grow without thorns, and civilization has its price and drawbacks. No wonder that Mr. Shimadzu and his "noble three hundred" petitioned that the law compelling Japanese officers to don foreign clothes might be repealed. The merchants in Tokei were very glad to welcome Shimadzu and his band a few months ago, because they thought old customs would return, home-woven clothing be worn again, and the unsaleable goods again meet a ready market. But Shimadzu was snared in the silken net of office and income, and his band disappeared like Tokio houses in a fire. "The decree of the emperor is like perspiration, it can never go back" saith the Japanese proverb, and the law remains still. The steam machinery of the hairy foreigners still hold easy victory over the native hand-looms, and broad-cloth has won the day over cotton cloth. Some of the native merchants who welcomed Shimadzu's band have found it is no use to fight against fate and fashion, and so, diluting mistaken patriotism with common sense, have taken stock in foreign goods and thrive by the change. It stands to reason, that a man who worships and prays to Daikoku, and begs him to shake his mallet of riches for him, and keep his wallet full of *satsu*, his *kura* of full stocks, his rice bag full of *komé*, and his shop full of customers must keep the goods his customers will call for. In spite of the irksomeness of foreign dress, its superior adaptiveness to work commends it to the men of this age of industry in Japan, and it will doubtless win the day throughout the land.

In a native paper is a paragraph to the effect that a Hakodadi man shipped 74,420 salted salmon on board one of the P. M. S. Co.'s steamers; and when he went on board to see how they were being stowed he objected that they were being placed in so warm a position, that they would be spoiled before the vessel arrived at Yokohama. His objection, however, was overruled, and he was told his fears were groundless. On the ship's arrival it proved that his apprehensions were realized, and the fish stank. A complaint was made by the owner both on board and at the office No. 4, but he could get no redress. The editorial remark with which the paragraph closes, is:—We do not know if this is true, but if so it is obvious that he'll never see the captain again.

KOKEI SHONIN, the chief priest of the Buddhist sect Shin-shiu, the principal temple of which is that known as Honganji at Asakusa. Tokei, returned last month, after a visit to India to see the country from whence Buddhism sprung, and afterwards to Europe whither he went to enquire into the truth or falseness of the Christian religion. The only particulars connected with his travels which have yet come to light are that his expenses amounted to about \$10,000. This is a mere trifle however, for so soon as it was known that he had come back the crowds who daily visited the temple to welcome him were so great, that their contributions already exceed \$30,000.

A REPORT comes from the province of Rikuzen of a storm which visited the district on the 26th October. The lightning struck a temple dedicated to the Kami Reiyosaki, in the village Minato-mura. The next day the priest exhibited in the municipal office, Ishinomaki, a lump of ice—called in the native account "a hailstone" measuring over a foot long, by nine inches broad and seven inches thick. It is said to be just like a large mass of snow, and hard as a stone, in containing it grass, leaves and small stones. It took more than a day to melt.

THE EDITOR of one of the Tokei newspapers thinks that it must have been in the storm alluded to in the preceding paragraph, that the *Ariel* was lost!!

FROM YAMANASHI KEN, we learn that the officers are so busily engaged in the duties devolving upon them in forwarding the education of the people, that it has been necessary to establish a separate office called Kan-noka to look after the agricultural affairs of the Ken. The people are becoming much improved, and many of the old foolish customs have been most unsparingly abolished.

THE FIRE which we reported the day before yesterday as having occurred in the neighbourhood Asakusa, is officially reported as having broken out in the house of one Hashimoto Shimbei, in Riyogoku Yagenbori. The wind was very high and the flames spread very quickly destroying every house included in a space  $2\frac{1}{2}$  cho east and west and 2 cho north and south.

THE NUMBER of Kazoku (nobles) recognized by government and receiving government salaries is 432. The total amount of their allowances is 967,846 $\frac{1}{2}$  kokus of Rice which at 4 yen equal \$3,871,386 being an average of \$8,961 54 to each *per annum*, or \$746.79 *per mensem*.

The Shizoku (samurai) receiving hereditary salaries number 420,579. Their total allowances is 3,786,905 kokus, value at 4 yen \$15,147,620—*cr* each *per annum* \$36, *per mensem* \$3.

Besides these there are vast numbers of pensioners whose distinguished services have entitled them to pay. They absorb far more than the above specified classes.

THE FOLLOWING notification of importance has been issued by Iwakura, and it is well that foreigners should know it:

"As formerly when a debtor failed to pay his creditor at due date, great delay often took place before any legal steps were taken, thus causing great difficulty in giving judgment it is now laid down as law that:—

1.—Salary for teaching, hotel charges, brokerage, price of food and drink supplied, bargain money or advances, money for goods bought, money lent, wages of coolies, &c., money due to theatres, actors or musicians—application must not be delayed over six months.

2.—Medical fees, salaries to scholars who assist their teacher, money lent or articles supplied by shopkeepers to customers, application must not be delayed over one year.

3.—Payment for rice or money lent for a specified term with its interest, money advanced on merchandise with its interest, money lent on mortgage (and some other matters not interesting to foreigners), application must not be delayed over five years."

SHIRANE TASUKE, the Sanji of Sakitama Ken has addressed the people of his province in a way and on a subject which all foreigners will approve. He does not leave them to grope along in ignorance, merely sowing their crops by chance and leaving to fate whether they may have done right or wrong; but he gives them figures which shew first how the commerce of the country flourishes, and then points out the most important productions and encourages them to give proper attention to them. He tells them that the soil of Japan is naturally good for the culture of the Mulberry and Tea plants; and commends those who have complied with the wishes of the government as to their culture; but he points out that many persons follow their old ignorant ideas, and

do not consider whether it is more profitable or not, to cultivate them. In order to show practically their value, he gives figures, and says "the sooner they are understood the better. "At present though the imports exceed the exports of Japan, yet the latter are far greater than ten years ago; and in the course of a few years, the exports will equal and perhaps exceed the imports, and ultimately be an important addition to our wealth.

"In 1872 the exports were \$16,848,033.62  
" 1871 " " \$16,369,737.45

"showing an increase in 1872 of \$ 478,296.17

"Already the imports are only of the value of \$40,000 more than the exports; so they may soon become equal.

"Of the above total for 1872, the items are

Value of Silk &c.,	...	5,699,606.13
" " Silkworm eggs		2,503,504.10
" " Tea		4,216,587.24
" " Laquer, bronze, porcelain and other goods		4,428,335.13

\$16,848,033.62

"Thus tea and silk form seven tenths of the exports, and if our people will pay proper attention to them, their increase will immensely increase the prosperity of Japan."

Taking the figures as sufficiently exact, we strongly commend Mr. Shirane's practical good sense in his appeal to those under his charge.

WE HAVE read with much attention the proceedings of the Silk buyers and the native Silkmen of Yokohama, and have refrained from commenting upon them, literally because it is one of those special cases, in which outsiders can have only a most superficial knowledge and consequently are likely to come to an erroneous conclusion. Our sympathies are strongly with the resistance party; but our convictions are not altogether with either; and we have thought it better to content ourselves with giving the reports of the meetings without remark.

At the very moment, however, of our Chamber of Commerce presenting a petition to the foreign ministers on the subject of Kiito Aratame Knaisha (the raw silk examining company) of Yokohama, and agitating for its removal, a company under the same name is being established in Yedo. Government has given permission to six merchants to form it. Probably silk-buyers in Yokohama may know the names. They are, Yechigoya Kiyemon, Furukawa Ichibei, Daimaruya Shoyemon, Dai-kokuyo Kokubei, Kobashiya Kinabei and Kawakita Kiukaiyu. These six asked leave to establish the Company on the same principle as that of Yokohama and received a favourable reply from government.

A MOST disgusting fact has come to our knowledge, which the notice of the authorities ought to be emphatically called to.

At the burial ground of persons beheaded at Tobé, the bodies are interred so near the surface, and with so little soil over them; that the dogs habitually tear them up and devour them. We had heard of this as being an especial feature of the Yedo execution grounds in days gone by; but we did not expect it existed now-a-days, and close to Yokohama. So great a taste have these dogs for human flesh, that if they cannot get it from the graves, they become dangerous; and as lately as within a few days at Tobé, fourteen of them at-

tacked a child—and injured it so severely that it had to be taken to the Native Hospital, and placed under the care of Dr. Simmons. The father of the lad who attempted to drive the dogs off, was also attacked and much injured. And a man who rescued the child was also turned upon, but as he was not himself seriously hurt, and has not been seen since, the people say he was a god.

AMONG THE many pleasant things that occurred on the anniversary of the Emperor's birth-day was the opening of the new double-arched stone bridge at the end of the Tori, or Main street. As we noticed in our columns some months ago, the Sujikai Go Mon had been taken down, and the stone of its buttresses utilized in the erection of this new bridge. The strength and stability of the old wooden structure leading across the small river from the Sujikai gate have been severely taxed of late, as the wooden bridge next above it was carried away by the tai-fun and flood of September, and all the traffic and passage has since had, of necessity, to be over the remaining well-worn old wooden bridge. The débris and mud made a frightful place to pass in wet weather, and the opening of the new stone bridge was anxiously looked for both by pedestrians and those who travel by jinrikisha or trap. Great efforts were put forth, night and day, to complete the work, which was ready for public use on Monday morning. The new bridge is of dressed hard stone, with stout posts and heavy railings of granite. It is very neatly and substantially built, and is wide enough for large carriages to meet upon, with room at the sides. The posts are capped with copper. The river flows through two semicircular arches. The name of the new bridge is Yorodzu Yo Bashi or "Bridge of ten thousand Reigns." It looks as though it might last that long. For the sake of such improvements as this in the capital, one can put up with a little inconvenience and delay, and to see such really fine and durable work is not only cheering, but argues well for the future architecture of Tokei. We hope to see many more stone bridges take the place of the decaying old wooden ones which prevail in the capital.

A SAD story appears among the provincial news, which, if true, is certainly very remarkable. The *Kobun Tsushi* gives it as received from Fotoz'ki Ken.

A man whose means of livelihood were in his pack horse, left his home one morning lately with his horse, to go to the labours of the day. During his absence his wife was very busy. She was also weaning the baby; and as it cried very much and wanted the mother to take it and give it its wonted sustenance, the woman called her eldest son, a lad of seven years old, and told him to take the child away, adding, "and throw it into the river;" not imagining that the boy would have supposed her to be serious. The boy, however, actually did take the child and throw it into the river. The mother had no suspicions and thought the boy had merely, as usual, taken the child out to amuse it. When he shortly afterwards returned without the child, and in answer to her enquiries she received the reply "I threw it into the river, as you told me," the woman in her anger took up a shuttle belonging to the loom at which she was working, and threw it at her son. It struck him on the temple, and he fell down and expired almost immediately.

Seeing what she had done the woman became well nigh frantic; as the day wore on, and the time approached for the return of her husband, she could not endure the thought of telling him what had happened, so went and hanged herself in the stable.

A little after dusk the man arrived at home, but his horse started and refused to enter the stable. The man whipped the horse to make it go in at the door, when the animal kicked out, and struck the man in such a manner, as caused him to die in great agony.

The "rider" of the *Kobun Tsushi* is "Although we do not know for certain whether the above is true—the inspecting officer has reported it, and enquiries are being made."

THREE YEARS AGO, on the main street in Tokei, there were scarcely a dozen shops for the sale of foreign goods, since that time, the number has so increased that a Japanese curiously inclined, started from Shimbashi northwards to count them. From Shimbashi to Suji Kai, there are two hundred and sixty eight shops in which foreign goods are sold. From nearly all of them native goods are excluded. They were as follows:

Books	20
Watches and clocks	88
Varieties	89
Boots and shoes	5
Merchant tailors	31
Umbrellas	7
Foreign drinks	4
Cutters and fitters	3
Paints	1
Canes	3
Chairs and desks	6
Machinery etc.	2
Hardware, locks	3
Harness	2
Trunks and carpet bags	2

Total . . . . . 268

No one will be surprised at the number of variety shops, nor even at the proportion of tailor's shops, but the number of places in which time-pieces are sold is extraordinary and we take it as a good omen for the future habits of punctuality among the natives. If the twelve o'clock gun in the castle were to be a little more exact, it would help on the good work which the clocks are doing. We do not ask it to split seconds, but it ought to be fired on the second that marks twelve o'clock precisely which is not always the case. The number of shops for the sale of foreign books is encouragingly fair, and we might be tempted to believe that foreign drinks were not in demand, did we not know that in most of the variety shops, all kinds of wine and brandy are sold. Of course we take the charitable view of the matter, and suppose the labels on the bottles to tell the truth, but no sane men would swear that the bottles really contain what they say they do. When all the new shops are occupied the numbers of shopkeepers who vend foreign wares will doubtless increase still further.

THE UDALJIN, Iwakura, has notified that an Exhibition in London, will be held yearly; and that all Japanese who desire to exhibit should notify their Cho Officer, who will communicate with the Exhibition committee, up to the end of this month.

A LARGE fire took place in Tokei yesterday in the direction of Asakusa. There must have been nearly a hundred houses burnt to the ground; and one or two lives were lost.

THE JAPANESE are altogether as generous as other people, if we may judge by the liberal contributions they make for certain objects; though generally speaking the direction in which their liberality is displayed is

not by any means that which would be selected by foreigners. A "philanthropist" of Yokamachi, in the town of Kofu is reported to the Finance department as worthy of reward, because he gave to each of the police of the town, numbering in all 80 persons, a suit of clothes, at a cost of rios 180—being 2½ rios each.

From the 4th to the 17th of this month the examinations of the Tokei Medical School are proceeding. Relatives of the students are allowed to be present.

A DOCTOR in the Aichi Ken has invented a rice-pounding machine, by aid of which one girl is able to do the work of eight persons under the old system. The price of the machine varies according to size from 50 riyos up to 100 riyos.

SOME TIME back we reported that a headless trunk of a man had been found in Shibuyamura, Tokei, but that there were as yet no traces of the murderer. It has now been discovered that there were two murderers—robbers, whose companion the murdered man was. They killed him because they believed he had betrayed them to the government. One of the men is a samourai of Tokei Fu, the other a samourai of Hamamatsu Ken.

A NOTIFICATION has been issued, signed by Iwakura, ordering that if any runaway seamen belonging to the Japanese Navy are discovered in any Fu or Ken, they must be sent at once to the Naval Department.

A PROCLAMATION from Okurasho calls attention to the necessity of care in the disposal of cattle, and particularly to the former government notice forbidding the killing of cows for food. Some people, it appears, in their eagerness to realise money, have killed their cows, and thus the fear arises of the stock of the Empire being rapidly diminished. We think this is clearly a matter worthy of the government notice it has obtained.

ON THE 7th instant, the Empress and the Empress Mother left the palace at Akasaka about 10 A.M., and took a drive round Takawana. When they reached Kumurazaka close to the Kankuriyo of Kobusho, the horses took fright through a portion of the harness giving way, and all were pitched over a bank into a pond. Fortunately their Majesties were not hurt at all, though somewhat alarmed. One of the horses was drowned, and the carriage much damaged. Their Majesties on being rescued from a most perilous position, were taken into one of the offices of Kobusho—where proper means having been taken for restoring them to their personal comforts, and a fresh carriage obtained, they returned to the palace, arriving at 2 P.M.

A FREE FIGHT occurred at a recent fire which broke out in the yashiki of Kazoku Asano. There were firemen from both the first and second divisions, and when the fire had been got under, they got up a quarrel upon some trifle that had happened during the confusion. At last the excitable temper for which these classes are notorious was aroused, and whilst some belaboured each other with fire-ho's—ugly weapons to play such a game with—others threw tiles from the roofs of houses on their foes. The police ultimately arrived in sufficient force to stop the outrage, but the people whose roofs had been robbed for missiles, wore anything but silent under their sorrows.

FROM GIFU—Mino country—a skilful and enterprising farmer named Nagawo addresses the husbandmen throughout the Empire. He has discovered a very novel manner of enriching his rice-fields. There is a kind of river fish called Koi; and observing their habits, he conceived a notion that they might be utilized, as they disturb the mud and the water in such a way, as to benefit the rice-plant whilst preventing any grass or weeds from growing. The fish grow very quickly if not over-crowded, and the field with them in it requires no weeding or attention. Two or three to each tsubo of land are sufficient—beyond that they are injurious. Not only is the crop much heavier that is so fertilized, but a profit is also gained on the sale of the fish.

A JAPANESE student who has been “studying medicine,” i.e., grammar, phrase book and the rudiments of the language, for three arsye in Heidelberg lately returned to Japan, and was examined by the German professors at the Medical College in Tokei. He was found to know so nearly next to nothing of medicine or therapeutics, that he could not enter the College. Comment is unnecessary. Examinations of returned students are getting to be a regular part of the professors’ duties at the Kai Sei Gakko. Each returned student is examined by a professor who is a native of the country in which the student studied. With every desire to show fair play to the applicants, and notwithstanding that some have been abroad three or four years, not one has been able to enter the first or second class. A batch of fifteen students who have been ordered home is expected to arrive by the next steamer from America. One cannot but feel sorry for the really deserving ones who have tried in vain to wring knowledge from an intractable foreign language; and profit by travel and residence abroad, but then they ought never to have left Japan, till they were prepared to appreciate what they saw and heard. Very worthy scholars who have worked hard at some foreign language for three or four years in Japan, are now waiting for their turn to go to see the western world for which they have so long prepared. So much money has already been expended fruitlessly, that the chances of the worthy ones are very thin.

A PARTY of Cook’s excursionists are announced in the New York papers. They will shortly arrive in Yokohama, and will doubtless visit the fair city of Yedo, and be as happy as the Japanese say the dwellers in that city are. They will be met at the station by a delegation of jinrikisha coolies and be invited to partake of the freedom and hospitalities of the city on payment of the ordinary charges.

ON WEDNESDAY the 5th November, three members of the family of Iwakura, visited Mr. De Long the late U. S. Minister at his residence on the Bluff, to take leave of him Mrs. De Long previous to their return to America.

A NEW Hot Spring has been discovered to the west of Nippon, in Toyooka Ken, and is spoken of as being of great use in certain kinds of diseases. It is in Ushima-mura, and goes by the name of Onsen. Crowds have visited it this year.

AT TAKIZU-MURA, province of Bushu, the corpses of an old man and woman were washed upon the beach by the sea. They were not recognised by any of the local residents; but

they were most likely poor people, for their clothes were very coarse. There were no wounds upon them: but no doubt can be entertained that they had intentionally committed suicide, as their bodies were tied together by a piece of himo (ribbon with which dresses are tied) as if they wished to be inseparable for ever. In their pockets were found their homios (posthumous name given by the priests). They appear to be about 50 years of age.

AT Shimura, near Itabashi, a post station on the outskirts of Tokei, an accident happened of a somewhat remarkable character. The road descends towards a small precipice and turns sharp round as the brink is neared, so that great care has to be taken with all loaded vehicles, both ascending and descending. A few days since, a Japanese was riding in a jinrikisha, and at this spot the coolie was unable to stop the vehicle, or, being within the shafts, to escape from it. The jinrikisha, coolie and rider, all went bodily over the bank. The coolie was stunned and lay there for a while as if dead. The passenger must have been unhurt, as he managed to get away without paying any attention to the coolie, who, however, on returning consciousness, imagined that he had certainly caused the death of his unfortunate fare, and when he got home, after recounting the manner of the accident, thinking he would be severely punished went and hanged himself. The authorities find great fault with the man who took advantage of the stunned condition of the coolie, to bolt without paying his fare; but so far as we can learn, the only step they have taken in connection with the accident is to order that in future no jinrikisha shall use that particular road.

AT KANAHODO-MURA an old woman has been giving herself out as an prophetess. She pretends that she received the god’s command in a dream; and was told that as she was so righteous, great reward was to come to her. A well close to her residence was revealed to her as a mineral spring; and all who drank of it after being blessed by her were to benefit thereby, whilst she would foretell their fortunes. The number of her dupes soon became great, and she has undoubtedly made a pretty penny by her dream.

WE ARE not surprised to hear that great discontent exists among the cultivators of Silkworms Eggs this year, on account of the official interference which has in some instances led to heavy losses.

A paragraph in one of Tokei papers tells of a complaint uttered by the people of Kikuchiu province, who have been very heavy sufferers. The reason they allege is, that the officer who had the management of the cards, did not give sufficient cards to the producers; acting on his own judgment, irrespective of the demands sent in. The cards delivered by him were far short of what were asked for, and the result was that the farmers did not know what to do with the seed. They used up any cards they could get, but were forbidden to sell any but those which were officially provided, either for exportation or home use. The outcry is a very just one; and as a similar one comes from several districts, it ought to have the effect, if anything will, of deterring government from such injurious meddling. Surely better things ought to be expected from Okuma, the present head of the Finance Department.

ONE OF our native contemporaries relates with a certain degree of asperity, a small incident, which had it happened in a foreign country would have been judged very differently. It appears that on the Emperor’s birthday, a man shewed his loyalty by erecting a booth in the street known as Minami Jimpo-cho, Tokei, and offered the passers by saké and fruits, in honour of the day. At the back of the booth he had the five Chinese characters “Mikado, Mutz’ Hito, Ten no.” The editor asks why did this man adopt so impolite a manner to celebrate the day? If he desired to let people know how loyal he is, he ought to have been content to write some other and more poetical words than these.

THE RECEIPTS at the Custom House in Yokohama last month—October—amounted to 161,501 yen 93 sen 2 rin; the largest ever known since the trade with foreigners began.—*Mainichi Shinbun.*

## Correspondence.

To the Editor of the *Japan Gazette.*

DEAR SIR,—I was so much pleased, surprised and interested, by a casual visit I paid this morning to the Yokohama Native Hospital, superintended by Dr. Simmons, that for the benefit of others, who, like myself, till to-day knew nothing even of the existence of such an institution, I trouble you with this letter.

The Yokohama Hospital, for native patients only, is pleasantly situated at the end of Honcho Dori, with a frontage facing the railway station, and a good view of Nongé Hill.

There are several patients, of course suffering from different ailments, under the care of Dr. Simmons who is the visiting physician. I noticed among them one poor fellow with a gangrened foot, and a woman who has had a very large tumour cut out of her mouth. Most of the patients were from a distance—as Odawarra and other places, whose names I do not remember. There were one or two Yokohama boys, servants of Europeans, and if it was more generally known, I think many other Europeans would avail themselves of the opportunity of putting their servants, when sick, under the medical care they can receive in the hospital. The charge for third-class patients is one boo and a half per day.

All the rooms were very clean and comfortable, and most of the patients had their hibatchis and teapots with the inseparable pipe, and appeared very much satisfied.

What seemed to me of more importance than all, was the practical information gained by so many native medical students, who, accompanying Dr. Simmons on his rounds every day, afterwards, in a large room, the walls of which are covered with surgical illustrations, attend to his explanations of the most approved method of treating the various disorders.

Attached to the hospital is an apothecary’s shop, where all prescriptions are made up by a Japanese whom the Doctor complimented on his skill and carefulness.

In about a fortnight the hospital will be removed to a more commodious building on Nongé Hill.

I understood that the hospital is supported by the Japanese merchants of Yokohama, with some assistance from the Kencho; but everything is under the sole charge of Dr. Simmons, on whom it reflects the highest credit.

Yours truly,

PHILOS.

To the Editor of the *Japan Gazette*.

DEAR SIR,

I am sorry to have to report an accident, which happened last week to an American gentleman while travelling in the mountain near Hakoné.

It seems he with two friends were visiting the Sulphur Springs, and without for a moment thinking he was not on solid ground, the earth gave away and the unfortunate man found himself with one leg as far as the knee in the boiling water. He had presence of mind, however, not to have his whole weight on the other foot, and being in reach of a rock he was out almost instantly.

It was a very narrow escape, and his experience may be an example to others. He is now at the "Grand" under Dr. Simmons' treatment, and his recovery is only a question of time.

I remain, Yours etc.,

A—

Yokohama, Nov. 8th, 1873.

To the Editor of the *Japan Gazette*.

DEAR SIR,

THE TEMPERANCE movement commenced in Shanghai a year or so ago. The large number of sailors at all times in the Port made it a moral necessity that a place should be provided where they could resort and yet not be subject to the demoralizing influences of liquor. A few energetic persons set to work to raise the necessary funds. The want was so evident and the desire for its early consummation was so manifest that all classes gave liberally towards the object. A lot of ground was secured and a building of fair proportions erected. At the opening ceremonies the English and American Admirals were present.

Temperance meetings were frequently held; large numbers of seamen joined the society and the Temperance Hall became an immediate success. A place of like character has also been started and is now in successful operation at Tientsin China.

When many of these Temperance men came here to Yokohama they of course found no home, no place suitable for them while on shore. They applied to some of the residents to help them. A number of Temperance meetings have been held—generally in the theatre of the English Camp—resulting in a large number signing the pledge and joining the organization. An Englishman, now employed by the Japanese government as instructor in Naval gunnery, having been authorized by the Grand Lodge of Good Templars of England to start auxiliary lodges in Japan, called a meeting to discuss the matter and ventilate its objects. At a subsequent meeting the Lodge was organized with some forty members. At first it was considered desirable to raise sufficient funds to erect a suitable building, but the immediate necessities of the case could not in this way be met; as a number of the contributors would not be here to enjoy its advantages.

Consequently the new building No. 114 on the Creek has been secured temporarily; but it is considered advisable to erect a building until sufficient means can be secured. Therefore, the residents will be asked to contribute towards the funds; which funds will be used first for furnishing the present quarters, the remainder to go towards the new structure. The Society requires a good deal of money, as the expenses at starting are necessarily heavy. They will also feel under obligations for small monthly contributions that its operation may not become embarrassed pecuniarily.

A WELL-WISHER.

SILK—BALES.

TEA—PACKAGES.

There was a severe Tornado or typhoon lately in Bungo, a province in the north-eastern part of this Island. Many houses were blown down, and several people were killed.—*Nagasaki Gazette*.

The news of the loss of the British barque *Norman*, on her passage from this port to Chefoo as stated in our last, has been confirmed by the arrival of the Norwegian brig *Kvick*, which has several of the shipwrecked seamen on board. She founded on the 20th Oct. on a reef about 7 miles from Chefoo. All were saved, excepting Capt. Bryce and the steward.—*Idem*.

An investigation was held at the U. S. Consulate, on the 6th inst. concerning the accident which occurred upon the last trip of the P. M. S. *Golden Age* from Yokohama, in which a native fishing boat was run over.

The following is the judgement of the Court in the case:—

After a careful review of all the testimony, we are of opinion that the officers of the said steamer *Golden Age* used all due care in the management of the same, but through uncertainty as to whether the fishing boat was at anchor or not, the order to "port helm" was not given by the officer of the deck soon enough to avoid the collision, and in view of the serious results of the same, we recommend that some compensation be allowed by the Pacific Mail Steam Ship Company, to the families of the deceased and injured men, and owners of boat.

(Sgd.) CHAS L. FISHER,  
U. S. Vice-Consul.

Assented to

H. STOUT,

J. U. SMITH, master mariner, } Assessors.  
A. C. PERCY, " "

Nagasaki, 7th November, 1873.

—*Idem*.

Doctor Osgood of the American Mission, reports that on the way to Yeng-ping, he passed what had been the site of the English Chapel, recently torn down by a Chinese mob; he further expresses an opinion, that if the Chinese would devote the same care and attention to Public Works, as they bestow upon the demolition of Foreign buildings, the country would be greatly benefited thereby.—*Chefoo Herald*.

We learn that Mr. Brennan, H. B. M.'s Consulate, leaves by the *Curlew* in a day or two, in order to convey to the King of the Loochoo Islands the thanks of H. M. Government for his humanity in affording relief to the crew of the *Benares*, and to present to him the gold watch and chain sent out from Home.—*N. C. Daily News*.

We hear on good authority that the sentence of the Naval Court in the case of the *Drummond Castle*, has been sustained, and Captain McRitchie's appeal against it disallowed by the Board of Trade.—*Idem*.

It is said that the Viceroy intends digging a broad canal from the Peitang river to the Peiho.—It is also reported that the Mission to Cuba is checked, in consequence of some point raised by the Spanish Minister.—*Idem*.

A serious and unfortunately a fatal accident occurred on the morning of the 29th October in the Hongkew village. Several Chinamen were engaged in breaking up some old naval stores amongst which were several old bombshells. One of these still contained the percussion fuse, which being struck, it is supposed, with a hammer or other instrument, instantly exploded, scattering fragments of iron around among a number of Chinese who were looking on at the time, at the old metal being broken up. An apprentice aged thirteen was instantly killed, and four workmen wounded, one of them, it is supposed, mortally. Two of the number required amputations which were performed at the Hongkew Hospital by Dr. Henderson, assisted by Drs. Johnston and Macgowan. The fifth man was but slightly injured.—*Shanghai Evening Courier*.

We learn from Chefoo that on the 20th October, while a heavy gale was blowing from the N.E., the British barque *Norman*, from Nagasaki, loaded with seaweed, struck on the rock outside English Island, and became a total wreck. The Captain and steward were drowned, but the remainder of the crew saved themselves by clinging to different parts of the wreck, and drifted on to English Island.—*Idem*.

A fine of \$500 has been inflicted by the court at Samarang upon a Chinaman Liem Tiang Siang, commander of ship *Good Luck*, sailing under British colours, which on arriving at the roadstead of Samarang from Singapore, did not show the yellow flag, although cholera was prevailing at Singapore at the time of her departure. To ensure the payment of the fine a seizure has been made of ship and cargo.—*Idem*.

## In the Japanese Language.

THE  
"Nippon Advertiser."

(FOR ADVERTISEMENTS ONLY.)

DISTRIBUTED GRATUITOUSLY,  
IN ALL THE  
Cities, Towns and Villages in the  
EMPIRE.

TO BE PUBLISHED WEEKLY.

THE object of this publication, the first number of which will appear in a few days, is to serve as an universal advertising medium between foreigners and the whole empire of Japan.

It is quite clear that such a means of communicating with all classes throughout the country must be most useful; and is calculated to do more to make the natives acquainted with the infinite variety of articles which may be of service to them, with which they can be supplied by foreigners in course of post, than any other means that can be adopted.

The charges for insertions are fixed on a most moderate scale. The whole space of the paper will be divided into spaces of  $3\frac{1}{2}$  inches by  $1\frac{1}{2}$ , and each space will be charged \$1 a week; a space and a half \$1 $\frac{1}{2}$ ; 2 spaces \$2—and so on.

For long term advertisements, payable in advance, the following allowances will be made:

For 3 months	...	10 per cent. discount
" 6 "	...	35 " "
" 12 "	...	50 " "

No charge made for Translation.

N.B.—As it is of much importance in the circumstances of such a commerce as that of Japan, that

### ALL FOREIGN MERCHANTS

Should be known by name to all landed proprietors, financiers, producers and merchants in every province, a column will be devoted to those who may wish to avail themselves of this permanent means of keeping their firms before the natives—a charge of \$5 per annum being made.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 6TH DEC., TO THE 24TH DEC. 1873.

#### BIRTH.

On the 11th instant, at No. 15, The Strand, Yokohama, the wife of JOHN RICKETT, Esq., of a son.

#### MARRIAGES.

On the 14th Oct., at Merrow, Surrey, by the Rev. H. Albany Bowles, rector of the parish, CHARLES HENRY DALLAS, of the Imperial Japanese Civil Service, to EMILY CHARLOTTE, second daughter of the late Rev. Francis Payne Seymour, rector of Havant, Hants.

OUR LAST Mail Summary was published on the 7th for P.M.S.S. Co's Steamer *China*, which sailed on the 8th instant.

Since then the Mail arrivals have been

	DUE.	ARRIVED.
The M. M. Co. <i>Menzaleh</i>	14th Dec.	16th Dec.
" P. M. S. S. <i>Japan</i>	12th "	14th "
" P. & O. Str. <i>Araca</i>	21st Dec.	22nd "

Latest dates are:—

From London ... 31st October.  
" New York ... 7th November.  
" San Francisco ... 14th "  
By telegram from London 12th December.

### Summary.

THE EMPEROR and Empress are making more and more innovations in the habits of the court life. Each of them has been active during the past fortnight in such ways as appear open to them to shew themselves interested in current affairs, and they have wound up by making one short progress together. This last was on Wednesday the 17th instant, when they came down from Yedo to Yokohama in the Imperial saloon-carriage, attached to the ordinary 8 A.M. train,

and embarking on a steamer which has been fitted up for them as a kind of yacht, were accompanied by a squadron of six Japanese men-of-war, to the Imperial Naval Yard at Yokeska. This is the first time that the old Japanese custom has been so publicly broken through, although we think they once paid a visit to the Silk factory at Tomioka together—but if so, much more privately. The Empress is very fond of going wherever her presence can encourage the cause of progress or education, and we hope that we shall hereafter see the Imperial pair together on all great state occasions.

POLITICAL AFFAIRS are at a stand still. Not a soul can tell when or how the treaties will be revised; but serious differences have more than once arisen between the present chief of the Foreign Affairs—Terashima, lately Japanese minister resident in England, and some of the foreign representatives. Matters which were considered to be practically settled by the former Foreign Minister, have met with very short treatment by the new. The new ministry, in fact appears to be without any other policy than this:—To avoid war with Corea: in which they are right; and to make foreigners feel as unwelcome in the country as they can—in which they are wrong.

THE LATE British Chargé d'affaires, whose services during the absence of Sir Harry Parkes will remain memorable from the active part taken by him in bringing the condition of the Chinese coolies on board the *Maria Luz* under the notice of the Japanese government, left Japan by the last English Mail steamer, to join the British Embassy at Copenhagen. Few men ever left this country more universally respected.

THE QUESTION of the Simonoski Indemnity has received some attention. It was originally \$3,000,000, to be paid by Japan to the four powers—England, France, Holland and America—for the damage occasioned by the Japanese firing into certain ships, and the expenses of the expedition those acts rendered necessary. That expedition consisted of 8 English ships, under Admiral Kuper, with a special force of 600 Royal Marine Light Infantry; 3 French ships under Admiral Juarez; 4 Dutch ships, and one small American merchant steamer (carrying marines from the United States Frigate *Jamestown*), hired for the purpose of enabling the United States to put in an appearance; and shew its co-operation with the other powers, in action taken to punish acts in which an American man-of-war had been among the sufferers. It will thus be seen that, when, after the success of the expedition, and the signature of the Shimonoski convention, the various governments arranged that all should share the amount agreed to be paid by Japan, equally, the United States make a pretty little profit on the transaction, if the money be all paid; and it is therefore no great stretch of liberality for her to make Japan a present of her portion of the amount which still remains unpaid. Still there is the one fourth of \$2,000,000 due to her, and we do not impugn her generosity in being desirous of not pressing Japan for the amount. But circumstances have arisen which have induced the others who are interested in the claim, to put on a little pressure; and this has caused some discussion. One of the Yokohama papers thinks it should be enforced. The others are of opinion that it were better to obtain commercial concessions in favour of foreigners, which would equally benefit the Japanese themselves. It is impossible to say how it will end, for at present the Japanese ministry appear to be sulking, and disinclined to do anything at all.

## SAGHALIEN.

HANABUSA has left Japan, as Minister from the Mikado to St. Petersburg. By the mail which arrived just before his departure, there came intelligence that Russia was about to establish a convict establishment on Saghalien. In point of fact Russia has long since done so; and any reader of the November number of the *Far East* may see that this establishment has not been unknown to the British government; and that it has been visited within six months by one of the ships of H. M.'s Navy. It is quite compatible with Russian aggressive proceedings that the worst fears of those who look for the ultimate annexation of the whole island to the already overgrown empire of the Czars, should be realized; but we do not see that this must necessarily be the case at the present time. There is plenty of room on the half of the island already occupied by Russia, to make a penal settlement, more than large enough even for her numerous prisoners.

Whether Hanabusa has any special instructions on this subject of Saghalien, is supposed to be a secret looked up in the deepest recesses of official secrecy; but whatever his instructions are, it is certain that he never can move the Russian Bear to remove his paw from the ground already appropriated.

Saghalien is so placed with regard to the mainland of the Asiatic continent, and the Island of Yeso, that it is a very small stretch of arbitrariness for the Power which holds the territory nearest to it on the continent to claim it. It has never been numerously populated by any race, but Japan has always had settlements there, and supposed itself to be, and no doubt was, the true owner of the island. The majority of the inhabitants were and are Ainos; and probably they were little troubled by the central Yedo government. Still they appear to have considered themselves as the subjects of Japan and not of Russia.

Apart from the old territories of Russia, which surely ought to suffice for all the purposes of penal settlements, the large tracts of land she has annexed of late years on the Amoor, and between the Amoor and the coast might satisfy her, if her real reason were that given in the home papers last mail, that her other penal districts were too limited; and at any rate the island of Saghalien, very small as compared with the continental annexations, will add so little to the space allotted to such purposes, as to form a very poor excuse for taking the island from Japan, and using it in that way. It is the old story over again, of the rich man with his exceeding many flocks and herds, and the poor man with his one little ewe lamb. Russia spares to appropriate of her immense continental territories, but must take the little insignificant appanage of Japan; and as an excuse to the world must say she wants it because her convicts must find room. If the world has any sense of justice, it will condemn this selfishness of Russia; but the conscience of Russia will not be scared; nor when the world says unto the Czar, "Thou art the man," will he repent as David did, and make restitution.

No—because Russia knows well that it is not as a penal settlement she wants Saghalien. It is as a matter of policy and aggrandisement. Had it been possible she would have kept all European powers out of these seas. During the Turkish war she proved what she had always felt, the inconvenience of having the fleets of other great Powers in these waters: and it was a considerable blow to her ambition when treaties were entered into between Japan and other nations. We have always thought, and we still believe, that her main object in placing

her hand on Saghalien was to prevent it being used as a naval station by others, and thus becoming a base for operations against Russia, in case of war. Against this contingency the right of Japan must sink before the might of Russia; and we see how gradually but unswervingly Russia is drawing the cords tighter which bind the island to her.

In "1866 an embassy was sent by the last of the Shoguns to the Czar upon this subject. It conveyed to the Czar of all the Russias, the inestimable treasure of the portrait of Yoshihisa; but even this could not move the great potentate of the North; and the embassy returned with an agreement to share the island with Japan. Ever since, Japan has chafed under this joint occupation, and more than once attempts have been made to come to an understanding more favourable to this empire. It is well known that early in the intercourse between Japan and America, the latter made representations in Japan's favour to Russia, which, however, totally failed. It is a sore point with Russia, and she does not like it touched. The ministers of Treaty Powers have been consulted on the subject, but they have cautiously replied, that their governments might and probably would, if asked by Japan, intercede with Russia, but that no warlike demonstrations could be expected. This is reasonable enough—for the whole island is of but little value to any one; and certainly not worth having any war about. Still Japan is in that unenviable position of a weak man with many friends, attacked by a strong man; whom, however, none of the friends will attack, because it is against their interests to do so. Thus the weakest must go to the wall.

What then is likely to be the issue of Hanabusa's mission? There are no great interests between Japan and Russia requiring a minister to reside at the Russia court. This Saghalien question is the principal one between the two nations. And what can Hanabusa do?

Alas! he will do as he did when sent to Corea. He will do his best—and that will be—nothing.

There was formerly something heard of Russia being willing to settle the matter by paying a sum of money to Japan. If this be so, and Russia is still in the vein, it might perhaps be well to settle the matter in that way. If not, the best plan would be to have the question settled, if Russia would agree, by arbitration.

If neither of these solutions are adopted—all the embassies Japan can send will avail nothing; and the end will be that Russia will do as she was done elsewhere—annex the whole, and abide the consequences.

## PUBLIC OPINION.

COMING EVENTS cast their shadows before.

There are now in Tokei, and we think it but reasonable to suppose in all the large and important cities and towns of the empire vast numbers of men who think about and talk politics. The masses have not reached this stage yet. We asked a red hot politician a few days ago, what the people at large think of all the things he had been talking about? and the reply was, "They think nothing at all about them. It does not enter their heads that they have anything to do with the government except to obey its orders. There is such a broad line drawn between officials and the common people, that the latter have no idea of the possibility of crossing it. And so the officials will continue to govern and the people will not interfere."

Any one who sees much of the Japanese people will admit that this coincides pretty nearly with their own observations. But there is a

class, and that too not one to be lightly esteemed, which pays much attention to politics, and to whom the events of the last two or three months, are not matters of indifference. We say there is a class because we allude to one in particular—the middle class samourai; but everyday, an increasing spirit of independence of thought, speech and action is made apparent in other directions; and we are informed that before long there will be several societies in Tokei, partaking much of the nature of debating clubs, whose object will be the discussion of political subjects. Already there are one or two of them; and as must naturally be the case, they, deriving much of their inspiration from the newspapers, the latter in some measure find encouragement from them, to touch more and more freely on hitherto forbidden topics.

Let not those who read the roughly gleaned news from the Fu and Ken throughout this empire, despise the day of small things. There is that working here, which will inevitably lead to great things. Every day convinces us more and more, that a strange undefinable restlessness pervades the nation, and that this season of parturition must sooner or later culminate in the development of a political energy, such as the nation has never known. It is quite likely that great mistakes will be made by those who are the active movers in this new life; but, that they are fast feeling their powers, and are eager to exercise them, we constantly receive what to our mind are most convincing proofs.

A few days ago, for instance, we published a letter from one Hashitsumé, a samourai of Awamori, suggesting the repayment of the foreign loan. Doubtless many smiled at the suggestion, and fancied it altogether too frivolous to find a place in our columns. But it must be borne in mind, that we are anxious to give our readers, not merely those local items with which they are acquainted before we publish them; but, so far as we can collect them, news which tell of the doings in the country; the feelings, the manners, the customs, prejudices, superstitions; the growing love of what is good, and hatred of what is evil; the striving for education; the craving for civilization in its widest sense; which are the only means of enabling ourselves and our readers both here and at home, to realize the true nature of the Japanese people. The letter, then, of Hashitsumé was freely translated from the *Nisshin Shinjishi* and transferred to our column. This poor samourai has gone one step further now. He has, in conjunction with Jida, called a Public Meeting to be held at Atagosh'ta on the 16th of this month, to consider the matter he has at heart. He writes to the *Nisshin Shinjishi*, and after expressing his thanks, that by its means his former letter "has made known his plan to all the people of Japan," he proceeds:

"However, I find opinions differ on the subject. I therefore wish all persons who desire to pay off the foreign debt to meet at the yashiki of Jiugoi Matsudaira Yodai, in Daini-daiku, Atagosh'ta at 1 P.M. on the 16th instant. As there are many people in Tokei who are anxious to return the foreign debt, we will consult as to the best means of doing it."

Signed HASHITSUME YUKIMASA,  
Samourai of Awomori.  
" JIDA TSUNEWU,  
Mombu Tairoku.

This is the first step of this kind we have ever seen in Tokei; although we have repeatedly seen in the *Nisshin Shin-jishi* suggestions as to calling public meetings, and instructions as to the mode of conducting them.

It will be seen from the above how much in earnest these men are. It was a bold step on the

part of Jida, a tairoku of the Education Department, to publish his opinion in the newspaper. It shews the hold the press is taking of the people, that the poor samourai, Hashitsume, although only just beyond the reach of starvation, reads the paper to his old mother every evening. Shall we say in passing, it illustrates the force that women wield, even for national weal or woe in forming the minds of the young—that the spirit to support Jida's proposal to pay off the foreign debt was engendered by the patriotic impulses of Hashitsume's mother? These led him to ponder over the matter; to indite the letter; and to address himself to Sa In, for assistance in publishing his letter by means of the officials of Fu and Ken. His sagacity was further exhibited in seeking for his letter insertion in a widely circulating and influential newspaper; and courage and determination are displayed in the alliance between these two samourai, which gives them a consciousness of strength sufficient to bring their scheme fairly under the severe ordeal of open public discussion.

This we give as one instance, but a very remarkable one, of the fact that the samourai class are beginning to recognise their power to exercise their right of sharing in the politics of the country.

But it is only one instance. It is not the one we had in our minds when we wrote the aphorism with which we commenced this editorial. We will not, however, drag that in at the close of an article. It will keep for a day or two; so on Monday we will direct attention to a far more important illustration of the same wise saying. There is danger abroad. Let us hope that it come not our way.

#### AUGRY RUMOURS.

IT HAS been confirmed by both of our English Yokohama contemporaries that dissatisfaction with the late government's changes and their causes, has been practically displayed among some of the military. It matters not to what extent this has been the case, so far as our purpose is concerned. Probably we should be able to shew that it has been to a far greater extent than is generally supposed, if it were not that the authority on which we make our statements must perforce be kept in the background. Even foreigners who send or give information to the Press are generally anxious that their names should not be made public; and this must be very much more a matter of consequence to Japanese, whose liberty might, and certainly would, be curtailed, were they known to give such information as we have from time to time been enabled to publish.

It will be fresh in the memory of our readers, that within the past two months we have given insertion to two letters received by us—as we explained at the time, unofficially from two officials—in which the statement made by us respecting the disaffection in the army was explained by the admission that some of the men had been allowed to retire from the service. We published just what was written; and did not question its correctness. We had given the fact—and followed it with the explanation. We now beg to be distinctly understood, that, in the few statements we have to make, our object is not to write sensationally or to create alarm, but only to let our foreign readers know that there is still fire to be quenched, and that the government has a very rough task before it. We are obliged to generalise, and not to mention specific facts within our knowledge, because, were we to take an opposite course, we should soon be deprived of some of our best sources of information.

In the proceedings which led up to the great revolution in this country, it was a long time before any name but that of Satsuma's was mentioned by the government, although he was but one of several confederates. He was looked upon as the recognised leader; he it was who addressed that celebrated letter to the late Mikado, protesting against the opening of Osaka and Hiogo, and demanding that his clan should occupy the van in opposing the entrance of foreigners; and he it was to whose influence all the crimes committed against us were attributed. So it is now. The Kagoshima men are generally mentioned as those who are leaving their colours. But they are not the only men whose animosity has been aroused by the late changes; nor are we even sure that they are the most numerous. When Shimadzu Saburo came to Tokei, in the early part of this year, great fears were entertained respecting the retainers who accompanied him. It was imagined that they would behave in the old swash-buckler style for which they were famous in days of old. It was in anticipation of their forming a nucleus for aggressions of some kind, that a vast number of ronins made their appearance in Tokei. But the government had taken such steps as rendered it impossible for them to do any great amount of harm. Every man was known. Everything he did was watched; and had any *émeute* been attempted, it would have been suppressed in a twinkling. We are satisfied that at this moment, government knows all that is going on everywhere in the country, quite as well as it did then. The only thing is that the very men whose names were at that time a tower of strength, are now out of office; and it is very doubtful whether those who have taken their places, would have similar influence.

The determination which is now openly expressed in Tokei, as that of more than one of the Ken, is, that drilling and exercising shall go on through the winter months so far as possible, and that an army shall be prepared, by the spring, and permission asked of government for this force to go to Corea. If the request be not granted it is stated that they will go without permission.

Now this is big talk, and we may very well afford to smile at it. It is pretty certain that the government, if its present members continue in power, will not assent; and, if they do not, it will be their duty to prevent any filibustering expedition leaving these shores, even supposing it were possible for such a constituted force to find equipment, commissariat, and transport. We anticipate, therefore, no actual departure of troops from Japan to Corea.

But there is danger to the country in the existence of any such movement. Freedom of speech no foreigner will object to. The free expression of opinions we should all uphold; but, if any approach to drilling or exercising, or in any way organizing either naval or military bands, otherwise than the legitimate and recognised forces of the empire, be attempted, it ought to be promptly and inexorably suppressed. Should Japan at any time carry out the earnest wishes of the majority of the samourai, and go to war with Corea, it must be as a civilized state, sending forth a properly accredited force. This would be recognised and respected by all nations, however much the sanity of the rulers might be doubted. But such an independent expedition as is spoken of would be treated as piratical, and not acknowledged as lawfully belligerent. It behoves the government therefore to be very watchful, and crush in the bud the very first and faintest

appearance of preparation for hostilities. And this we say, because should men be allowed to form themselves into armed bands, and be thwarted in the objects for which they had engaged, they would be apt to act in a manner hostile to the government which interposed between them and their designs. It may easily be conjectured what shape such hostility would take.

We spoke on Saturday of the advance of public opinion among the middle class Samourai. This subject is one of common converse among them, and there are already strong evidences, in many quarters, of a growing party spirit in connection with it, as well as with other matters of more or less importance.

The action of the Daijo-Kuan in regard to the dispute between the Judicial Department and the Finance Department which led to the resignation of Mr. Fukuoka and other judicial officers, has provoked a wonderful amount of indignation in some quarters; and we very much doubt whether we have heard the last of it. For, as we write, a letter lies open before us which we dare not quote, but which speaks in such plain terms, that did we write ever so strongly on the necessity for caution on the part of the government and its individual members, we should be perfectly justified.

It is a simple matter of fact. The intelligence of Japan is beginning to feel its strength. It does not yet quite know how to use it; but that it will ere long make itself felt by the government and the country at large must be apparent to all.

If the government be wise, it will consider this fact. It will be unsafe to attempt to repress public opinion; but it will be judicious to control it, by assisting and directing it into proper channels.

There is, then, work to be done, in nipping in the bud any illegal drilling of unauthorized armed bands; and also in turning to good account the force of Public opinion. It is useless, even were it possible, to stifle the latter. It will make its way in this country and among this people, as it has never yet done among Asiatic nations.

In these remarks our object is rather to let our readers take note of what is going on, than to remonstrate with, or advise, the government. There are broad shadows visible; it remains to be seen what are the coming events which are to follow them.

#### THE SIMONOSEKI INDEMNITY.

WE ARE very pleased to find that the *Japan Mail* has again directed public attention to the Simonoseki indemnity, only one half of which has been paid; although it has been eight years overdue. As our contemporary points out, the time for payment has been twice postponed—first until 1869, and then until 1872; but the second period has passed and yet there is no attempt made to pay it, nor, so far as we can learn, is there any proposal for a re-extension of time. The amount now due with accumulated interest amounts to a little over \$2,000,000; and of course this in strictness ought to be paid. No one can or does question that; least of all the Japanese government.

But will the four governments of England, France, Holland and the United States, among whom it is divisible, insist upon it? The United States we may be quite sure from the action she has already taken will not; and the other three surely would not like themselves to be outdone in generosity by a younger member of the family of nations. So far as England is concerned, she has al-

ways averred her preference for some commercial concession on the part of Japan; and if the course of reasoning in this country, were not, (like everything else), the very reverse of what it is elsewhere, the government would see that this proposition is doubly for the benefit of Japan—first in remitting the heavy debt, and secondly in increasing the trade and the revenue-producing power of the empire. But—ah! there is a but—there is a very important fact to be considered.

It is an axiom with diplomatists—"nothing for nothing." And it is one that they are bound to act up to, unless they choose to meet the censure of their countrymen. Thus all treaties are supposed to be mutual in every respect in the privileges accorded and the obligations undertaken. Already Japan has advantages over foreign powers in the treaties made with them, inasmuch as any Japanese may go freely in their countries whithersoever he will, whilst no foreigner may legally put his foot on Japanese territory beyond certain limits. Japan may reply to this, we give a *quid pro quo* for this by allowing foreigners to live under their own laws on our soil; and to a certain extent she would be right. Indeed even now her statesmen do say to those who have treaties, "concede to us the full jurisdiction over your people, and they may go whithersoever they will in Japan." This is the very point which brings the revision of the treaties to a standstill; and at this moment all is at a deadlock, arising from the strong desire of the government to gain their point as to jurisdiction over foreigners, before they make any further concessions.

We quite sympathise with those who wish to see Japan possessing the same control over foreigners who come hither, as the Powers which have entered into treaty relations with her have over Japanese who visit them. But it ought to be as plain to them as it is to us, that the thing is impossible. Where are the laws she would bring us under? By what judges are they administered? They will say that the laws are being made; and will principally be based on the Code Napoleon. But they are not made; and the business of making them proceeds very slowly. And were it otherwise, how can the Japanese judges know anything of them, or of the proper forms of law procedure? This then is a concession that cannot be yielded for several years to come. After all, it is not one the withholding of which is in any way prejudicial to Japan. If anything it is the very reverse. But it in some measure touches her pride; and thus she feels galled.

Now as a mere sentiment, each individual foreigner, whilst acknowledging the impossibility of yielding in this particular, would urge the most generous dealing in the matter of the Simonoseki indemnity. Ministers, however, have to consider such a proposal not simply as one of sentiment; but as a dry matter of business between nations. It is a beautiful theory conveyed in the parable, "when they had nothing to pay he frankly forgave them both;" but practically it is understood among the fastest friends that business is business; and although when a man has no means of meeting an obligation, the utmost generosity is often extended to him, yet when he possesses anything by which his friend can be satisfied, even though it be not hard cash, he is expected, and in most cases is willing, to yield it.

The Japanese government is in this position. She acknowledges her indebtedness but is unable conveniently to pay in money. The foreign Powers to whom she is indebted, have already shewn her every kind of generous con-

sideration. And if it were a fact that she could not pay, and had no means of satisfying her creditors, there is little doubt, the debt would be altogether waived; or at any rate she would not be in any wise troubled by importunate applications for payment.

It so happens, however, that at the very moment when we are all feeling desirous of showing our good feeling towards Japan by relieving her of this our claim upon her, she has something which we are desirous of obtaining from her, which the conceding to us, would be of considerable benefit to herself, and yet which she resolutely withholds from us. Under these circumstances, however much we may wish to see her absolved from the debt, is it consistent with the usage of nations to act altogether so one-sidedly?

It is not. There is nothing unfriendly in refusing under such circumstances to wipe out the score. On the contrary, it would be a simple act of folly to do so, when we have it in hand wherewith to diplomatize. Foreigners ask nothing of Japan that is unreasonable, or that will not be even more for her good than theirs. If she is too proud to grant it, perhaps she would be also too proud to accept for nothing a remission of the debt.

Much therefore as we all would like to see the four powers give her a clean receipt, we do not believe it is possible, unless her statesmen shew a disposition to reciprocate the friendly feelings which would prompt them to do so; and certainly not when they evince a leaning in the contrary direction. "Strictly just" writes the *Mail*, "it may be that this money should be claimed; generous it cannot be." It is nevertheless not ungenerous to propose a definite *quid pro quo*. Our opinion is that this is what some of the foreign representatives concerned are empowered to do, and that all will be. We consider this a preferable course to the giving it up altogether; and we shall rejoice to see that all the tough encounters which have taken place since the new chief of the Foreign office came into power, end placably in the abandonment of this claim, but with the concessions on the part of the Imperial government which foreigners universally desire, and which it really is to the disadvantage of the people of Japan to refuse.

#### THE YATO BASHI.

TO us it is a great matter of satisfaction that the Yato-bashi—the first bridge over the entrance of the canal, Yokohama—has given way. The construction of that bridge was part and parcel of the folly that pervaded all the acts of the government of Kanagawa at the time it was built. The officials would be, in spite of all remonstrance, penny wise and pound foolish, and now the consequences are seen. What piles of money have been squandered by them in doing badly what would have cost but a trifle more to do well! How resolutely did they set their faces against foreign guidance in matters about which they knew but little themselves; and what a pretty penny they have had to pay for it!

Looking at the streets of Yokohama now, our later comers may smile to be told that only five years ago, the governor of Kanagawa—albeit so good and generally able a man as Midzuno Wakasa no Kami—insisted on burying in the mud nearly as much money as it afterwards cost to macadamize the streets and make them what they are now. He would bring heaps and heaps of muddy gravel, to form the streets in the old Japanese fashion, and when the press had bullied him to the nth, and public meetings had been held

and remonstrances sent to him, he wrote to them by the then Municipal Director, "The streets are made on the same principle as those of the castle, and if they are good enough for the Shogun they are good enough for you"—or words to that effect. The result was, that, so soon as traffic was brought to bear upon them, they gave way. By this time a new race of governors ruled, and fortunately, Mr. Brunton having arrived, they had a man to advise them, and shew them how to make the streets properly; and to him they delegated the duty of grading, draining and metalling the streets of the settlement.

There were plenty of Engineers here before Mr. Brunton's arrival who could give and did offer advice, but they were not in government employ. Mr. Brunton was; and to him they gave heed. So that it is not only the wave-tossed voyager who had to be glad of his advent in Japan, but the citizens and visitors of Yokohama, who at last were able to locomote with some degree of comfort, over well macadamized causeways.

But the old Yato-bashi, having been built before foreigners arrived, on the old and universal model of such structures in Japan, the new one must be built like it. If we mistake not, Messrs. Whitfield and Dowson gave in designs for a substantial suspension iron bridge, which at a reasonable price they would have constructed; but of course their offer was not accepted. That design gave an ample height of the floor of the bridge above high water level; and so there would have been no such obstruction as the two wooden bridges—the old and the new ones—have always caused in the traffic of the canal. How Mr. Brunton got them to construct the Yoshida-bashi of iron we cannot tell; but whilst he was about it, he ought to have made that bridge higher from the water. An opportunity now offers to shew the metal the present chief of the Ken-cho is made of. If he has as much *savvy* as he is represented as possessing, he may act a little more intelligently than his predecessors. If he has any regard to economy, he will see that no mere patchwork be done to the bridge now closed, but that a good substantial bridge of a single span is constructed.

The direction of the bridge should also be changed. It is absurd to have it, as now, leading from Water street straight to nowhere, except against a stone wall. It should go in a slanting direction from Water street to the foot of the hill. The convenience of the public ought to be more considered than it has hitherto been. It is the part of good landlords to increase the value of their property by making the best possible means of communication for their tenants; and considering that this is the only bridge that may be said to be mainly used by foreigners, and that it is the principal connection between those two valuable and highly rented properties, the Bluff and the settlement of Yokohama, it is worth some extra care to make it worthy of its position.

We hope, then, that the experience of the past may be attended to at this opportunity: that the wish of foreigners may be complied with as to the direction of the bridge; and that a good substantial one may replace that which has now given way. If it be ornamental so much the better—for utility and a moderate price are not necessarily incompatible with elegance of design. We have not much to boast of in the way of public buildings or structures of any kind, and a handsome bridge would be very acceptable.

No steps should be taken, at any rate, to build another bridge on the same principle as

the last. But Mr. Brunton or some other civil engineer, should be invited to see whether an improvement on Yoshida Bashi is possible.

\* \* We let the above article stand, although it has transpired that it has been resolved merely to repair the old bridge. A new one must be provided ere long. That is certain.

To the Editor of the *Japan Gazette*.

HAKODADI, 16th Dec., 1873.

A native of some standing here, on leaving the Gwaimusho at Yedo a day or two before the end of October last, was arrested by police officers in the employ of the Kaitakushi, secured with rope at Shiba, taken at once to Shinagawa, and shipped off in a small boat for the steamer *Gemba Maru* (Kuroda). He was placed on the top of some baggage, and, there being considerable sea on, he tumbled overboard, and was very nearly drowned, owing to his hands being tied under his clothing. He sunk twice, but on coming up the second time he managed to catch hold of some part of the boat and was hauled in.

Placed on board the steamer, all answer as to why he had been arrested was refused. The steamer sailed for Hakodadi and on her arrival there he was at once transferred to the jail. He remained there thirty-six days, and during that time was neither examined in any way nor allowed to know for what reason he was imprisoned. At the end of that time he was told that the government had found out "a little" of what they wanted to know (but what that was, was not imparted to him), and he could live at his own house under surveillance of the street officer. This partial release only occurred three days since. He has, as yet, not been informed by his paternal government why he was lodged so many days at the expense of the state.

It is understood that some influential friends of his have sent in a petition, to the so-called Department of Justice, to have this action of the Kaitakushi investigated. It is hoped it will bear fruits, as this is not the first instance of the Kaitakushi using their powers in such an improper manner.

Articles have at various times appeared in the *Yokohama Daily News* exposing some abuses and mismanagement in the Kaitakushi Department, and the officials of the latter have been endeavouring to discover the author, whom they imagined they had this time caught, but they were mistaken, and they should be made to suffer for such high-handed proceedings. *Quere*, where are the "laws of Japan" under which foreigners will come when the ministers agree to relinquish ex-territorial rights?

Takashimaiya's petition to the government for the contract to construct a line of railway from Yedo to Awomori, which appeared in the *Japan Gazette*, has caused some amusement among persons who are familiar with the country which the proposed line would traverse. Mr. Takashimaiya had better travel over that country himself and then ask the combined governments of Europe whether they will guarantee him six per cent on the outlay. Besides, he writes a lot of "bosh" about a railway in Yezo to connect the "Capital" (Saporo) with Hakodate, the natural capital; and about fish and seaweed lying rotting on the shores of Hokaido (Yezo). Let Mr. Takashimaiya petition government to place a capable man in the position of Governor-General of Yezo and its outlying islands, and reduce the number of subordinate officials to a minimum, and he would find Hokaido prosper without the

"Northern railroad," and not be a drag on the finances of a government which has to raise foreign loans to keep it on its legs.

The greatest dissatisfaction exists throughout Yezo with the present Kaitakushi, and the sooner it is squashed the better. Articles above referred to in the *Yokohama Daily News* are far from exaggeration, and it is only from the fear of the consequences of exposing the truth, that persons conversant with the state of affairs in the Kaitakushi do not oftener give their opinions.

The Mikado is spoken of as coming to visit his northern dominions next summer. He should wear spectacles of a kind manufactured specially for him by Governor-General Kuroda and his Kaitakushi officials; and ask no questions as to the expenses of the "improvements," and when he is safely esconced in the "state house" at Hokio ("northern capital," the new name proposed for Saporo) let him thank his stars, if his joints have not been dislocated in travelling over the new road from Hakodadi. Some of the imperial guard should attend to his majesty to defend him from chance attacks of bears, which are said to be a considerable proportion of the "citizens" of Saporo.

It is snowing a little to-day—sometimes it does here—(in winter).

Yours in the cold,

MATSUMAI.

#### IMPERIAL VISIT TO YOKOSKA.

HIS MAJESTY the Tenno, accompanied by the Empress and the ladies of the Court, passed through Yokohama yesterday en route to Yokoska, which their majesties had expressed an intention to visit, to inspect the works of the establishment. At an early hour the new pier at the Hatoba, and approaches, were thronged with a multitude of people—chiefly Japanese anxious to catch a sight of their Ruler—and the harbour presented a gay aspect, the various men-of-war and merchant vessels being gaily dressed with flags and streamers. The Imperial party left Shimbashi by the 8 o'clock train, and reached the Yokohama terminus shortly before nine o'clock. A detachment of the Imperial Body guard were in attendance as a guard of honour. Their Majesties were conducted to a suite of apartments which had been improvised as reception rooms, and after resting a few minutes, four of the ladies of the Court were conveyed by carriage to the Hatoba, and thence by barge, on board the Japanese steamer *Tsoju-maru*, formerly the *Komei-maru*. Their Majesties and the remainder of the suite did not reach the Hatoba until some time after. Much interest was manifested in the arrival of the Tenno, and great was the pushing and craning of necks, to catch a glimpse of him. The detachment of European and native police, however, did their duty, and no confusion occurred. The Imperial party were conveyed on board the *Tsoju-maru*; his Majesty proceeding in the ship's gig, and the Empress and suite following in the barge, towed by the steam launch. The Diplomatic party who accompanied his Majesty by special invitation, were conveyed on board the *Nishin-kan*, and amidst salutes from the various men-of-war in harbour, the French and American war vessels manning yards, the Squadron got under weigh.

At Yokoska great preparations had been made, the various craft in dock and harbour flying a liberal quantity of bunting. The Russian gun-boat *Sobel*, which had put back

with loss of main-topmast, reached the anchorage in time to run up her flags: this was the only war vessel in harbour.

The stage which had been constructed for the landing of the Imperial party, was beautifully decorated with shrubs and evergreens, and the various buildings and objects of interest visited by the Tenno were similarly adorned. The flotilla conveying their Majesties (consisting of seven Japanese vessels) came to an anchor abreast the *Sobel* shortly after one o'clock. H. B. M.'s Minister, Sir Harry Parkes, Hon. J. E. Bingham, U. S. Minister, and the Representatives of the French and other Embassies landing a few minutes before the Imperial party, in readiness to receive them. The officials connected with the dock establishment, in full uniform, were in attendance at the landing stage, and a company of infantry was drawn up close by, and received the Imperial party with presented arms.

The steamer conveying their Majesties and suite came alongside the stage at half-past one; and preceded by the imperial banner, the Mikado, with the Empress and suite stepped ashore amidst the firing of guns from the flotilla. The troops presented arms, and the band on the upper deck of the tender played the national anthem. A procession being formed, the Mikado was conducted by the head of the dockyard, who had been waiting to receive the party, followed by the Empress and their suite proceeded to the Government building on the hill overlooking the settlement, and after a short interval devoted to rest and refreshment, returned to the works, and were conducted to the ship yard, where a handsome dais had been erected for His Majesty and the Empress. An address was here presented by Sir Harry Parkes, on behalf of the various Representatives of Foreign Powers, expressive of the satisfaction they experienced in the visit of His Majesty, and conveying their pleasure at the interest shewn by His Majesty in this great undertaking. The Diplomatic Corps then took their leave of their Majesties and returned to Yokohama. As an initiation of the programme prepared for the approval of His Majesty, the process of ship-building was partly shewn in the erection of two ribs of the framework of vessels on the stocks in different stages of advancement. An adjournment was now made to the workshops, where the different actions of sawing and planing machines were exhibited, and the process of mast making shewn. Proceeding onward, his Majesty next inspected machines employed in sawing, boring, turning, and fretwork cutting. The Store rooms, stocked with every kind of material necessary in ship building next claimed attention. In the large shops containing the huge steam forge hammers, a platform of observation had been erected, and the action of one of the larger hammers was shewn on a massive piece of white hot iron just drawn from the furnace.

His Majesty, with the Empress and suite, here adjourned to a building which had been fitted up as a refreshment room, and partook of luncheon. Resuming his inspection, his Majesty was next shewn the action of the diving apparatus; a diver, fully accoutred, descending near the large floating crane.

The machine shops were next visited, and the different operations of metal bending and cutting machines, of the apparatus for bending boiler plates, and of various delicate machinery at work in threading bolts and nuts, cutting piping, &c., were exhibited. The operations of hammer-work (by hand) and boiler-making, were also shewn, and the party proceeded to the Dock, in which the steamer

*Elgin* had just completed her repairs. The water was let in, and the steamer floated in a few minutes. Proceeding onward, across the pontoon of the new graving dock, His Majesty inspected *en passant* the action of the large steam dredging machine at the mouth of the dock. Passing through a large building in course of construction, the party entered a large shop devoted to the laborious and delicate process of metal turning; and, entering the foundry, His Majesty and the ladies of the suite were conducted to a platform which had been erected, and a couple of large charges were drawn from the cupola, and a heavy casting made. His Majesty's cypher was cast in metal, and excited some interest amongst the Court ladies. An immensely long building in which the operations of rope and twine making, the manufacture of ships flags, sailmaking &c., are carried on, was the last visited, and, it being by this time nearly dark, the Imperial party retraced their steps to the Government residence, where arrangement had been made for their accommodation for the night. The various vessels at anchor in harbour, as well as the buildings of the establishment on shore, were brilliantly illuminated with coloured lamps, producing a very beautiful effect. The illuminations were visible from the deck of the tender conveying the last batch of visitors homeward, for many miles. The day was brilliantly fine and bracing, but towards nightfall it set in extremely cold, and the trip back to Yokohama was hardly enjoyable.

The early hour of six o'clock was appointed for the review of the Japanese vessels of war this morning. Shortly after that hour the men-of-war composing the flotilla, six in number, steamed outside the harbour of Yokoska, and went through some nautical manoeuvres, in which a little powder was burnt. The Emperor and suite viewed the operations of the fleet from the hill above the ropeworks, the spectacle not being visible from the flat. At the termination of the sham fight, if such it might be called, the gentleman connected with the arsenal despatched a large balloon from the hill on which the Imperial party were situated: this portion of the programme was a great success, the balloon when released rising majestically and with perfect smoothness to the admiration of the assembled spectators.

The steamer *Menzaleh* belonging to the Messageries Maritimes Co. reached Yokoska at an early hour this morning, and was hauled into the new dock without any ceremony. At about 10 o'clock the Imperial party embarked on board the *Tsoju-Maru*, the vessels containing the party following, and bade farewell to Yokoska, evidently much pleased with what they had seen. In such a short passage as that between Yokoska and Yokohama, little that is eventful could be expected; we nevertheless hear a rumour that the steamer conveying His Majesty touched the ground in rounding Treaty Point. At all events little or no delay occurred, as the pretty little steamer kept on her course, apparently without damage, and brought to off the end of the Hatoba pier at 12 o'clock, amidst salutes from the *Belliqueuse*, *Bourayne*, and *Saco*, the yards being manned, and all available bunting displayed on board the vessels mentioned. The other vessels of the convoy rounded the light-ship and brought up at the moorings soon after.

An immense concourse of people were in waiting to receive the Imperial party. The Hatoba was densely packed with an eager assemblage of all nationalities, and the Bund,

and approaches were packed with a larger crowd than we have seen for many a day.

At last the word was passed "Here they come," and the ship *gig* of the *Tsoju-maru* was observed to be leaving that vessel, and soon drew up at the stage on the landing. His Majesty the Tenno then stepped out, and attended by two Japanese gentlemen in private clothes (said to be uncles of his Majesty) and the Chamberlain in waiting, entered the carriage drawn up in readiness on the pier, and drove up to make room for the carriage of the Empress, who reached the landing in the barge, towed by the steam launch, in which her Majesty was conveyed on board the *Tsoju-maru* yesterday. Her Majesty, with two of her ladies, entered the carriage, and the remainder of the ladies of the Court with the principal officials were conducted to carriages which were drawn up near the boat house for their reception. The whole *cortège*, escorted by the detachment of body-guards, then proceeded towards the Railway Station which they reached at about half past twelve. Their Majesties were immediately shewn to the reception rooms prepared in the upper story of the Railway Station, where they remained until 2 o'clock this afternoon, at which hour the Imperial party proceeded on to Yedo by the usual train, His Majesty the Mikado and the Empress occupying the private carriage in which they came down from Shinbashi.

Some disappointment was expressed by a large number of our citizens, at the early departure of their Majesties. The hour originally fixed for their departure from Yokohama was four o'clock, and it was hoped and believed by many, that the Mikado would at least drive through the settlement, and give foreigners an opportunity of seeing him. Many citizens, even up to four o'clock wended their way up to the Station in hopes of catching a glimpse of the Imperial party.

A gentleman, who has just returned from Yedo, reports the safe arrival of their Majesties who at once entered the carriages in waiting to receive them, and proceeded to Akasaka.

#### GREAT FIRE IN TOKEI.

WE know not whether most, to regret the terrible calamity that has again befallen Tokei, or to admire the pluck of its victims. A fire, hardly of less extent in point of ground covered, and of far quarter importance considering the wealthy district it traversed, than that of last April twelve-month, has run its destructive course. Commencing about 2 o'clock this morning, it continued to burn fiercely until 8 A.M.; and during the day it has burst out afresh in some quarters. At 3 P.M., a godown at the waterside near Hakozaki was still burning, but with no prospect of the fire spreading any further.

It commenced near Ooyeno in one of two small houses situate in Higashi Fukuda-Cho goban-chi. One belonged to a maker of bamboo trunks, the other a user up of waste paper (the produce of the collections of the street *chiffonniers*). The opposite side of the street is safe; but on both sides and in a broad line right away to Yedo bashi, all but the fireproof godowns is swept away. The curved line of godowns, between the bridge and the Samida gawa, have all felt the effects of the flames, and six or eight of them have succumbed, but as a rule the fireproofs have stood well, and there are so numerous as in a great measure to hide the extent of the conflagration.

The godowns above Yedo Bashi, between it and Nihon Bashi are all safe.

It is impossible to praise too highly the energy of the burnt out folk. They are like so many bees, working briskly to clear away and repair. We stood awhile watching the godowns on the river's bank still burning, and the people next door were already, with all the hands they could engage, beginning to rummage for any articles that might be amongst the débris, and to give directions for obtaining shelter. We traversed the whole burnt district in and out and all about, and looked to see whether we could discover any who were giving way to grief. And there was not one. Every man and woman was busy; and although for the most part the women and children had been removed, still there were a few left, and on the ground occupied by the two houses in which the fire originated, were three mats—one placed flat on the ground, and two raised on their sides at right angles so as to form shelter for the third, on which was a little child lying in the cold, but whom another little girl 4 or 5 years older was trying to cover up and make comfortable, singing as contentedly as if it were putting it to sleep in a cozy nursery. Many of the lots are entirely cleared of all rubbish, and marked out for enclosure. Several are already enclosed; and in one instance we saw a weather-board house just receiving the finishing touches; in which the proprietors will find warmth and shelter to-night. One peculiarity of a fire of this kind was particularly striking. All the houses for a long distance, surrounding the district, were in confusion, from the occupants having put all their effects into the fireproof godowns or made other preparations to meet the calamity, if it came their way. The timber yards all round, and they are very numerous, are fast being emptied, and the quantity of timber being conveyed to the spot is prodigious. The firemen and coolies are there by thousands, and all working with a will. Truly, if a large fire in Japan is a great misfortune, there is nothing which presents so interesting a feature of Japanese character. We do not hear of many lives lost; but in the course of a few days statistics connected with the catastrophe will be officially published. Meanwhile everything necessary for the assistance of those who may be in want, has been done.

WE HAVE much pleasure in calling attention to the subjoined report of the committee of the Public Hall—for the 13th months ending 30th November, 1873.

#### To the Subscribers to the Public Hall Fund.

GENTLEMEN,

The committee appointed by you for the arrangement of this institution during the past year, have the honour to lay before you their report.

The Honorary Treasurer's account shews at balance in hand of \$202.51; the gross receipts having been \$2,597.45, and the gross expenditure \$2,394.94 this latter sum includes two items—viz: \$415.88 for the properties of the late Dramatic Corps, and \$401.79 cost of fitting the Building with Gas: together a sum of \$817.67 which will not be incurred in future working.

The sum of \$1,351.45 received from Amateur and other performances is exclusive of the cost of dresses; all of which belong to the Hall and form a valuable stock of properties.

A donation of \$400 the proceeds of a performance given by a few gentlemen amateurs, to whom the thanks of the community are due, was made to the General Hospital.

The Committee therefore trust that you will consider the movement has been fairly successful for the first year. On their part they feel confident, that, as the objects and principles of the institution become more widely known, more frequent amateur performances will not only increase the funds and render the Hall self-supporting, without further subscriptions; but the public amusement will be more fully provided for.

When the subject of opening the Gaiety Theatre as a Public Hall was first mooted, a few members of the community were sanguine as to the success of the scheme.

The Committee think these expectations have been fairly realized; for, apart from the state of the funds and from the value of the building as a place of Public Amusement, Theatre and Concert Room, it has been made useful for Public meetings; and, though last not least, it has been placed at the disposal of the Ladies' Benevolent and all other charitable associations.

The Committee conclude with the expression of a hope that the future working of the Public Hall will leave a balance of cash sufficiently large to render substantial and timely assistance to all good charitable institutions.

STATEMENT OF PUBLIC HALL ACCOUNT,  
From 1st November, 1872, to 30th November, 1873.

To subscriptions from Residents, ... ..	\$ 821.00
„ Amount collected from Performances, &c. ...	\$ 1351.45
„ Amount received from Union Church ... ..	\$ 390.00

	E. & O. E.

Yokohama, Dec. 1st, 1873.

We have the honour remain,

Your obedient servants,

Signed S. T. BRIDGEFORD.  
„ W. H. SMITH.  
„ H. J. H. TRIPP.  
„ A. MITCHELL.  
„ F. TOWNLEY.

THE MEETING called by the Committee of the Public Hall to receive and consider the Report and Treasurer's Statement, took place last evening in the Hall. The attendance of the public was meagre. Captain Purvis, R.N., was called to the chair, and Mr. W. H. Smith, acted as Secretary to the meeting.

THE CHAIRMAN, after a few preliminary remarks, read the Report (which has already appeared in our columns) by which it is shewn that the gross receipts for the 13 months ending November 30th 1873, have been \$2,597.45, and the gross expenditure \$2,394.94, leaving a balance for disposal in the hands of the Hon. Treasurer of \$202.51, and this after the disbursement of the sum of \$818.67 cost of fitting building with gas, and of necessary properties taken over from the late Dramatic Corps. The handsome sum of \$1,351.45, received mainly from the Amateurs as proceeds of performances, constitutes the larger moiety of the gross receipts. In addition to the sums handed over by the Amateurs, the whole of the dresses, and other properties used in their entertainments, have been placed in the hands

of the Public Hall Committee: these represent no inconsiderable sum, and together with the value of fittings and furniture above mentioned, the Capital Stock belonging to the Hall Trustees forms quite a respectable item as an asset. After reading the Report the Chairman said that all would agree that it was eminently satisfactory. The public were indebted to the Committee for their indefatigable exertions in providing a Public Hall for the community.

It was proposed by Mr. Dare, and seconded by Mr. Wilkin that the Report as read be adopted. Carried.

Proposed by Mr. Wilkin, and seconded by Mr. Syle, that a vote of thanks be accorded to the Retiring Committee for the great exertions on behalf of the public. Carried unanimously.

THE CHAIRMAN then said, that as the time for which the present Committee was elected had expired, it would be necessary for the public to proceed to the election of another.

It was then proposed by Mr. Isaacs, and seconded by Mr. Wilkin that the present Committee be requested to serve again.

Carried. (The whole of the Committee were present, with the exception of Mr. Tripp, and cordially agreed to the proposition).

With reference to some enquiries which had been put by a gentleman in the body of the meeting, Capt. Bridgeford explained the position of the Amateurs who give entertainments in the Hall. They guarantee the Committee \$100 for each performance, besides the expenses of lighting &c. This they would pay in any case, even at a loss to themselves, but the entertainments had fortunately been a great success and had left a surplus, which the Committee received, and had in addition been put in possession of the dresses, properties, etc.

Mr. SMITH remarking on the efforts of the Amateurs to provide a Public Hall, suggested the consideration as to whether the present Hall was not too small, and proposed that a Committee of Three be appointed to make enquiries as to the cost of erecting a Theatre, not to exceed \$15,000, for which Capt. Bridgeford would no doubt kindly furnish a plan. He proposed to raise the money by debentures, which the Amateurs would no doubt be able to wipe off quickly.

Mr. MITCHELL thought the public would like to see some security for their debentures, besides that of the Amateurs.

THE CHAIRMAN suggested that as the proposition was outside the objects of the present meeting, another had better be called to consider Mr. Smith's proposal.

After some desultory conversation the matter was allowed to drop.

A vote of thanks was then accorded to the Chair, and the meeting separated.

AMONG THE few items published yesterday under the heading "Niigata," was one telling of the improved road made through the mountains. This recognition of the value of good roads, and of their actual necessity for trading communication, has been pretty general among the hill districts. From Kuchiki Ken, to the Ken-cho of which a letter had been written on behalf of the editor of the *Nisshin Shinjishi*, requesting information of Ken news direct, as the officers of the Ken, in Yedo, only gave it when it was too old to publish, a response was received which tells as the best and only news, the fact of an improvement in the principal hill road. The communication runs thus:—

"Shiwoya province of Kuchiki Ken is the extreme northern corner of the country, and full of high and precipitous mountains. The road from Yokokawa to Tajima is close by Wakamatsu in the Aizu province of Iwashiro;

but the hills are so steep, and the paths are so winding as to render communication difficult. The Kochos therefore of the various villages between the two points, after frequent consultations, came to the resolution to raise funds among themselves to make a good road for the benefit of the people. They applied to the Ken-cho for permission to make a road of ten miles—from Yokokawa to Shiobara, and to repair, restore and extend an old road, 20 miles long, lately quite deserted, from Otamura to Tajima. On this latter they also proposed to build a rest house half way, so that travellers may obtain rest, food and shelter. The high officers of the Ken having examined the route, plainly recognise the public spirit of the proposers. They know that hitherto the people have been almost cut off from each other for want of a proper road, and that the produce of the district has failed in finding a market from this cause; and they see that if the proposed road be opened, it will give a great impetus to the farmers of the whole district.

They therefore made such representations to Okurasho (Finance department) as have resulted in the required permission; and all the inhabitants are full of satisfaction at the prospect of the road being completed.

Every letter from Japanese, now-a-days, is sure to allude to the "civilization" which must be in every man's mind,—so this letter ends with the remark "So you see that civilization is reaching even this barren corner of the empire."

IN THE village of Renge-ishi, Nikko, a fire-proof godown has long been used as a public gunpowder magazine. Lately the powder was sold to a merchant, with the license to dispose of it. The Kocho of the village, Murata Yodohei, in the performance of his duty had occasion to go with three other persons to examine the place; but by some unexplained accident, whilst they were there the powder exploded, the earth was shaken as if by an earthquake; and a report like thunder was heard for miles. In extreme alarm, the villagers ran towards the spot, but whilst they were yet seven or eight cho distant, they came upon limbs—hands, feet, detached portions of flesh and even in one direction a blackened head. Of course they could only gather these fragments together and look on the devastation helplessly. It can never be revealed how the accident occurred—but most probably it was from the careless use of a pipe. Great sorrow is expressed for Yodohei; and his family are to be provided for. Nothing is said officially about the others.

A SPECIMEN of the still pervading superstition respecting the Fox, comes from Minato-mura, in Ibaraki Ken. A man found a fox's hole in his garden. At the same time his wife dreamt that she had seen a fox whom she was satisfied was none other than Inari-sama. Full of dread, the man put this and that together, and came to the conclusion that the hole must be the abode of Inari-sama, and he forthwith had a small temple put up over it. He then called for the Shinto priest; and after much ado, the matter got abroad, and crowds came to worship at this temple. At last the Saibansho officials of the Ken, heard of what was going on, and sent for the man and his wife. The interview must have been somewhat disappointing to them, for the judges told them such superstitions now became criminal; and the punishment due for such follies was 40 days imprisonment. As, however, in this instance, it was clearly the result of extreme ignorance on the part of the interesting pair, they were let off with a fine of 3 yen.

AT AN early hour this morning, one of our citizens, residing on the Bluff, feeling restless and wakeful, was endeavouring to court slumber with the aid of a book, when he was startled by observing the hands of a would-be burglar in the act of attempting to open the window shutter. Whilst debating with himself as to the advisability of saluting the intruder with a small leaden pill, the latter, no doubt hearing some movement within, quietly "got up and slid," and managed to get clear away.

Another gentleman living close by reports a visit of a like nature at about the same hour. In this case, disliking the idea of being quietly burgled without some action on his part, he possessed himself of his revolver, and went for the individual. As in the other case, the intruder succeeded in shewing a clean pair of heels. It behoves our Bluff residents to keep a sharp look out, and be on the alert for similar professors of the art of Bill Sykes.

A PARAGRAPH in the *Nisshin Shin-jishi* gives the following statistics connected with the change in the mode of locomotion within the last few years. They are obtained from official sources, and may be supposed to be correct; and, if so, previous estimates of the number of jin-riki-shas have been greatly over-rated.

The paragraph states that the jin-riki-sha was invented by two Tokei people named Susuki Tokujiro and Takayama Kosuké. These may be the names of the first who introduced them: but the idea originated with a foreigner—Mr. Goble—who made a drawing for a Japanese, of what he wished to explain to him would be a great improvement on the old Cango; and had not long to wait before he saw one made and in use.

"The number of jin-riki-shas registered in Tokei amounts to nearly 20,000—of which 4 have four wheels; 140 three wheels; more than 6,600 are large enough to carry two persons; and over 12,500 are constructed to carry one passenger.

"There are 102 horse carriages registered in Tokei."

"Of Cangoes, which of old were so numerous, now only 800 remain."

"Saddle horses are 450 in number."

"Horse boats for private uses are only 18; but for business purposes 496. The small wherries for private use are but 9; those used by firms in their business 378."

20,000 jinrikishas,  
102 carriages,  
450 saddle horses,  
901 boats,  
800 cangoes;

These now form the registered conveyance power of Tokei. It will be interesting to note annual fluctuations in these statistics.

THE YATO-BASHI, the bridge which crosses the creek near the French Camp, has lately shewn unmistakable signs of weakness, and to-day the authorities (for the safety of the limbs and lives of the public) have stopped the traffic altogether, and established a blockade, which is enforced by the presence of European and native police. In view of the immense amount of traffic over the bridge in question, we fancy something more substantial than the present structure is required. A light iron structure could be thrown over the creek at an inconsiderable cost; and, it would be not only an ornament to the eastern end of the settlement, but more likely to meet the exigencies of the daily increasing traffic Bluff, wards. It also becomes a question whether the present course

of the bridge should not be altered. Carriages approaching the Bluff from Water Street in crossing the bridge have an exceedingly awkward turn to make: no doubt it affords an excellent opportunity for expert Jehus to exhibit their skill, but every one who drives a trap is not equally skilful with the ribbons, and, until some unfortunate pedestrian is run down, or a couple of vehicles come into collision at the point mentioned, we suppose the present state of things will be allowed to exist *ad infinitum*. A knowledge of the most crude principles of the art of bridge construction would shew the necessity of suitable approaches; at present the bridge (looking towards the Bluff) leads nowhere in particular; a new structure, thrown obliquely across the stream, would join the hill road and obviate all danger.

THE STEAMER *Turtar*, the pioneer boat of the NEW YORK, LONDON, AND CHINA STEAMSHIP CO. whose arrival here we noted in our issue of Thursday, is a good sample of what is being done nowadays in the building of fast merchant steamers. Her passage from Shanghai to Kobé, from the time of unmooring until the engines were stopped at the latter place, occupied just 30 minutes over the three days; whilst the trip from Kobé to Yokohama was done in 27½ hours, both passages we believe, being the quickest on record. The precise time consumed in the outward passage to Shanghai is not given; but, judging from the sample of her mettle we have given above, we fancy the crack traders to these Eastern Seas will need to look to their laurels.

She is fitted with a powerful pair of compound engines, with the most recent improvements, capable of being worked up to 2,000 H.P. Captain Ferries, a commander well-known in these waters, and under whose superintendence she was fitted up, is in charge of her, and our readers will see, by advertisement, that she is laid on the berth for Hong-kong direct, Messrs. Walsh, Hall & Co. being the Agents.

Her passenger accommodation is worth seeing.

MURATA UJIIHISA, one of the Sanji of Tsuruga Ken, and one of the most faithful and energetic officials in the Empire, has been appointed Gon-rei of Gifu Ken. He will be a great loss to the ken he leaves, as he has been always forward in every good enterprise for enlightening and elevating the people under his care. Several foreigners have been in the employ of this ken, and all speak of him with the highest respect. A combination of energy, promptness, good sense, and fidelity to engagements, such as existed in Murata Ujihisa's character, is not too often found in a Japanese official, and, it is but fair that when it is, it should be acknowledged. We take this opportunity of wishing him as much success in Gifu ken as he has won during his long service in the province of Echizen.

AFTER THE great fire in Chicago, some of the losers made up their loss by carting away the ashes, and leaching them to obtain the potash, of which there must have been several millions of pounds in the *debris* left by the conflagration. It seems a pity that the Japanese do not know the treasure that is wasted when they throw their ashes away after one of their great fires. People who do not use soap, however, do not trouble themselves about alkali, and until they learn its value and importance, they will continue to waste

the *debris* of their fires, and instead of adopting wholesome washing and cold baths, will continue to parboil themselves in hot baths at a half tempo per head.

IN TSURUGA KEN a coolie who was pulling a jinriki-sha in which a woman was riding upset the vehicle and the woman was "dumped" into the moat. She was fished out in a condition that might make a passing spectator believe in the existence of mermaids. The coolie was somewhat non-plussed about the capsize of his machine, and could only account for it on the theory that a Kappa or water-sprite had bewitched him. This was not very satisfactory to the woman, nor would it be to any of the many foreigners who have been spilled out by reckless coolies. One of the favorite works of art conceived and executed by the artists in gluten, who can transform a sticky white mess of paste into a flower, a daimio, a hairy *to-jin*, or anything desired, is the representation of a sprawling coolie, an upset jinrikisha, and a woman turning a back somersault, in a manner that make the heels more conspicuous than the head. To watch one of these street artists dexterously mould, mount and daub one of these representations of a daily occurrence, and to see the crowd of admiring coolies, each with his green or red blanket around him, is a very interesting sight to any one who likes to see street-life in this country. Every line of the coolie's face shows his applause of the artist's hits, and happy is the man who has cash enough to buy the toy. When, however, the coolie endeavours to improve upon the lessons given him by the dabbling artist, and makes use of people with only the ordinary thickness of skull and collarbone, the living tableau, though a good joke for the red and green blanketed spectators is not relished by the victim. Ups and are getting to be so common that some penalty should be inflicted upon these *jin-riki-sha-hiki* to make them a little more careful.

#### NII-GATA.

THIS TOWN has much improved of late, the streets having been thoroughly repaired as well as all the banks of the numerous canals, bridges &c. The houses have all a covered verandah in front, which is necessitated by the heavy snows of winter; they are very convenient, but have a curious appearance, as each one built as high or as low as he liked. By a rule made last summer a certain standard was agreed upon and all are now being made uniform: the long, and in most cases, nearly straight streets, have a very pleasing appearance.

SINCE THE addition of the Kashiwazaki Ken to this, active repairs have been going on with all the roads near the Mikune mountains and travellers who have passed that way will no doubt be pleased to hear that a good road 12 feet wide, commencing from the top of the mountains at the Mikune\* Temple, has taken the place of the old dangerous bridle-path which was barely passable for pack-horses. A large number of men are engaged in this work, and the road is to be made in the same manner up to Niigata.

THERE HAS been much rain here of late and the river is very high, this has interfered much with the salmon fishery and the takes of the fishermen have been very poor.

BOTH natives and foreigners complain of the scarcity of game around here this season.

\* Mikune means three provinces; at the temple named the boundaries of the provinces of Ichigo, Simshu and Joshu meet.

A SURVEY of the river and bar, on behalf of the government, was made during the summer by a Dutch engineer, Mr. Lindau, who reported fully on the same, and it is said very favourably as to the ease of constructing a safe harbour at a moderate cost.

A FINE new hospital has been built, having accommodation for thirty patients, and also about the same number of medical students. It is under the charge of Dr. Vidal.

THE SCHOOL, which re-opened this summer in a large new building near the river, is well attended, having 260 pupils on the books—130 of whom are boarders.

THE BALL given in honour of Mr. Watson by the foreign residents of Yokohama, came off at the Club last night, Friday, the 12th instant, in a very spirited manner. The attendance was very numerous, and included some of the Japanese friends of Mr. Watson. The supper was excellent, and being over, Mr. Cargill proposed the health of Mr. Watson, in a pleasantly eulogistic speech. Having feelingly replied, Mr. Watson proposed "The Ladies" coupling the toast with the name of Lady Parkes. Sir Harry Parkes, in returning thanks on behalf of Lady Parkes, spoke of the value of Mr. Watson's official services; and expressed the pleasure it afforded Lady Parkes and himself when they could do anything to add to the pleasure of the community. It is needless to say that there was no drawback of any kind to the pleasure of all present.

THE FIRST foot Paper Hunt of the season took place yesterday afternoon. The course was from the Yokohama Athletic Association's running path, and after a round over the hills from the upper end of the Rifle range to the left, then bearing away to the right continually to the rope walk, and so back to the starting point.

Mr. A. Dare was the winner, Mr. Julius Dare second and Mr. Hamilton third. The time occupied was 38 minutes. The hares were Messrs. W. Brent and Abell.

H. I. M. THE MIKADO on being informed of the intended departure of Mr. Watson, expressed his desire to bid him farewell, and, in the audience granted for the purpose, adverted in complimentary terms to the satisfaction he had derived from the manner in which Mr. Watson had discharged his duties at the Court. —*J. M. Daily Advertiser.*

ON THE 2nd of this month, a policeman on his beat on the river bank, Asakusa, saw a tub floating with the tide, which appeared to him to have a body in it. He called the attention of the cho-yakuin to it, and they succeeded in getting it ashore, when they found the body of an infant quite dead, and quite naked. Information was at once forwarded to Tokei Fu.

THE SAME evening a robbery was committed in a house belonging to the Asakusa Monastery. At the time there was no one in the house but a woman named Fujū. Her attention was first aroused by hearing the sliding shutters forcibly opened; and looking up, she saw two men, who in a fierce manner demanded money. She declared there was none in the house; but they were not so easily got rid of. Proceeding to a search they had examined everything they could think of, and were about leaving in no very satisfied frame of mind, when one of them in mere spite, took up some of the mats, to give the woman the trouble of replacing them. Whilst thus acting wantonly, his eye fell upon a pocket book which had been concealed under one of the mats, and picking it up found it to

contain five 10 yen satsū. The money he claimed as payment for his trouble; the pocket book he politely returned to the woman; and then both he and his comrade with brightened faces, made off as quickly as they could. The woman at once went to the police station to give information; but of course there is not the faintest clue as to the perpetrators of the robbery.

IN MIKAWA KEN, the preachers sent by the Department of Religion have had wonderful success. The Gonrei and the Ken officers went to hear them the first day, all in their ceremonial dresses; and encouraged by them the audiences, or perhaps we ought to say congregations, have so increased, that now it is a common thing for them to number 6,000 people. The official comment on this fact is, "thus, it is clear that under our good government religion is fast spreading over the Empire. Therefore none will be so foolish as to believe that hateful Christianity!"

TEN FARMERS of Saga Ken have subscribed 900 riyos towards the schools in the Ken.

TWO MEN in Konara village, whose occupation was that of lime burners, were engaged a few days ago obtaining lime-stone from an adjoining hill. For this purpose they were pursuing the unusual course among Japanese of blasting. They had bored the hole and put the powder in, and were ramming up the aperture with the iron drill, when a spark was struck, which caused an explosion. One of the men was killed on the spot, and the other wounded so severely that he is not expected to live. How many accidents of this kind have we known, simply because the labourers will not take the trouble to put aside the iron drill, and use a wooden rammer.

IN SAGA KEN is an old samurai named Uyeno Toshichi, who is 85 years old. His wife is 78; he has one sister 90 and another 81 years of age; he has children, grand children, and great grand children. On the 9th November 52 members of this single family assembled. The united ages of the four eldest present were, as will be seen from the above figures, 334 years.

YESTERDAY the Mikado visited Yetizima, Fukugawa, to see the drill of three regiments—one his body guard, one infantry regiment, and one artillery. The artillery shewed some fair target practise, which seemed to interest His Majesty.

GOVERNMENT has imposed a tax of \$1 a month on every rabbit. Any man discovered with rabbits in his possession which he has not registered for taxation, will be charged \$2 each. All rabbit auctions are forbidden; and to-day, plenty of those who have so long resisted the government orders have been anxious to give their rabbits away to any friend who would accept them.

YESTERDAY EVENING a Japanese coolie employed in loading Ballast Train at the Shinagawa cutting of the Railway line, accidentally fell between the truck and was not extricated until the wheels of four had passed over his legs. He was immediately removed to the Imperial Naval Hospital at Takanawa as the nearest suitable place, and attended by Drs. Wheeler and Anderson, by whom both legs were amputated; but although he survived the operation, death succeeded shortly afterwards.

We are happy to learn that the porter who was injured at the Yokohama Station on the 3rd instant has since apparently quite recovered, and returned to his duty, his injuries being of a less serious nature than was at first supposed.

A FREE library has been established and opened by the Kenrei of Shimane Ken.

AT TSUCHI-URA, about a week ago, a little child upset a kettle of boiling water over itself, and was dreadfully scalded. Its parents not knowing really what to do, plastered it over with cold mud. The cries of the child were most piteous; and many neighbours being thereby attracted, some told them they should have applied oil, whilst others ran for a doctor. On his arrival, he told them that such an application as mud must necessarily increase the inflammation, and consequently the pain, and that the infant would die. He did all he could to save it, but in a very short time the child died in the greatest agony.

OUR READERS will have perceived that for almost every act for the public good, done by Japanese, the Okurasho is asked to reward the doers. Last week one of the Tokei papers was almost filled with paragraphs about these applications. We told a Japanese gentleman, that in the eyes of foreigners this seemed very strange; and his reply was, "We punish malefactors; of course therefore we should reward benefactors."

Among the applications from the various Kenchos for rewards of individuals, the following are a few:—

Takase Giheiji a wholesale rice merchant in Ibaraki Ken, when the price of rice went up in this present Autumn, refused to charge the poor the augmented price, saying he would not make a profit out of his neighbours' sufferings. Besides this, when there was a large fire in the district he gave 30 poor people 5 sho of hulled rice, each.

The Midzusawa Ken ask for rewards for five men, who gave respectively towards the foundation of the Ken school, the magnificent sums of rios 20, 20, 15, 15 and 15!

Akita Ken asks for a reward for one Kimoto, a farmer in Kawashiri village, much respected as a just and upright man. A neighbour named Sato was robbed of a lot of cloth and other goods; and by some means or other Kimoto got hold of the thief and handed him over to the authorities, who found him to be a great scoundrel and a very old offender. Kimoto must therefore have a reward for stopping his career.

Awata Saburo and Kawasé Kobashi, belonging to Hawamatsu Ken, are recommended for reward—for having given respectively, rios 300 and 150 for school purposes.

But the biggest demand is from Niigata Ken, which presents the names of 809 persons who have contributed for schools in the Ken, the really munificent sum of rios 14,380. Of these, two gave 1,500 rios each, one 1,170, one 1,000, and one 780.

In all this there is one interesting fact to be observed; namely, how carefully the names of all those who do worthy acts are noted. And we can well imagine that it does act as a very strong incentive to the people to do good.

IN YAMANASHI KEN is a civil Magistrate named Susuki, who has adopted as a means of instructing the people, the plan of inviting them to his house every evening, to hear the newspapers read. He reads, and explains anything they cannot well understand. The young people

appreciate it fully, and attend very regularly. Susuki is looked up to as a kind of father in his village, and what is better, the report says, crime is now unknown in it.

A FIRE, which was fortunately quickly got under, was caused a few days ago by a photographer in Tokei, mixing collodion with the iodizer too near the flame of a candle which was held by his servant. The ether caught and the collodion exploded, and set fire to their dresses and the mats. Both master and man were severely burnt: but they succeeded in putting out the fire before it communicated further than the floor of the room.

IBARAKI KEN officials report the pleasure they derived from the visit of Mr. MacLeod, who passed through alone on horseback, on his way to Yokohama, after the wreck of the *Arctel*, on board of which he had been a passenger. He called at a school called Gaikoku Gakko, and gave the teacher several valuable hints respecting school teaching, which it seems are not likely to be thrown away.

Here is another proof how little occasion there is to prevent foreigners freely visiting the interior. Ibaraki Ken is the old Mito Han, always superlatively inimical to foreigners; yet now they have a school with the title of "Foreign School," and make an official report of the gladness with which they received an intelligent, well-conducted foreigner.

THE *Mainichi Shimbun* says that two proprietors of gambling houses (name given) have been taken up and are now in the hands of the Saibansho. The editor hopes they will ere long be seen among the "hard labour" prisoners on the roads.

IN MITSUMATA Ken there has been quite an epidemic among children, even boys and girls of 13 and 14 years of age being attacked. Glad as we are to be furnished with information of all kinds from the provinces, there is little use in simply stating the above fact, unless some idea of the nature of the epidemic is given. However, it appears that it yielded to medical treatment in about a week, and none died of it.

THE *Mainichi Shimbun* (Yokohama Daily News) tells a horrible story of a samurai of Hamamatsu Ken named Okichi, who at "the great change" went and resided in a lonely house at Totomi in his native province. His family consisted of seven persons, but he only received rations for six. He would not work, and gradually sold everything that he possessed to feed his family; and at length having no more to sell, they seem to have given themselves up to die of starvation. The house being so entirely segregated, no one knew anything of the state of things; until one day an old friend in passing through the province, enquired for him. Being directed to his house, it was found to be closed, and looking as if there had been no movement about it for some time. The friend thinking it strange, slid open the door, when the horrible sight presented itself to him of the whole family—dead. He at once gave information to the nearest Kocho, who went to the house with him, and proceeded to examine the bodies. They were in such a state of putrefaction that their features could not be recognised. The *Mainichi Shimbun* from this points a moral in the following words "Alas! Behold, and beware of the effects of slothfulness."

THE TOORI, (or main street of Tokei), from Kiobashi to Shinbashi now fast approaches completion. The foreign built houses are near-

ly finished, and most of them are occupied. The causeway is being macadamized, and trees planted on each side, making quite a pretty boulevard. The uniformity of the houses is in some instances broken, through the proprietors insisting on building on their own plans; and we are sorry to see that in some of these instances, the builders have shewn a lamentable ignorance of the commonest principles of the distribution of forces, on which stability mainly depends. The consequence is that structures in which apparently the strongest materials are used are showing signs of weakness. A few of the houses too are built on the old fashioned wooden framing, which the English architects most positively set their faces against in all the houses built under their superintendence. The great silk shop which every one knew so well, is now a really handsome building among the rest; and we should think that its fine elevation as compared with the building put up by other great native firms in Tokei on plans by Japanese architects, must have some effect in improving the taste of all who in future desire to erect edifices on the foreign model.

WE SEE that a gentleman whose name has been much mentioned of late in the Shanghai, Hongkong and Kobe papers, has arrived in Yokohama—Mr. Pannecfort, whose readings have for some years been famous in the United States. It is so long since we had any entertainment partaking of this nature in Yokohama, that we feel pretty sure that Mr. Pannecforts' will be hailed with great pleasure. Since 1868, when Stephen Massett—Jeems Pipes—was here, we have had no public readings; and his were of a very different kind to those of Mr. Pannecfort, being introduced in a medley of songs, imitations, &c. Mr. Pannecforts are simple readings after the style of those given by Charles Dickens, from whose works, many of his selections are taken. We are not yet precisely informed as to the time when the first reading will take place, but it is likely to be on Christmas eve, and if so, it will include the "Christmas Carol," Dickens' first Christmas story—than which nothing could be more acceptable. We will not pay the community so poor a compliment as to write anything that would imply a doubt of good audiences attending the readings.

EVERY ONE TO HIS TRADE.—In our last evening's issue appeared an advertisement for a "middle-aged person to take care of a nursery." To-day two applications for the situation have been made—both men—gardeners by profession, who have had great experience in nurseries.

AS THE S. S. *Tartar* was passing Kaneda Bay a small vessel was seen with topmasts gone, flying the Russian ensign; she is supposed to be the gunboat *Sobel* that left this port on Sunday last.

We have since heard that the *Sobel* having left on Sunday, got out as far as Rock Island, where she experienced heavy S.W. gales, and was driven to leeward of the islands, losing her maintopmast, and springing her foremast in a squall; and was compelled to bear away for this port. She arrived at Yokoska at 11 a.m., just in time to salute the Mikado and the Empress; being the only foreign man-of-war present.

#### FOOTBALL MATCH.

SETTLEMENT V. UNITED SERVICES. Play commenced at 3.50 P.M. Three quarters of an hour later the first goal was won by the

Settlement players. The second goal was quickly won in thirteen minutes, by their opponents.

Time was called without any further success on either side.

THE second foot paper chase to start from the Camp, for a Cup value \$20, presented by the Amateur Athletic Association, will take place next Saturday, 20th inst., at 3.30 P.M. The hares this time will be Messrs. A. H. Dare, (the winner of the last) and J. J. Dare. The finish will be on the Rifle Range.

WHAT do our North German friends say to the following statement, which appeared in yesterday's issue of the Yokohama native paper, the *Mainichi Shimbun*?

"A noble lady of Prussia arrived a few days ago at Nagasaki. Her object was to find out her lover, who was one of the Japanese scholars educated in Germany. She was however unable to find him, and so applied to the Ken-cho, and in the meantime remains at one of the hotels. The name of her lover is Miura, and he belongs to Hiuga province."

Nothing is easier than to ascertain whether there ever was such a student sent to Prussia; and it can as easily be ascertained what has since become of him. But how about the noble lady?

#### FOOTBALL.

THE MATCH at the Recreation Ground last evening—English (white jerseys) *versus* Scotch and Irish (stripes)—resulted in a draw. Though well contested throughout, at the wind up neither side had succeeded in securing a goal, and it would be difficult to award the palm of excellence to the play of either.

Recent Matches on this ground have partaken much of the character of this last; arguing a judiciousness in the selection of sides, and the presence of that indomitable pluck which may be said to be a *sine qua non* in the game.

THE CONSUL for the Netherlands was yesterday occupied in the hearing of a case in which Mr. B. Poehge, the proprietor of the "Cat National" on the Creek, was charged with being drunk, and threatening the police—whilst on the premises in the discharge of their duty—with demonstrative gestures, in which a pistol figured prominently. He was ultimately taken in charge, and the Consul, after severely taking him to task for his errant ways, fined him in the sum of \$2 for his indulgence in the pleasures of the bottle.

#### List of Fu and Ken, Cities and Shires.

IN giving the Japanese news as it comes from all parts of the country, we frequently have to mention the Ken just as in England we should the shires. For the information of our readers, we give the names of the Ken and Fu—the latter being the three cities which have separate municipal governments of their own.

THE THREE FU ARE:—

Tokei, Kioto, Osaka.

THE KEN ARE:—

Kanagawa, Hiogo, Nagasaki, Niigata, Saki-tawa, Kumagayé, Ashigara, Chiba, Niibari, Ibaraki, Tochigi, Nara, Sakai, Miyé, Watarayé, Aichi, Hamainotsu, Shidzuoka, Yamanashi, Shiga, Gifu, Tsukuma, Nagano, Miyaki, Fukushima, Iwamayé, Wakamatz, Mizusawa, Iwaté, Awomori, Yamagata, Okitama, Sakata, Akita, Tsuruga, Ishikawa, Niigawa, Aikawa, Toyo-oki.

Tottori, Shimane, Hamada, Katsushita, Hojo, Okayama, Oda, Hiroshima, Yamaguchi, Wakayama, Kochi, Fukuoka, Ogura, Owaké, Saga, Shirakawa, Miyazaki, Kagoshima, Aihhi, Miyo, Natow.

Three Fu and sixty Ken.

THE Udaijin Iwakura, his son and three daughters, with Ito Sangi, visited Yokohama to-day, as the guests of Sir Harry and Lady Parkes, at the British Legation.

A HOUSE BOY in the employ of Mr. Bird (Roe, Pratt & Co.) was last evening, entrusted with that gentleman's keys for the purpose of getting out some clothing, and took advantage of the opportunity to explore the contents of a chest containing \$55, which sum he quietly appropriated to his own uses. The theft was not discovered until some time after, when, being sent on business and making rather a lengthy stay, suspicion was excited, and a search was made, resulting in a discovery of the larceny. The matter is in the hands of the police, but, up to the present, no tidings have been heard of the delinquent. For the protection of the public, and as a warning to others of his class, it is to be hoped that his career of crime may be summarily cut short by an interview with a certain gentleman at the Sainbansho.

### Correspondence.

To the Editor of the *Japan Gizek*.

Laws deary me, lovey, who'd ever ha thought an Owl a settin' atop of a sickermaw tree was a watchin' as the sayin' is, for the words of wisdom, which they is, as comes out nocturnal in the *Gizek*. Wen I sees it I says to Mrs. Harris, I says—"who'd a thought it?" Says she, "Sairey, why its second natur'?" "Wot?" says I. "Sairey," says she, "the owl's the burd o' wisdom," says she, "which instink tells it where shall wisdom be found!" Says she "There the poor burd sits in a dry tree which its mark is No. 22, and whilst you, Sairey, enliven the *Gizek*, supposingly unbeknownst, it mopes for night until the *Gizek* appears; and then it sings "to wit, to wit, to who" and flies to look for you." With wich she appeaged me. But when he ints as the tea was a little too strong—fancy my feelinx Mr. editor, when I hed said before to poor dear Mr. Chizzlewick which I says it agen, 'put it on the mantel-peace, and let me sip it now and then;' and then the ign'rant thing not to know its own blessed inglidge langaidge—which a.m. is *after moridyum* which is plane. So, Mr. Ed itter, I did ope as my high dentitea would be hid—but as Mrs. Harris says, says she "Sairey, if there is one wallable cretur with whom wit rampages and wisdom do abound, I knows how to name her." Says I "My dear, no spies; I'm not a rooshan nor a prooshan, and won't abide spies. Let Mr. Owl cum out and shew hisself, and drink fair, if he likes—but no spies." Says she, "N fear"—

"Fear!" Mrs. Harris says I, "I scorns the haction. This 'ere party," and I drops a a graceful kerehey, "This 'ere party ave made the forchin of won book; and will dew as much for the *Gizek* as sure's my name's your most obojent,

SAIREY GAMP.

\*.\* We are glad to let Sairey answer for herself; but some one else takes up the cudgels for her in a letter which we subjoin.  
—Ed. J. G.

To the Editor of the *Japan Gazette*.  
DEAR SIR,

In last night's *Herald* an "Owl" pauses for a reply. Allow me to give the "ould gintleman" one. Poor Mr. Owl has got completely out of his element, for he has dared to poke his weak eyes into broad daylight. The 3.30 A.M. was merely an error in the typographic art, and anything except an owl could have seen such was the case.

"Owl" talks of having seen "many strange things" during a "long and varied career." Why on earth does not the *Herald* employ him at a liberal salary, to write some of his adventures? Probably they would startle a number of us. Everything will not bear looking upon in daylight. At any rate one of the first things he should do is to inform the police where the Mr. William Sykes who has been trying to "go through" some of our friends, is to be found. Owls see all at night, but nothing while the sun shines, so there should be no difficulty in our smart friend "Owl" "spotting" Mr. Sykes.

AN EX M. L. A.

Yokohama, Dec. 18th, 1873.

To the Editor of the *Japan Gazette*.  
DEAR SIR,

I beg to call your attention to the condition of the road in front of the Shosha Godowns.

The traffic there is considerable, and it is really pitable to see the poor coolies trying to make their way thro' the mud and dirty water, which seems to have been gathered from all the neighbouring streets and placed in front of the Godowns.

The authorities have taken care to put in good order that end of the street near the Japanese Hatoba, but why did they stop the street improvements just at the place most wanted? I would like to see some high official take a ride up the street; he would get well splashed and perhaps have a fall, or I am much mistaken.

Perhaps a remonstrance from the press may have the effect of inducing the authorities to repair this street, which is at present a disgrace to a Government aiming at civilization.

A PASSER BY.

To the Editor of the *Japan Gazette*.

DEAR SIR,—What a "storm in a tea-pot!" I allude to the cross fire about a translation that appeared in the "locals." It calls to mind the old saying, "that a little chink lets much light into a dark room."

Of the thousands of foreign residents in Japan, during the last twenty years how few have become competent to conduct their own business direct with the native, and what a very small percentage, even including attaches to Legations and Consulates, ever enter into the study of even the language, much less of the social and inner life and modes of thought of the people amongst whom they live.

The incompetency of the native interpreters is too well known, for, when they learn a few sentences and gain an official position, they are too big and consequential to go on studying; and those natives who do acquire a fair knowledge of a foreign language are too self-sufficient to be mere translators, looking for something higher, a Consulate or Legation. The letters of "Merchant" ventilating the grievances of our trade shew up a network of rascality that saps the foundations of our business and social intercourse with the natives

of this country. This would not have existed had our Ministers, Consuls, and their subordinates been experienced in details of business, or our merchants sufficiently well posted up in what was going on amongst their own native employes and their friends. The indolence of the young foreigner, who has been in China and Japan for a few years, and the comparatively cheap wages of Chinese and Japanese, make it almost necessary to depend on these menials for the carrying through of the most important business transactions, the clerk merely keeping books, corresponding, &c., &c.; consequently the interests of the home shipper or local importer suffer, and our treaty-port guilds are only too ready to copy the Chinaman's ideas of combination against the hated foreigner, minus the Chinaman's smart business way.

What a lot of business is spoiled by this difficulty of getting ones ideas translated, or of obtaining anything like correct information or a true version of what a native wishes to say to one, is a matter that we all more or less have experienced to our cost, none more so than

Your obedient servant,

EJIN.

### Law Reports.

H. B. M.'s Provincial Court.

Before RUSSELL ROBERSON, Esq., *Consul*.

Tuesday, Dec. 9th, 1873.

JOHN SCOTT was charged with having on Nov. 13th forged the name of Watson & Co. to a receipt for \$15.50 which amount he had collected from the firm of James & Wilson and appropriated to his own uses.

Defendant pleaded not guilty.

Nicholas Stibolt, sworn, said:—On the 18th Augt. took the management of the affairs of James Watson & Co. with the consent of their creditors. About same day accused asked him if he wanted a book-keeper; agreed to employ him at same rate as he had with Watson & Co. \$15 per month and his chow. Gave Scott orders to collect monies on account of the firm and pay them to him. Scott collected different sums but paid them over to Mr. Jas. Watson. On 20th September remarked to Scott that it appeared several accounts had been collected and duly entered, but that the monies had always been handed to Watson. Considered accused his servant. Had requested Mr. Watson not to collect any monies account of Watson & Co. Accused left witness on 22nd October, and went back to Mr. Watson. About the time of the races Scott called and asked witness for a couple of dollars to buy chow, and on 12th Nov. received a letter from Scott, but did not answer it knowing he had received more wages than was due to him. According to his own entries Scott had had \$48.55. Last Friday sent his collector to James & Wilson to collect \$15.50 due Watson & Co. Collector returned and said they had already paid. Went on Saturday to Mr. Broadhurst who showed him the bill receipted "Watson & Co." Asked Mr. Broadhurst particularly how Scott had asked him for the money. Mr. Broadhurst replied that Scott had said he was authorised by the firm to collect. Scott had been there before but he told him to call again. Since October 22nd considered Scott had no authority to collect or sign for the firm.

Robert Campbell Broadhurst, sworn:—Conducts the business known as James & Wilson, On 18th Nov. Scott presented bill (produced). Witness paid him on that date \$15.50. Mr. Stibolt's collector called last Saturday, and was

informed by him that the bill had been paid. Did not remember Scott saying anything about wages being owing to him by Watson & Co. at the time he was collecting the account.

Stibolt, recalled, said:—Accused had no accounts in his possession after he left his employ. James & Wilson's account was given Scott by Mr. Watson. In reply to the Court Mr. Stibolt said Mr. Watson distinctly declares he did not authorise Scott to collect James & Wilson's account.

In the absence of Mr. Watson and other important witnesses the case was remanded until this day week (Dec. 16th) at 10 o'clock. Bail allowed in Scott's own recognisances of one hundred dollars, and two sureties of fifty dollars each.

Before N. J. HANNEN, Esq., *Acty. Asst. Judge.*  
Tuesday, 16th December.

JOHN SCOTT was brought up on remand, charged with having forged the name of Watson & Co. to a receipt for \$15.50, and appropriated same to his own uses.

This case was partially heard on Tuesday last, before R. Robertson, Esq., who resumed the hearing this morning.

Mr. Ness appeared for accused.

Nicholas Stibolt, at whose instigation the charge against prisoner had been laid, in reply to Court as to whether he had anything additional to state, said he had found one more small account which accused had collected from Dr. Siddall.

Mr. Ness objected: this was a new charge. Prisoner was accused of forging the name of Watson & Co. to an account against James & Wilson.

His Honour allowed Mr. Ness's objection. The object of adjourning the case was to allow of Mr. Watson's attendance.

Mr. Stibolt, examined by Mr. Ness, said he purchased the business of Watson & Co. in August last. Did not, after that, continue the business in conjunction with Mr. Watson. Swears he did not, in October, withdraw from the business of Watson & Co.

By Mr. Ness.—Did you write any letter to Mr. Watson?

Stibolt, after some hesitation, admitted that letter produced by Mr. Ness, was in his handwriting.

Mr. Ness, with the consent of Court, read the letter dated Oct. 18th, written by Stibolt to Watson, in which he admitted that he had no right on the premises, and intimated that he should consider himself not responsible from that date, for anything connected with the affairs of Watson & Co.

Mr. Ness:—Mr. Stibolt, do you still swear that you did not withdraw from the firm of Watson & Co. What do you mean by these words (quoting from letter) "I have no right on your premises?"

Stibolt objected to explain, saying it concerned other affairs.

Mr. Ness:—Do you not say in the letter that the transfer of the business to you was illegal?

Mr. Stibolt objecting to answer, Counsel put in the letter referred to, in which Stibolt, it was shewn, contradicts his own evidence.

Mr. Ness, addressing Court, said his object in questioning Mr. Stibolt was to shew that he had nothing to do with the business. Counsel then read another letter of Stibolt's to Watson, returning the books of Watson & Co., and saying the keys he had not got.

Mr. Ness:—Do you still swear, Mr. Stibolt, that you did not withdraw from the firm?

Stibolt, in reply to Mr. Ness, admitted that, on the last hearing of this case, he had sworn

no wages were due prisoner—that the affairs of Watson & Co. were put into the hands of Cheshire & Co. in August last, but said that he was not aware that Scott claimed \$20 as wages then. Had not paid him \$20 since.

Stibolt called Jas. Watson, who being sworn, was questioned at some length by him. Mr. Ness objected to these questions as irrelevant.

Stibolt (to Watson):—After I left the firm on the 17th Oct. what money did you collect? Watson—None.

Stibolt—Did you tell Mr. Scott to collect monies after that?

Watson—Yes.

Stibolt—Did he give it you?

Watson—No, he kept it for his wages.

Stibolt—Did Mr. Scott collect the \$20?

Watson—Yes.

Stibolt—Did you receive \$12 for house rent?

Mr. Ness objected to such questions.

Stibolt—In November did you authorise Scott to collect Mr. Siddall's bill?

His Honour ruled that this was beyond the present charge.

Mr. Watson, examined by Mr. Ness, said that in his capacity of partner, he gave Scott authority to collect the monies due the firm. Scott applied to witness for his wages; told him to pay himself out of the monies collected. When the affairs of Jas. Watson & Co. were put into the hands of Cheshire & Co. in August last, there was a sum of \$20 due Scott for wages. Stibolt stepped out of the business in October.

Court, to Watson: you say Mr. Scott had due authority to collect monies, how did he sign, John Scott, or Watson & Co?

Watson—Watson & Co. (Witness here stood down.)

Stibolt, through the Court, asked Mr. Watson if he considered he had the power to give Scott authority to sign Watson & Co.: in reply to which Mr. Watson said Scott was in the habit of signing the firm's name before Stibolt came into the firm. Had given Scott authority to collect James & Wilson's account, and sign Watson & Co.'s name. Witness formerly signed J. Watson & Co.; when the partnership of Stibolt & Watson occurred in August, the firm dropped the "James"—and then signed Watson & Co. The partnership lasted two months.

Mr. Ness, with reference to a question addressed to Mr. Watson by Court, explained that Scott had been a servant of the old firm of Watson & Co. before Stibolt came in.

Mr. Watson, in reply to Court, said there was now \$17 due Scott as wages. The latter had been in his employ 12 months; never had any reason to complain of his conduct, always found him steady, upright, and trustworthy. Has not received the money collected from James & Wilson; does not know what has become of it.

Mr. Cheshire, called by Mr. Ness, sworn: In August last the affairs of Jas. Watson & Co. were put into his hands. Has the list of Creditors in the Estate. In that list Scott appears as a creditor for \$20 for wages. List is in witness's own writing. Understood that Stibolt and Watson were to carry on business as partners. Stibolt afterwards told him that the Bill of Sale was not worth the paper it was written on, and that he would have nothing more to do with the firm. In Oct. received a letter from Stibolt to that effect. (To Stibolt). When the partnership was arranged, you told me Scott was going to remain with the firm, and that there was no

necessity to give him a Promissory Note. I told you his was a preferential claim, being for wages.

Mr. Ness said from the evidence of Mr. Watson it would appear that he was a partner, and gave Scott instructions to collect the money. Mr. Watson also says there was actually wages due Scott; which he told Cheshire in August. He also told Scott to collect the money, sign the firm's name, and make use of the money. There was no intention on the part of the prisoner to do anything wrong.

The Court here adjourned the case till 2 o'clock. On resuming, His Honour addressing Mr. Ness, said he was yet in ignorance as to what had been done with the money.

Mr. Ness, in reply, said:—Mr. Watson had stated in evidence that Scott had his authority to dispose of it. It appeared from Mr. Stibolt's own evidence that he had gone into the business under a misapprehension, and then he had gone out as soon as he found that out. From his own letter it was evident that he was never a partner in the firm of Watson & Co. at all.

Watson, re-examined by Mr. Ness, said:—Prisoner had asked him for his wages; told him to collect the monies of the firm, and apply them to the liquidation of his own wages. The prisoner collected and applied the monies with witness's knowledge and consent. Prisoner is his servant. Wages were owing to Scott to a larger amount than that collected from James & Wilson.

Stibolt, in answer to His Honour, said the last entry in the hand writing of Scott in the books in which he debited himself was October 14th. Scott collected all the bills entered.

Mr. Ness would like to press on the Court's attention that Stibolt never had anything to do with the firm, and that he had handed in the books &c. as soon as he discovered his error, as appeared from his own letters produced in evidence.

His Honour, said there was no doubt the charge of Forgery fell to the ground; the only doubt in his mind had been as to whether Scott had not been guilty of embezzlement; but on reference to Rule 295—which his Honour read—he found no grounds for such a charge. He therefore dismissed the charge against the prisoner.

## STAPLE EXPORTS.

**SILK.**—Although the silkmens have been in some instances willing to quit stock, in order to realise for the close of the year, only a limited business has been done—partly owing to the large quantity of Silk rejected on inspection. The stock is slightly increased, but we cannot alter quotations.

**SILK-WORM'S EGGS.**—The season is now closed, with a total export of 1,400,000 Cards, against 1,230,000 last year.

**TEA.**—Since the departure of the American Mail on the 8th inst. a large and important business has been done on our Tea Market; Settlements reaching the large total of Piculs 7,000.

Prices have in consequence rather stiffened, and we note an advance of some \$1 @ \$2 per picul on all classes.

The closing rates run much as under, holders being very firm and stocks diminished, owing to falling off in arrivals, which have come in very sparingly.

As the Christmas holidays commence to-morrow, but little or no business will be done for the next fortnight, native holidays this year being held at the same time as foreigners.

The J. S. Stone has obtained a full freight and will leave about the 28th inst., the rate of freight nominally £2.50 @ £3, to New York; but there is at present no vessel on the berth for the States.

## REPORTS.

The Brit. str. *Madras*, reports left Hongkong on 27th November, at 7.17 p.m., experienced strong N. easterly winds with heavy sea as far as Tudg Ying, from thence to Rock Is and moderate and fresh winds from N. E. with heavy northerly swell, and thence to Yokohama fresh head winds and fine weather. Passed P. & O. steamer *Bombay*, 3rd Dec. at 11.55 p.m., British ship *Tamerlane*, one English, and one American barque on 5th, at 12.30 p.m. off Vries Island; also a Japanese steamer standing to the southward at 3.30 p.m. Arrived 5th instant, 7.45 p.m.

The Brit. barq. *Gaucha* reports light winds throughout.

The French str. *Menzaiah* reports fine pleasant weather throughout the passage.

The Brit. str. *Tartar* has made the quickest passage from Kobe to this Port on record, having left that Port at 5.30 a.m., on the 16th, and arriving here at 9 a.m. the following morning.

The Brit. barq. *Vanguard* reports strong westerly winds during her rapid passage of nine days from Shanghai.

### THE "Japan Gazette" MAIL SUMMARY.

FROM 24TH DEC. 1873, TO 22ND JAN., 1874.

#### BIRTHS.

On the 31st December, at No. 52, Yokohama, the wife of Mr. H. L. COOK, of a son. San Francisco papers please copy.

#### MARRIAGES.

On the 20th inst., by the Revd.—Shaw, British Legation, Yedo, in the presence of Sir HARRY PARKES, C. B., H. B. M.'s Minister, WILLIAM JOHN WHITE, of Brockhurst, Gosport, to ALICE KATE, youngest daughter of Mr. George Woodman of Shernold House, Coose, Maidstone, Kent.

On the 7th instant, at the British Legation, Yokohama, by the Revd. W. Wright, M. A., EDWIN VHEELER, Esq. M. D., to MARY, second daughter of G. L. MOORE, Esq., of Belfast.

#### DEATHS.

At the Yokohama General Hospital, January 15th, at 1 P.M., H. A. MCLEAN, late of Hongkong, a native of Scotland, aged 55 years.

IN CONSEQUENCE of the withdrawal of the bi-monthly steamer to San Francisco, by the P. M. S. S. Co., there has been no departure of an American Mail steamer since the 24th of December last, by which occasion we despatched our last Mail Summary. Our mails inwards and outwards since then have been:

### Summary.

It is useless to attempt to write a mere paragraphic summary of the occurrences since our last. They have been of a very startling character, and such as will doubtless be read with more than usual interest abroad.

The Christmas holidays passed pleasantly enough with foreigners, but with the government of this country that period was anything but an agreeable one. We have already, in our former Mail issue, told of the accession to power of Iwakura and his colleagues in the embassy. No sooner had they the reins of government in hand, than it became evident that all their ideas were obstructive, and that if Iwakura could be said to have a policy, it was to retrograde rather than advance; and this under the name of retrenchment. He laboured hard to bring some of the most influential politicians in the Empire to his views; but all he succeeded in doing was to leave himself almost isolated; without a friend (politically speaking), either among Japanese or foreigners. Terashima, the late Japanese minister in England, now at the head of the Foreign office, acting upon Iwakura's principle, managed to upset all that had been virtually resolved upon by his predecessor, in connection with the revision of the Treaties; and created discord where before there was at least the semblance of harmony; and everything became so unpleasant at the Council of State, that Sanjo Daijin, the prime minister, who, at the personal request of the Mikado, resumed office on the 21st December, on the 23rd sent in his resignation, which, however, the Mikado refused to accept, praying him not to desert him.

The new year's holidays passed quietly enough; and the first week was dedicated to all sorts of ceremonial receptions and visitations; but no sooner were these past than trouble began.

The Mikado personally attended to open the year's proceedings, both at the military and naval colleges, and otherwise busied himself in such ways as a good monarch may. But the reports from the south and west poured in, of discontent among the soldiery. In Tokei, and at the large divisional military depots in the interior, many men of certain clans left the service, and went off to their own country, and at this moment, many

regiments and the Tokei police are greatly shorn of their strength.

But Iwakura had the credit of having devised a scheme for commuting the hereditary allowances of the samourai, by granting them a lump sum—half in cash and half in bonds—equal to four or six years pay, in lieu of the annual salary. This seems to have been the last ounce; for, a few days after, he was warned that his life was in danger, and, on the morning of the 14th January at about 8 o'clock, he was attacked by several men with drawn swords, as he was leaving the palace in his carriage; his coachman was severely wounded, and he himself cut in the shoulder and the lower part of the back. He, however, managed to jump out and escape, by running down a steep bank into the moat, where he remained nearly an hour and a half. He then cried out and assistance came, and he was conveyed into the palace, where he still remains, gradually recovering. Five men have been taken into custody on suspicion, but as yet their examination has not transpired.

Hardly has the excitement on this head subsided, when a memorial was presented to SA IN, (the nominated parliament or lower house) signed by the members of the government who lately resigned, and some others, demanding a Representative Parliament, and the enfranchisement and encouragement of Public Opinion.

This came like a thunderbolt upon the government, and the Emperor ordered its immediate discussion. It was dated 17th, sent in on the 18th, and discussion on it commenced on the 19th instant. It will be found *in extenso* in other columns. The reply has not been delivered, up to the time of our going to press. But it must, we think, be entirely, or at least partially, favourable; or serious trouble may arise.

From the close of last week, for some days, several of the ministers and other high officials did not go to their offices, but remained at home on the plea of ill-health; and we expect to see a change of ministers in a few days.

The Mikado behaves extremely well through it all; and although he is guarded in his acts, as becomes him, he is by no means opposed to the creation of public opinion, and encouraging the people to take an interest in public affairs.

Such is the political situation in Japan this day.

IN our issue of Saturday we mentioned that a memorial had been sent in to Sa In, signed by several influential ex-members of the Government and other important officials, praying for the establishment of a representative parliament, and for permission for the free discussion of government questions. On Monday we were enabled to state that the memorial was deemed of so great importance that the Emperor had ordered the members of Sa In to assemble at 7 o'clock that morning for its immediate consideration; this being the first occasion in the history of the Council on which his Majesty had attended and opened the sitting himself. We now have much pleasure in presenting our readers with a translation of the Memorial and accompanying letter.

To the Honorable Board of SA IN.

GENTLEMEN,

We have the honour to address to you the accompanying memorial, and to beg that you take it into consideration. You will find in its proposals, some which we often made to you during the time we were in the government service; for they are all matters which we have always earnestly desired. As, however, ambassadors were visiting all the Treaty Powers in Europe and America, to obtain practical knowledge, it was decided to delay the discussion until their return.

Now, though the Ambassadors have already returned several months, we hear of nothing being done.

From the want of concord existing of late between the government and the people, the present position of the government is, that it is liable to be brought to destruction.

We extremely regret that this state of danger should have been occasioned by nothing else than the prevention by the government of free expression of opinion by the public.

#### THE MEMORIAL.

Your respectful memorialists, having considered with whom the power of the government at present lies, (see that) it is neither with the Emperor nor with the people; but with the officials alone.

Well! Although the officials would not shew disrespect for His Majesty, the honour and magnificence of the Imperial council chamber gradually disappears; and, although they do not wish to neglect the people, the laws are too changeable; so that the proclamations of the morning are changed in the evening; and all things are done according to the individual will of the officials. Rewards and punishment are administered with partiality; the public are forbidden to discuss government proceedings; and they are obliged to be silent under the oppression.

It must be evident even to children three feet high, that it is impossible tranquilly to govern the empire under such conditions. And the country will quickly be ruined unless there is an improvement in its present mode of government.

Unable to divest our minds of the feelings of patriotism, we have consulted on the best means of relieving the government from its

perilous position. The public opinion of the whole empire must be aroused. Nothing else will do. And to this end, it is important to establish Minsen Gi-in, (*Min* public, *sen* choice, *Gi* deliberation, *in* house), where the members shall be chosen by the people; and shall discuss the laws. Then the power of the officials being limited (under control), all men, both public and private, will find themselves happy and contented.

Now we beg to lay before you the following opinions respecting the above.

As the people, as is their duty, pay the taxes to the government, they should possess the right and power to examine government affairs. This, being a self-evident proposition, should be understood by all, without requiring any explanation from us.

We beg, therefore, that the officials cease to oppose this right.

They may oppose our proposition to establish the parliament, by saying that, as our people do not yet themselves promote the march of civilization, and are ignorant and unlearned, the time has not arrived for establishing a parliament.

We reply:—If it be so, so much the more necessary is it to establish the parliament, in order that the people may advance in knowledge and wisdom, and promote themselves to the state of civilization. Because, in order that they may so progress, they should first be taught to watch their rights and powers, and then they should be led to discuss public affairs, so as to rouse up each one to prize his rights and privileges and to identify himself with the prosperity or adversity of the nation. Then there would be none so indifferent as to be content to remain ignorant. If the people be expected naturally to advance and progress of themselves, without any such spur, we may wait perhaps a century; just as if the muddy water in a river were expected to clear itself naturally.

Again, the officials most unreasonably say:—To establish a parliament now, at once, would be like nothing but the assembling together the fools of the whole empire. Alas! Why are they so self-conceited, and why so look down upon the people? All officials ought, of course, to be the most clever of the people; but as it may be uncertain whether or not there are more learned and intelligent persons than they themselves, they should not feel this contempt. If the people be so foolish as for the officials to despise them, the officials must themselves be ignorant and unintelligent, for they are but one class of the people.

But which is the best way of governing? Is it by the absolute acts of a small party of officials alone; or by the public opinion of a vast body—all the inhabitants—of the empire?

We daresay that politicians or officials have greatly increased their knowledge and capacity, as compared with what they had before the recent great revolution of the government—seven years ago; for, the more learning and knowledge are cultivated, the better they are able to be advanced.

For this reason, we say again, the parliament must be established at once; in order to enable the people to improve in education and knowledge, and promote themselves to a state of civilization. It is the duty of the government to encourage in the people, an ambition which shall cause them to step forward in such progress.

In a barbarous country, the people being only bold, disorderly, and disobedient to the government, it is the first duty of government to make progress by compelling the people to obey. Now, our people are not barbarous; and they are very obedient to the

government. Such being the case, it must be the ambition of government that the parliament be established to-day, on purpose to stir up the people to know their own minds, and to exercise the proper duty of each one's taking part in the national affairs. This having been accomplished, the public throughout the whole empire shall, for the first time, be of one mind.

Now, what makes a firm and strong government? It is the strength of public opinion. We need not go back to antiquity for example. We will prove it by the change of government which happened in October last.

How unsatisfactory was the government at that time! That it was able to stand was indeed wonderful.

But who and how many of the people were glad of the change? Not only were they indifferent upon the matter, but nine-tenths of them knew nothing about it; and were only surprised by the movement among the military.

It is for this simple object:—to open unobstructedly the communication between the minds of the government and the people, so as to unite them together as one body, that the parliament should be established at first. Then the empire will increase in strength, and the government itself will become firm.

Having thus perfectly explained the rights of the people, examined the present condition of the government, and called in proof the change of government in October last, as above-mentioned, we are the more confident in our demand; and we therefore earnestly declare:—

The best and simplest way of upholding and strengthening the Empire is to establish a Parliament and arouse public discussion.

We do not here enter into details of the subject, as they could not be all mentioned even in many papers.

We privately hear that the opinion of the present officials is to delay any efforts from day to-day. They say "It is heedless progress; for how does it benefit the country?" And again "It is yet too early to enter upon the subject." We proceed therefore to examine the two phrases.

First, the phrase "It is heedless progress," we do not quite understand. Do they mean that it is roughly done? The establishment of a Parliament should be most carefully effected. Again, do they say that it would derange the regular order of beginning and end, the hastening and delaying, according as circumstances change, because all departments are not altogether in concord? This is because (the government having no fixed regulations) all business is committed to the will of any of the officials.

It is evident for these very reasons that it is most important to establish the Parliament. As progress is necessary for the nation, all things must be brought within that progress. The officials cannot oppose our project on this ground, for Parliament is the means to make the people partakers of the progress; they therefore only oppose it on the ground of "heedlessness." The heedlessness has nothing to do with the Parliament.

The second phrase "It is too early" we are not only unable to comprehend, but our opinion is just the reverse. Because if the Parliament be established so hastily as to-day, yet it will not be in perfect working order for some time—perhaps months or years. And thus we are very anxious that it shall not be delayed a single day.

So, as we said before, the phrase is just the contrary to our opinion. But further—We hear the officials say "As the Parliaments in European countries and America

have not been established in a morning or an evening, but gradually, according to the progress of the people, we cannot hold them up as examples for imitation.

We reply:—Parliament is not the only thing constituted according to the progress of the nations—but several sciences, public works, machines, and many other like things. But the reason why these things took so many hundred years to perfect is, that everything had to be discovered by their own individual experience, for they had no examples to imitate. But we are able to select examples for imitation, and have not to contrive and discover for ourselves alone. If we were able only to use the steam engine when we have ourselves discovered the natural law of steam; or, if we can only work the telegraph when we have ourselves discovered the principles of electricity, how many years will be required before we can avail of them.

The purpose we have now discussed is:—

A Representative Parliament must be established at once; and the degree of progress made by our people is just suitable for its establishment. We do not consider it necessary to refute the opinions of those officials who oppose it; but only to rouse the people to public discussion; to acknowledge the full rights and power of the people; and to excite them to activity, so that the government and people being agreed between each other, the Emperor and his subjects shall love each other; and our Empire shall become happy, strong and powerful.

Thus, we earnestly pray that our Memorial may be favourably considered.

## 1873.

EVERY ONE who comes to Japan becomes speedily imbued with the sentiment of wonder at the extraordinary progress which she is exhibiting: not considering that, during the whole of the nineteenth century, all countries of any civilization at all have been also making "gigantic strides" in a similar direction. The fact is that in other countries progress has been the normal condition so long as the oldest now living can remember, whilst in Japan it has only just commenced. The nation was standing still with an antiquated civilization of its own, until less than fifteen years ago; and it is only during the past five years, that things have appeared to forge ahead, as if with an unquenchable desire to catch up with the nations which have always kept moving, and to redeem the former misspent time.

The close of each year naturally leads to retrospection. It forms a raised halting place, where we can quietly pause and review the ground travelled over during the course of the preceeding twelvemonths; and it must be interesting and may be useful to avail ourselves of the opportunity now presenting itself to us.

The year 1873 has not been prolific in momentous events, in either home or foreign affairs. It came in and went out like a lamb; and although all has not gone quite smoothly during its entire course, it has not seen anything very lion-like.

The Imperial Court has still further allowed itself to appear as a part and parcel of humanity at large. The Emperor has not only received foreign ministers and important personages himself, but the Empress has received Madame Butzow and Mrs. De Long, the wives of the late Russian and United States Ministers, at the palace. Their Majesties throughout the year have been seen very frequently in public; the Emperor generally putting in an appearance at the schools or naval and military training

grounds, the Empress showing much interest in such national enterprizes as have for their end the instruction and employment of women: though it must be mentioned that she has also not omitted to honour the Kaisei Gak-ko, or Imperial college with her presence. The last public act of their Majesties during the year was to visit the Yokoska Naval Yard together; and, both in going and returning, they visited Yokohama, taking the ordinary trains, only with the Imperial saloon carriage attached. Five years ago, when the Mikado came from Kioto to Yedo, and foreigners were permitted to witness the passage of the cortège at a space allotted to them at Kanagawa, His Majesty was carried in a plain white norimon, with the blinds down, so that not a mortal eye could penetrate to that sacred visage. Now, it is quite evident that both the Emperor and Empress enjoy moving about in public; seeing and being seen.

A catastrophe occurred on the 5th May, by which their Majesties were deprived of a home. The palace in the castle was burnt to the ground; and, though none of the Court were injured, a large quantity of valuables were destroyed. The Court removed to the Kiisiu Yashiki, which had been appropriated as the residence of the Empress mother since her arrival in Tokei. Shortly after the event, the Emperor wrote to Sanjo Daijin, the prime minister, telling him that, considering the heavy pecuniary demands on the Treasury, he did not wish the palace to be rebuilt immediately.

The Political course of the year cannot be said to have been altogether satisfactory. Certainly no one can complain that things have been advancing too fast; and now, at the close of the year, they seem to be almost stationary.

At the close of 1872 the country was a good deal exercised by the expected edicts concerning such small matters as the abolition of the use of mats for the floors: the mode of wearing the hair: and the like. The excitement respecting these died a natural death. But there were some Imperial decrees which affected the people very materially at the time of their promulgation, and which subsequently led to a good deal of agitation. First was the alteration of the calendar, which, coming into force on the 1st January 1873, after a public notice of little more than a month, put many—perhaps a majority—of the people to great inconvenience; inasmuch as it is the custom in Japan, as in China, to square up all accounts to the last day of the year; and this alteration of the Calendar threw this settling day more than a month earlier than the old computation of time would have done. In the course of the year many *émeutes* took place in the provinces; and in almost every case the interference with the calendar was one cause of disaffection. It has led to various inconveniences to the more ignorant among the people, but the better informed are now pretty well reconciled to it. The increase of taxation, and the adoption of the conscript system of raising the army, both lent their aid to swell the ranks of the discontented; and with some the withdrawal of actual opposition to the Christian religion was an exciting cause; but the alteration of the calendar was a prominent objection with all the rebellious.

As 1872 drew towards its close the consequences of the enormous outlays to which the country had become committed had forced themselves upon the government; and at once efforts at retrenchment were made. Throughout the whole of the year 1873, therefore, there has been far greater attention paid to the subject of "ways and means" than there ever was before; and, from circumstances we shall hereafter have to glance at, the Treasury has been

more vigilantly watched and managed than it was formerly.

At the beginning of the year, it had two heavy drags on its resources, of a character quite extraneous to the ordinary calls upon it. One, the "embassy" of Iwakura to all the Treaty Powers; and the other, the contribution of Japan to the Austrian Exhibition, and the Commission which accompanied it.

The former had been absent just a year—having left in the P. M. S. S. Co.'s steamer *America* in December, 1871, for the United States—and during that lengthened period, it had only visited America, Great Britain and France. It has long since returned, having hurried over the other Courts just as much as it had seemed to dally with the earlier ones. It won the respect of all the countries it passed through; and it surely cannot pretend that it was not well received in any one of them. Now we begin to look anxiously for some fruits of the long travel, and the voluminous information which must have been accumulated; but as yet we see only this:—that the principal members of the embassy, all of whom are now in power here, are putting on the drag, and the chariot of the state will henceforward, at least so long as they direct it, move at a very sober pace.

The Commissioners of the Vienna Exposition, having dispatched all the goods by the M. M. Co.'s Steamer *Phase* on the 25th January, followed a few days after; and it is gratifying to know that the collection by which Japan was represented at the great Fair was so appreciated in Europe, that it has led to an universal acknowledgment of the industrial skill and artistic taste of Japan, as well as of the value and the great variety of its productions. Whether it will lead to any further results, which may be considered as compensation for the vast outlay, remains to be seen. We hope that it will; but it is early days to look even for a beginning yet. We have been disappointed in the reports which the home papers have given of the Japanese collection; for although they have lavished praise on the lacquer, the bronzes, the pottery, and some of the minor industries, they have spoken very little of the natural productions of the soil. Silk and Tea we do not so much dwell upon, because probably our merchants know quite as well how they compare with similar staples of other countries as the most intelligent of those who were called on for reports. But the drugs and the minerals were well worthy of particular attention, and a report on them, if made by competent persons, might be most valuable. As it is, we have only the satisfaction of seeing that Japan has been so far repaid for her heavy outlay, in the general acknowledgment that her display was quite a worthy feature of the Exposition.

The expenditure for the purposes we have mentioned—the Embassy and the Vienna Exhibition—were heavy, and of course a large portion of their cost had to be borne by the Budget of 1873; still they were originated in previous years, and must be spoken of as belonging to those years that gave them birth. No great and costly government expenditure was originated in 1873; but, on the contrary, retrenchment has been the order of the day. Yet, to meet the expenses of the government, not only has a foreign loan of 2½ millions sterling been obtained, but the taxation of the people has been considerably increased.

To those who closely watched the proceedings of the government it was quite evident, before the year 1872 was half through, that a crisis of some kind was approaching in the Finance Department; and it was only a matter of astonishment that evil was staved off so long

as it was. But early in 1873 it was quite recognised that the Department and its then chief must part company, and that it must be brought more immediately under the supervision of the Daijokuan. The business of the country was literally under the control of one man—the minister of Finance; for, no matter what the government determined upon that required any considerable outlay, he could forward or veto it as he pleased, by simply providing or refusing the money. Some of the acts of Inouyé Kaoru, while at the head of the Treasury, were to be commended; but, whether rightly or wrongly, he was suspected both by Foreigners and Japanese, of making his high and responsible position serve his own ends; and this was viewed with envy and annoyance by his own countrymen, and with regret not at all mingled with surprise, by foreigners. On the 7th May 1873, Inouyé and his next in rank in the Department sent in to the Daijokuan that joint letter, accompanying their resignation, which raised such a storm about their ears. They told some plain truths, which if they had borne in mind when in office, and acted accordingly, it would have been well for them, and well for the country. But they tried to prove too much; and it recoiled upon themselves. They declared that the revenue was but 40,000,000 yen, and the expenditure 10,000,000 yen in excess of it; and they stated the total indebtedness of the country for foreign loans and paper money to be 140,000,000 yen, and added that for the repayment of this large sum no provision was made. The government indignantly returned their letter, saying that the greater part of their statements was false, and for the rest Inouyé was himself responsible. Okuma, one of the longest-headed men among the Sangi, was placed at the head of the Department, and ordered to examine into matters and report as soon as possible.

On the 9th June his report was sent in, and certainly it gave a very different aspect to the state of affairs. He stated that although Inouyé and Shibusawa had undoubtedly been actuated by patriotism, they had “overstepped the truth,” and based their estimates “upon rough calculations made merely from memory.” Giving the details both of revenue and expenditure, he showed the total income of the empire to 48,736,883 yen, the expenditure 46,596,518 yen; leaving a surplus of 2,140,365 yen; after making allowance for the stipulated redemption of the Public indebtedness both at home and abroad, and the interest both on the internal and foreign debts. The amount of this provision was no less than 2,679,100 yen; and so far from permitting to pass unchallenged the statement of his predecessor, that no provision had been made for these, he reported:—“As to the Public debt, although we have incurred an internal and a foreign debt, there is a provision for reducing the foreign debt by fixing the allowances of the nobles and samourai, and by establishing a rule for making good the deficiencies with the surplus thus obtained. There is also a fund for meeting the internal debt—viz., the money and rice lent by the government to private individuals. Although paper money has been issued there is a “Special Reserve Fund” to meet this, which is deposited in the godowns of the Treasury.”

The principal items of expenditure are, the Army which demands 8,000,000 yen; the Navy 1,800,000 yen; Public Works 2,900,000 yen; the Kaitakushi (Agricultural Department) 1,177,312 yen; and the Education Department 1,300,000 yen.

The leading items of revenue are the Land tax 40,263,588 yen; Stamps (only just introduced) 1,300,000 yen; and the Customs at the

open ports, 1,823,909—of which Yokohama yields 1,270,481 yen.

We see no reason to doubt that the estimates of Okuma are pretty near to the mark. We are the more inclined to believe that the finances are in a greatly improved state from what they were at the commencement of the year from the fact that, whilst during 1872 and the early part of 1873 one reason for holding the public will in check with regard to an expedition against Corea was the scarcity of money, the Daijokuan, with one or two exception, were of opinion that in October the time for strife had come. We gather from this that there were plenty of funds in hand; especially as Okuma, the Minister of Finance, professed to be of the party who wished to go to war with Corea.

The Land-tax is estimated at 40,000,000 yen, but whether this is likely to be fully realized or not we are not informed. The harvest, though quite an average one in some parts of the country, was in many less than six-tenths of the average—little more than half. Still, on weighing the estimates pretty carefully, we are disposed to believe them nearly correct; and, as this is the first year in which Japan has published a “Budget,” it is to be hoped that the actual “turn-out” of each year, as well as the estimates at their proper times, will always in future be faithfully made known to the people, through the newspapers.

Since the change of ministry which took place in October last, the attention to economy has been even closer than before. We do not therefore find any fault, as many were inclined to do a twelve month ago, with the “heedless extravagance” of the government.

During the year there have been no further railways opened to the public; but the Osaka and Kōbē line is said to be now finished, and likely to be opened in this month of January. If this be really completed the only railway in progress will be that between Osaka and Kioto. The double line which was contemplated between Yokohama and Tokai, will, for the present, be confined to the three miles between Shinagawa and Shimbashi. So there will but little drag upon the revenue for such expenditures during the present year. The telegraphs have had a good deal of money spent upon them, but they are not by any means as satisfactorily constructed as they ought to be; and between Tokai and Nagasaki, the line is frequently out of order. In the estimates, the Railway and Telegraphs are put down as yielding revenue to the amount of 200,000 yen. With the Osaka and Kōbē line open, we suppose we may look for twice this amount during the present year.

Having dwelt at such length on the very important subject of the state of the finances, we pass on to other things.

The internal condition of the country has been in some marked instances, very bad. The promulgation of the government decree respecting the conscription, and the high taxation, have had their effect upon the people; and in many ken, both North and South, troubles have arisen. The most formidable outbreak was in Fukuoka in Kiuisu. The government, however, was strong, and has proved quite equal to the task, so far, of restoring order. Some real or supposed disaffection among the Satsuma clan, who,—thinking their old chieftain Shimadzu Saburo was likely to be in danger on the occasion of his being ordered to Yedo in the morning of the year,—gave some disquiet to many persons; but the police had them all under their eye the whole time they were in Tokai; and these old world samourai must have been very glad to get back to their own country. Shimadzu was made private war

counsellor to this Majesty, for the sake of obtaining his loyal allegiance; and Shimadzu caught the bait, and so continues to hold this position as well as that of Home minister, to which he has just been appointed.

(To be continued.)

ONE of those very extraordinary documents which we have so frequently copied from the official portion of the *Nisshin Shinjishi*, appeared in yesterday's issue of that journal. It is an application from two officers of the Kiyobusho (Department of Religion) to the heads of the Department, suggesting that a thorough discussion should be invited between Buddhist and Christian priests, and published in the newspapers, or rather in a newspaper, that all people may see which is really the best religion. They say:—

“In the present civilized reign there are some barbaric and indefinite doctrines in our religion, which exhibit no particular brilliancy of dogma or reason.

It is a very shameful matter for us that, in the matter of Religion, things should be as they are; and in order to find out which is the best of the different religions, we propose that the priests of the various foreign religions be requested to meet us, that we may ask them questions about their mode of belief, and so endeavour to find the truth. Then we wish to publish the whole matter, that our people may know what is right.

Although we know that we are not well versed in religious reasoning, yet, as we have been learning it for many years, we suppose we are not more ignorant than foreign priests in their department; in other words, we are not yet convinced by their foreign doctrines. If we commence the work several other friends will certainly help us, and, therefore we wish to be allowed by government to publish, in a newspaper, the best opinions upon religious matters. We pray you, therefore, to give us the license. Our subject is as follows, viz:—

#### THE OBJECT OF THE TWO OFFICERS APPLYING TO THE KIYOBUSHO (Department of Religion).

Religion is the medicine to recover sickness of the mind; which is avaricious, foolish, and sceptical. If the sickness be not ministered to with medicine, the mind becomes bewildered, and the root of knowledge is cut off. Hence the usefulness of Religion. The religion, however, which prevails in foreign countries is of two kinds (we speak of the larger divisions), Christianity and Buddhism. Although there are several divisions (or sects) in Christianity, yet the main belief of it is, that the soul of man comes from God, and therefore the soul is only saved by believing in God, and obeying his commands. Buddhism is also divided into many sects, but the belief of all is mainly identical. Its doctrines differ from those of Christianity, as to the origin of the soul, or mind, which, they say, has not the beginning which the Christians believe, but naturally exists, and the way of saving it from vice and sin, is to apply to it the best religion which can be found by the eyes of all mankind; in other words, to believe the best of the several religions for preserving the mind from illness.

Christianity originated with Jesus Christ, in the land of Judæa, and has spread over the continents of Europe and America. Buddhism commenced in India, from Shaka, and spread over the East. The Buddhist religion has been believed in our Empire for more than a thousand years, and both Indians and Chinese admire the completeness of our system of education in the doctrines of Buddhism and Confucius.

The far distant European nations have now become so intimately connected with us, that we look on them as brethren. Commerce is daily advancing, and education gradually spreading among us. Our knowledge is daily progressing; so much so that in the science of chemistry, in the arts of medicine and agriculture, in manufactures, and in industrial pursuits, we may be said to have almost reached the point of completeness, or perfection. Every foreign nation admires our silks, our teas, and our minerals. The question of Religion is the only thing which has not yet been opened up between us. They believe in one God, and think any other belief is false. We believe only in Buddhism and discard all other religions. But all true religions admire truth and abhor vice. Truth and vice are so naturally separated that it is impossible for them to exist together. They are like two medicines, one of which is harmless, and the other a poison; yet no one can say that a useful medicine is poisonous. Truth is what every religion aims at but in the words of truth there are different degrees, as, high and low, deep and shallow, long and short, clear and dark; and, on casting our eyes over mankind generally we find that it is the first mentioned of these qualities which tends to increase the belief of people; and, on the contrary, the low, the shallow, the short, and the dark are naturally despised by them. In fact, we may compare the one to water, which naturally runs to the low land, and the other to flame, which as surely rises to the heavens; and no one can oppose the reasonings of nature. This will be conceded by both foreigners and our own people; but we, and they, with foolishness and obstinacy cling to our own ideas, and refuse to examine into the truth or falsity of the two religions, and so despise each other. This is just the same as saying good medicine is poison. How can we or they say, "Your silver is inferior to our lead," or "your gold is inferior to our silver?"

At the point of civilization which the whole world has reached, such foolishness is idle; it is the sickness with which both Europeans and Japanese are affected. Neither European nor Japanese can say their own religion is good unless they strip off the garments of prejudice and bigotry with which they are clothed.

To cleanse themselves from this illness there is a means, and this it is:—Having assembled together, in a convenient place, the priests of different religions, let each ask the others questions in the leading principles of their religion, debating with one another as to their truth. Having thus argued, the several opinions of the various priests should be published in the newspapers, that they may be made known to the people throughout the world: for the nations where religions are would surely like to see the papers. These assemblies should be held at stated times, and, after many such discussions, in a few years, all the readers of the newspapers throughout the world would be enabled to judge which is right and which is wrong. (!)

By such a means the bigotry and intolerance of priests should be melted away, and every obstinate idea having been clean sed from their minds, all the readers of the world might recover from the sickness of avariciousness, doubt, foolishness, etc., etc. And how fortunate and happy would all the nations of the world be, when recovered from this sickness!

In the Assembly reporters should be present, to take down what is said by the priests of the various religions represented.

We propose that a special newspaper, denoted exclusively to the discussions of the Assembly, be published, not less than ten thousand copies being printed, and they should be distributed abroad, throughout our own land, and amongst

all the foreign nations. The Assembly should meet thrice in a month, and thus thirty thousand papers would be scattered abroad in that time.

As much money might be obtained by the sale of the newspaper, the Assembly should form themselves into a Company, like any other mercantile corporation, to be conducted on business principles.

Buddhism commenced in India, but, by our great exertions, and the work of over a thousand years, it has now become a production of the Japanese Empire, just the same as tea, tobacco, &c., which were originally derived from foreign sources; and all foreigners admire our tea and tobacco. In a similar manner, Buddhism should be viewed as our production. The Company, therefore, should be considered as business men, and not only as a collection of priests to examine religion; and so, rules should be drawn up according to mercantile law.

As the Company is formed for the comparison of knowledge, it should be looked upon as quite different from those associations devoted to horse-racing, fencing, &c.; and as there will no doubt be very many people both at home, and amongst foreigners, who would wish to listen to the arguments, so regulations for (admitting) such people should be drawn up, similar to those of public exhibitions.

And, we think, the fighting, or controversy of the persons engaged in the argument, could not be considered mean or vulgar; it is the fighting of sages, and the battle is that of Religion."

#### ATTACK ON IWAKURA.

It is with deep regret that we announce that last evening at about 8 o'clock, as Iwakura was returning from the palace to his own house in a carriage, he was waylaid by a band of thirteen men, who stopped the carriage, killed the driver, and proceeded to attack Iwakura. How he managed to escape is difficult to tell, for he does not appear to have had any armed attendants. He, however, seized the reins himself and quickly turned the horse back, and returned as fast as possible to the palace. He was wounded by four sword cuts, but we trust not seriously. Drs. Hoffman and Müller were sent for, who promptly dressed his wounds, and report him likely to recover.

The men who made this dastardly attack are unknown, and they seem to have got off scot-free; but we can hardly imagine such a band can remain unknown, and undiscovered. There can be no doubt whatever of politics being at the bottom of the attack; and circumstances lead us to believe that Iwakura himself had some apprehensions; as, for some time, he is said to have taken precautions against being recognised in the street. Of one thing we feel strongly assured; and that is, that the leaders of the party opposed to him in politics will most warmly deprecate such barbarism. No terms can be too strong to express the horror that must be felt by all men of progress at such a cowardly act.

Yesterday 500 Satsuma men belonging to the Tokai police force refused duty; and going to Ono's bank demanded money to take them to their own country, saying that the amount would be repaid by their clan. The Prince of Satsuma has already left for Kagoshima. The soldiers who burnt their barracks in Higo lately were Satsuma men. Before setting fire to the barracks they possessed themselves of all the arms, ammunition and military equipments they could find; and, when told that a large temple would afford them temporary shelter, they replied that they did not require it,

as they were on the start for their own province. Some short time back some 300 Satsuma men were being drilled on the parade ground near the Foreign Office, when they suddenly told their officers that they had determined to serve no longer, and there and then, the whole of them left and they have not since been collected. All these circumstances, added to the sudden resignation by Shimadzu Saburo of the high and honourable office to which he had been appointed, create a very strong feeling of apprehension; and our recent articles, which the *Mail* took upon itself to satirize, are being verified even earlier than we ourselves expected.

The official account of the attack on Iwakura, which was sent by the Konaisha (Imperial Chamberlain's office) to the *Nisshin Shinjishi*, the first thing this morning, is as follows:—

"Yesterday evening about 8 P.M., as Udaijin Iwakura was leaving the palace at Akasaka in a carriage, a band of about thirteen men, who lay in wait for him, attacked him at Kuichigai Akasaka, with drawn swords. His excellency was wounded, and the driver fatally so. Iwakura immediately took the carriage back to the palace; and the Emperor sent for Dr. Hoffman and Dr. Müller, who having attended to the wounds, said they were slight and that Iwakura would soon recover."

We hope that the above may turn out to be the correct report, but another reaches us, which tells of Iwakura's death. We shall however content ourselves with publishing the official one; any further particulars we will publish as we receive them hereafter.

WE REGRET to state that the answer to our enquiries respecting Iwakura is that yesterday he was in a very feverish state, and not so well as he had been, but not yet in any danger.

FIVE MEN have been arrested as being concerned in the attack on Iwakura. They are all Samourai of Kochi Ken; and the evidence on which they are taken is, that they took jinrikishas to Akasaka on the evening of the attack, each armed with swords, and having dismissed the jinrikishas, remained there as if laying in wait. One of them is a very small man, who is considered the personification of courage and strength. He has been quite a wanderer, having visited China, Corea, and many places in Japan. But what particular reason there was for the attack on the Udaijin is not yet known.

THE UDAIJIN IWAKURA is going on favourably; and is in no danger from the wounds. The circumstances are not quite as reported last evening. So far as we can judge of our various sources of information, we are inclined to believe the following:—He was unusually late at the palace, and started for his own house in his carriage with two bettoes, either running before the horses or elsewhere about the carriage, and his coachman sitting beside him. There lying men who we in wait at Akasaka, rushed out and surrounded the carriage, thrusting their swords through the sides. The coachman was so severely wounded that he died; but Iwakura, seeing how things were, managed to make a spring out and though he received some thrusts, he ran towards the bridge over the moat. It was black dark, so that, not seeing where he was going, he fell over the bank and rolled down into the water, and there he had the good sense to remain quietly, whilst the would-be assassins searched about for him. At

length they must have given him up for dead or lost; and so retired. After waiting some time, he called out, and some persons came to his aid. He was taken up the bank, and back to the palace; and the doctors sent for. What became of the carriage we have not heard.

WE BELIEVE that, in connection with the attack on Iwakura, the Japanese mail steamers have been delayed in their departure for the present.

WE HAVE further ascertained respecting the attack on Iwakura, first that the wounded betto, though seriously cut, is not dead, but is in the Daibiyo-in—Imperial hospital, Ooweno—under the care of Dr. Müller. Iwakura himself received two wounds—one in the shoulder, the other the lower part of the back. Neither wound is serious in itself, but up to yesterday morning he seemed better than could have been expected. As, however, he was *an hour and a half* in the water, the danger of cold—pneumonia, pleuritis rheumatism, &c., is not yet past. He did not fall accidentally into the moat, but ran down the bank as the best means of escape.

We sincerely rejoice that the assassins were unsuccessful; and we hope that a few days may see Iwakura restored to health.

IT APPEARS that one great object of the attack on Iwakura was to secure certain important papers which he was known to have with him at the time of his visit to the palace. These papers were kept in a pocket and were seized by the would-be assassins, and carried off. Having secured these papers, they did not make any very careful search for their victim, but decamped with their booty. The attack was made at Kuichiga, and only a few yards from the palace gate and sentries. It seems a miracle how any but the most stupid bunglers could have let their victim escape, had they made it their supreme object to kill him. The road leading from the main road in front of the castle is so narrow that an ordinary carriage can with the greatest difficulty turn in it. A bank about four feet high rises on each side of this narrow causeway, whence on either side the ground slopes steeply down to the moat, the water of which must be at least forty feet from the top of the bank. It seems very strange too, how the attack could have been made without alarming the palace sentries, who must have known that Iwakura was in the carriage. The opening in the wall near which the attack was made is not a regular Go-Mon or Gate. It is simply an opening made in the bank, and named Kuichiga. Mr. Iwakura had received warning that his life would be attempted, and imprudently, or with a courage amounting to rashness, exposed himself, almost unarmed. His quick action in leaping from the carriage showed his wariness. He is still at the palace of the Mikado, being attended by his wife, son, and daughter.

ON DIT that Ennomoto has been appointed Rear Admiral of the 3rd rank.

THE KAISEI GAKKO has changed its Director. The gentleman who has been appointed is Mr. Hatake-yama, who was attached to the late Embassy to Foreign countries. On Saturday last he attended at the Kaisei Gakko and received the foreign teachers. Addressing them in English, he told them that he felt no less deeply than themselves the importance of the great task they have in hand, and that he would work with

them to accomplish it. He also said that he would appoint certain days of meeting, that he might receive from them such suggestions as they might wish to offer.

THE CHIJU of Tokei Fu, in an official communication to the Kocho of the city, points out that at the present moment there are many houses in Tokei, ostensibly used for the carrying on of ordinary business, which are in reality neither more nor less than houses of ill-fame. This state of things, he says, has a fearful influence upon the morals of the people; and he therefore strictly forbids anyone to occupy premises for such a purpose in the streets of the City; and each Kocho is ordered to severely enforce this regulation. The following places, five in number, are set apart for the purposes of the houses referred to, viz:—Yoshiwara, Shinagawa, Shinjiku, Itabashi, and Senjiu. These, and no other.

ON THE 9th inst. His Majesty the Emperor paid a visit to Yechiu-jima and Tsukuda-jima of Tokei, to witness certain regimental exercises. On his return he visited the yashiki of Yamauchi Toyonori (Tosa). He was accompanied by Iwakura and several other high personages. The Emperor took a seat in the house of the late Tosa prince (which projects into the river), and was shewn some net fishing in the pond of the beautiful gardens attached to the house. Several members of the Tosa family were presented to him, and the young prince shewed his Majesty the furniture and works of art which belonged to his late father. The Emperor then return to the palace, much pleased with the reception which had been given him. This visit was made by his Majesty in remembrance of the loyalty of the old Prince at the time of the Great Change.

THE FOREIGN ministers dined with the Japanese ministers to-day at Hama-goten. On the 20th the Emperor and the Empress receive them and their ladies at the Palace.

THE EMPEROR has expressed a desire to spend the remainder of the winter at Kioto.

It is said that a letter has been sent to Daijokuan, threatening another of the ministry. There must be a change before many days.

OYE TAK is removed from the Governorship of Kanagawa, and Nagashima is appointed in his stead. If Nagashima will only get rid of his anti-foreign notions, and disabuse his mind of the idea that his short trip to Europe taught him everything that is to be known, we will welcome the change. But to us it seems that it is sufficient for Japanese to go abroad, to give them, not the wisdom to assist the progress of their own country, but the folly to obstruct its intercourse with foreigners to the utmost.

A COOLIE employed as watchman in Murayama, Uzen, whilst going his rounds through the village lately, saw a "suspicious looking body" coming along the road, wearing a long sword. He demanded his name, but the body answered evasively and continued on his way. Nishimura, the watchman, ran after him, in order to cross-examine him, (our translation reads "close ex-main"); whereupon the suspicious looking body drew his sword and cut and slashed at poor Nishimura, who, though wounded, nevertheless contrived to defend himself with his clob (club), and ultimately succeeded in arresting him. "Afterwards"—to continue in the words of our native cor-

respondent—"as the prisoner was ascertained to be a great offender, just as had been suspected, the above watch-man was praised with seven riyos." A very comfortable and substantial sort of praise, truly!

THE S. S. *Mowtan* has been chartered for the conveyance of the 500 men, whose resignation of police duty we lately announced, to Kagoshima.

THE RUMOURED resignation of Okuma as Finance Minister is untrue. It is at least premature; and we cannot clearly trace how the report became prevalent.

FROM OSAKA we hear (from a native source) that the soldiers stuck a long declaration in conspicuous places in the city and in Kioto, to the effect, that if the ministry were not changed quickly, there would be trouble.

SOME OF the Sangi and other officials have remained at their houses under the plea of illness, since Saturday; and there can be no doubt whatever that the changes we declared would quickly take place, are now on the eve of accomplishment.

IN THE five months, from 31st July to the 28th December, 1873, the number of special applications to Sa In (Parliament or Council of State) on the part of the general public, was 103. Of these 11 have been passed on to Sei In, 12 have been discussed in Sa In, 13 are not yet enquired into, and 67 were returned.

ON THE 27th Dec., a proclamation signed by Sanjo Daijin was issued to the effect that hereafter all family or hereditary salaries allowed by government to the Nobles and the Samourai, will have to pay income tax; but that salaries for services will be exempt.

A LETTER has been received from Osaka, stating that the Kobe railway is finished; and that it will be opened at the end of January. The Kioto and Osaka railway is commenced, and the Kioto people are rejoicing in the prospect of soon having all the facilities of commercial communication which they consider to have been heretofore monopolized by Tokei.

THE PORTRAIT of His Majesty the Emperor which was sent to the Kencho of Ibaraki, in common with all other Kens, was suspended on the first three days of the present year, in a Public garden, that all persons might see it.

THE FEAST of the New Year, called Shinnen-yen Kai, was held at the Imperial Palace at 4 p.m. on the 5th instant. The Emperor honoured the occasion with his presence, and all high officers of the first and second rank were invited. Officials above the 7th rank who are in the provinces, held the feast in their several Kencho; and the officials called Sonin Kan, in Tokei, were also invited to their respective departments.

On the 6th instant His Majesty invited the high Kazoku or nobles and received them himself, sitting down to the feast with them. And these festivities have been greatly enjoyed by all privileged to share in them.

NATIVE PAPERS dwell upon the rapid progress made by the military students under the French Military Mission. The Officers arrived only in 1872; but their judicious teaching, combined with strictness of discipline, has already borne excellent fruit.

Several of the pupils have received commissions in the army; and many have so far advanced as to receive certificates of competency.

WHEN THE Empress visited the Young Ladies' School under the care of the Mombusho, a few weeks ago, several of the girls were promised prizes for proficiency in study. During the New Year's holidays these promised gifts were presented, and the kind chosen speaks well for the good sense and knowledge of the fitness of things of Her Majesty. Instead of sugar jelly, sweet cakes, pieces of silk or boxes of eggs, each of the five first-prize scholars were given a handsome copy of the large illustrated Japanese-English dictionary. The second-prize scholars received each a copy of "Smiles' Self-Help," translated into Japanese, by K. Nakamura."

FOREIGNERS ARE apt to talk a good deal about matters connected with *satz*, and what is and what is not in circulation; but we take it that few know anything whatever upon the subject. In the six weeks between the 18th September and the 31st October, for instance, the amount of *satz* burnt at the official burning place, Idzumi-bashi, totted up to the small sum of rios 4,771,631 and yen 1,126,625, besides Okurasho bonds yen 10,770. Of these there were:—

Daijio-kwan kinsatzu .. . 4,656,583  
(these were the original sinking fund, the whole to be paid in 13 years.)

Old Mimbusho (ishin and nishin)	165,405
Damaged <i>satz</i> changed for new	24,470
Kaitakushi <i>satz</i> (Mitsui) .. .	86,620
Old Han <i>satz</i> .. .	1,012,535
Okurasho bonds .. .	10,770

THERE WERE 27 fires in Yedo between the 1st and 20th December, of which the origin of no less than 14 is reported as doubtful.

HIS MAJESTY the Mikado held a review on the usual parade ground on the 8th instant, and paid his annual New Year's visit on the 9th (yesterday) to the Naval College. On both occasions he appeared in *better* state than he has ever done before. His carriage, drawn by four black horses, was exceedingly well appointed, and the principal ministers of state and other officials were in attendance.

THE CELEBRATIONS attendant upon New Year's in the capital were, if anything, a little more quiet than on the two or three previous like occasions. For several days previous the regular chosen localities were made lively by the bustle attendant upon the erection of booths for the sale of straw ornaments, evergreen decorations, and new household and kitchen utensils. On New Year's day the spectacle, so strange and unusual in Japan—except on New Year's day—of an utter cessation of traffic, was witnessed. The usual number of tipsy folk was observed toward nightfall. The high government officials in bullion and cocked hats, and the shivering company of employes in funereal black added to the gloom of the slushy streets and forbidding skies. The fine weather succeeding the first day of the month brought out thousands of gaily dressed girls with the battledoors, and showed that the old custom which the Yeta women have had of playing the samishen and gathering cash has not wholly died out. Another of the old relics of by-gone days which has not entirely faded is that of the *Man Zai* (Ten Thousand Years). Men attired in a rather loud style of ancient dress, and with the old *eboshi* or black lacquered paper cap of ceremony on, go round singing the song of congratulation for the New Year, wishing "many

returns of the same." These fellows, who do not disdain either cash or *satsu*, are all (except the imposters or "opposition" upstarts) from the province of Mikawa, and are welcomed pecuniarily by a few people, though it is quite evident that they do not reap rich harvests as of yore, and will soon cease to find a welcome.

WE HAVE several times called attention to the gorgeously colored illustrations published as broadsides, which do duty for illustrated newspapers. In these pictures, which issue thick and fast from the native press, we see the artist's pencil, the engraver's burin, the colorist's gay tints, and the pressman's "printing press" of flat boards, all called into requisition to depict most flamboyantly the course of current events. The week before New Year seemed to have been the occasion of a fresh issue of cartoons on every subject in which the Japanese artist delights; and the picture shops, with their new spoils daily changed and adorned to highest advantage, remind one of huge kaleidoscopes. We have a new edition of portraits (?) of favorite actors, some fresh lampoons on the rabbit, several chromatic caricatures of foreigners, a view down the boulevards of Tokai, a "View in London," an illustrated itinerary showing the 53 stations from Tokai to Kioto, and, finally, some illustrations of the methods now in vogue of teaching the young idea how to shoot. The school room of the present day is shown, and the new methods of instruction are portrayed. A connoisseur might pick a few flaws in the execution of the pictures, and it is quite certain that art critics would object to the coloring. Several of the pupils have their hats on while studying, and the native teacher has the old sword in his belt. The first mistake is far in advance of fact or time, and the second is out of date. Spite of defects, the cartoon is a spirited representation of the advanced state of pedagogics in Japan.

ON THE 19th December, His Majesty the Emperor visited Sanjo Daijin at his country seat at Hashiba, (about 2 ri from the castle) and kindly expressed his deep regret at the illness of Sanjo. He urged that he should return to the business of his office, as he required his help urgently; the business of the country being very heavy and important.

Sanjo replied on the 23rd that, in accordance with his Majesty's wish, and to shew his gratitude, although he had been so long ill and confined to his bed, yet he went to his office; but he found that things were not in accordance with his views, especially in matters he had explained to His Majesty. He therefore asked permission to resign his office of Daijo Daijin.

The same day, 23rd December, the Emperor replied, earnestly desiring him to continue to hold his office, and giving him an assurance of the perfect confidence he reposed in him.

It is quite evident that there will be another change of ministry before many weeks pass.

There is now little chance of war. That idea will be given up by all parties. But Saigo Kichinoske still keeps away from Tokai, having, as we reported, gone to Kagosima, directly after the change of ministry. The Saigo who is still in Yedo is his brother.

Better days are in store for foreign intercourse; and our readers may rest assured that much of the obstructiveness they have lately witnessed will pass away for ever.

The visit of His Majesty to the Naval Department was intended as a kind of ceremonial opening of the year. He arrived at Kaigunsho at 10 A.M. and at once proceeded to the college, at the entrance of which he was received by native officers above the 7th rank, and by the

Foreign officers. The band of the Imperial Marines played the "National anthem" as he alighted. The Chrysanthemum ensign was hoisted, and a salute of 21 guns fired; the men-of-war at Shinagawa also taking up the salute. Among the proceedings was a boat race between boats belonging to the Japanese men-of-war; the three first boats getting prizes.

At noon His Majesty took luncheon, and at 1 P.M. he listened to a short explanation of Naval history. At 2 P.M. His Majesty reentered his carriage, and, as he drove off, another salute was fired. His Majesty seemed highly interested with all that passed.

One thing struck us as most incongruous. The day was cold, and many of the officials in attendance on His Majesty wore the dress of ceremony of the present day—foreign evening dress with black "bell-toppers." Oh! how cold and unhappy they looked. Why are they not allowed to wear great coats on such occasions? It made our teeth chatter to look at them. Ever since New Year's day, when the officials were moving about in the heavy snow, paying their ceremonial visits in the same cruel fashion, these unfortunate men have had to endure this torture; and if they could but see themselves as foreigners see them, and if they realized their "ghastly" appearance, surely they would forswear foreign clothes for the remainder of their days. Cannot the Court tailor invent a ceremonial great coat?

THE GOVERNMENT has ordered that the families of the late Tokiyeda Gontenji of Fukuoka Ken, and of five other officers killed in the rising of that clan about the middle of last year shall receive sums of money varying from 150 to \$100 yen.

A NEAT robbery was lately committed at a bathhouse. A young "white faced" fellow, having the appearance of a student, entered, went to the room on the first floor, and sat down as if to rest before bathing. Presently a gentleman named Yamakawa came to the same room and having placed his gold watch and chain in his hat, divested himself of his garments and descended to the bath room. Having completed his ablutions, he returned to the room. He found no one there, but his pouch containing 14 yen 3 boos and his gold-watch and chain were absent. He called out, and the old woman who was employed to watch the upper floor declared in a tone of great surprise that it must have been stolen by the first mentioned youth. He went to her almost immediately after Yamakawa had left the room, and asked for some bathing tickets, as he should return to-morrow, having already bathed elsewhere that day; and on receiving the tickets and paying for them he quietly left the house. Of course there is no trace of the thief. The watch cost 92 yen, and its number is 12,950. The chain was of Japanese make weighing 15 mommé. Who shall say there is no "Swell Mob" in Japan?

THOSE who purchased on credit the brick houses on the South of Kiyo-bashi, Tokai ought to have paid one third of the purchase money a few days back; but as they represented that in consequence of the road not being completed, they had not yet had any business, Tokai Fu put off the payment until the beginning of next year.

A YOUNG fellow a day or two back entered an eating house in Sarukaku cho, and after finishing his meal, and being left alone in the room, he took a short sword and cut his throat. The waiter going in shortly after found him quite dead. The police were informed, and

after inspection by the proper officer, the body was taken to the temple of Igo-in at Riyogoku, where all dead persons whose names are unknown, are buried.

Just about the same time a young damsel drowned herself in a well in Ura Jimpocho; and as the two places are close to each other, a touching little romance is made of the circumstances and the two suicides are bound up in it.

ON THE night of Thursday last, the 8th inst., a policeman on his beat saw a heap of rubbish burning as if recently kindled behind the temple of Quanon Sama at Asakusa. As he looked at it he heard the noise of wooden clogs as if worn by a person running. An old woman approached at the moment, but she had no shoes on, and though she had a bundle of joss sticks in her hand, her manner and speech were such as to convince the policeman that she was a mad woman, and had nothing to do with this attempt to set the great temple on fire. He thinks that it must have been the footsteps of a man that he had heard, and who having been disturbed by his approach, ran off as fast as he could. Speculation is now rife as to whether the same incendiary was he who set fire to Daikiyoin at Shiba. It certainly looks suspicious.

On the 25th instant, Jiuni-i Hisamitsu Shimadzu was appointed Nai-kaku-komon (Home Minister). This is the most mysterious move yet made by the new government; and at the first blush it would appear that all thoughts of a Korean campaign were at an end; for the Kagoshima and Kochi men were supposed to look to him to head their movement. Still it must be remembered that when the Mikado won him over by his well-timed appointment as his personal War Adviser Shimadzu then replied, that his effort would be to keep Japan at peace. If the appointment means any thing, it must be that Shimadzu is true to his promise made under the impulse of gratitude for the Emperor's kindness. It remains to be seen what may be the effect of his joining the cabinet (as it may be called) with regard to Foreign questions, but speaking generally, he immensely increases the ministerial strength.

SANJO DAIJIN resumed active duties on the 25th instant. It is hoped that the restoration of his health may be permanent.

H. I. H. Yoshiakira Higashi Fushimi no Miya, and H. I. H. Sadayoshi Fushimi no Miya, both relations of the Emperor, having expressed a wish to serve their country by joining the army, the former has been appointed a Shoi, (officer of 7th rank), as he has already studied military exercises abroad. The latter has also been ordered by His Majesty to be diligent in military studies, that he may ultimately receive an appointment.

IN ADDITION to the many cares, anxieties, and responsibilities of the editor of an Anglo-Japanese newspaper, which is read by men of two different races and nationalities, the great danger of being constantly mistaken ever threatens to disturb the peace of mind which an editor should have. The Japanese have itching ears to hear, and eyes to read what the foreign newspapers say, and whatever is printed in sober, matter-of-fact, and dry-as-dust language, can be understood and appreciated fully by them. In fact when the language is framed after the model of an advertisement, or some other very plain statement in which the indicative prevails over the subjunctive form of ex-

pression, they can catch its meaning with very fair success. Indeed, whatever is driest and least suggestive to a foreigner is most easily read by a Japanese. The fewer idioms, allusions to literature, questions, etc. there are, and the barer and balder the language, the better. When, however, the average Japanese "interpreter" attempts to translate an ordinarily idiomatic article from one of the foreign newspapers, the caricature of it which is produced in the native newspaper is very trying to the risibilities of a foreigner. Some of the native newspapers when literally translated by a first-rate translator,—especially when the articles taken from the foreign papers are retranslated into English and compared with the original—are as funny as *Punch*. The most serious part of the fun however is, that in many cases, paragraphs from the foreign papers which are meant for jokes, are translated and set forth with all gravity as sober wisdom in the native reprints. We can easily imagine the expressions on the faces of the native editors who ponder gravely over what they suppose to be oracular statements. To be perfectly fair, however, we must acknowledge that many items of Japanese news when turned into indifferent English are often equally misapprehended by foreigners, and many things that strike the foreigner as grotesque are, in reality, very ordinary and sensible affairs. Perhaps, too, many Japanese sayings and writings which we take to be solemn fact may be meant for wit and fun, and so the inhabitant of the land of the gods may laugh in his long sleeve at the hairy foreigner for knitting his brows and lengthening his face over something in print that was meant to make his visage as jolly as that of Momus and as broad as that of the merry household gods of Japan!

ON THE 5th December, 1873, the Mikado signed the appointment of Honno, the first secretary of Gaimusho, as his commissioner to make postal arrangements between Japan and Great Britain.

On the same day His Majesty signed the appointment of Takagi Saburo, as Japanese Vice Consul in San Francisco.

FOR MANY years the name of Awomori, as a port on the extreme North coast of the island of Nippon, and its nearest port to Hakodadi, has been well-known to foreigners. The following information respecting it, taken from a native newspaper may prove interesting to our readers:—

"Awomori received its name from the abundance of deep green pine trees, which surround it. The fisherman of old called it by this name which means green woods, and it has ever since retained it.

"The entire circumference of the harbour of Awomori is only about three miles, and the greatest depth of water is 24 feet. It is 10 cho long by 6 cho wide; and often as many as 400 Japanese junks are anchored within it. It is directly opposite to Hakodadi, from which the distance is 28 ri.

"The *Komei-maru* and other small steamers ply twice a week, and sometimes three times, between Awomori and Hakodadi, and thus the trade of the place is always increasing.

"The town contains over 2,300 houses, and the population is about 11,200. There are plenty of wine shops and eating houses, but everything is very dear; and fuel, whether charcoal or wood, is scarce. Its general characteristics are like those of Niigata, as to houses, roads, position, and the local aspect; but the women of Awomori are far inferior in beauty to those

of Niigata. Its most famous production is Amé, or Awomori jelly, and a good trade is done in this with Yesso. In so cold a clime of course no sugar grows, but the steamers now bring a considerable quantity, and fears are entertained that this will interfere with the Awomori jelly trade."

It must be but a very inexperienced man, one should think, who can only speak of the "Awomori jelly" as the staple product of a town of 11,000 inhabitants: though it must be of some importance, judging by the fact that the writer alludes to the apprehensions lest the importation of sugar into the town should injure it. But a town where an average of 400 junks are anchored, and to and from which from 8 to 12 steamers ply every month must have a much larger import and export trade; and we have set enquiries on foot to ascertain more correctly what the nature of its trade really is.

ON THE 22nd of December in the Ashiwa river, Tsuruga Ken, a boat laden with rice, while on its way to Mikuni, one of the seaports of Yechizen, sunk in the river, and went down so suddenly that the three men, composing the crew, were drowned. Seventy bags of rice were lost, which seemed to the owners of the craft the heaviest part of the misfortune. Whether owing to the absence of life-insurance societies or of correct moral notions on the subject, human life does not seem to be a precious commodity in this country.

THE 'very ominous' paragraph in the *Gazette* of a few weeks ago, that "two milliners were coming out from London to make European dresses, millinery, etc., for the Empress, Princess, etc.," needs supplementing. It is true that while the Embassy were in London, they made arrangements for the milliners to come out to Japan for the purpose above specified. Since that time, however, a change has come over the spirit of the dreams of the chief Lady of the Realm, and there is at present no probability that the Court ladies will adopt European dress. The Udaijin Iwakura has succeeded in persuading Her Majesty and the officers of the Imperial Household that such a step would be most unwise, impolitic, and fraught with great danger to the business of the country. Such a step is not only wholly unnecessary and would involve great trouble and expense, but would render unsaleable the large stock of native dress goods, paralyse native industries, and seriously derange the entire textile business of the country. These and numerous other reasons, that need no detailed explanation either to a foreigner or native, have prevailed with Her Majesty, and native costume will remain in fashion for some time to come; private ladies may dress in foreign style if they desire, but no official example will be set by the ladies of the court. This information we have from one very near the person of both the Emperor and the Udaijin, and we believe it to be perfectly true. We have no doubt that nearly all foreigners will hail the news with delight, and thank their stars, that their eyes will not be pained by the soul-rending spectacle of the Japanese women attempting the mysteries of foreign female apparel. If one could see a Japanese lady after ten or twelve years of experience in foreign dress and among foreign people, the sight would perhaps be very agreeable; but to be doomed to spend several years in viewing the native maiden or wife pass through the transition stages from *obi* and *kimono*, to Paris bonnets and the miracles of trimming and panniers, *Vigogne* mantelets, and the successive inner strata of fine raiment of needle work, is something to be shrunk from as not only comic and annoying, but positively painful.

**THE KIITO ARATAME KUAISHA.**

We have been favoured with a copy of the following correspondence:

Yedo, December 31st, 1873.

SIR,—With reference to the correspondence which has passed between us, relative to the illegal proceedings of the Silk Guild called the Kiito Aratame Kuaisha, I have now the honour to forward to you, on the part of the Foreign Representatives, whom you addressed on this subject, and for the information of the Yokohama General Chamber of Commerce, a copy of a note in which the Foreign Representatives have stated the result of their discussions with the Japanese Minister for Foreign Affairs, relative to the abuses of which you complained. I also add a translation of His Excellency's reply in which he informs the Foreign Representatives that those abuses have never received the sanction of the Government, and that the said association cannot interfere with the transactions of other merchants, nor oblige them to bring their silk or silk-worms' eggs to the said Kuaisha for inspection. His Excellency also forwards a notification, of which I enclose a translation, in which interference on the part of this or other Guilds with the free action of dealers not belonging thereto is distinctly forbidden, and he adds the assurance that the Japanese Government will diligently take measures for the removal of those obstructions to trade of which the Foreign Representatives have complained.

I think it desirable to forward to you this correspondence in Japanese as well as in English, and I should observe that the Foreign Representatives will be glad to be kept informed of the result of the above mentioned proceedings, which they trust will be to confine the operations of the Kiito Aratame Kuaisha to legitimate channels, and to free foreign and native trade from similar interference in future.

I have the honour to be,

Sir,

Your most obedient,

humble servant,

HARRY S. PARKES.

A. J. WILKIN, Esq.,

*Chairman of the Yokohama General  
Chamber of Commerce.*

(Copy.)

Yedo, December 15th, 1873.

On the 15th ultimo the Undersigned Representatives of the Treaty Powers held a meeting with the Minister for Foreign Affairs for the purpose of bringing to the notice of His Excellency the proceedings of a Japanese guild established at Yokohama called the Kiito Aratame Kuaisha. The Undersigned informed His Excellency of the complaints they had received that this guild interfered with the freedom of trade which is guaranteed by the Treaties, that it compels the Japanese dealers in Silk and Silk-worms' eggs to bring all their produce to the Guild on arrival at Yokohama, that it assumes the power of inspecting such produce, and of levying inspection fees, that it lays down rules for the management of the silk business of the port, imposes heavy fines upon native merchants who do not observe these rules, and stops the trade of those who do not pass their goods through its agency.

The injury thus done to native and foreign commerce is fully set forth in the Memorial which the Yokohama General Chamber of Commerce addressed the undersigned and

which they placed in the hands of His Excellency. A copy is subjoined to this note for convenience of reference.

His Excellency admitted that the said guild had no right to interfere with trade in the manner complained of, and promised that the Japanese Government would issue such decrees as would prevent similar interference in future. In considering the question further with the Undersigned His Excellency has also informed them that the said guild has no authority from the Government to inspect silk or silk-worms' eggs belonging to those who are not members of the guild, that the guild cannot oblige any Japanese merchant to enter it or to remain therein without his consent, and that it is not permitted to exercise any restraint over the dealings of those who do not belong to it.

The Undersigned having thus the satisfaction of finding that the views of His Excellency are in accord with their own on this subject, they have agreed to an exchange of notes which shall record the resolution of the Japanese Government to redress the abuses complained of.

The Undersigned, &c.

TRANSLATION.

December 24th, 1873.

I beg to acknowledge the receipt of the communications dated the 15th instant signed by the honourable representatives of the Treaty Powers, stating that the Kiito Aratame Kuaisha (Silk-Inspection Guild) established at Yokohama has in violation of the Treaties obstructed the commerce of that port.

I have attentively considered the contents of your letter and the statements set forth in the Memorandum of the Yokohama General Chamber of Commerce, and I beg in reply to state as follows:—

As to the establishment of the said Guild, the production of the Raw-silk which has from past times been a chief (celebrated) staple of our country has year by year become careless, and its quality deteriorating its reputation has decreased and the exports to foreign countries have fallen off. Our merchants consequently petitioned for leave to enter into mutual combination in order to bring the production to the highest state of perfection, and to take complete precautions against this

state of things for the future. Sanction was consequently given, but the Japanese Government has not for a moment sanctioned such illegal acts as the placing of restrictions on other Silk-merchants, the making them bring their Silk or Silk-worms' Eggs to the said Guild for inspection, or the compelling them to submit to the rules of the said Guild.

All Guilds being established at the option of the parties forming, they cannot force (others) to become members or forcibly detain them as members of a Guild if they do not break its regulations. As all merchants are not members of the said Guild they have the right of trading freely with natives and foreigners without having their goods examined by the Guild. The Japanese Government has already issued the enclosed Notification and will diligently take measures for removing those obstructions to trade of which the honourable representatives have complained.

With respect,

(Signed) TERASHIMA MUNENORI,

*Minister for Foreign Affairs.*

His Excellency,

SIR HARRY S. PARKES,

*&c., &c.*

Note.—The same letter has been addressed to the other Representatives.

Copy.

TRANSLATION.

NOTIFICATION.

TO THE *Fu* AND *Ken*:—

Whereas it has been stated that some of the Silk-Examination-Guilds established in various places have sometimes forced independent merchants to enter them or have placed restrictions on the business of persons not belonging to the guilds, notice is hereby given that as the guilds are established on the principle of mutual agreement alone, not only is it at the option of each individual that he enters the guild, but he may leave it if he do not violate the guild rules, and may also freely enter into dealings with natives and foreigners whether he belong to a guild or not. Further, no obstacles are to be offered to the dealings of persons not belonging to a guild in respect of the transmission of their goods to an open port.

(Signed) OKUMA SHIGENOBU,

*Minister of the Treasury.*

December 18th, 1873.

Asiatic Society of Japan.

A Regular Meeting of the Society was held on the 22nd December, 1873, in Room 19 at the Grand Hotel—the chair being taken at 8.30 p.m. by Dr. Hepburn, President of the Society.

The minutes of the previous Meeting were read and approved, and the names of the new members were announced as follows:—

Hon. John A. Bingham, Rev. A. C. Shaw, and Messrs. J. H. Gubbins, Jas. Davison, John A. Fraser, Jas. McRitchie, E. F. Kilby and H. Macarthur. Also Hon. Arinori Mori—being the first Japanese member of the Society.

The Committee on Revision of the Constitution and By-Laws reported progress.

The Committee on the Library and Museum announced that Room No. 8 at the Grand Hotel had been fitted up and was ready for the reception of such Books and Specimens as might be presented. The Room is to be opened daily from four to six o'clock; and donations in money for the increase of the Library would be especially opportune at this time.

Mr. Brunton then read a paper on "Constructive Art in Japan;" for which the President returned him the best thanks of the Society; remarking that the only point to which he would venture to take exception was as to the comparative frequency of earthquakes in recent times. He was inclined to think that the more frequent mention was owing to greater carefulness of observation and record.

Mr. Syle inquired, whether it could be made to appear that the Japanese followed any "type" in their buildings as did the Chinese, who took the tent as their model, and hence the unmistakable catenary curve in all their roofs: also the construction, as of wood-work, though the material might be stone, in all their memorial gateways. He suggested also that the prevalence of typhoons, as well as earthquakes, might impose conditions which would influence the architecture of Japan; he inquired whether it was true that the Japanese were ignorant of the proper season for felling timber?

Mr. Brunton replied that there seemed to be no predominating type of building; and that as to the liability to typhoons as affecting the architecture, a greater annual force of wind-storm was felt in the British Islands than in the Japanese. With regard to the felling of timbers, while great recklessness was witnessed now, there must have been better care formerly, as evidenced by the entire soundness of many wooden structures which were erected hundreds of years ago. At present it was difficult to get seasoned timber. He had pleasure in presenting to the Society's Museum specimens of various kinds of wood to be found in the Island of Yezo.

Dr. S. R. Brown remarked on the slightness of the supporting timbers in many temples, while the roofs were immensely heavy—the Japanese themselves giving as a reason for this, that the whole structure was less affected by earthquakes.

Mr. Mori stated that in former times thatched houses were universal—not only the roof but the sides also being of thatch; the tent-form structure came from the South. He remarked also that, as to the occurrence of earthquakes &c., the earlier Japanese records were not considered reliable.

Mr. Boyle said that Japanese workmen were excellent joiners, but not such good carpenters; still less, architects. In their work, though often well put together, there was much waste of material, and faulty distribution of strain. This applied also to their structures in stone, and they showed much want of knowledge as to how to make the best use of their very valuable quarries.

Mr. W. H. Smith spoke of the excellent lumber which was procurable here some few years since; and argued that in earlier times, when the demand for building-materials was more moderate and steady than of late years, there must have been both skill and knowledge exhibited in providing it.

Mr. Howell remarked with satisfaction that the name of a Japanese gentleman had been inscribed on the roll of members. Mr. Mori has shewn himself anxious to promote the cause of education and progress in this country, and though the speaker had not been so fortunate as to agree with Mr. Mori in the scheme with which his name had been prominently connected, no one could doubt the earnestness of his views and efforts. Whatever we might bring to the Japanese, it was certain that much of that information which we sought here must come from them, and it was thus encouraging to find them coming among us for the purpose of such discussion and investigation as was the object of the Society.

After the termination of the discussion, a question was raised as to whether or not it would be better for the Papers to be printed, or made accessible to members previous to being read. On the motion of Mr. Boyle, seconded by Mr. W. H. Smith, the consideration of this question was referred to the Revision Committee.

### CHURCH MEETING.

The adjourned General Meeting of subscribers to the British Episcopal Church Establishment of Yokohama, was held in the Court Room, British Consulate, yesterday afternoon. There was not a large attendance. Russell Robertson, Esq., H. B. M.'s Consul, occupied the chair, and, after stating the object of the meeting, which was to receive the Report of the Trustees of the Church, together with the Treasurer's statement for the current year, called upon Mr. E. D. Murray to read the Report and Statement of accounts.

The report was then read; we give a synopsis of it as follows:

General Report of the Treasurer and Trustees of Christ Church, Yokohama, for the year 1873.

To Russell Robertson, Esq., H. M.'s Consul, Kana-gawa.

Sir.—The Treasurer and Trustees of the British Episcopal Church Establishment at this port, in closing their year of office, beg to present their Report, and the accounts for the past year, which they trust may be found in order.

The accounts may be summed up as follows:

The "General account" shewing total receipts inclusive of the Government Grant for 1872 and all monies and subscriptions received during the year from British and other subjects ... .. \$5105.85

Against total expenditure ... .. 5317.35

Leaving a balance due the Treasurer ... 211.50

It may be stated that in the sum total of expenditure is included the Chaplain's Salary, interest on debt \$132, and a balance due on last years account of \$430. Deducting the account of interest as well as the sum really belonging to last year's accounts, and a sum of \$225 remitted to the Rev. Mr. Bailey, the incidental expenses for the year only amount to about \$750.

The contributions from Pew Rents during the year have been

From British subjects, ... .. \$2,293

" other than do. do., ... .. 570

and these amounts are much the same as last year,

From British subjects, ... .. \$2,245

" other than do. do., ... .. 570

Before passing from the accounts we may notice that the sum promised to the Revd. Mr. Bailey, as compensation when giving up his chaplaincy at this port, was finally paid off in Sept. last, when the last remittance was sent home.

The Report then goes on to notice the appointment of Revd. Mr. Syle, who come over to take the place of Mr. Bailey; calls attention to the removal to the Organ to another portion of the Church, under the superintendence of Mr. Syle, (without cost of the Church), and takes the opportunity of tendering the thanks of the Committee on behalf of the Church community, to Mr. Howell and the other gentlemen who have kindly given their services in conducting the musical services. The Sunday School, it appears, has been well attended since its opening last year. The Consul is desired to convey to H. M.'s Government the best thanks of the Committee for the liberal way in which it has responded to the appeal made by them last year.

The Committee then call attention to the important fact that on payment of the sum of £800, (the Government contributions of £400 per annum for the years 1873 and 1874), the grant in aid by H. M.'s Government will cease.

The Report concludes as follows:—"The Trustees ask special attention to the foregoing, as it will be a very important change in the working of the Church Establishment, and earnestly crave the cordial support of all interested in the Church, and the serious consideration of the meeting as to what steps must be taken to meet the exigencies of the future."

T. JACKSON, Treasurer.

E. D. MURRAY, } Trustees.

J. M. SMITH, }

After some general comments it was proposed by Mr. J. Mackrill Smith, and seconded

by Mr. A. J. Wilkin, that the Report and Treasurer's statement, as read, be adopted.

Carried *nem. con.*

The Chairman said that although the business of the meeting was purely formal, and called for the purpose of receiving and adopting the report, he thought (that having been done) that there could be no objection to a proposition which Mr. Cargill, in the course of a conversation he had with him, had made; that the meeting should consider what should be done after the Government grant to the Church had been withdrawn, which would be at the end of 1874, as notified through the press some short time ago.

Mr. James said, in anticipation of the remarks of the Chairman, he had put together a few ideas or suggestions for the carrying on of the Church after the withdrawal of the grant, which he would, with his permission, read. The proposition for the future maintenance of the Church is briefly as follows:—

Put aside the government grant for the years 1873 and 1874, amounting to £800 sterling, the equivalent, in round members, being \$3600, and pay off the debt on the aisle, \$2000, and on the organ, \$1600. This would not only free the Church from debt, but also save an annual sum of \$432 for interest.

Raise the pew rents (the only source of income) from 1st January, next, to \$25 per annum for single sittings, and \$130 for whole pews; a few pews near the organ being excepted from this provision. Taking the present number of sittings let as a basis, the amount of income would be about \$4400 per annum. The current expenses hitherto have amounted, on an average, to nearly \$5000 yearly; but with a few modifications and careful management, they could be reduced to under \$4500. The present income of the Church from sittings amounts to \$2760. There are 43 pews in the Church, 6 of which are free: but if the all the pews were let at existing rates they would still be inadequate to cover the Church expenses.

Mr. James concludes with an expression of opinion that, if the Church going community will look at plain figures, they will find that unless the pew rents are raised the Church cannot be carried on, and feels sure that for the sake of a few dollars extra, yearly, it will not be allowed to fall to the ground.

Mr. James having explained the details of his plan to some of the subscribers who desired particulars,

Mr. Cargill said he agreed in the main with the proposition of Mr. James. He also thought that the British Government would be likely to pay up the £800 (due at the end of 1874) at once, if the case were properly laid before them. This had been suggested by another gentleman present, and he thought it worthy of consideration. It seemed that the amount received for pew rents at present was hardly sufficient to pay the clergyman's salary. Then there were the expenses of lighting the church, and other items. The question then arose as to whether they should raise the pew rents or go round for subscriptions.

At the suggestion of the Chairman the proposition of Mr. Cargill was put formally, and

It was then proposed by Mr. James that the Government subscription of £800 (to be received) be applied to the liquidation of the present standing debt of the church.

Mr. Cargill seconded the motion.

Mr. Wilkin suggested the adoption of a sliding scale of pew rents, which he thought would meet the approval of many who had not sittings in the church at present.

A shew of hands was asked for on the motion of Mr. James, when it was found to be carried by a majority of 5. The numbers being 8 against 3.

Mr. Cargill moved that H. M.'s Consul be requested to ask the British Government to give the promised sum of £300 in one payment, to enable the subscribers to take over at once the affairs of the church.

Mr. Jackson seconded; carried unanimously.

The Chairman pointed out that a meeting of subscribers would occur next month, for the election of office bearers, and suggested that, by sending a telegram to the home authorities, an answer with respect to the £800 might in all probability be received before the meeting.

Mr. Jackson then proposed that H. M.'s Consul be requested to send a telegram to the Foreign Office, soliciting the immediate payment of the sum of £800.

Mr. McDonald seconded the motion, which was carried.

Mr. Cargill suggested that, in the interval between this and the ensuing meeting, Mr. James' proposition be considered. In the meantime perhaps it would be well if a Committee were formed to discuss and report on the matter.

Mr. Winstanley moved that a Committee, consisting of Mr. Cargill, Mr. James, and the present Church Committee, be formed, to report fully on the matter, (more particularly with respect to Ways and Means) and on the scheme suggested by Mr. James; for consideration at the meeting to be held in January.

Mr. Wilkins seconded, and the motion was carried *nem. con.*

Mr. Wilkins said before they separated he should like to mention the great obligation the Committee were under to the Choral Society for the assistance rendered by them; their thanks were also due to H. M.'s Government for the prompt response they had made to their appeal.

The Chairman said this was embodied in the Report.

Mr. W. H. Smith, before the meeting closed, would like to say a word or two. He thought it advisable that Mr. James' proposition should be thoroughly discussed and ventilated before next meeting. He fancied the expenses of the Church might be materially reduced. There were many young men taking orders at Oxford and Cambridge, who would be glad to accept a salary of £300 a year, with house, and other privileges. This would admit of a saving of \$1,500 per annum; that with the \$400 for interest saved, would make up \$1,900, about the amount granted by Government. This would do away with the necessity of raising the pew rents from ten to twenty-five dollars per sitting, which was altogether too much.

The meeting separated after some general conversation.

### CORONER'S INQUEST.

Yesterday afternoon at three o'clock an enquiry was instituted by Russell Robertson, Esq., H. B. M.'s Consul, to ascertain the cause of death of William Wishart, a Ship Carpenter, who was found dead in a cell at the Police Station, at about half past four o'clock yesterday morning.

The jury—which was composed of Messrs. William Curtis, John Farmer, and Joseph Higginbotham—having inspected the body, which was lying at the Police Station, proceeded to the Consulate and the enquiry was proceeded with,

Kuramochi Sadayiro, Japanese Police Constable, No. 498, cautioned:—Yesterday at five minutes past four was on duty in the neighbourhood of No. 93. Saw a foreigner lying on the road. Raised him up, but he could not stand: nor did he seem able to speak. Put him in a jin-riki-sha and had him conveyed to the police station; the two jin-riki-sha men assisted me. Have recognised the body as that of the man I conveyed to the police station. His eyes were much discolored when I picked him up, and his lips were purple. There was foam issuing from his mouth.

To Jury.—The man appeared to have been prostrated by sudden sickness. Delivered him over to the Sergeant of Police. Did not mention to him my impression about the man's sickness; merely delivered him in to the Sergeant's charge.

W. T. Buckle, M. D., sworn:—At the request of H. M.'s Consul made the *post-mortem* examination of the body of the man now lying at the Police Station. There were signs of contusion about the eyes and mouth of deceased. On examination found the lungs to be congested, especially the right one. There was a state of fatty degeneration of the liver and kidneys; also a fatty degeneration of the heart. These appearances were quite sufficient to account for death; especially if the man had been in a state of intoxication previously. (To Jury.)—It is possible that death might have been hastened through deceased having been put into a cold cell. It would have been better had immediate medical advice been taken, but it is difficult for a police officer to determine the necessity for doing so.

Mr. Higginbotham said deceased had been in the employ of Messrs. Whitfield and Dowson until Dec. 17th. He came to their office at the end of the month looking very ill. When he (Mr. H.) heard of the affair, he sent a man down to the Police Station, and found deceased lying in a cell, covered with a thin piece of blanket.

Dr. Buckle, to Coroner:—The immediate cause of deceased's death arose from congestion of the lungs. Could not decide from the *post-mortem* whether he had been drinking; if he had been it would be an additional cause of death.

Police Sergeant Francis Chester, sworn:—Yesterday, about four o'clock, the man was brought to the Police Station in a jin-riki-sha by the Japanese Police, charged with being drunk and asleep in the street at No. 93. Took the charge and confined him in a cell. Between 7 and 8 o'clock he woke up, and asked for a drink of water. It was given him, and he laid down and went to sleep. Visited him at half past ten when I returned from going the rounds. He was awake, and asked for a drink of water then it was given to him. The constable who came off watch at 11 o'clock also visited him; it is a usual thing to do so. The officer who came off watch at 10 minutes past three p.m., also visited him. About half past 4 o'clock had occasion to get up, and visited him; found he was dead. At once sent a constable for a doctor. The doctor did not come then. Dr. Buckle came at half past nine this morning.

To Jury:—The man spoke to the policeman who visited him at 11 o'clock, but not to the one at 10 minutes past 3. He seemed to be sleeping very soundly. When the man was brought to the station he appeared to be very drunk; as if he had been drinking for several days. When he got out of the jin-riki-sha we had to lead him into the station. When he asked for water he made no complaint. After he had a sleep, he seemed to be quite

rational; quite a different man. He did not complain of cold. Didn't complain of anything. He had a blanket as covering; it was given to him, he did not ask for it. Folded up some waterproof capes and made him a pillow. The policeman who went into the cell at 10 minutes past 3, and thought he was asleep, saw him afterwards when the doctor was sent for. He saw him in the position in which he died. Deceased did not ask for water after 11 o'clock. When he was brought to the Police Station did not imagine he was sick at all, simply thought he was drunk. He did not speak to the man who visited him at 10 minutes past 3. When he was brought to the station he had on a dark coat and trousers, a muffler round his neck, and wore a peaked cap. He appeared to be warmly clad. He was given one blanket, a thin one. The cell would be rather cold for anyone lying there. When I visited the cell at a quarter past four it did strike me as being cold, but there is a fire in the office, and the cell is at the other end of the room. Think the blanket is supplied by the Japanese Government. There is only one thin one. There are two cells. If 3 or 4 men were brought to the station I would send the soberest of them to the prison. Five is the outside number I have had in the two cells. There would only be the one blanket for the 5 men. Cannot be sure whether it was supplied by the Government or not.

To Coroner:—Was not surprised at his speaking rationally after being asleep. It is a usual thing with runken men after having had a sleep; the cold refreshes them. When deceased was brought to the station, asked him his name; he told me, but I could not properly understand him then. Do not know the man; have never seen him before to my knowledge.

To a Juror:—If it be a fine night so that the officers don't require them we usually give the prisoners some waterproof coats for pillows. Did not put the pillow under his head as a necessity owing to his state of intoxication.

Joseph Connor, constable, sworn:—At 10 minutes past 3 this morning came off duty. It is a usual thing to visit any prisoner who may be confined in the cells; did so in this case. He appeared to be asleep, and breathing freely; bolted the cell door. Have seen the body, and recognise it as that of the man in question. Am positive he was not dead when I saw him. He appeared to be breathing; I held the lamp to his face. The cell seemed cold. Deceased had a blanket and a couple of oil coats; he did not complain of the cold. There were a couple of coats under his head.

To Coroner:—Think he had a coat over him; in addition to the blanket. Did not see him when he was brought to the station. Saw him at 7 o'clock; he was standing up in the cell and asking for water. Did not think he was sober, from the way he talked and staggered about.

To Jury:—He was not at all wild. He did not make any complaint or want to know why he was locked up. (To Coroner:) Have seen the man before, about Messrs. Whitfield and Dowson's premises.

John Ronald, sworn:—Don't know much about the man. First met him about 2 months ago; have been in his company several times since. He belonged to Scotland, and was working for Whitfield and Dowson for some time. Yesterday morning saw him in the street. He was just recovering from a fit, and two people were holding him up. Don't know the name of the street. Saw him on Tuesday night. He told me two persons had been quarrelling on the previous night (Monday), tried to separate them, and was struck in the eye. Never saw him the worse for drink. On account of the

New Year's holidays he had been drinking more than he had used to do before. Never had been much in his company. Never saw him so much under the influence of drink as to be staggering about.

To Jury:—Am positive he was not under the influence of drink when I saw him yesterday morning. First saw him, yesterday morning, at 9. When he had the fit it might be about 10 or 11 o'clock.

Benjamin Thomas Ford, sworn:—Saw the body of deceased this morning at the Police Station. Recognize it as that of Wishart.

To Jury:—The cell struck me as being very cold. Thought it a miserable place. The body was covered with a piece of an old rug, or something of that kind. A policeman had come up to Whitfield & Dowson's, asking for someone to go down to the station to endeavour to recognise the deceased. I went down for the purpose. Deceased was working about a week at Yokoska.

The Jury, having considered their verdict, found as follows:—"The deceased, William Wishart, died on the morning of this, the 8th day of January, 1874, between the hours of 3.10 and 4.30 A.M., at the municipal lock-up in Yokohama; death resulting from natural causes."

The following rider was added:—

"The Jury feel it their duty to draw attention to the inadequate supply of blankets provided at the station, and request H. M.'s Consul to bring this matter to the notice of the proper authorities; as also the desirability of keeping the cells at a fair temperature of warmth during cold weather, and of seeing that there is proper ventilation in summer."

### Correspondence.

To the Editor of the *Japan Gazette*.

SIR,

As your sporting representative, I attended at the old Coffee House on Christmas Day, to witness the meet for the Pony Paper Hunt; and a grand and exciting scene it was, I can assure you. By three o'clock p.m., the road was blocked up by a crowd, composed of the élite of Yokohama; some in carriages, some mounted, whilst the greater portion were on foot, ready to take short cuts and view as much as possible of the proceedings, and get rewarded by seeing a spill or two.

At the word "go" a field consisting of Messrs. Buckle, A. Brent, Hudson, Bennett, Sandwith, Hungerford, Graves, Sharp, Blanchard, Hayne, Black, and a few others whose names I do not know, (but all more or less ambitious of winning the Silver Cup presented by the Stewards of the Race Club) went off at what I call a most leisurely pace. The scent-paper was soon found, at a well known old corner, famous, in many a previous hunt; but, the first bank looking decidedly ugly, and a rapid sifting took place, which reduced the numbers considerably.

Messrs. Bennett and Buckle, who were as usual well mounted, here gained a fine start; the remainder of the field, losing the original scent at the rope walk and finding a new one, went for a ride on their own account, only checked in their wild career by the cliff overhanging the Canal.

The paper was laid from the rope walk down to the wishing bridge; thence, across the road, on to the hills over the Rifle Range across to the right, twisting and turning about in a marvellous manner; now down a continuous terrace of banks, thence over the paddy up on to the high ground, eventually coming through

the plantations, were there were some good stiff banks, down on the Rifle Range close to the Butts. The water jumps finished a fine fair run, and Mr. Abbott, (who rode his famous steeple-chasing pony *Haut-ton*, of Shanghai reputation), deserves the best thanks of the hunt for laying such a capital course. Mr. Bennett, who rode *Kingcraft*, and Dr. Buckle on *Swop*, finding that they had the race much to themselves took it easiay, finishing in the order named—I am afraid it must have been somewhat 'ARROWIN' to the feelings of Mr. A. Brent who came in third.

After a long interval a series of be-draggled objects made their appearance, whose racing down the flat forcibly recalled to my mind younger days at *Hampstead* and *Blackheath*, where everyone rode another's animal, and the last was wont to be the winner. I cannot say that I saw the other hunt, but, from what I hear, everyone claimed to be the winner; so, to avoid disputes, it will come off another day. In the first mentioned hunt, 20 minutes was the time and something between 3 and 4 miles the distance. You may depend on my attending the next meet which I hear spoken of as likely to take place about New Years Day—when we may hope for another good run.

Yours obediently,

"SPORTING TOM."

Boxing Day,  
1873.

To the Editor of the *Japan Gazette*.

YEDO, 7th January 1874.

SIR,—I purpose shortly giving two lectures, both here and in Yokohama, of which due notice will be given in the public press; the result of a six years' patient research and travel in the country, including Nagasaki, Shimonoaki, Osaka, Kobé, Kiyoto, Nara, Yamashiro, Bansho, Yamato, Awaji Sima, Yedo, Mito country, and Iwasaki Ken—about 135 miles to the north of Yedo—and the surrounding districts of most of those towns; which places include the early locations of all the Mikados from Jinmu Tenno down to the present time; and should you have space in your paper I will be much obliged by your kind insertion of the result of my labours; the first part of which I now send you, as it will give your readers an opportunity, after a perusal of my collection of facts, of judging of same, and arriving at a logical conclusion for themselves.

I remain,

Sir,

Yours faithfully,

N. McLEOD.

The identity of Jinmu Tenno, his samurai and their descendants—the Mikado, Miya, and Kugé Sama, and the nine oldest Kokushiu and their relatives, the Tozama Princes—with the ten lost tribes of the Children of Israel, beginning with a short account of the different races in Japan.

### CHINESE.

At a very early period a colony of six hundred young men and women arrived in this country from China, hence the Chinese features occasionally to be met with; but they cannot by any means be termed the national features of the country. For some years I have noticed the pilgrims on their way to Isee, and the two summers the Exhibition was opened at Kiyoto—where I latterly took a house and remained for some time—I had daily opportunities of seeing people from all parts of the country, and I cannot say that I saw much of the Chinese cast of countenance; and, wherever

I have seen it, there could be no mistaking the form of the eyes and Chinese expression. There are more Chinese features to be seen about Nagasaki than in any other parts of Japan; and Kaempfer had good grounds for scouting the then current opinion that the Japanese were of Chinese origin. I think all the historians who are of the opinion that the Japanese are of Chinese descent must have based their opinion on from what they saw in Nagasaki, where a colony of Chinese have been established for a very long time; and few of them had the opportunities that Kaempfer had of seeing the country, with the exception of the Jesuit Fathers.

### COLOURED OR BLACK MEN.

At a very early period a colony of black men were said to have settled in Japan. The Japanese are said to have rooted them out, but I have met several Japanese, especially in Bansho, with the woolly head and Negro type of countenance. The Japanese termed the coloured men "black devils," and afterwards, as a mark of distinction and to show their high opinion of christians, they likewise termed them devils; in contra distinction to the degraded opinion they then had of themselves, as when angry they call each other "Chi ku shiya," (beast). The Jews always called all Heathen nations *dogs*, and brought no Idols of wood or stone to Japan with them, and not till afterwards were they introduced; and we can only suppose that in Jin-mu Tenno's time they were not unacquainted with the well known fact that all Idolaters are brutish, or they would not have called the aborigines of Japan "Ainos." These two words may be said to have the same meaning, as the serpent, the devil, in the garden of Eden before he deceived Eve was termed a beast (Aahi Yotzu, or a quadruped).

He may, with truth, be termed the most distinguished foreigner in this heathen land, and I am thoroughly persuaded that, until he receives his credentials and marching orders and becomes Inkiyo,—that is, confined to his house or retires from business, under the title of the most Extinguished Foreigner—that both Japanese and foreign merchants will have a heavy amount at the left hand, his side, of the ledger. I rather suspect he has been throwing dust in the eyes of the latter; but of course they would not credit it, he is such a venerable book keeper.

It has been a most ancient and time honoured custom in Japan for the Emperors, when they wanted to get quit of an ugly customer in the shape of a powerful Daimio whom they could not make a head shorter, to create him Kubo Sama, and under this title he became Inkiyo. Most of them were long headed customers and deserved the title; but sometimes a long sword is an irresistible and charming persuader, and the only necessary qualification or recommendation to such a high honour. If the Japanese would only take the hint and make Beelzebub a Dia Butz Kubo Sama, and send him to the king of the Koreans with the title Ko-no Diabutz—formerly sent them from that country—all his fatherless children would soon come to grief in Japan, and the treasury would soon begin to fill, as the Japanese would no more spend their money in buying foreign toys and Chinese vermin. And when the coin did go out of the country there would always be value received, which, if necessary, could at any time be re-exported and again turned into coin with the light of day on it, instead of the visage of the prince of darkness, whose majestic form may be seen everywhere; on the kinsatz above the temples and Miyas, shewing the poor deluded people his way to heaven. I wonder the Japanese

never smelt brimstone, when Isanami, the mother of Ten shin-go-dai shin, took that road to Heaven and landed in the other place, termed by the Japanese "the dirty regions." As she did not come back, her husband Isanagi (who had evidently smelt the mineral,) had more sense than to take the broad road. He knew all the ropes and was too old a sailor for that! Catch him make any treaty with the powers of the lower regions without some back doors to it! But evidently he did not make a long stay, only a fivine visit. He sent up his card, and, like the Irish midshipman who was blown up in an engagement, and left in such a hurry that when he descended through the skylight into the Admiral's cabin he politely apologized to that dignified personage for not having had time to finish his toilet. Isanagi did not let grass grow under his feet, with his Xantippe, accompanied by all the thunderers, and the whole army of the dirty regions after him; and he never stopped to wash his face or change his apparel till the light of day and distance lent enchantment to the view.

The study of that old serpent the devil in all his shapes and forms is not uninteresting, and in the land of the rising sun his name is legion. In one temple in Kiyoto there are no less than San-man-san-shen-san-biya-ku-san-jiu-san (33,333). These are all in the shape of Idols, a whole army of them; one thousand gilt generals and the rest rank and file, each one at the head of his company. The father, or rather the grand-father of these, is called Nara Dia Butz, which may be termed another name for the father of lies; and whenever a Japanese spins what Jack would term "a long bender" the Japanese say "Nara hodo," and to a long Saghalien ditto, Nara ditto. He came here from the Corea when a very small boy, and the country air seems to have agreed with him, but of course he has had plenty of time to grow. He must have consumed an enormous quantity of his favorite mineral mixed with treacle and put in with the spoon, for on sounding him there was nothing in him. The Dia Butz at Kamakura may be termed the Nara Dia Butz noko, or his offspring, and his mother must have died when he was very young. At all events he could not have sucked much of his mother's milk; and I rather suspect the young scape-grace must have tried to suck his father, that is, to pick up all the cash; and not unlikely he was sent to suck the Shoguns while the father sucked the Emperors; and perhaps that was the way the Emperors left and went to Kioto, and the Shoguns to Yedo; but history doth not narrate. The number of ko no Dia Butz (Dia Butz children) in Japan perhaps may account for the scarcity of milk in the country. They are the driest, and the Bonzes (vulgarly termed Böös) the thirstiest lot in Japan; and, to use a vulgar expression, so soon as the Japanese find out that their enemies the Coreans by sending them Dia Butz have sucked them in, he and all his fraternity travel; and so long as the Japanese retain him in any of his forms he will weaken their hands and divide their counsels for good. A bundle of rods in the Devil's hands must come very heavy on the fool's back. When the samourai of Jin mu Tenno first came to this country the horn, or horns, of the Devil were lifted up on high; see early pictures, where, in the shape of a firey horned serpent, he is carried as an ensign held above the Emperor's head. He might in this form in truth be termed Kubo Sama, or keeper of the Emperor's head. The ancient Kings of Media also used him as a war standard, their crest being a biting serpent. In some Miyas he may be seen with a sword, biting it with his teeth. He may also be seen in this form in old pictures on Japanese helmets; and the Empress in olden times wore him as a head dress.

His most popular form, however, is the dragon; in this shape he has transformed himself into an angel of light, and in China and the Corea he is represented with a claw extra; and truly he has all these countries in his clutches. After a long and careful inspection of his mouth I came to the conclusion he was a very ancient customer, and, if off the chain, no very canny; and from the number of times he had changed his skin he, I concluded was very aged, no less than 5877 years old, (see 3rd chap. Genesis). He was then compelled to eat dust, which he has been busy ever since throwing into the eyes of all—the foolish, and wise, and prudent of this world. See also 18th chap. of 2nd Kings, 4th verse; where the Israelites worshipped him as a brazen serpent since the days of Moses, and good King Hezekiah broke it in pieces and called it Nehushtan Brass.

No wonder, then, with his long pedigree he has been admitted as a most distinguished Foreigner and guest of the proudest nobles ever the sun shone on; and it is just because he is such a very ancient customer that the Japanese pay him so much reverence. They have exalted him above their Temples and Miyas with the Shishi or Meteoric Stone, which may be said to have two meanings, one as an emblem of authority or sovereignty given him from Heaven, and the other as a light. This stone or light, then, may be said to be his credentials, but, alas, unfortunately it is not the true light. It has been proved to be the false light, as it directs all its victims to the left hand, which in Japan is considered the place of honour. For 2500 years he has been throwing dust in the eyes of the Japanese and made them stone blind to the truth.

This is a subject I would be the last to treat with levity. On the contrary, we ought all to sympathize with the Japanese, as our forefathers were just as foolish; see the remains of the large serpent made of stones, in the south of England, which our forefathers worshipped. And they also were then sunk in a low degraded state, and with truth could likewise be termed brutish until the Bible, the truth, entered in; and from being painted savages inhabiting islands like Japan the sun may now be said never to set on Her Britannic Majesty's dominions. And I trust I shall be able to prove that that book which the fore fathers of Jin mu Tenno discarded, the early part of which was written by the prophets of their ancestors, is their own book, which has made England and her early sons America, a great and happy people; and they would be truly ungrateful and not worthy of the name of Christians if they did not obey the command God has given to the Nations to proclaim the truth to the lost tribes of Israel, to be found afar off amongst the gentile heathen in the Isles of the East, and who at present worship God as the Unknown God (but not righteousness and truth) under the same titles as in the book of Daniel, and who have the old Jewish temple instruments, the Psalter, Harp, and loud Timbrel. But ever since Jin mu Tenno's time this worship has been defamed by the Sun worship, and the erecting of Miyas or Misasaki where the carcasses of the dead Emperors are buried along side of the Shin tau Temples, and have defiled them. These are an exact facsimile of the high places in Israel of old, which I will prove, with the exception of the Golden Calves, and these may be said to be in Tenjin-sama Miya.

In Japan, like Israel of old, crucifixion is only a murderer's or malefactor's punishment; and all samurai when guilty of those crimes commit Hara Kiki, to avoid such an accursed death: which saves their family from reproach and ruin.

I would not have taken so much trouble in describing the devil in many of his forms, but that it is necessary thus early to unmask him, and show him in his true colours, that the saddle may be put on the right horse.

I was much struck with the remarkable coincidence in the similar words put into the hearts of the Jews of Judah by the Prince of Darkness, when they said of our blessed Lord, "He hath a devil, away with Him, crucify Him." The Jews said of the Samaritans, "they also had a devil:" also "no man spoke openly of him for fear of the Jews."

No Japanese dare speak openly of Christ out of any foreign settlement, for fear of the Jews.

A foreigner may address them, and everywhere obtain an attentive audience, but a single whisper, and all immediately vanish for fear of the Jews.

Before the powers that be were strong enough, many Japanese Christians were crucified.

And to this day they say of every Christian "he hath a devil." The national belief is, that Christians can become invisible and change their bodies.

B.C. 730 the ten tribes were carried into captivity, and, if you take 660 B.C. from that date, you have 70 years as the result, so that their captivity may be said to have lasted the same time as that of their brethren of Judah, as B.C. 660 they arrived in Japan.

Kaempfer mentions that the distance between Babylon and Japan could be travelled in six months. I have been able to trace the lost tribes to B.C. 660, and, three years after they arrived in Japan.

At the date of the Captivity, B. C. 730, Jin Mu Tenno, the first Emperor of Japan, was only a child. Here they have remained ever since B. C. 660, each tribe separately, in their walled cities with their nobles at their head.

The ancient kingdoms of Assyria, Egypt, and Media, and the more modern ones of Greece and Rome, during that time have all passed away, and even China has several times changed her dynasty; but the Mikado of Japan is the only living potentate who can show his pedigree in an unbroken line from Hosea, the last king of Israel, down to the present day, of which I have undoubted proofs. And they, long lost Israel, stand a living evidence of the truth of the Bible.

Some years ago it was told the Marines that, when a certain distinguished foreigner arrived in the Corea the Bras Band began to play, and doubtless the King of Corea must have thought, from the amount of Brass, (bounce) gold lace, &c., &c., about him, that he was entertaining King James the First of blessed memory, or some other distinguished Royal personage with a fleet at his back lying outside.

This little episode occurred before the Coreans smelt French powder or tasted Yankee pills; and, if that aristocratic Beefeater had only had H. B. M.'s credentials after having had his soup well peppered, and with his paper fleet outside, he might have bounced them into a Treaty that would have thrown all the foreign Ambassadors completely into the shade, and sent them for the good of their health to luxuriate in the Parks. But these big bugs may be said to be always in clover, no matter how trade is. If they were all made sleeping partners in the different foreign houses a sleeping partner would be a curio in Japan after some years of bad trade and heavy engagements to meet. Sleepless partners have rather been the order of the day. Though the principle, as a rule, is very bad yet they would learn to know all the ropes and become very ancient, even the Inquisition could not tell them anything they did not know. The Japa-

nese noblemen now do not consider it *infra dig*, to become Nipon Baba. A Minister, to be able to speak eloquently, must be able to speak feelingly.

Truly some of the manners and customs of these two ancient Eastern countries are peculiarly interesting to those not immediately concerned.

In Japan whom the Emperor delights to honour he makes a Kubo Sama, a head longer; but in the Corea the custom is quite the reverse, all the Ambassadors sent there are made a head shorter, which may be termed an extinguishing title.

Beelzebub, if sent to the Corea as Ambassador, would doubtless be received, and if the King of the Coreans politely took his hat off it is only to be hoped the head would be in it. After that we might heartily wish him all the honours the Corean court could confer on him.

#### THE AINOS

May with truth be termed the aborigines of the greater part of Japan, as the same kind of features, more or less, may be seen scattered nearly all over the country.

(To be continued.)

NOTE.—There is no such word as Sintoo in the Japanese language; the fact of it not spelling with the Kata Kana is a proof of this. The proper word is Shinto (Shindo). Shin means "god" and Do "way," and it is applied to God, the Creator of Heaven and Earth. Shin-to then means the "way of God," but the word is spelt in Kata Kana *Shi n ta u*, but pronounced Shinto.

### Law Reports.

#### In H. B. M.'s Provincial Court.

Before N. J. HANNEN, Esq., Actg. Asst. Judge.  
Friday, January 9th, 1874.

J. R. Lucas, Master of the British Barque *Vanguard*, was this morning charged, at the instance of the Japanese Government, with having, on the 31st December last, unlawfully broken certain seals which had been placed on the hatches of said vessel by the Custom-house officials; in contravention of the Trade Regulations laid down in the Treaty between Great Britain and Japan.

Mr. F. J. Lowder, Barrister-at-law, appeared to prosecute on behalf of the Customs authorities. Capt. Lucas conducted his own case.

Defendant, in reply to Court, admitted the charge, but denied any liability.

Mr. Lowder, in stating the charge against defendant, said that, on the evening of 30th December last, the hatches of the *Vanguard* were duly sealed up at sunset by the Custom-house officials, this being the usual course of procedure; and, that, on the following morning (31st) before sunrise, said seals were broken by defendant, or with his consent and by his orders, and the hatches opened for the purpose of discharging cargo.

At the request of Capt. Lucas the charge was laid against himself; the Chief Officer being really the person guilty of the alleged offence.

Adatchi, a Custom-house officer, cautioned, said he remembered the evening of 30th Dec. last. Was on board the *Vanguard*. It was his duty to seal up the hatches in the evening. Did so. Went on board the *Vanguard* again on the following morning. Left the Custom-house at 6 o'clock in the morning to go on board. Went by a Japanese boat, containing three sendoes. First went on board the *James S. Stone*, then it the *Corea*, and after that to the vessel in question. Could not be positive but thought to would be seven o'clock when he first reached the

*Vanguard*. His duty was simply to go on board and break the seals. (In reply to a question by Mr. Lowder witness here stated that, when he first reached the *Vanguard* it was 15 minutes past six.) Went purposely to break the seals, but when he reached the vessel found they had already been broken, and about a Japanese cargo boat full had been unloaded. There was no European officer of the ship on deck; asked the headman of the Coolies for the Captain; saw him. The Captain asked him what was the matter. Replied, "I find that the hatches, which were properly closed last night, have already been removed; how is that? I have come to open them." Witness does not understand English very well, but understood the Captain to say it was a mistake. It was not witness's duty to do more than break the seals, and therefore concluded to hold no further talk with the Captain. Came ashore and reported the circumstance to the chief of his Department, Siunura Sanzun. Returned on board the *Vanguard* in the steam launch with two other officers; the sun was not then up.

By Captain Lucas:—Does not particularly know the time of reaching the *Vanguard* on the first occasion, believes it was about a quarter past six.

By Mr. Lowder:—Thinks it could not have been more than a quarter past six when he reached the *Vanguard*, as the regulations are that they should leave the Custom-house at 6 o'clock, and he looked at the clock there when he left. The *Vanguard* was only the third ship he had visited.

Gonjoro, Custom-house officer, cautioned:—Remembers going to the *Vanguard* on the morning of the 31st December last, in company with Adatchi and Fujda Momoko, two other officers. When they got alongside the *Vanguard* the sun was not up. From the elevation of the Hatoba judges the sun rises at about 15 minutes past 7. As he went into the cabin to see the Captain the clock just struck seven.

By the Captain:—Heard the clock strike 7, and pulled out his watch to verify the time. Is certain it was the clock that struck.

Defendant here stated that they had no clock on board that struck the hours; and, furthermore, that they were at breakfast when this witness came on board, at a quarter past 8.

Fujda Momoko, custom house officer, cautioned:—Went on board the *Vanguard* on the morning of 31st Dec. Observed the clock on board, the hands were pointing to seven. The Captain was engaged, in a side room, writing a statement that the hatches had been opened by mistake.

By His Honour:—The Captain had told last witness (Gonjoro) that he was writing the statement.

By Mr. Lowder:—Brought the letter ashore, to the Custom House authorities.

By the Captain:—The Captain's family were inside the room at breakfast.

Mr. Lowder here handed in to the Court the letter referred to.

William Cozens, Chief Officer, *Vanguard*—Remembers the morning of 31st Dec. First saw the Custom-house officer at 22 minutes to 8, by the clock. On former occasions they always came before half-past 6. Remembers a conversation he had with the Captain on that morning, with reference to the officials being so late. Went to the Captain at half-past seven, stating that they had not arrived, and ask him if the seals might be broken. He demurred awhile, but at last said. "Well, all right, do so; they seem to have forgotten us." Had the hatches lifted. On one or two occasions the hatches had been closed so that they could not be lifted without breaking the seal,

but generally they could be opened without the necessity of touching it. (To Capt. Lucas) You pointed out to an officer, on a former occasion, the farcical way in which the hatches were sealed. There is no clock on board which strikes, to my knowledge. It was a quarter past 8 when the steam launch with the custom house officers came alongside. Am certain of this; the hands had gone to breakfast some time before that.

By Mr. Lowder:—Knew it was 22 minutes to 8 when the officer came on board; looked at the clock. The Captain's family usually sit down to breakfast a few minutes after 8. Eight o'clock is the usual hour.

William Hyde, Compradore, sworn:—Remembers going on board the *Vanguard* at half past seven on the morning in question. The Captain was just having the hatches taken off; remarked to him that the Custom-house people must have forgotten to come on board.

By Mr. Lowder:—It struck seven bells before I got alongside. Saw no Custom-house officers on board. The mate and the hands were taking the hatches off.

James Middleton, Carpenter of the *Vanguard*, sworn:—Recollects the morning in question. As near as he could guess it was about half past 7 when the officers came aboard. Heard the steamer's bell strike. When the steam launch afterwards came alongside was at breakfast; the hands were also at breakfast. Knows of no clock aboard the *Vanguard* which strikes the hours.

Wm. Hyde, recalled:—(To His Honour.) When I said I heard seven bells struck I referred to the bells of other vessels.

Jas. Middleton (examination continued):—I heard the man-of-war strike 7 bells. Don't know whether there had been any cargo discharged into the cargo boat before the officers arrived; should have seen it if there had been.

Capt. Lucas, in reply to court, admitted breaking the seals about half past seven.

William Cozens, recalled:—The vessel had been discharging cargo 5 or 6 days before this happened. The Custom House officers came off every night and sealed the hatches, and broke them again next morning.

Capt. Lucas, in defence, said:—On that particular morning there was a nasty, short sea. The cargo boat was alongside. The mate came and said—"The Custom House people must have forgotten us, other ships are discharging and cargo boats going ashore loaded. It's coming on to blow, don't you think we'd better take off the hatches?" Replied,—"There can be no harm in that, as the sealing appears to be done in such a loose manner; especially as it is coming to blow. The Custom House boat has to pass the *Vanguard* to reach the other vessels, and therefore they must have forgotten us." The first hatch was taken off at 25 minutes to eight. The Custom House officer who first came went away immediately, and returned soon after with two others. Explained the circumstances and apologised to the officer, who said, "Well, write a letter to the Commissioner of Customs and explain the matter."

Mr. Lowder, in reply to a question by His Honour, said he was not instructed in the matter, but believed that no copy of the Harbour Regulations were put on board vessels.

The Court here adjourned until 3 o'clock.

On re-assembling

Mr. Lowder, in reply to His Honour, said it was the contention, on the part of the Customs, that if the hatches were opened after sunrise the defendant would still be liable.

His Honour then proceeded to read his decision, which was as follows, viz:—

"I think that, under the wording of the Order in Council, and the Trade Regulations forming

part of the Treaty of Great Britain with Japan, I must find the Defendant guilty of an offence against the Treaty. I further consider that I ought, unless the Custom House refrains from asking it, to inflict the full penalty specified in the Trade Regulations.

I do not consider that the Defendant's excuse that he was ignorant of the Rules he was infringing is a valid one. He knew he was coming to Japan, and it was his business to acquaint himself with any such Regulations as might exist. Moreover, for four or five days the officer sealed the hatches at night, and opened them in the morning; so that, in fact, he must have been aware of the existence of such a Regulation as he is alleged to have infringed.

I think that his proper remedy, if an officer is late in coming to break the seals, is to complain through his Consul; and I do not think that a Captain of a vessel has a right to break the seals himself. The words of the regulation are plain, (His Honour here read Article 2 of the Trade Regulations)—I must however point out that I can see no special reason for the Custom-house asking for the infliction of the full penalty in the present case. I would also point out to the Custom-house authorities that it would be a just, and I believe it is in other ports a usual thing for them to serve on the master of a vessel entering the port a copy of the Regulations he is expected to conform to."

His Honour further remarked:—I understand that the question in hand has been differently decided by other consuls. If the Captain wishes, therefore, I will submit the case, for further consideration, to the Supreme Court at Shanghai; although I have no doubt in my own mind as to the legality of this decision. The full penalty of \$60 will be therefore enforced unless a special case be applied for within 14 days.

Mr. Lowder, addressing the Court, said he was not instructed with respect to the enforcement of the fine, but he would not fail to lay the matter before the Custom-house authorities for consideration.

Before RUSSELL ROBERTSON, Esq., Consul.

Tuesday, 23rd December, 1873.

WILLIAM ALEX. SMYTH, Japanese Light-house Service, was brought up on remand, charged with having, on the 5th day of November last, assaulted the wife of Kondo Komei, at Nabesima, with intent.

This case was originally brought up for hearing on the 12th inst., and adjourned to following day, when it was finally remanded by consent for 10 days, to allow the parties bringing the action to appear—the steamer not having then arrived.

Prisoner was defended by Mr. F. V. Dickins. Mr. J. R. Davidson appeared to prosecute on behalf of the Japanese Government.

Nai-i, wife of Kondo Komei, was cautioned to speak the truth, and was about to give her evidence when

Mr. Dickins objected: Witness should either be sworn, or required to give substantial proof that she is aware of the gravity of the affirmation she takes.

His Honour, said he was not aware that such an objection had ever been raised before; it was the invariable custom in dealing with Japanese witnesses. He would, however, take a note of it.

Mr. Dickins pointed out to his Honour that there was no Japanese law against perjury, nor punishment for it.

Mr. Davidson replied, shewing that in England, a declaration was in many cases considered amply sufficient. It was impossible to swear present witness, unless it could be shewn that she understood the nature of an oath and believed herself bound by it.

Nai-i, at the suggestion of Mr. Dickins was examined by Mr. Davidson, and deposed:—On the night of November 5th, was sleeping in her room. Smyth came off duty and her husband Kondo went on duty, at twelve o'clock that night; was sleeping alone. Had fallen asleep, when she felt Smyth catch hold of her hand and propose to sleep with her, (Mr. Dickins here requested that the other witnesses be required to withdraw). Opened her eyes, being very much astonished to find anyone come back. Smyth caught hold of her hands, and said, "Sleep with me and I'll give you a present." Was frightened and called out to Ikonoitsi. Smyth then put his hand on her mouth, and she was so frightened that she covered up her head in the blankets. Smyth then repeated his request and offer. Witness cried through fear. Smyth again put his hand upon her mouth, and told her not to make a noise. Smyth again asked her to sleep with him, and said it was all right, there was no fear. He then put his hand upon her breast, through the clothes; called out for Ikonoitsi again. Smyth expostulated with her for being so noisy. She was crying. Smyth said, "Why do you cry, and make such a noise?" He then asked her not to report the conversation to Kondo; replied that she would. Smyth said it would be dangerous for Kondo if she did; she answered, "No, it wouldn't." Smyth called her a fool, for crying, and Ikonoitsi then came into the room, and asked her what was the matter, coming over to her bed. Did not know Smyth's name then, but replied that a foreigner had wanted to sleep with her; told Ikonoitsi that she was much confused, and didn't know what to do; asked him to run over and bring Kondo. Ikonoitsi then went to the light-house to replace Kondo, that the latter might return to the house. Kondo then came to the house, and asked her what was the matter; replied that a foreigner had come to the house, and witness then recounted to her husband (Kondo) the particulars of what had taken place in the manner just stated in evidence. Kondo then went and endeavoured to awaken Smyth, but the latter wouldn't get up, and they had difficulty in arousing him. This is all she had to say at present, and is the substance of what she said some time ago.

(In reply to Mr. Davidson):—Smyth's room was next to hers (in the passage) in the foreign building in connection with the Nabesima Light-house. The building is a short distance from the lighthouse. When Smyth came into her room her husband was on duty at the lighthouse. There are two doors to the room she was sleeping in that night; Smyth came in at one of them. Witness slept on a foreign iron bedstead, the blankets were also foreign. The bed would be about 3 feet from the floor. (Mr. Dickins objected to a question here put by Mr. Davidson—"Did Smyth get upon the bed"?). Smyth rested at the side of the bed and put his face down to hers, touching it: pushed away his face.

Mr. Dickins objected strongly to Mr. Davidson's mode of examining this witness; the proper way would be to ask her what occurred, and not to suggest to her leading questions.

Mr. Davidson said it was the usual way of elucidating facts; he had heard identical questions to these put in Courts of justice.

Mr. Dickins quoted the Rule (Procedure in S. O.) referring to the examination-in-chief shewing that Mr. Davidson was not justified in putting such leading questions as he had complained of.

His Honour said he would note Mr. Dickins' objection as to the propriety of Mr. Davidson's mode of examination. The Court then adjourned till two o'clock.

# REGINA versus SMYTH.

The case being resumed:—

Mr. Davidson, addressing his Honour, said he had taken measures to acquaint himself, that the punishment which might be inflicted on a Japanese witness guilty of perjury was a year's imprisonment; which might be modified by the official passing the sentence.

His Honour, referring to the "leading questions" (complained of by Mr. Dickins) put by Mr. Davidson, said there was no doubt in his own mind that if the questions put—for instance, "Did the prisoner get on the bed"—were not leading questions they partook of that nature. The only thing to be said on the other hand being, that it was almost impossible to examine a Japanese witness in any other way. His Honour, however, requested Mr. Davidson to modify his system of examination.

Mr. Davidson assented, but pointed out that his questioning saved a great deal of time, and was warranted by precedent; citing Roscoe on Evidence in support of his practice. If the Court, he said, at any time thought he was in error in his mode of examining a witness, he would, of course, bow to that decision.

Mr. Dickins replied, combating the arguments of his learned friend. It was doing his client a great injustice to compel him to submit to the putting of such pointed questions, to which the required answers were as clear as daylight.

Mr. Davidson said he would endeavour as much as possible to avoid leading questions.

Nai-i said:—Accused put one hand on her mouth, and the other behind her neck, with violence; she struggled and thrust away his hand. (Witness was here about to reply to a question put by Mr. Davidson.)

Mr. Dickins again emphatically protested against such positive questions; the answers were actually put into her mouth.

Mr. Davidson contended that according to English law he was entitled to ask a witness questions as to whether she was assaulted or not.

Mr. Davidson (to Nai-i):—Did Smyth, in the course of the struggle on the night referred to, endeavour to embrace you?

Mr. Dickins objected to the question. His Honour said, upon consideration, he would allow the objection, the question, he thought, being a leading one.

His Honour said he was inclined, in the main, to agree with Mr. Dickins as to the manner of questioning. As far as he could see, unless some basis of understanding was agreed upon between the Counsel engaged, these disputes and objections would be interminable.

Nai-i (continued to Mr. Davidson):—When accused came into the room on the night in question the first thing he did was to catch hold of her by the wrist; was sleeping at the time; woke with astonishment, not expecting anything of the kind, whereupon she heard Smyth saying Okami-san, Okami-san. Was excited and alarmed and cried out Ikonoitsi-san, Ikonoitsi-san. Smyth then put his hand on her mouth and told her to stop her noise. Ikonoitsi is a light-house keeper at Nabesima; he is no relative of hers; he sleeps in a room next to hers, separated by a passage. Whilst she was crying out Smyth said "hold your noise," and put his hands over her mouth, and under her neck. He tried to kiss her, she repelled the attempt; he then put his hand in her breast, under her night dress.

By Mr. Davidson:—Did Smyth attempt to tear off the bed-clothes?

Mr. Dickins objected to this, as a leading question.

Mr. Davidson in the interests of the government he was there to represent, and in the interests of English justice, would emphatically protest against these continued objections.

His Honour, allowed the objection of Mr. Dickens, on the principle before laid down.

Nai-i:—Rolled the bed clothes about her, and Smyth attempted to take them off; resisted him. When she had the blankets rolled round her, Smyth again put his hand on her breast, and she again called out for Ikonoitsi. Smyth again put his hand upon her mouth. He then bent down over the bed, and requested her not to report the circumstances to Kondo. He was standing at the side of the bed when he bent down, and was leaning over the bedclothes.

By Mr. Davidson:—Did Smyth threaten, on that occasion to take her life, if she told her husband what he had done?

Mr. Dickens objected; she had said nothing about that yet.

Mr. Davidson said it was in the charge, and quoted from deposition, "did threaten to take the life of."

Court suggested the question—"Did he use any threats?"

Nai-i:—Smyth said, on that occasion, "If you tell your husband your life will be in danger." In answer to Counsel, witness said she had related all that took place on that occasion.

Mr. Davidson, addressing Court, said he had put various questions to the witness, and had elicited her statement; but, he had before had some conversation with her, and knew that, from nervousness, or from the peculiar nature of the position she was placed in, she had forgotten other circumstances, in which he could refresh her memory. Was he allowed to put those questions?

Mr. Dickens:—Most certainly not; why, it would virtually amount to the manufacturing of a charge.

His Honour remarked that he had taken down every question which had been objected to *seriatim*, and the objections raised should receive due consideration.

Mr. Dickens again raised an objection to another question put by Mr. Davidson; after some argument between Counsel, His Honour said he would allow Mr. Davidson's question.

Nai-i (by Mr. Davidson):—When Ikonoitsi came in he asked what was the matter, replied that a foreigner had entered the room whilst she was asleep, and asked her to sleep with him; described to Ikonoitsi the circumstances. There were two doors in the room, Smyth went out at one as Ikonoitsi entered at the other; Ikonoitsi saw Smyth's form as he went out. Sent Ikonoitsi for Kondo; was up when the latter came, and she repeated to him the circumstances of the case as given in evidence by her. Did not know prisoner on that night, as Smyth; there were other foreigners employed at the Nabesima light-house. Smyth (pointing to the prisoner) is the man. The night in question was the first on which she had slept at the Station. Had come that day from another small island, Yosima. Was married to Kondo on that day, 5th November.

By Mr. Davidson:—In the course of the struggle referred to, did Smyth, &c.

Mr. Dickens objected.

His Honour said he would put the question on his own responsibility.

Nai-i:—It was probably with that intention Smyth came, but she put her head under the blankets.

By Mr. Dickens:—Kondo is her first husband. There are two doors to the room; the door at which Smyth went out was locked. He unlocked it. Does not know whether the one at which Ikonoitsi entered was locked or not. It was dark, there was no light in her room, but it was a moonlight night, and she was enabled to discern Smyth's form by the moonlight which came in at the window. The

window was at the foot of the bed, but not in a direct line with it; a little on one side, (position indicated on paper.) The bed is in one corner of the room. The moonlight did not shine directly on her face. The side of the house where the window is, is a little to the north, but west. The moon was full, it was a 16 day moon. Smyth had on a long mantle; could not tell the colour of it, being so confused. The floor of the room was covered with matting. Could not see (being in bed) whether the man who entered the room had boots on; did not hear the sound of boots. Has no children, not one; never had any. Before she married Kondo lived in a house where they sold charcoal, was engaged there in the housework. Knows that prisoner is the man who entered her room because he is the only foreigner at Nabesima; there is no doubt about it being Smyth. At that time did not know whether it was Smyth or not; there was no mistake about it being a foreigner. (The Consulate Interpreter here explained that he had made an error in interpreting that portion of witness's evidence which said there were other foreigners at Nabesima.)

By Mr. Dickens:—Smyth and his Chinese boy were the only foreigners there. After the 5th Nov. until she left Nabesima to come to Yokohama, frequently saw Smyth, but had no conversation with him after the first mentioned date. Her husband never told her anything about Smyth. Had seen Smyth before her marriage. Does not know particularly whether Smyth and her husband were very bad friends; had some conversation with a Japanese boy about it but could not gather whether they were on bad terms or not. Went once to the lighthouse previous to her marriage. Kondo never told her that he had been frequently reported by Smyth to the lighthouse authorities for being incompetent and insubordinate. Had never heard of Kondo's being reprimanded by Smyth for sleeping on his watch. On the night of the 5th Nov. does not know what o'clock it was when she woke up, but it was the time when Smyth and Ikonoitsi came off watch, and Kondo and Matsmoto went on watch. Was confused when she woke up, and does not know what time it was. Went to bed at 8 o'clock; Kondo left at 12 o'clock and she was left alone. Kondo slept with her that night until 12, when he went on watch. Was awake at that time. Was so frightened that she could not say how long Smyth was in the room. Is not acquainted with the measurement of time by watch. Does not know even by Japanese time how long he was there; perhaps about one hour, or thereabouts. On reflection thinks it could not have been so long; it might have been a Japanese half hour, but was so confused, could not be sure. Remembers no smell of a lamp burning; there was no lamp burning in the room in which she slept; there was no such smell proceeding from any other room. When Smyth came into the room he had trowsers on. Could not speak minutely as to their colour or material; did not even notice whether they were light or dark. He had a sort of mantle on, rather a long one. Did not pay particular attention to what he had below the hem of his mantle. When Kondo went out he left one of the doors open, Smyth could not have come in by any other door but this; the other door was locked. When Kondo heard the whistle denoting the return of Smyth and Ikonoitsi, he got up, and went and unlocked one of the doors. Kondo told her the door was locked. Cannot say how long a time elapsed after Kondo went out, and the man came in. Had fallen asleep, does not know at all—cannot speak positively having awoke confused. Has no means of judging. Was so sleepy that she fell asleep almost immediately after Kondo left, and did not even know of Ikonoitsi's having

come back. No other foreigner lived on the island of Nabesima: only Smyth.

December 24th, 1873.

Ikonoitsi, duly cautioned to speak the truth:—On the night of the 5th Nov. was on duty with Smyth, and came off watch at midnight and went to bed. Shortly after heard a woman's voice calling out "Ikonoitsi-san, Ikonoitsi-san." Immediately got up and opened his own door, and saw Smyth leaving the room. Went in; the woman told him that Smyth had entered her room, kissed her, attempted to embrace her, and put his hand on her breast; that she had resisted and was very much annoyed. She requested him to go to the lighthouse and call Kondo. Went to the bottom of the stairs at the lighthouse and called Kondo, and took his place on watch that he might return home. At half past 12 Kondo returned to the lighthouse, thanking him for having kept his watch whilst he was absent. Witness then returned home, and went to bed.

By Mr. Davidson:—When he left his watch and went home, he went to sleep. Was aroused by the cries of the woman. That (pointing to prisoner) is the man witness saw in the woman's room that night. When he went into the room the woman was in tears, and her hair was dishevelled. Reported the affair to the authorities on the following day (6th). When Kondo spoke to Smyth, on the following morning, about going into his wife's room, he said "I have witnesses to prove it;" he referred to witness. Smyth denied being in the room; Kondo said, "anyone who would act in such a manner is no better than a brute. Smyth then clenched his fists in Kondo's face, telling him to take care, and immediately a struggle ensued and they both fell down. When they got up went to separate them. Nabesima is an exceedingly small island; just large enough to accommodate a house. There is another island, called Yosima, near. There are no Europeans near the island. Smyth was the only European on Nabesima. It is in the province of Sanuki, Island of Sikok', Natto Ken.

By Mr. Dickens:—Knows it was Smyth who was in the room; saw his face. There was no light in the room, but it was a moonlight night. The outside shutter was open. The moon was not shining on Smyth's face; could distinguish it without. It was a side view witness had of his face: was at the door when he saw him about returning to his own room. Smyth had the door half open, and was just about going out when witness caught sight of him. Does not remember particularly how Smyth was dressed, having gone there in a hurry. Knew his face, being in the habit of seeing him. Does not remember a kerosine lamp taking fire on that night. When Smyth and witness came off duty on that night they returned to the house together. They parted at the doors of their respective rooms. Witness went to bed at once. Thinks it was about five minutes past 12 when he got to sleep; cannot say particularly. Generally returns about 5 minutes after 12. The whistle blows at 5 minutes to 12, to change the watches. It takes witness about 2 minutes to go from the lighthouse to his dwelling. Sometimes falls asleep at once; did so on this occasion, being tired. Does not remember distinctly whether he fell asleep at once next night (6th). When Smyth and he return from the lighthouse witness blows the whistle himself, at 55 minutes past 11. Smyth does not generally wear a mantle, nor a dress coming down towards his heels. Cannot say, accurately, what time the moon rose that night; thinks it rose about sundown. It was not a cloudy night. Does not know whether the woman has had any children. Is sure he never told Smyth she had. If Smyth was

told so, it must have been by the other man, who knows all about her, being a native of Yo-shima. Had heard from the latter, whilst on duty, that the woman had had a child, or children.

Mr. Davidson objected to this as evidence. Court noted the objection.

Ikonotsi:—Was not aware that any quarrel existed between Kondo and Smyth. Sometimes they had altercations about matters of duty. There had been a reprimand to Kondo on the part of Smyth for neglect of lighthouse duties by the former. That is, when Kondo was doing something in an improper manner Smyth corrected him. Is not aware that Smyth ever reported Kondo to the authorities for neglect. Remembers Mr. Fisher, a lighthouse official, coming his rounds in August. Does not know whether Smyth reported Kondo to him. Had seen the woman at the lighthouse previously; on one occasion before the day in question. The struggle which Smyth and Kondo had, on the morning following that of the day in question, took place in front of the door of the lighthouse: this was at about 9 or half-past 9 A.M. Smyth left Nabesima on the 7th of December. Between that date and the day of the alleged assault there was no special difference in the nature of the relations between Smyth and the others. Never saw Smyth speak to the woman after the day referred to (Nov. 5th). When witness came up to Yokohama Mr. Davidson examined him once as to the affair; the examination lasted three hours. This was the examination of the three witnesses. They were told to come again next day; witness did so, but there was no examination. Went away, as he had some work to do. Never saw or heard of any hurt on the woman's body, nor heard of her clothes being torn. Kondo once gave witness a beating. Smyth was not then present; but, at night, witness told him of the circumstance, and Smyth then gave Kondo a beating. This was last month; after the occurrence with regard to the woman, but does not remember the date. Did not tell Smyth that he had reported the affair of Nov. 5th at the chief office. Kondo made a written report of the affair to the office, and he, himself, as a witness, also wrote what he had to say.

By His Honour:—You stated that the woman's hair was dishevelled; was that brought about by violence?

Ikonotsi:—Thinks it was done by rubbing against the pillow, and was not done purposely by Smyth, in the struggle. Yo-shima is a small village of about 80 houses. It is inhabited mostly by peasants, with a few fishermen. Did not know Nai-i in the village, before her marriage. Had met her twice before; the first time was at the lighthouse at Nabesima; and on the second occasion, at her next door neighbour's in Yo-shima. Nai-i is the only woman at the lighthouse.

Kondo Mitsoaki, Lighthouse keeper, cautioned:—Reported the circumstances of this case to the authorities some time ago; they were as follows. Witness's watch is at 12 o'clock, the whistle generally blows at 11.55. On the 5th Nov. got up at 11.55 to go on watch, went at 12 o'clock. A short time after he had commenced duty heard Ikonotsi's calling him, from the foot of the lighthouse steps. Thinks it was about 12 or 13 minutes after 12, but didn't see the watch. Went down the stairs, when Ikonotsi told him that a person had come to his house and was making a row there. Asked him what sort of a row. Ikonotsi replied "A person has caught hold of your wife and kissed her, she is crying." Did not wait to hear much more, and went to the house. When witness left his wife her hair was beautifully done up; when he returned it was all tossed and she was in tears. She told him that, after he had left, she was awakened by feeling a hand on her; she was

astonished, knowing that Kondo could not be there; was alarmed and put her head under the bedclothes; the man attempted to kiss her, she was alarmed, and cried out for Ikonotsi. The man told her he would make her a present, attempted to embrace her, kissed her, put his hand on her breast, and caught hold of the bedclothes; she was so annoyed that she cried and put her head under the bedclothes. Witness though his, a monstrous thing, and that he ought to speak about it. Went to Smyth's room and called "Smyth-san, Smyth-san." Smyth, who ordinarily rises quickly, would not get up. Finding this the case, returned to the lighthouse and told Ikonotsi to blow the whistle, and then went back to the house. The whistle sounded three times; heard a sound as of Smyth getting up, but he did not appear. The whistle was at the end of a pipe (speaking tube) running from the lighthouse to the dwelling. Heard the noise of Smyth's taking the whistle out of the end of the tube. Called Smyth, but he would not make any response. Put off further conversation till the morrow, and directed his wife to go to sleep again, and to call Ikonotsi if any further disturbance occurred. Returned to the lighthouse with the intention of speaking with Smyth after work was done, next day. In the meantime Smyth had told witness's wife that if he (witness) reported the affair his life would be in danger. Had omitted to state that, before he went to the house, Smyth had told his wife this. During work hours didn't attempt to speak to Smyth about this. After work was finished and witness had put everything in order, went out and said to Smyth, "What did you go to my room for last night; what were you going to do to my wife?" "Smyth replied," "What! I go to your room?" "I said to him," "You went to my room, kissed my wife, put your hands on her breast, and attempted to take hold of her." "Smyth seemed astonished, and said he had done nothing of the sort. Witness said," "Yes, you did, my wife told me, and besides Ikonotsi saw it and told me." Smyth replied, "That cannot be, call Ikonotsi." Did so, and Ikonotsi came; said to him, "Is it true that you saw Smyth last night?"—when Smyth interrupted them and said "It's a lie," and swore at Ikonotsi in English. Witness again questioned Ikonotsi, who replied "Yes, I did." Smyth said they were lying, and abused them both in English. He then got very loud and abusive, and witness rejoined, and said, that a man who would come to another's house and kiss his wife was a beast. Smyth shook his fist in witness's face and told him to take care. Smyth rubbed his knuckles against witness's teeth. Witness made no counter-demonstration, but said, "If you wish to strike, strike away." Smyth then ceased and walked away; but returned and again abused him in English. Witness then called Smyth a beast, and he came back, and raised his clenched fist, and there was a scuffle, and they fell down. Did not make any attempt to avoid Smyth's blow, or to strike him. Ikonotsi and another lighthouse-keeper were looking on, and they came up and separated them.

On resuming, the examination of Kondo Mitsoaki was continued.

Kondo:—On the night of the occurrence wrote out report of it, at the lighthouse, and sent it off to the authorities on the following day. No Europeans live on Nabesima except Smyth. There are none nearer than Kobe, or Simonosaki, 120 or 150 miles. When witness went to the door of Smyth's room and endeavoured to arouse him, no answer was made.

Mr. Dickens wished to call the attention of the Court to the fact that during the examination of Ikonotsi, an official of the Lighthouse Department, Mr. Brunton, with his Japanese interpreter had gone outside, and communicated with the witness Kondo. Mr. Davidson could not see any objection to such a course.

Kondo (examined by Mr. Dickens).—Heard of Nai-i's having come to the lighthouse on one occasion before their marriage, but did not see her then. She never came to see him at the lighthouse before his marriage. Never directly met Nai-i before his marriage; had seen her, but entrusted the negotiations for the marriage to the usual go between (Yobi). Never heard that she had had any children before her marriage. Would be very much surprised to hear that such was the case. Knows nothing of the character, of his wife before marriage. There may be people who say she is a bad woman, but witness thinks she is a proper person; her general reputation is good. Has heard incidentally that she bore a good character but never made any pointed enquiries on the subject, considering that shameful. His wife was in an uncle's house before marriage. When witness went to arouse Smyth, he rapped and tried the handle of the door, but found it was locked. There was a kerosine lamp in Ikonotsi's room, but does not know whether it was burning. Does not remember anything about a kerosine lamp smoking or bursting. Heard from Smyth something about it on the following day; was asleep at the time. Smyth simply said, "Last night there was a lamp burning;" the lamp referred to was in Ikonotsi's room. Thinks this conversation was probably after the affair of the 5th Nov., cannot be sure. The hour of the conversation would be at about the time of lighting up, in the evening. That is how he recollects it was at night, but cannot recollect the exact day. Thinks it cannot have been on the 6th. On the 5th Nov. was on watch from 12 at night until dawn (6 o'clock). First saw Smyth after the assault on his wife on the following day at dawn. Spoke to him at, perhaps, 8 o'clock. Merely closed the door of the room where his wife was sleeping when he left her to return again to the lighthouse. Did not lock the door; told her if any other attempt was made by Smyth to call Ikonotsi, to let him know. The window shutters were open on the night in question, and the moon was shining in. The window faced west and north. Before the assault witness and Smyth occasionally had words, but otherwise they were good friends. Mr. Clarke was instructing them in their duties for about three months before the lighthouse was opened; after that only Japanese were left. Witness was not specially reprimanded by Smyth; the latter occasionally complained, but witness did not write it down in his memorandum book. On 21st June was reprimanded by Smyth for sleeping on his watch. Witness was nearly asleep, and was ordered to go to his house; this was at 4 o'clock, not the usual hour for the change. The watch was changed and Matsumoto took his place. Was not aware that Smyth came into the house, was awake when Smyth came in, but had been asleep; Smyth did not find him asleep. On 23rd July Smyth's woman came to the lighthouse. Did not see the woman at all on that day. About the end of July boatloads of woman repeatedly came to look at the lighthouse. Did not set his dogs on any of the women; was not reprimanded by Smyth for doing so. Remembers Mr. Fisher coming to the island about the 6th July. Is not aware that Smyth complained of him to Mr. Fisher. Was not specially reprimanded by Smyth in the months of August, September, and October, for negligence and insubordination. Is not aware that Smyth reported him to the head office in the month of September. Does not remember what the interpreter said this morning when he left the Court to speak to witness; he was told to speak the truth.

Mr. Dickens:—(to witness) What else did he say?

Mr. Davidson, said the communications referred to by Mr. Dickens were private, from himself to this witness, and contended that by the law of England he, as a lawyer, was privileged to communicate with his witness; he therefore objected to such questions.

Mr. Dickens contended that the person with whom Mr. Davidson communicated was not the plaintiff, but merely a witness; and shewed that the very object of sending the witness out of Court was to prevent their evidence being tampered with.

Mr. Davidson replied; and said that he was perfectly justified in consulting with his witness, in the interests of his clients.

Mr. Dickens said his learned friend had produced nothing in justification of the course pursued, but his own *ipse dixit*. The very object of sending the witnesses out of Court was frustrated, and important communications were no doubt being sent out to them.

His Honour said he would allow Mr. Dickens to put the question.

Kondo (by Mr. Dickens):—Mr. Davidson had sent out to ask him if he and Ikonotsi had had a quarrel, and what the nature of the quarrel was. Explained the nature of it to the interpreter. It was about the lighthouse boat, which on one occasion was overturned through the fault of Ikonotsi, who was drunk at the time. The latter, Smyth, and witness

were in the boat. The quarrel did not take place on that occasion, but on another, when Ikonoisi again got drunk, and, brought two strange men and shewed them over the lighthouse; also telling the sendos to take the two strangers back in the lighthouse boat. This was all the interpreter asked him. The boat affair occurred last month Nov. 8th) after this affair of the assault. Ikonoisi, witness, and Smyth went out in the boat to look for the latter's gun, which had been lost. Smyth offered them 10 rios to recover it. It was Smyth's duty to instruct them, but he never gave them any instruction. Smyth's predecessor did.

December 25th, 1873.

(Conclusion of the evidence.)

His Honour, in his revision of Kondo's evidence, said that witness had somewhat modified portions of his statement. He acknowledged having met his wife several times before his marriage, and also corrected his evidence with respect to what occurred when the boat was upset; witness was not in the boat at the time, only Ikonoisi and Smyth. The boatmen were drunk, and witness reprimanded Ikonoisi for permitting them to get drunk; the boat was not injured.

The depositions of the witnesses being closed.

Mr. Davidson, for the prosecution, proceeded to address the Court. He said it was unnecessary for him to re-capitulate the evidence, as it was no doubt fresh in the mind of His Honour. Three witnesses had been examined, and the evidence of the two men corroborated in the main (in fact nearly word for word), the evidence of the woman; which was just exactly what might have been expected from a female placed in the position she was in with respect to this case. The evidence had been heard by His Honour, and that evidence had been brought forward with the object of obtaining a committal, and he should ask His Honour for a committal. He characterised the attempt of the prisoner as a most atrocious one, which should meet with the severest punishment. It was not at a tea-house, or any place of that kind, but in the woman's own house, on the night of her marriage, and whilst her husband was absent on duty, that the prisoner entered the woman's room, and was guilty of great indignities towards her; making use, too, of dangerous threats. Living as they do on small islands and isolated rocks it was imperative that the native employees of the Department should be protected from violence and indignity, such as this case presents. The employees of the lighthouse service were selected from the better class of natives, they were not coolies, and unless they were assured of protection from insult and injury at the hands of the European servants, it was not likely that the Public Works Department could expect them to come forward to fill the offices of the service. In the interests of the Public Works Department, and in the interests of every European nation whose vessels came to these waters, it was imperative that the lighthouse service should be properly conducted, and that, as a consequence, such cases as the present should be severely dealt with. On these grounds he would leave the case in the hands of His Honour, and ask for the committal of the prisoner.

Mr. Dickens, on behalf of the accused, said, (with reference to the remarks of his learned friend as to the Public Works Department,) he really couldn't see that this Court had anything to do with the Department. Mr. Davidson had spoken at some length about the necessity of protecting the Japanese servants of the service from insult and indignity, but he would like to point out the danger that Europeans were subjected to who were sent to these isolated places as employees, where Japanese women were allowed. His Honour would no doubt recollect the innumerable cases with which the English newspapers were filled some years ago, in which gentlemen travelling in railway carriages were charged by females (who made it a business,) with the most abominable crimes; for the sole purpose of extorting money. What are the facts that have been proved, admitting that they have been proved? The statements of the witnesses (which bear on the face of them a most marked resemblance to each other) shew that the prisoner entered the woman's room, asked her to sleep with him, kissed her, and put his hand on the bed clothes. Nothing more; no violence was used, nor was it shewn that any was attempted. Do the statements of the witnesses bear out the charge, which is that of attempting to commit a rape?—most certainly not. Counsel here cited a case in point; shewing that, even taking the statements before the Court as true, there was not shewn any intention on the part of the prisoner to have connection with the prosecutrix. Is there anything more shewn than a soliciting on the part of the prisoner? Nothing of the kind. Supposing the facts to be true there was nothing more than a soliciting, which, no doubt, was wrong. Counsel's

argument, therefore, was that no such charge as had been laid against his client had been proved. No attempt at force, or anything approaching it, had been shewn in evidence. Even supposing it to be true that he threatened the life of the woman, or of her husband, it was only to prevent her telling tales. Nothing was produced in evidence to show any actual intention of such violence. Prisoner could not, therefore, be committed for trial on the charge laid. In the second place, counsel contended that it had been indubitably shewn that the whole thing had been made up amongst the parties with the intention of ruining his client, with whom they had a quarrel. The law required the most undoubted evidence in order to warrant a committal on such a charge. The evidence of the witnesses for the prosecution agreed almost word for word, evidently shewing that they had laid their heads together in order to get rid of his client. The evidence produced was mainly that of the woman. Ikonoisi's evidence was doubtful; it was proved that the moon could not have shone sufficiently in the room to enable him to distinguish the face of his client.

In fact the evidence of the three witnesses was not to be relied upon, the whole being evidently a trumped up story. The husband of this woman had spoken of his wounded feelings, "he considered it a monstrous thing", and yet after the assault alleged, he admits having left his wife alone, in a room next to that of the man who was said to have committed the assault; left her to his mercy, and did not even take the trouble to lock the door of her room. The warrant was also informal; it was, in the first instance, really issued on the statement of a person (Mr. Davidson) who knew nothing at all of the matter, and it was quite impossible that Mr Davidson could have made himself acquainted with the truth of the deposition to which he swears.

The evidence laid before the Court was that of witnesses of the lowest class, and in such a serious charge as the present, certainly not to be relied upon. There was no *prima facie* evidence of the prisoner's intention to commit the offence alleged; on the contrary it was clearly evident that the charge was simply trumped up. With these remarks, Counsel would leave the case in His Honour's hands, feeling satisfied that he would dismiss the charge against his client.

Mr. Davidson replied, This was only a preliminary examination, and the facts elicited in evidence would have to be submitted to a jury for decision. It was shewn that the prisoner had gone into the woman's room, and proceeded to various indignities, which were interrupted by the entrance of Ikonoisi into the room; it would be easy to guess what the result would have been otherwise.

His Honour, in summing up, said, after hearing the evidence, he did not think there was sufficient to convict the accused of the assault laid down in the charge, but thought there was sufficient to warrant him in committing prisoner for trial on a charge of indecent assault. Would the accused plead guilty to that charge?

Mr. Dickens, having consulted with his client, said that neither on the 5th November nor at any other time had his client committed any offence of the sort; he therefore refused to plead guilty to the charge of indecent assault.

The case was then remanded until Friday, 26th inst. at 11 A.M. Mr. Dickin's bail (Mr. Kirby being absent) being accepted.

Friday, December 26th, 1873.

W. A. Smyth was brought up on remand this morning, and the case was again adjourned to the following day.

Saturday, December 27th, 1873.

Wm. Alex. Smyth, on remand for assault with intent was brought up for final examination this morning.

His Honour read over to prisoner the depositions of the various witnesses, and after administering the customary caution, asked prisoner if he had any thing to say in his defence.

Prisoner replied that he had nothing to say.

Court then committed him for trial, on the charge of indecent assault. Bail allowed; prisoner in his own recognizance in \$500, and one surety for a like amount.

### In the United States Consular Court.

Before Messrs. GEO. N. MITCHELL, Consul, and

E. A. SCHROYER & GEO. L. MONTGOMERY,

(Assessors.)

Tuesday, January 13th, 1874.

Frederick H. Penoyer was charged with embezzling certain monies, the property of the Directors of the Temperance Hall.

Wm. St. George Elliott, M.D., Dentist, sworn:—There are no Trustees to the Yokohama Temperance Hall. I am Treasurer. The accused first entered the Institution about November 1st, when it was first opened, as a boarder. He continued, but was not able to pay the charges. He was frequently requested to pay his account. The Institution was intended for such as desired to give up their drinking habits, and they were encouraged to reform. It is managed by a Committee of four or five citizens. Mr. John Henderson is Secretary. The Committee meet every Saturday to consider the cases of those boarders, who are unable to meet their accounts with the Hall. There were many such, and it became necessary to take into consideration the best means of grappling with them. A resolution was accordingly passed by the Committee that defaulters should have a week's notice to pay up, or get employment; and in the event of failure to do so, they were to be requested to leave. Mr. Penoyer, I believe, had notice to that effect. One of the Committee offered to pay a week's board for him, as he said he was likely to get employment on the *Saco*. In the meantime the affairs of the Institution were getting into a deplorable condition, and everything was very dirty. The Committee taking this into consideration, debated the desirability of getting rid of the then manager, who hearing of this, tendered his resignation. Penoyer was then spoken of as his successor, but his antecedents were by no means favourable. He was, however, a most excellent penman and book keeper, in which respect the retiring manager was very deficient. The Committee ultimately passed a resolution that Penoyer be requested to take the position for a day or two. The Committee had been recommended a man employed in the English Navy, but there was likely to be some delay in getting his discharge. Penoyer, in the meanwhile, therefore took charge of affairs, got the books into order, and in a very short time the receipts were quadrupled, shewing that the interests of the Hall had before suffered at the hands of the retiring manager, who must have failed to collect dues and fees belonging to the Institution. The capital with which the Hall started, \$1000, being so small, there was all the more necessity for attention to its receipts.

The Christmas holidays being at hand some of the sailor boarders resolved to get up a subscription dinner at 50 cents per head, and Penoyer offered to take the management of it. The Committee demurred to this, but the matter was finally left in his hands; it being understood that the cash received was to be kept in a separate account, so that the Institution should not be called upon to become responsible in any way. The dinner was very successful; so much so that, on New Year's night, when the society of "Good Templars" gave a dinner to their friends at the Hall, Penoyer was also given the management of it. On Friday night, (2nd inst.) at 11 o'clock the manager of the institution (Accused) left, according to the testimony of one of the sailors boarding there.

On the Saturday I was requested to attend a committee meeting, and was told that the manager had cleared out. Was astonished and annoyed, being, as Treasurer, responsible. On entering the Committee room the first person I saw was Penoyer, who was engaged in balancing his accounts. Told him to square them up, as the Committee wanted to look at them. Examined his books, and remarked to him that there was a very large bill for 10 days. He replied that it included bread, beef, washing, &c. He was called before the Committee and asked if the accounts entered were paid; he said they were. He was then asked by one of the Committee if he had not received \$50 from a Mr. Wilson for board. He admitted it, and

said, in explanation of his not having entered it, that he did not know where to put it. According to his books he was indebted to the Hall about \$23, or, including Wilson's amount, \$73. He was then asked for details of the expenses of the Christmas dinner, and replied that he would go down stairs and get it. He went down stairs, and walked out of the back door, and that was the last that was seen of him. Witness here handed into Court a list of charges against accused, as follows, viz:—Received from Wilson and not entered, \$50, Stentz, Harvey & Co's account \$16.84, and Bread account \$21.28, entered as paid; items of marketing &c. entered in Cook's book, and marked as paid, \$16.40. The exact defalcation amounted to \$151.72; the difference between expenditure and receipts being \$47.20.

Penoyer did not leave until January 3rd., but there were no entries in his books after 31st December. There may possibly have been other sums collected by him, of which there is no information. For instance, there was a sum of \$5 subscribed by a sailor, which was not entered.

John Wilson, officer in the Merchant Service, sworn:—I am a boarder at the Temperance Hall, Yokohama. Am acquainted with prisoner. Have known him since November 22nd, when I first went there to board. Penoyer took the management of the Temperance Hall about two days before Christmas. On the 30th Decr. I paid him \$50 in one bill; got no receipt for it, it is not customary to do so. This sum was partially in advance. I was indebted for 8 days board when I paid the \$50, at the rate of \$1 per day. There was thus \$42 to my credit. Penoyer understood this, and agreed to give me credit for it in the books of the institution. Since then I find he has failed to do so, and has not accounted for the money. In reply to accused, witness said he had no one to prove that he had paid him the \$50.

John T. Henderson, sworn:—I am Secretary of the Temperance Hall, and am acquainted with prisoner. About 9th Decr. the old manager sent in his resignation, and we asked Mr. Penoyer to take charge for a day or two, until we could obtain the services of another man of whom we knew. He did so, and succeeded so well that we agreed to continue him for a few weeks, until we had heard something definite about the other man, with whom we were in treaty. Mr. Penoyer did very well until the end of the month (December.) On Saturday, 3rd Jany. Mr. John Ballagh, one of the committee, came to my office, and told me the manager had absconded. I went to the Hall and looked over Penoyer's books; one of them I couldn't find. I looked at the expenditure and thought it very high. At 5 o'clock went round to the Committee meeting, and found that Penoyer had put in an appearance at 20 minutes to 4. Asked him in presence of Dr. MacDonald, the President, where he had been. He said he had been ill and was obliged to take Morphine, and had fallen asleep in consequence. We examined his books and found that he had taken about \$150. Asked him to bring up his book, which he did. Found some other entries in it in pencil; such as the butcher's and the baker's bills. Dr. MacDonald asked him if he had paid those bills. Do not know whether they were separately read over to him; one of them was Stentz, Harvey & Co's. He was asked if he had received the \$50 from Wilson, and replied "Yes;" also saying that the other bills were paid. He was then asked if he had any balance of cash; he said he had. We gave him a quarter of an hour to produce it. Mr. Ballagh then went down to look for him, and one of the sailors said he had gone out of the back door.

To Court:—He gave no reason for not entering Wilson's \$50. He said Stentz, Harvey & Co's account was paid. The books were examined by the Treasurer, Dr. Elliott, after Penoyer had left. We found that Stentz, Harvey & Co's account—entered as paid, had not been paid. We keep a debt book (produced), Wilson's \$50 is not entered. (The Consul remarked that, according to Penoyer's own account, he was indebted to the institution \$37.02.) He was called upon on the Saturday to produce the balance of his cash, and the statement of the Christmas dinner. He was told to bring these, and went to do so. Did not return. He was supposed to enter everything received in that book. The books were examined by the Committee at intervals. There may have been other sums collected by him for subscriptions (a few dollars) and not entered. Don't know of any others. In rendering his accounts he was supposed to shew vouchers for all payments. He was not supposed to take receipts for wood, marketing, boy's wages, and such like. Such disbursements were closely watched, and anything apparently too heavy had to be explained. The President, Secretary, Treasurer, Mr. Ballagh, and Mr. Kilberry were present when accused was asked for the balance together with Mr. Wilson's \$50. He said he had it, and went down stairs to get it but did not return. Cannot say whether he had to give receipts for any monies he received. He only got one amount \$22, from the Treasurer, in advance for the Christmas dinner. As a rule I did not interfere with his books; left that question entirely to the Committee.

Alexdr. Clark, employee of Stentz, Harvey & Co., sworn:—Supplies beef to the Temperance Hall. Presented a bill to them for \$16.84 sometime between the 1st and 5th of January. This was the December account, up to the 31st. Asked for the manager, and was told that he has absconded. Afterwards went to Dr. Elliott's office and he asked me if I had been paid the \$16.84. I said no. He then told me to call again, and he would pay me; did so, and got the amount.

Court.—Penoyer's account shews that he paid you \$16.84 on 31st December.

—That could not be so, as we never present bills until the end of the month. It was between the 1st and 5th January when I called for the account; it might have been the 2nd. The prisoner paid me one bill in Dec., for \$12.48, for the Nov. account; this was the first month we had supplied the Hall. Did not see the prisoner between the 1st and 5th Jan. I collect all bills for Stentz, Harvey & Co. Have since received from Dr. Elliott the amount in question. Will swear I did not receive the sum of \$16.84 from Penoyer on 31st Dec.

Dr. Elliott, recalled:—The cook does all the marketing, and therefore the sums of \$1 and \$5.50, entered by Penoyer on 28th, have not been paid. We keep only books for Receipts and Expenditure, nothing else is entered. If any one pays cash, such as the \$50 referred to, we looked to Penoyer to enter it. There must necessarily be a certain amount of confidence reposed in such an officer. The cook's accounts and prisoner's agreed; I examined them. The Committee is only capable of judging of the alleged expenditure; which seemed to them high, for the number of boarders. All large sums are paid by me, for which I hold vouchers.

The Japanese cook of the Temperance Hall, being cautioned, said:—Works at No. 114 (Temperance Hall). Does the marketing. Knows prisoner. During the month of December received orders from prisoner to purchase, at the market, things for No. 114. Also to buy coal, wood, &c. When prisoner first took charge of the Hall, witness used to present his account, and was paid by prisoner, every morning. The

latter afterwards kept putting him off, promising to pay him, but did not do so. From Dec. 31st to Jan. 3rd received nothing. Once or twice (before that) received payment for two or three days in one sum. There was nothing due him on the 30th; up to then had been paid. Made no purchases on the 30th. Received cash on the morning of the 29th, \$23, for the purchases of the 28th. Received his wages, at the rate of \$7 per month, from prisoner on 31st December.

Richard Willis, seaman, sworn:—Formerly belonged to the *Idaho*. Since 4th Jan., have been temporary manager of the Temperance Hall. Am acquainted with the prisoner; last saw him on the night of the 2nd Jan. Know nothing of his accounts. Paid the baker's bill, \$21.28, on the 7th Jan. It was presented, on the 4th or 5th. (Bill produced.) The bill is for the month of Dec. When it was presented I was told it had not been paid. Was not present when Penoyer was examined by the Committee.

Prisoner, in reply to Court, said he had no statement to make. He was then sworn, and examined as follows:—

Court:—You have heard the statement of Mr. Wilson that he had paid you \$50, and asked you to place the \$42 to his credit.

Prisoner:—He said nothing of the sort.

Court:—You have entered here \$16.84, as paid to Stentz, Harvey & Co.; did you pay it?

Prisoner:—No.

Court:—Did you pay the bread bill, \$21.28.

Prisoner:—No.

Court:—Why did you enter it as having been paid? How do your accounts stand?

Prisoner:—I entered it in pencil to shew how the accounts stood. I don't know how my accounts stand with the Hall.

Court:—What have you done with the money you collected on account of the Hall? According to your own account you owe the Hall \$27.02.

Prisoner:—I have no money belonging to the Hall. Don't know how much I owe it.

Court:—Do you deny all about the \$50 Wilson says he paid?

Prisoner:—I don't deny all about it. Have no recollection of the amount.

Court:—Were you manager of the Temperance Hall?

Prisoner:—I was in charge of it; was not regularly employed. I collected monies that came in through the day. To the best of my knowledge I accounted faithfully for all the money I received.

Prisoner, said in answer to court, that he was born in the State of Maine, has no trade, and has been at sea most of the time.

He was then found guilty, and sentenced to be confined in the goal of the U. S. Court for the term of two years, with hard labour.

H. P. LILLIBRIDGE and CHARLES DRAKE,  
(Assessors.)

Wednesday, January 14th, 1874.

ANDREW LEWIS (colored), was charged with having, on the 17th December 1873, between the hours of 9 a.m., and 2 p.m., assaulted with a knife with intent to kill one Daniel Robertson, alias "Ice Cream Bob."

A plea of not guilty was recorded.

Daniel Robertson (colored) sworn:—I am a British subject; was born at Sierra Leone. Am a cook, now out of employment. Formerly vended Ice-creams. Am slightly acquainted with prisoner. On the 17th Decr. met him in Benten, with a bundle of clothes in his hands. He wanted to sell them to a clothes dealer; the latter refused to buy them, but ultimately lent him 1½ boos on them, which he was to return afterwards. Prisoner asked me where I was

going, and if I had any money. I said I had a few dollars. He said "let's go for a stroll." There was a Manila man present, but I objected to his going. We went to Yoshiwara. Prisoner said he wanted something to eat. We went to a restaurant and I ordered something for him. I offered a dollar in payment; the man said it was not a good one. I gave him another, and received the change. We came out of the restaurant and went into another, and had some gin. Prisoner then proposed that we should take jin-riki-shas and go to Kawasaki. We did so. He said, "let's stop until dark, and go home then." I refused to do so. I called for something to drink, and a bottle of gin was brought. We drank; prisoner urged me to drink. I drank four or five times. When we got up I gave the dollar to the Japanese proprietor of the house. He went to get change, but came back saying he couldn't change it. I then paid him out of the change I had before; prisoner took the dollar and then proposed to go to Yedo. I said "give me the dollar." He replied that he had not got it. His hand was then in his breast. I again asked him for the dollar. He said "Here, take it," and immediately stabbed me in the side. I took up a stick and knocked away his hand in order to throw off the knife. He ran away and a policeman caught him. The latter put us both into jin-riki-shas and brought us to the police station. I was bleeding very much, and they sent for a Doctor who attended to me and ultimately sent me to the Hospital. Whilst we were in the police station prisoner threatened to kill me, and also said he would go to my house and kill my child.

By Court:—The knife with which he stabbed me was a small Japanese knife; he shewed it to me before. This man (prisoner) stabbed me. Am sure of it. He stabbed me three times. I was not altogether drunk at the time. Prisoner was not drunk at all. Never had any words with him. Had neither quarrel nor words with him before. Did not strike him before he stabbed me. Struck him with a stick on the hands, to knock the knife away, when he stabbed me; also struck him once on the face. Before this, prisoner gave me a little shut up knife, and he had an old sheath knife. I swear that Lewis is the man I met in the clothing store; the man I took to the tea-house at Kawasaki, and the one who threatened to kill me. Lewis had a Japanese dagger, a shut-up knife, and a sheath knife. First met him between 8 and 9 in the morning. We arrived at Kawasaki between 11 and 12. After he stabbed me he ran away. I saw a Japanese policeman take him as he was making for Yokohama. There were only Japanese present when the stabbing took place. The women of the tea-house ran away when they saw it.

By prisoner:—Did not ask the Manila man, who wanted to run away, to come with us. Did not ask you to go away with me. You did not tell me that you had to go on board the *Sico*. Did not jump on and strike you at Kawasaki. Was not so drunk as to fall down.

Japanese Constable, cautioned:—The two foreigners were present at Kawasaki, at a tea-house. They were disputing, and the proprietor sent for the police to clear the house. Witness, as he was going thither, met prisoner calling out "Police, Police!" Went on towards the tea-house, and met Robertson, who required him to take prisoner into custody. Chased him to Kanagawa. Sent a coolie on ahead to direct prisoner's jin-riki-sha to take him to the Police Station at Kanagawa, which was done, and he was arrested there. He tried to get away from the jin-riki-sha when it reached Kanagawa, but he was taken into custody and forwarded to No. 6 Police Station, Tobé; the sergeant there sent him on to Yokohama. When witness first met prisoner he had

already got into the jin-riki-sha, and the coolie had just commenced to run. Did not see prisoner with a knife, but another person shewed it to him. When complainant spoke to witness about arresting prisoner he did so in Japanese; hardly understood him. He shewed witness where he had been stabbed, but he had already seen the blood coming through his coat. Robertson was tottering about. First met him about 2½ Cho from the tea-house. (A knife was here shewn witness.) That is the knife complainant was stabbed with. Knows it is, because Robertson told him that was the knife. Prisoner did not resist when they brought him to Yokohama.

Proprietor of the Tea house at Kawasaki, cautioned:—Has seen both complainant and prisoner before; in his own house at Kawasaki. They entered his house, and asked him to boil some beef. Did so, and gave it to them. They eat it, and then asked the charge; told them 1 boon. Asked prisoner for payment, as he saw he had a dollar; he did not pay him. Complainant then told witness's wife not to be afraid of the money, as he would make prisoner pay. They then began to quarrel and push each other. Witness ran to the police station, and when he returned they had left the house. Did not see prisoner stab Robertson. Prisoner struck him first; does not know on what part of the body. Did not see prisoner with any knife, but saw the blood on the man's. They began to struggle in the house, but finally got through the wall. They both fell down. They were so "mixed up" that he could not say who was uppermost. Witness's wife was in the house but did not see prisoner stab the man; she ran away. Does not remember how many times prisoner struck the other man. The latter struck back, with his fist. Did not see any stick in his hand.

Japanese Constable, (to prisoner):—When you were in the jin-riki-sha, coming to Yokohama, you might have requested me to take you to the American police station. I do not understand English.

The Court here adjourned until 2 o'clock.

The case was resumed at two o'clock.

D. B. Simmons, M.D., sworn:—I am a physician practising in Yokohama. Remember attending on Daniel Robertson on 17th Dec. On that day I was called by a policeman to see a man who was reported to have been stabbed. This was at about 8 o'clock in the evening. Found him at the police station, lying on a bench. He was bleeding profusely from a wound in the side. The wound was a small one, external. I concluded, from the symptoms, that the instrument with which it had been made had penetrated the wall of the chest, and that he was bleeding internally. Not being able to give him proper care at the police station I applied a simple dressing, and recommended his being sent to the Hospital. I was told that the patient had been drinking, although he did not seem to be very much under the influence of drink at the time. I could not determine whether the constitutional symptoms which he then shewed were the result of the injury or debauch.

By Court:—I probed the wound about an inch, but not into the chest. I found a slight scratch on the other side. The principal wound was caused by some penetrating instrument. From the position of the wound it is possible, but not probable, that prisoner could have made it with his own hand. It is possible, but I should say hardly probable, that Robertson, in carrying a knife in his own pocket could have inflicted the wound. (Knife exhibited.) The knife produced was shewn to me at the time; I am under the impression that it could have inflicted the wound.

J. J. R. Dalliston, M.D., sworn:—I am a physician, practising in Yokohama. Daniel Robertson has been under my care. When I first saw him the wound had been dressed. It was

on the left side, penetrating the lung. I had him under my charge in the Hospital. His symptoms were, for a time, serious. He had much fever, and was in great danger for some time. He was delirious, and I had to put him into a straight waistcoat. The air had escaped into the wound and lungs. He had *emphysema*. The wound was well dressed when I first saw him, and therefore I did not interfere with it, to probe it. I think the wound had been made with a knife with a narrow blade; say, an inch wide. It is possible, but not likely, that the wound was self-inflicted. If the man carried an open knife in his pocket, and fell to the ground, it is possible, but not altogether probable, that the stab might have been self-inflicted. The wound was closed when I saw it. From the fact of the wound being near the position of the coat pocket I judge it to be quite possible that it might have been produced in falling. (Witness here examined the knife). As the knife was carried in the left coat pocket (the wound being on that side) it was quite possible. There were no other knife wounds on the man; I examined him, and found bruises only. The cut was nearly a straight one, upwards and inwards. Did not probe it.

Dr. Simmons, recalled:—I probed the wound. It was upward and inward. Since giving my evidence, and after noticing the position of the man's pocket and seeing the knife as it is bent (the point projecting through the sheath) I am now under the impression that it is not at all unlikely that the knife might have been open and cut him as he fell. My impression is now stronger on that point. (Here the Doctor examined the coat which Robertson wore on the occasion, and compared the cut in it with the position of the wound). The wound could have been made by a Japanese dagger. Supposing the sheath knife to have been in the right or left hand coat pocket of prisoner it is possible that, in the scuffle, it might have entered the side of Robertson.

Joseph Connors, European Constable, sworn:—I am attached to the Municipal Police force. Was at the station on the night of December 17th, when Lewis was brought in, charged with an assault on Robertson with a deadly weapon. Prisoner was first brought to the station, in a jin-riki-sha, by a native constable. Was informed by the latter that there had been a row at Kawasaki between the two foreigners. Prosecutor followed soon after, and shewed only a small wound in his right side. He was put into a cell. About 7 o'clock opened the cell door and found him bleeding very much. Went for Dr. Simmons, who soon after came and dressed the wound. He was afterwards taken to the Hospital. Prisoner was slightly under the influence of liquor; Robertson was also drunk. The latter accused Lewis of stabbing him with a knife. He said they had had a bit of a scuffle.

Prisoner, being asked whether he had any statement to make, after being sworn deposed as follows:—I came into Benteu about 7 o'clock on the morning of 17th December. A Manila man who belonged to a ship was with me. I had a bundle of clothes in my hands. Met Bob, (Robertson is known as "Ice Cream Bob"). He said, "Where are you going?" Replied that I was going on board the *Sico*. He said "Come out into the country; I have shipped. I can't get a living in Yokohama." Went with him. Told him I had no money. Robertson said he had some money. I left the clothes with the Japanese and got 1½ boons lent on them. The clothes were given me by some sailors of the *Monoway*. I went away with Bob and we got drinking at Kanagawa. We stopped at Yoshiwara and had breakfast, about half past seven. Arrived at Kawasaki about 11 o'clock. I had made a proposition to go to Yedo, and he

wanted me to go. I wanted change. Bob gave me a dollar, which I gave to the Japanese to go and get changed; he stopped away a quarter of an hour. Bob asked me for the dollar. I said I hadn't it. He then jumped on me, and we rolled outside. I got up and ran away, hollering "murder." I saw the knife sticking in his side; he was bleeding. I got away from him. Saw him lifting his clothing to look at the wound. He didn't know till then that he was stabbed. I got into a jin-riki-sha to go to Yokohama. On my way saw a policeman and told him there was a man stabbed. I was sober. Saw Bob with two knives; one of them a sheath knife. He had previously drawn a knife on me to stab me; it was a black handled knife, with a blade 4 inches long. When we started from Yoshiwara I saw him put it into his coat pocket. We had always been good friends before. I have stopped at his house. I swear that I did not stab Bob at Kawasaki on 17th December. Do not know who did it. He must have done it himself when he tumbled down. I had no weapons on me when I started. I was half way to Yoshiwara when I stopped the policeman and told him of the row. I stopped of my own accord at the police station at Kanagawa, that they might take me to the European police station. I met the police about two miles from Kawasaki. Went of my own accord to the police station at Kanagawa. Waited there a quarter of an hour till the police came to take Bob and I to the European police station. I was in the jin-riki-sha when I met the policeman; was half-way; had ridden about 2 miles. The policeman was coming behind in a jin-riki-sha. The knife produced is Bob's; it is the one he had. I saw him with it at breakfast; I know it by the sheath. I saw him with a similar one. I had no weapon at all on me. I had only 1½ Boos, which I spent. The dollar I had from Bob I gave to the Japanese to get change. After the fuss in Kawasaki the Japanese give it back to me. The fuss occurred because, before that, Bob wanted me to give him the dollar, and I had not then got it; the Japanese had it. I afterwards put it into my pocket and offered it to the jin-riki-sha to take Bob and me to Yokohama. I gave it to them at the European police station.

Jos. Connors, (to Court):—We searched prisoner at the police station, and found the dollar and 2 or 3 tempoes on him.

(Defence resumed):—I had 6 bottles of lemonade and one glass of gin between the time we left Benten and our return to Yokohama. Do not remember saying to Mr. Robertson (in the deposition) that I had drunk 4 glasses of gin at Kawasaki. Had only one there. I hollered "murder" three or four times. The Japanese stood at the door; they were too frightened to come in. Bob was only three minutes behind me in reaching the police station at Yokohama. The police brought Bob in a jin-riki-sha to the police station immediately after I arrived.

Jas. Connors, (by Court):—The knife produced was found on prisoner at the police station. Both of the men came together.

G. W. Elmer, sworn:—I am gaoler to the U. S. Consular Court in Yokohama. When Lewis was in gaol, a short time ago, on suspicion of stealing some goods from Mr. Anglin, he threatened, in my hearing, to take Bob's good life; saying that it was his fault that he was then confined. To-day, when the Court was adjourned, I allowed him to warm himself, and he said, also in my hearing, that he didn't care a—, that the Japanese testimony was all true, but Robertson's was not; and that he did not care a— if he hung for it.

Prisoner:—That is not true.

In answer to Court, accused said that he was

born in Philadelphia, was 25 years old, by trade a barber, and never was in prison before.

Mr. Mitchell, after commenting on the serious nature of prisoner's offence, addressed him as follows:—

The Court finds you guilty of the prime charge, and the sentence of this Court is that you be confined at hard labour in the Consulate gaol of the Court for the term of two years.

## Correspondence.

To the Editor of the *Japan Gazette*.

HAKODADI, 6th Jan., 1874.

SIR,

It is reported here—whether truly or not—that Governor-General Kuroda has applied to the Central Government for the moderate sum of ten million, seven hundred thousand rios (R. 10,700,000), to allow him to carry on the so-called colonization scheme for Yezo. He has in the three years just passed expended about six millions (R. 6,000,000). Should the Government be foolish enough to accede to his request, it will only re-establish the mismanagement and speculation which has marked the system hitherto pursued by the Kaitakushi, for which they ought to know whom to hold responsible. Let the Government pause and reflect before they renew the lease of life of the Kaitakushi, and ask themselves, or General Kuroda, the following questions:—

- 1.—What material advantages have resulted from the expenditure of over five millions of Rios by the Kaitakushi on Hokaido?
- 2.—Are the people in Hokaido better pleased with the Government now than they were before the establishment of the Kaitakushi?
- 3.—Has the population of Hokaido increased to any considerable extent during the Kaitakushi Government?
- 4.—Why has the military defence of Hokaido been entirely neglected?
- 5.—Has the trade, and consequently commercial prosperity, of Hokaido increased to any great extent during the operation of the Kaitakushi?
- 6.—Has the production of the valuable fisheries of Hokaido developed much since the Kaitakushi scheme has been in force?
- 7.—Why has agriculture not developed itself in Hokaido?
- 8.—Is Sapporo the proper place for the capital of Hokaido?
- 9.—Has the Kaitakushi benefited by using the steamers purchased for them by the American Commission; and were not these steamers extraordinarily dear?
- 10.—Why has not a general preliminary survey of the whole country been made by the American Surveyors?
- 11.—Has any inducement been held out to capitalists to open mines in Hokaido?
- 12.—Why has the Kaitakushi allowed the valuable Sea-Otter (rakko) fishing ground to be invaded by foreign vessels and collected no duty?
- 13.—Is there one road in Yezo fit to travel on in bad weather?
- 14.—Why have the coal-mines of Yezo not been worked to any extent; and the Kaitakushi and navy vessels, consequently obliged to purchase imported coal at Hakodadi?
- 15.—Has the foreign trade of Hakodadi increased; and why has not the Kaitakushi assisted in developing a direct trade between Hokaido and China?

- 16.—Why has the Kaitakushi allowed foreigners to supply the Government dockyard of Yokoska with timber from Hokaido—and not attempted it themselves?
- 17.—Is the Kaitakushi farm in Tokei of any advantage to Hokaido?
- 18.—Why does the Governor-General of Hokaido reside nearly all the time at Tokei?
- 19.—Why has not the Kaitakushi encouraged foreigners to commence farming on Yezo, on a system suited to a northern climate; so that the inhabitants might benefit by their example?
- 20.—Has the Kaitakushi taken measures to prevent the destruction of hitherto productive Salmon Rivers?
- 21.—Is the municipal government of the towns and villages satisfactory to the people?
- 22.—Has the Kaitakushi established any newspapers in Hokaido; or pamphlets for the information of intending immigrants?
- 23.—Are there any proper schools for the instruction of the people in Hokaido?
- 24.—Are the roads and bridges in Hokaido kept in proper repair?
- 25.—Is there any money order office, thro' which persons from one part of the country can remit money to persons in other parts thro' the government?
- 26.—Are there any government Savings Banks?
- 27.—Is the postal service properly performed?
- 28.—Does the foreign office of the Kaitakushi give satisfaction, and are there not constant complaints on this head made at Yedo by Foreign Ministers?
- 29.—Is the revenue collected without great squeezing on the part of officials?
- 30.—Is the Coast, (bashi) duty proportioned, so that unproductive and newly opened districts are more lightly taxed than others, to induce more settlements on the Coast, and greater development of the fisheries, at present the principal resource of Hokaido?
- 31.—Is there anything to prevent an enemy seizing Hakodadi; so shutting the gate between the East and West seas of Japan?
- 32.—Why does the Kaitakushi favour such ridiculous schemes as those of Railways from Tokei to Awamori, and Hakodadi or Mororan to Sapporo?
- 33.—Why does not the Kaitakushi keep large stores of rice in order to guard against a scarcity in Hakodadi?
- 34.—Why does the Kaitakushi not favour the proposition of the Horaisha to make advances to fishermen in Hokaido?
- 35.—Why have not the Kaitakushi introduced cattle in Yezo instead of keeping them in Yedo?
- 36.—Why does not the Kaitakushi employ some of the former Matsumai officials, instead of bringing up southern men who are unaccustomed to a northern climate?
- 37.—Why does not the Kaitakushi pay their officials partly in land, so as to induce them to settle in Hokaido, and encourage their relations to come to the country also?
- 38.—What are the land regulations of the Kaitakushi for new settlers?
- 39.—Are the hospitals sufficient for the country?
- 40.—Are the laws (*quere*, if any) administered with justice, and has the Kaitakushi established civil courts?

MATSUMAI.

**SAGHALIEN AND RUSSIA.**

HAKODADI, 10th Jan., 1874.

The Steamer *Gembu-maru* (Kuroda) left this, on the 5th, for Kusiukotan, in Aniwa Bay, Saghalien. She carried some Japanese officials, and is understood to have been sent up for the sole purpose of landing them. What their particular mission is has not transpired, but it doubtless has reference to the undecided question of the sovereignty of the country. Do what the Japanese may, however, Russia must of necessity annex Saghalien. It is only a question of opportunity.

Situated as the eastern coast of Russia's Asiatic dominion is, the importance of the command of La Perouse Strait, which separates Saghalien from Yezo, is evident. In time of war, were that shut against her, all communication between her Manchurian ports and those in Kamschatka and the Okhotsk would be blocked, save for the passage of the very inferior craft which might run through the shoal and intricate channel between the mouth of the Amoor and Saghalien. Her vessels of war, once in the Sea of Japan, would be effectually blocked, by the occupation by the enemy of the Strait of Corea, and the Strait of Tsugar (Hakodadi); at both of which places, excellent harbours, as points of aggression, exist. Neither could her Asiatic fleet be reinforced from Europe, even should the relieving ships elude the vigilance of the enemy's cruisers by passing round Cape Horn and across the broad Pacific. But with a fortified anchorage in Aniwa Bay, and stores of coal and other material of war there, Russia's position in the North East would be secure. It should not be omitted that the port of Hakodadi,—which, with some artificial additions to its natural strength, might be rendered a second Gibraltar,—has not been overlooked by those now in power in Japan. It is intended to make it one of the military depôt-centres, as well as a defensible naval port; which, once done, would give Japan and her allies the complete command of one gate of the Sea of Japan. Besides, the want of a harbour of any capacity at the northern extremity of Yezo renders it impossible to hold in check a rival establishment on the northern side of La Perouse Strait.

It is idle to speak of Russia as being actuated in her intention to annex Saghalien by the desire of grasping territory. It is a military necessity; and she will no more abandon it, than vacate her Eastern Asiatic territory and retreat to the deserts of Siberia. She may allow the question to slumber, and to outward appearance seem to retract, but an opportunity will be waited for, and when such occurs immediate action will be taken.

It is a question, therefore, for Japan in her feeble and unallied state, what course to take. And it behoves her rulers to decide, for the future peace and welfare of the country. On the one hand she is offered the friendship of Russia, or may expect her vengeance upon the least provocation; while, on the other, she has subtle advisers who are but playing a game directed by their European masters against the Czar, although their counsel is given with apparent disinterestedness. Japan must look to her individual interest; she must well weigh the question, and then seek to bring about a settlement such as will entail on her neither loss of honour, or of valuable property.

In these considerations the first point will be, whether Saghalien is of any real value to Japan; and it may be said at once that, except for its fisheries, it is valueless. The present government has attempted what is called 'colonization'; but the failure of a Southern and

effeminate race to make war against an inhospitable climate in a barbarous country might have been foreseen. The exertions of the government have availed nothing, and the expense is a constant and not insignificant drain on an impoverished exchequer. Besides, for one Japanese settler, Russian puts ten gathered from the dregs of her population, and accustomed to the use of arms—in fact, soldiers. And if, (as is said,) the present scheme of transporting all the felons of Siberia to Saghalien be carried out, what, in a short time, will the joint occupation amount to? Then again, is not the friendship of such a near neighbour as Russia worth as much, as if not more than, that of two or three of the first nations of Europe together? And lastly, what is the value of the fisheries of Saghalien to Japan?

Having weighed these points, and considered whether Japan could not retire from Saghalien without tarnishing her honour—perhaps not at present the brightest in the eyes of foreign nations—it will probably be her wisest policy to commence negotiations for the transfer of the sovereignty of Saghalien to Russia, in exchange for a good round sum and one or two more of the Kurile Islands; stipulating, in the convention, the right of Japanese to use seas, bays, harbours, and unoccupied or at present Japanese portions of the coast, for the purpose of fishing and commerce; and freedom from all duties and taxes imposed by the sovereign power.

Under such an arrangement Japan would lose nothing save her present half-title to a poor and insignificant territory. She would receive some millions, it may be, of ready money; her fishermen would retain all the rights they now possess; her merchants would be free to trade on the very easiest of terms, and she would be saved the expense of a very costly scheme of government colonization. It may be said that the Czar, having gained Saghalien, would not be content; but keeping his eye on Yezo, would never be satisfied till he had occupied that also: that a Naval Station in the south of Saghalien would be a menace to Japan; and that an early descent might take place from thence on the coast of Yezo. Such misgivings are not only against reason, both from political and military points of view, but are such as Japan need not take into account. Because instead of as now having really no frontier line, and consequently subject at any time to collision with a stronger power, she would then be separated from her northern neighbour by a portion of the ocean. She might cultivate his acquaintance as much or as little as she thought proper, not being in constant contact. She would have acted like a wise general, who, finding himself forced by the moves of his antagonist into a false position, does not endeavour to hold it at a hazard, but, withdrawing to a defensible one, is there able to give battle, if such is forced, at an advantage. She might then settle Yezo and spend a few millions more on that favourite scheme, so continually harped into her ears by those who have a political purpose to fulfil, or by others who use their diplomatic powers in palming off on Japan useless officials of their own governments. The surplus produce of Yezo would find ready market in Saghalien, and the more dependent on Japanese merchants the inhabitants of that country became for their necessary supplies, the greater the guarantee that Russia would encourage no breach with Japan.

Let Japan accept wise counsel in time. Let her act "the better part of valour," which she can now do with a good grace; bearing in mind that by a proud policy—one that it is

impossible she can maintain—she will risk an open rupture with Russia, which she will repent. Doubtless she will be flattered as to her power and encouraged to resist, but the flatterer will desert her at the last moment. *They* have nothing to lose and will risk nothing. Japan has, and Japan must be careful. It would be well for her to call to mind some instances in the history of modern Europe; Italy's Savoy and Nice, Denmark's Sleswig and Holstein, France's Alsace and Lorraine; and think whether she can calculate upon support from those who would be able to give it if they were inclined. Japan's insular position is her best safeguard, and where, as in Saghalien, she is not isolated, she should lose no time in isolating herself.

12th January.

The Steamer *Gembu Maru* has returned from Saghalien, having successfully landed the officials, above referred to, on the ice about a mile from shore.

MATSUMAI.

OMIASAKI, 13th Jan., 1874.

We have just had an awful morning of rain and wind. It has lasted about two hours, blowing from the south-west; I never saw a typhoon any worse. It has now cleared up, but there is still a heavy sea running.

The particulars of the murder, which I mentioned in my last, might be a little more interesting if you had the whole. A woman and her daughter of the peasantry class lived near one another but in separate houses. The daughter, who has a husband and two children, took a fancy to a sendo of the Kii province, who had been driven into the place through stress of weather. The father of the two children, not pleased at this state of things, remonstrated, but the mother and daughter managed to put him out. He, however, returned in the evening, and commenced on the daughter, his wife (or paramour), with a large knife or sword. The mother interfering received a stab about the head, the point coming out about the neck, and causing almost instant death. After inflicting 18 severe cuts on the daughter he left her for dead, but, in all probability, she will recover. The village officer despatched a messenger with the news to the head office of the Ken at Hamamatz, a distance of 16 ri from here. The old woman was lifted into the house by some neighbours and left lying, the blood still oozing from the wound. In this state she lay for four days, until the officer arrived to see her, but, previous to this, the murderer was found in the woods close by, having, it is supposed, committed suicide that same night. The people here seem to think nothing of a thing of this kind, and they have every respect for the woman, the real author of the deed.

The people about this part are like most of the peasantry one sees in Japan, very poor, with no energy; growing as much as supplies their own wants, sweet potatoes, grain, and vegetables; in fact, it is only the better class that can afford rice. Sugar-cane is grown in quantities, but they have no idea of refining. Their houses are mean, their out-offices being generally better than their dwellings. At one time the people of this place must have formerly been some sort of wreckers. At present they are the terror of seafaring men of other provinces; and from what I can hear, they were not overscrupulous with the crews who fell into their hands, but I think those days have passed away.

Near here are extensive Petroleum works; they are expecting refining machinery from America shortly. The establishment belongs

to some of the old Tokugawa yakunins. Shidzuoka, a distance of about 11 ri from here, is the head-quarters of the Tokugawa clan. Many of these officers, who were once of high rank, are reduced to a state of poverty, and some of them are at work here as labourers, at a little more than half a boo per day. On a holiday, however, they come out dressed in their old garb and wearing their swords. I am told that others of the more desperate class infest the Tokaido in the neighbourhood of the Hakoné mountains, and the poor way-farer often suffers, for if any robbery is committed in that quarter, the blame is generally laid at their door.

### THE TEN LOST TRIBES OF ISRAEL.

By N. McLEOD.

*The Ainos; Continued.*

They are either an upper and lower class or two distinct races. To the north of Yedo, including Yezo, (judging from photographs, Japanese sketches, and the Yezo people now in Yedo) all I have seen may be termed the same race, as there is a similarity of features, and the people average more regular or equal height, and are a much stronger and taller race. About Niigata, especially, they are tall and able bodied men. The merchant class all over Japan, and the tradesmen, with some exceptions, also most of the wrestler class, and all the Shita no Samourai of every one of the late Princes in Japan, including all the Tokugawa race, from the Shogun down to the lowest Samourai, may in truth without doubt be termed one and the self same race.

The Royal House Kugé Sama, oldest Kokushio, and the Tozama Princes, had good grounds for calling them all "Shita no Hito," or of low degree, as sprung from the earth; in contradistinction to themselves, whom they termed the people of God, or, heavenly race; and I think the Hi-yakashio, or farmer class, north of Yedo, with some exceptions may also be included amongst them. And I cannot see my way to make any distinction between the Princes of the Tokugawa House, and the average of the merchant class, except where the Tokugawa Princes may have mixed with the samourai of Jin mu Tenno; as many of them took the daughters of the Kugés as wives. With the exception, then, of some of the farmer class, all the inhabitants north of Yedo may be termed of the upper class, including the principal merchants, most of the tradesmen, and the lower class samourai of nearly every Prince in Japan. Before the revolution of 1868 the fact of a low, or shita no samourai only ranking above a common coolie amongst samourai of the Princes of Jin mu Tenno, marks the line of distinction, which was completely drawn by their living within the outside wall of every Oshiro in Japan, next to the merchants and tradesmen; and the upper class samourai would as soon have thought of marrying the daughter of a farmer or coolie, or even a merchant's daughter in these days, as the daughters of their lowest samourai. The nearer to the Prince's citadel the higher the rank and the purer the blood of Jin mu Tenno's samourai. As they generally married the daughters of those of their own rank, and kept a correct register of their genealogy, as did the Jews of old, this is how the races have for 2500 years been kept distinct. Although the Princes of Jin mu Tenno were tributaries to the Tokugawa Shoguns, yet they never dared to separate, or interfere with, the arrangements of the two distinct races in the Oshiros of Jinmu Tenno's samourai, though

they deprived many of them of a good part of their lands. But it was principally amongst the Imperial provinces and several of the early Princes of the royal house, not including the nine oldest Kokushiu, that havoc was made, and also amongst the lands of the earlier Kugés. It was out of their lands that the Tokugawa Princes principally received their provinces, and it may truly be said that the house of Tokugawa robbed the Imperial House, the particulars of which I will afterward fully explain, as this is clearly foretold would happen. I visited the Oshiro of Mito; it is one of the largest in Japan, and there I saw the pure Tokugawa race, who, to a man, did not appear to have one single drop of the blood of Jin mu Tenno's samourai in their veins. There are said to be 6,000 of them, and they turned out pretty well in crowds, so I scanned their faces as closely as possible, and they were the exact facsimile of all the lower classed samourai, the merchant and most of the artisan class in Japan. I saw very little difference between them and the townspeople of Mito, as I remained there for a short time and had a good look at the castle and town.

The proof of these two races may be seen in the list of all the Daimios or Princes of Japan. The word Daimio may be termed of Tokugawa origin, and might be translated Great, Honourable Lord; from *Dai* great, *Mi* honourific, or honourable. All the Tokugawa Kokushiu and Daimios have the word Fudai opposite their names, to distinguish them from the other race, the Princes of Jin mu Tenno; including Hata Moto, and higher samonrai, Iyeyas family, the Tokugawa, and all those who assisted him in his wars. In Iyeyas' time there were said to be 8,000 Daimios, and the Princes of the other race were not permitted to have any say in his councils; most of the Tozama Princes are specially mentioned as having been hostile to him.

The Ainos from being only originally servants to Jin mu Tenno and his samourai, became lowest class or shita no samourai; and many of the principal farmers during the early wars who were also of this class were permitted to arm their servants for their self-protection; being also permitted to adopt the crest of their Prince. And during the earlier wars, and especially of the Hegi and Gengi wars, by distinguishing themselves in battle they gradually rose to rank and power, and received lands as a reward for their services; by the time of Nobunanga they were able to take the field under their own leaders against their former conquerors. He may be said, then, to be the first who broke their power. Yoritomo was a Minamoto, and of the race of Jinmu Tenno; and the Hegi and Gengi wars were simply a repetition of the war of the eleven tribes against Benjamin, and was just as blood-thirsty, and had the same end in view, viz: extirpation. The only difference is, that the Hegi and Gengi war was between two tribes, and the Hegi, to this day, have never recovered from the effects of that war, as they were nearly rooted out. The family of Yoritomo and the aborigines were the principal gainers by this war, as the foundation of their independence was laid by Yoritomo.

Tyeo Sama may be said to have been the first who completely broke the yoke of bondage, which was borne on the necks of the Ainos, and transferred it to the necks of their former conquerors, who had oppressed the people; and Iyeyas completely rivetted this yoke, and made it a yoke of iron. From the Mikado Miya, and

Kugé Sama, oldest Kokushiu, and Tozama Princes, who were compelled to send their wives and families to Yedo to reside as hostages, and they themselves were made Inkiyo in their own provinces. A united rising of them to free themselves of the Mikado would have been death to those dearest to them, the Mikado would have been instantly dethroned, and the Miya Sama, who resided at Uyeno, Yedo, the next heir, would have been made Emperor. The graves of those hostages in Yedo may be said to be one of the saddest sights to witness in Japan, their dust being mingled with those of their enemies the Shoguns, and the *Hyaku-nin-Ishew*, or, Book of Songs, composed principally in Kioto, may well be termed Israel's lament, and the curse foretold in the 28th chapter of Deuteronomy, 36th and 32nd verses, is here strikingly illustrated and fulfilled.

"The Lord shall bring thee and thy King, which thou shalt set over thee, unto a nation which neither thou nor thy fathers have known; and there shalt thou serve other Gods, wood and stone. Thy sons and thy daughters shall be given to another people, and thine eyes shall look and fail with longing for them all the day long, and there shall be no might in thine hand."

The comparison of the Shoguns' graves and the Mi-sa-saki of the Emperors is mournful to behold. The Shoguns, the race of a day, have mausoleums erected over their dead, and Miyas of gorgeous magnificence erected at the expense of their old conquerors; but, in my humble opinion, they cannot compare with the grand old graves of the Emperors of Japan; many of whom may be said to have witnessed the old world pass away, and can tell the tale of about 2,500 years. Many of the oldest Princes of Jin mu Tenno's samourai now in Yedo and at present the dominant race, have but too good reason not to forget the yoke of iron which may be said to have entered into their soul; and, if they are hard upon their former conquerors, it is but human nature that they should retaliate, and cause them to taste of some of their former bitterness. Only a nation composed entirely of Christians could forgive the accumulated wrongs of more than 200 years. To understand the present dominant race and judge them justly we must enter into all their feelings, and know all their wrongs, before we can come to any understanding with them, and to do this properly it is necessary to review their history from the time the first foreigner set his foot on their soil, and take into account their isolated condition, shut out as they have been from the world, and with a due regard to all their manners and customs, and above all to the sure word of prophecy, of which they are living evidences of the truth; and so soon as they know that all the curses in the 28th chapt. of Genesis rest on them, and have been sent by the God of their fathers, whom they ignorantly worship, because they have no true records or Bible which shows the proper *Shin do*, or way of God; or how to worship the God of their forefather in righteousness and truth—not till then will be fulfilled the prophecy which says "Whereas ye were a curse, O! House of Israel, among the heathen whither ye went, so shall ye be a blessing, and the heathen shall know that for your sins ye went into captivity." This the Ainos and the Tokugawa heathen as yet are ignorant of.

The Ainos may truly be termed the sons of Japhet. Taking them all in all they have the features of the European. They are better looking than the race in the south of Japan, and they are the strongest race in Japan;

being cast in a much rougher mould than the samourai of Jin mu Tenno. They are a larger boned race, have larger feet and hands, a different shaped head and cast of countenance, an expansive forehead, a different shaped nose. Almost every one of them, to use a vulgar expression, have their noses slightly snubbed or chipped at the point. The shape of the eye is quite different, and it is deeper set in their head; they cannot be termed such a well proportioned race as the samourai of Jinmu Tenno. This description applies specially to the Tokugawa race, and the merchant and artisan classes.

The two races are as different as night and day, as every one of them has a different shaped nose and eyes from the samourai of Jinmu Tenno, who, to a man, have their noses rounded at the point. Also the form of the eye is fuller, darker, and more or less protruding; and, like the nose, of altogether a different shape.

The probability is that the Ainos descended from the north of Asia, *via* Yezo, and peopled that island on their way; gradually extending themselves as far south as Naniwa, the ancient name of Osaka; which may be said to be the oldest city in Japan, as it was called Naniwa Tokoro before ever the samourai of Jinmu Tenno came to this country.

The farmer race are decidedly the smallest, and in many districts the weakest, bodily race in Japan, especially on comparing them with the Tokugawa samourai and shita-no-samourai all over Japan, and the merchant and artisan class, and, more especially in the south of Japan, they are much smaller, darker skinned, and an uglier race than the farmer class to the north of Yedo. And, while I would not disturb public opinion as to their being a different race, yet many of them have the flat nose that is not much seen amongst the Tokugawa and merchant classes. The Satsuma farmer class have a lower forehead; and many of their southern brethren appear to resemble the Malay; when Japanese and Malay sailors from the south are dressed alike there is a marked resemblance.

The sweet potato is called the Satsuma Emo, and, if the south of Japan has been peopled from Java, which is not improbable, the natives would likely bring that edible with them.

But, until the country is all open to foreigners, I don't think any one can honestly give a decided opinion as to the Ainos being the aborigines of all Japan.

The curse of Ham seems to have rested on the poor farmer race, as they were oppressed previous to the Tokugawa, and now, in the present state of the country, they are more heavily oppressed than ever.

The Ten Tribes in the Holy Land were noted for their oppression of the poor, but I trust the advent of a New Year may see the prophecy fulfilled where it says that Israel would be a blessing instead of a curse amongst the heathen whither they went. It is also foretold that the heathen would know that God had sent them here for their sins. We all know that they told the Ainos, almost word for word, the prophecy of Ezekiel which was written B. C. 587, 73 years after their arrival in Japan; see Ezekiel 20th and following verses—"and when they entered into the heathen lands whither they went they profaned my Holy Name, when they said to them, These are the people of the Lord and have gone forth out of his Land."

And the very first thing they did was to give Japan the name of the land of their forefathers, Kamé no Kuni, "The Holy Land."

## SECOND FOOT PAPER HUNT.

DESPITE THE attraction of the deliciously mild and genial weather on Saturday afternoon, the muster of spectators at the Camp, to witness the Foot Paper Hunt "throw off," was by no means large. This was the second meet of the season, the prize offered being a handsome silver Cup, of the value of \$20. Half past three was the hour appointed for the start; it wanted, however, but seven minutes of four o'clock before the hares were let go, and, fifteen minutes after their departure, the hounds got away, Captain Walsh, R.M. giving the word. The result of this late start was, that the sun had long disappeared ere even the hares put in an appearance at the appointed goal, and it was almost dark before the last of the hounds came in.

The course was one of the stiffest that could well be found: from the Camp the scent lay along the road past Capt. McDonald's, on to Curtis's "Cliff Hotel" (where a halt of three minutes was made) through the paddy fields, over the race-course, and so on to the hills at the back of the targets, and thence along the hills skirting the Range, down on to the Range itself, the course terminating with a tangled piece of scrub and a leap over a ditch.

Some thirty or forty spectators, including a few equestrians, and a number of military gentlemen, known as enthusiasts in everything connected with legitimate sport, were on the ground, which was graced by the presence of several ladies, mostly on horseback.

At 5 o'clock the sun had disappeared behind the hills, and the air began to grow raw and chilly. Just as the visitors had begun to grow somewhat impatient a crash was heard on the hillside, timber flew about considerably and the two hares, (Messrs. J. J., and A. H. Dare) leaped across the ditch, and ran to earth. A few minutes after, Mr. Watson, the first of the hounds, put in an appearance, but unfortunately not from the direction taken by the hares. At twenty three minutes past five, the cry was raised. "They are coming," and the winner, Mr. Hamilton got to grass, amidst the congratulations of his friends, pretty well pumped out with his exertions. Mr. Brent came in at his heels a good second, Lieut. Smyth, R.M., following, third in order. The rest arrived stragglingly. The time, taken by Capt. Purves, R.N., was 1 hour 15½ minutes, and considering the exceeding stiffness of the course (on the selection of which the Messrs. Dare are to be congratulated, altho' we daresay the hounds don't exactly see it) was by no means bad. The competitors were unanimous in the expression of the opinion that it would be almost impossible to cut out a more difficult line of country than was laid out for them on Saturday, the reeds being in some places over their heads. The following is a list of the Hounds:—Messrs. Hamilton, (1), Brent (2) Lieut. Smyth, R.M. (3), Messrs. Sandeman Snow, Longford, Walker, Watson, Corp. Dunn and Private Culley, R.M.

ARRANGEMENTS for a regular mail steamer service between San Francisco and Australia have just been definitively completed. The vessels leaving San Francisco will touch at the Sandwich Islands, Fiji, and New Zealand, and Sydney will be the terminus.

A subsidy has been granted of £80,000 per annum (half from New South Wales and half from New Zealand), and the contractors will also be at liberty to negotiate mail terms with the United States' and French Governments, the latter being interested in the communication with New Caledonia and Tahiti. Four

screw steamers are to be built for the purpose—two of 2,800 tons and 500 horse power each, by Messrs. John Elder & Co., Glasgow, and two of 3,130 tons and 600 horse power, by Mr. James Laing, of Sunderland—the guaranteed speed being 12 knots. The first of these is to be ready by the 1st of October next, but as the service is to commence immediately, a fleet of four new ships, the *Mongol*, the *Tartar*, the *Macgregor*, and another, have been chartered for the purpose.

These steamers were constructed for the China trade, and one of them, the *Macgregor*, is to leave Sydney on or about the middle of December and is advertised to sail from San Francisco on the 27th January. When the regular ships shall be in operation, the contractors will be under heavy penalties to perform the voyage from San Francisco to Sydney in 25 days, but, during the temporary service the time is expected to be between 26 and 28 days. From London to Australia the time with the regular vessels in operation is expected to be 42 days.

The negotiations on behalf of the capitalists interested have been conducted by Mr. H. H. Hall, the U.S. Consul in Sydney; and Messrs. Lawrence, Clark, & Co. are to be the London agents.

## YOKOHAMA RACE CLUB.

The Annual General Meeting of the Yokohama Race Club was held yesterday afternoon at the premises of the Chamber of Commerce, the use of which had been kindly tendered to the Club by the Committee. N. J. Hannen, Esq. occupied the chair. The Hon. Sec., Mr. J. A. Fraser, read the Report and statement of accounts, which were unanimously adopted as read.

The retiring Committee were re-elected, *nem. con.* The following is a statement of RECEIPTS AND EXPENDITURES FROM 1st JANUARY TO 31st DECEMBER 1873.

RECEIPTS.	
Yearly and half-yearly subscriptions, ...	\$1660 00
Entrance fees, ...	2495 00
Subscriptions to Cups, ...	940 00
Matches and fines, ...	25 00
Stalls, ...	610 00
Tickets sold, ...	2030 00
Bettes' and grooms' tickets, ...	55 00
Rent of Refreshment Room, ...	100 00
	<u>\$7915 00</u>
Balance in hand 1st January 1873, ...	1053 14
	<u>\$8973 14</u>

The above is exclusive of presentation cups not in money.

EXPENDITURE.	
Maintenance of Course, wages, etc., ...	\$642 55
Repairs of old Grand Stand, ...	55 00
Temporary Grand Stand and Stables (May Meeting), ...	380 11
Temporary Grand Stand (Autumn Meeting), ...	254 97
Stables (part cost), ...	252 00
New Rollers and Coffee House, ...	166 80
Repairs, painting, etc., ...	85 27
Prizes, ...	3860 00
Expenses of Meeting, ...	512 54
Printing and Advertising, ...	427 75
	<u>\$6636 99</u>
Balance 31st December, 1873, ...	2336 15
	<u>\$8973 14</u>

It is reported in *Tokai* that the police force connected with the *Fu*, is to be increased to 15,000 men; and that the chief officer is to be a man of very high rank.

WE learn to-day that the taunts and insults from Corea to Japan, are increasing. Never a month passes without them; and sooner or later there must be war.

We regret to have to report that almost at the moment of the passing away of 1873, the alarm of fire was raised in Tokei, and it was discovered that the large temple of Zozogi at Shiba was on fire. It was burnt to the ground, with scarcely an effort to save it; and although it is said to have caught fire from the upsetting of a lamp, there are strong grounds for thinking it was the work of an incendiary. It was one of the most venerable buildings in the eastern metropolis, having stood the storms and earthquakes during upwards of 250 years. The bell tower in the quadrangle was also burnt, but all the other edifices are safe.

ON CHRISTMAS DAY, a woman was brutally murdered near Omaisaki, and the body of the murderer was found, two days afterwards, in the woods, where he had evidently committed suicide.

A FEW days ago, at Omaisaki, a very poor woman presented her liege lord with three miniature specimens of the genus *homo*. Unfortunately for her the triplets were born outside the bounds of Her Britannic Majesty's Empire, and the bounty granted on such occasions was not forthcoming. Some charitable folk however, resident thereabout, have taken the matter in hand and assisted her with a little cash for her present needs.

MURATA UJIHISA, late Sanji of Tsuruga Ken, whose promotion to a higher position in the Gifu Ken, was noted a few weeks ago, has been called to Tokei, and made Nai-mu-dai-jo, an office of honor and importance in the new Nai-mu-sho, or Home Department. The appointment has given great satisfaction to the people of his native province of Yechi-zen, although they feel the loss of a most excellent officer.

A STRONG force of policemen keeps guard over the residence of Okubo and the other high officers of the Government who are known to favour the policy of Iwakura.

AMONG OTHER articles of "game in season" now on sale in Tokei, fat black bears, wild boar, deer, foxes, monkeys and badgers are ready for native epicures. "Darwinian potpie," "A Natural Selection of tid-bits," would be good names for some of the messes concocted for the palates that will be tickled by the savory flesh of these quadrupeds.

THE PEOPLE in the provinces on the western coast are wondering at the rare spectacle (to them) of a January landscape without snow. Instead of having their fields and streets whitened to the depth of from six to ten feet with snow, they were, up to the 14th of January, rejoicing over bare ground. They will doubtless be snow-bound before the winter is over, as usual.

AMONGST THE native pelt, raw hide and leather dealers, an unusual activity prevails at present, and one large house on the Main Street, Tokei, deals exclusively in pelts. Among others, we notice an unusually large number of rabbit-skins, which, in due time, will reappear on the heads of natives, in the form of the round caps so much in fashion among them. This argues gloomily for the late house-pets (or pests) of the people, but shows the might and speedy operation of the government edicts. In this utilitarian age a useful cap is better than a live rabbit, and decidedly cleaner.

SINCE FOREIGNERS and foreign journals have had their fling and laugh at the hetero-

genous wardrobe of the Japanese who attempt to wear foreign clothes, it is only fair to note that a great improvement has taken place in this respect, and that hundreds of natives now appear in well-fitting, tastefully made clothes which are chosen with an eye to harmony in colors. We were formerly tempted to suppose that native tailors, instead of getting their "latest fashions" from Paris, London, or New York, obtained them from Tokei, in the form of the colored Japanese prints, in which men are represented in scarlet coats, sky-blue trousers, and green caps. It does not so often happen, as in days gone by, that old men are seen with little boys hats on, infants with high boots, and laborers in ladies shoes. We congratulate both foreigners and natives on the changes, which we doubt not, work to the benefit of all parties concerned.

ON THE night of Friday last, or early Saturday morning, the premises occupied by Mr. Hornby Evans at Kudang, Yedo, were visited by burglars, and property, consisting principally of clothing, taken away. There is every probability of the thieves being captured.

#### NI-GATA.

21st December, 1873.

A FIRE occurred during the week in a new tea house in Tera-machi or Temple street, but, owing to there being no wind it was fortunately confined to one house. It was caused by a kerosine lamp being hung too near the roof. Kerosine, which is obtained in great quantities from a spring near here, is largely used in the town, the streets being lighted with it, and the people mostly use it in their houses. It is sold at 35 cents the gallon. The Japanese purify it a little, but it is a very dangerous fluid and is not used by foreigners here. Several cases of explosion have occurred, but fortunately without any serious result. There is talk that next year a company will take over the springs, and import proper refining machinery: there may be something in it as a foreigner visited them this Autumn and was engaged some time in boring, &c.

THE EUROPEAN Staff engaged in the gold mines in the Island of Sado, has been increased, and there are now four foreigners engaged there.

THE PRISON, as well as the Ken, has lately been enlarged, and the inmates of the former appear to be pretty numerous, though mostly confined for light offences. All the prisoners are dressed in uniform of red cotton stuff, and look healthy and strong: very different from the miserable wretches one used to see in the Tobe at Yokohama, not very long ago. The establishment is nearly self supporting, as the prisoners, unless convicted of a serious crime, are allowed to work in the town during the day, but have to return to the prison at night. A small proportion of the money they so earn is given them on the expiration of their sentence.

A DISPUTE has arisen, between some farmers in a village about ten miles from here, about a boundary line. The local officer of the place went out to settle it, but his ideas did not meet the approval of one of the interested parties, and a row was got up. In the *mêlée* the officer got knocked down with a billet of wood, and was killed. A high officer was at once sent to the place from Ni-gata, and he has returned with five of the worst that were concerned in the affray.

7th January, 1874.

THE NATIVE New Year went off very quietly there being a great dearth of the usual decorations and jollity; indeed the only signs of the times were the enormous piles of Muchi or rice cake, to be seen in every house, and a few of the well to do natives airing their new clothes many of which were cut after the foreign style. The weather has been fine and the usual heavy snow appears to be holding off much longer than usual.

QUITE AN epidemic of measles has visited the place and few have escaped its annoying attack.

THE BOILER for the oil springs near here, has arrived. It was brought from Yedo overland and our informant who saw it as he was crossing the Mikune mountains said there were from 250 to 300 coolies engaged in the job, and those who know the route will understand the work and exertion it must have required.

THE JAPANESE intend running a steamer here once a month to commence from March or April next, and to continue it as long as the weather will allow them; the steamers will be in connection with the post office and visit Sendai, Hakodadi and ports in Yesso en route between here and Yokohama.

INFORMATION HAS reached the government from Niigata, that on the 27th of December three large boxes were thrown ashore on the coast of Yechigo. All had the Tokugawa mong or badge, and two of them were empty. The third contained many valuable writings, books and manuscript rolls written by famous Tokugawa people of high rank, and some beautifully illuminated. It is supposed that they belonged to some Tokugawa noble or gentleman, and that being sent by sea, the ship or junk was lost on the voyage.

#### MR. MARSH'S CONCERT

THE Farewell Concert of Mr. Marsh, which came off last night at the Gaiety Theatre, was, as it happened, fixed for a very unfortunate night, for the weather was such that nothing but the most determined good-nature could induce any one to face it. Black as Erebus, and pouring with rain; miserably cold and comfortless. Though the room was but half filled we confess that we were surprised to see even, so many present. The kind feeling of the community towards Mr. Marsh was fully shewn by such an audience on such a night; but we fear that he will not be much richer for it.

We shall not be very critical in our notice: for we hardly think it is demanded of us. There were some weaknesses in the programme which it was difficult to get over, consistently with availing of all the assistance proffered and yet confining the concert within due limits; and thus there were times when the performance seemed heavy and somewhat dragging. There was nothing which was not of itself good, but what was wanting was light and shade. The gentlemen who assisted Mr. Marsh were the same as have done so on several occasions, and, generally speaking, they acquitted themselves as well as at other concerts.

The opening piece was the trio from a septett by Beethoven; and although it was an Allegro it was taken too fast, and much of the effect was marred thereby. The players were less in accord than usual, and it gave the idea of being "rushed." More than once the harmony, which is so smooth and pleasant when the time is properly taken and the performers thoroughly understand one another, was altogether lost.

and appeared like passages of discords; and certainly this was the least satisfactory trio we have yet heard the same gentlemen play. The glee which followed was one of Hatton's, "I loved her." It had plenty of "go" in it, and, with the exception of the first bar, went admirably. Indeed this glee and the one which opened the second part were the best specimens of glee singing we have heard in Yokohama. The latter—Müller's well-known "Maying,"—was as near perfection as amateurs in these parts are likely to attain; the voices well-balanced, the time well taken, the tone well supported, and the painting quite sufficient. The songs were led off by Mr. Jacquemot, who sang *Mandolinata* with his fresh young voice so sweetly as to secure an encore, in response to which he sang, to his own accompaniment, a charming little song which hardly escaped a re-demand.

It is needless to say that Mr. Marsh's harp solo was highly appreciated by the audience, and that Gounod's *Nazareth*, and the German song *Fünf hundert tausend Taufel*, were well sung.

The latter song, particularly, we should like to hear under more favourable circumstances—coming in its place nicely mosaiced with other pieces, to which it might serve as a contrast whilst keeping up the general spirit of the hour. It requires not only a good singer but an audience prepared to understand and enter into it fully; and under such circumstances is well calculated to "bring down the house." The duet between Flute and Piano, by Messrs. Wagner and Marsh, was full of life and melody, and was so effective as to wind up the first part with applause.

The second part was altogether more effective. The glee led off well, and Fesca's song *The quivering star* was exceedingly well sung by Captain Walsh, who, being encored, sang Sheridan's song *The mid watch*—always pleasant from old associations, as well as for its intrinsic feeling. Then came Captain Fletcher, whose appearance was the signal for a perfect shout of welcome; his jolly beaming face evincing the pleasure it afforded him to do Mr. Marsh a service. The song selected by him was one from Mr. Marsh's opera "The gentleman in black." It was entitled *The deep deep mine*, and is a far better specimen of composition than most songs of the same class. Of course Mr. Marsh played it *con amore* and it was sung with great spirit. It received a loud encore and the last verse was repeated accordingly. A duet for harp and violoncello by Messrs. Marsh and Chapman was nicely played and was much enjoyed. But the next song, *Die Forelle*, by Mr. Ohl, was the *meurieu* of the evening. It was delightful to hear the familiar voice again, after nearly a year's interval. It was better than ever, and the song is of that graceful, melodious character which captivates at once. We need hardly say it was encored. The *Jubilee Overture* was next played as a duet for Pianoforte by Messrs. Marsh and Thiemer, and the concert closed with the song of the giant Harapha, from Samson, *Honour and Arms*.

Before concluding our remarks, we must express our regret that Yokohama is not yet sufficiently advanced to allow of so excellent a musician as Mr. Marsh remaining amongst us. We cannot divest ourselves of the memory of the pleasant hours his residence here has enabled us to pass. Not only his own concerts, but all others which have been given, and the musical theatrical entertainments have all had the benefit of his accompaniments and performances; and, whilst we see that it is necessary for him to seek a more fruitful field, and sincerely trust that whither he is going he may

find it, we, like some of old, consider ourselves and our loss, and sorrow most of all that on his departure we may see his face no more.

### MR. PAUNCEFORT'S READINGS.

Wherever one goes there is always to be found a certain class of folk who have conscientious scruples about entering a theatre. These are in the minority, of course, and whilst we pity their taste (or perhaps the want of it) it is hardly fair to condemn it absolutely. And yet these are perhaps the very people who would desire no greater recreation than to sit down before a good fire with a copy of Shakspeare, or a volume of Standard Plays. Mr. Pouncefort's is essentially a Drawing Room entertainment, just the one in fact to please such as we have spoken of. It was a "happy thought" of his to secure the Salon of the Grand Hotel for his first reading before a Yokohama audience; and the room certainly presented a pleasing appearance when the gentleman made his bow last night. There was a good fire burning, the lighting was brilliant and effective, and above all, there was a large proportion of the fashion and intellect of our City to encourage the reader.

The Art of Reading (considered as an Art) is, strange to say, most studiously neglected as a rule, both in our Academies, and in the family. It is an art which may be acquired by everyone, and the good reader carries constantly about with him the means of touching the hearts, and appealing to the finer feelings of his fellow-creatures. Music and painting are to some seemingly impossible of acquirement; and they are often in reality so, where nature has denied the capacity. Histrionic ability is desired by many but attained by few; but the art of Elocution, is one within the grasp of everyone. Many who were present last night, had enjoyed, no doubt, in the "old country" the opportunity of hearing the Great Master himself in his Readings. The writer some years ago had that pleasure, the selection being, on that occasion, the first and best of the Christmas sketches, the one selected by Mr. Pouncefort last night. The story of "A Christmas Carol" is so well known that it is needless to give even a sketch of it here. Let it be said that it lost nothing at the hands of the reader of last evening. A very long experience of the stage, added to an innate aptitude for grasping the intention of the writer; a full, rich voice, a fine presence, a great command of feature, all combine to evoke from him a true interpretation of the writer's ideas. Much practice in the study of dramatic literature has enabled Mr. Pouncefort to dispense with the use of the book, so that the Reading is in reality a Recitation. Yet he adheres closely to the text, excepting in the case of some slight omissions or curtailments, warranted by the practice of the author himself. It is not our intention to dissect minutely Mr. Pouncefort's rendition of the sketch, it is sufficient to say that each character was crisply individualised, and as a whole we think realised the audience's conception of the faults, failings, and good qualities of the *dramatis personæ* of the story.

The reader received considerable applause at the termination of the first portion of the programme, and announced that after a few minutes interval he would present a selection from the American Humourist, Mark Twain.

The selection made was *The Great Beef Contract*, one of Twain's happiest efforts;

it abounds with the very essence of dry humour, and is a most sparkling hit at the endless complications and delays of the U. S. "Circumlocution Office."

Mr. Pouncefort thoroughly identified himself with the inheritor of the unfortunate contract; and the expression of resignation and subdued melancholy depicted in his visage: the result of the legacy which had already been the death of six or seven legatees, was beyond expression sublime; it was inimitable. The story was told in a deliberate, matter of fact way, as though the narrator were relieving himself of an unpleasant duty, and the audience evidently entered thoroughly into the humour of the thing. To our mind, this was the better rendered portion of the programme.

The reading concluded amidst applause; and Mr. Pouncefort, in thanking the audience for their attendance, said he would probably announce through the press, a further selection from the works of the great writers. We hope to have the pleasure of again hearing him at any early date.

### BAZAAR.

NOTWITHSTANDING the length of time that has elapsed since the advent of the *Ijin* into Japan, it has been reserved for the Ladies of the American Mission Home, whose school rooms are situate at No. 212 Bluff, to introduce amongst us that familiar institution, so well-known to both Europeans and Americans, the Bazaar. And, considering the object of this initiatory effort, it could hardly have been introduced at a more opportune moment, or for a more appropriate end; which is, to aid in the support of an establishment designed for the education of Japanese girls and young women. The school is intended exclusively for females, and since its establishment, has grown rapidly; so much so that there is now need of more extensive accommodation, to provide which is in deed the object of the Bazaar. Many of the pupils are received gratuitously; others pay a small sum for board. The work is wholly supported by ladies in America, and the business of the school is under the management of Mrs. Pruyn, who is assisted by four other ladies. The sale commenced yesterday and is intended to continue to-day and to-morrow; the school-rooms, where the Bazaar is being held, being open from 11 A.M. to 8 P.M. each day. Yesterday, the opening day, a brisk sale was carried on, and a great many things, both useful and ornamental, disposed of. The articles for sale are mainly for parlour and toilet use, the handiwork of ladies in America, and are intended to furnish to the Japanese pupils of the schools evidence of the industry, ingenuity, and self reliance of the female sex, a point which the lady directors look upon as of some importance. The Rooms are very tastefully decorated, and there are 7 tables or stalls, presided over by young ladies of Yokohama, who have very kindly lent their assistance for the occasion. We are satisfied that it will not be necessary to do more than mention this fact, feeling assured, from the known gallantry of the gentlemen of Yokohama, that the tables will be cleared of their contents long before the hour of closing to-morrow evening!

### THE "VASCO DA GAMA."

AT NOON to-day the 19th inst., about 200 guests assembled, by invitation, to luncheon on board the C. & J. T. P. S. S. Co.'s steamer *Vasco de Gama*, on the occasion of her opening the new line to San Francisco.

The accommodation and the whole appearance of the steamer was much admired.

After an excellent repast.

SIR HARRY S. PARKES proposed success to the C. & J. T. P. M. S. S. Co.; of which the *Vasco da Gama* was the Pioneer steamer. He believed that it was in no spirit of monopoly that the Company had been projected and trusted that between the two great continents of America and Asia, across the widest ocean in the world, there was room enough for the profitable employment of both Companies; and that whatever emulation existed between them would tend to the benefit of the public, the mutual supporters of both,

Mr. HUDSON responded on behalf of the Agents of the Company, and said that, of course, they must naturally look and wish for the support of their American friends, in San Francisco and elsewhere. And, though their ships sailed under the British flag, he hoped under that flag there was room for passengers of all nationalities. The Company was started in no spirit of monopoly, but wherever enterprise had a chance of success, especially on the seas, there it was natural the British flag should be found. He alluded in graceful terms to the merits of Capt. Rice, and concluded by proposing his health, which was cordially received.

Capt. RICE, in reply, said, that though the spacious saloon was somewhat crowded there were then present even less than the number of passengers he had brought to Bombay; and he believed they all left highly satisfied with the ship. There might not possibly be such ample space as in the large ships of the P. M. S. S. Co. but still he believed that, after one trial, travellers would always be glad to take passage in the same ship again. He thanked the visitors for the way in which his health had been received.

The numerous company then broke up.

### OSHI-KOMI.

ON TUESDAY evening last, (30th ulto.) the tea house called Baraki-ya, opposite the Cliff House, was forcibly entered by an armed man, who drew a long sword, with which he threatened to kill anyone who attempted to resist him, and proceeded to appropriate the money and clothes of the people of the house. As these were only women he had it all his own way, and, after gathering together his plunder, he took his departure, vowing vengeance on anyone who should attempt to raise an alarm.

The same night some men who were bringing fish in from Negishi, taking a short cut at the back of the Race Course near the Grand Stand, came upon the body of a man lying on the ground. On examination he was found to be quite dead, but had evidently just been cut down. On his head there were two deep cuts, on his shoulder a cut and two thrusts, there was a deep cut across his stomach, and another on his thigh, but no tokens of any struggle or resistance having taken place were to be found, and it seemed as though he had been cut down from behind, and the finishing strokes given afterwards.

Next morning, the authorities having taken the matter in hand, the girls of the tea-house where the robbery had taken place were called to inspect the body, the supposition being that it was that of the man who had entered their dwelling on the night previous. On examining the remains, they expressed their conviction that it was really the body of the robber. If this supposition be correct, we may further surmise that he had accomplices, who quarrelled with him—perhaps about the division of the spoil—and slaughtered him with

his own weapon, as no sword was found near the body. His clothes however, were not taken, and the sum of 1½ boos was found in his purse untouched.

The body was not removed from the spot where it had been discovered. On New Year's Eve it was still lying there, but the mayor of the district of Negishi had appointed a man to watch it, and when our informant left, the poor fellow had lighted a fire and was preparing to keep his solitary watch through the long winter night; no very agreeable occupation, under any circumstances, but as the weather turned out toward morning, particularly unpleasant in this case; and without doubt an exceedingly dismal way of watching the "old year out."

### ROBBERY WITH VIOLENCE.

LAST NIGHT, at about 7 o'clock, a quartermaster of the U. S. Store-ship *Idaho*, named William Webb, came to the U. S. Consulate and complained that he had been robbed, knocked on the head, and thrown overboard from a sampan by the sendoes. It appeared from the statement of complainant that he had come ashore on leave at 11 o'clock yesterday morning; on returning towards the vessel in the evening, not being aware of the regulations for booking at the Hatobas, he omitted to register his name at the office and went down to the slip at the French landing place. Seeing the boatmen there who had brought him ashore in the morning he agreed with them to be taken back to his vessel: as he was quietly sitting in the bow of the boat, he was suddenly struck on the head from behind, and his face very much cut and bruised. He remembers no more until he found himself lying on the stones near the iron bridge in the native town: wounded, covered with mud and slime, and minus about \$8 which he had on his person when he entered the sampan.

After resting awhile, although very much exhausted, he managed to reach the U. S. Consulate, where he laid the complaint stated above. He was accompanied by the Deputy Marshal to the Japanese Police Station, the authorities of which sent down an officer with him to the Hatoba. The person in charge of the boat-house, being informed of the particulars, called together the sendoes present, and Webb pointed out a man as being one of the boatmen. He was taken in charge and brought to the Japanese Police Station, but, as Webb could not swear that he was actually the man who assaulted him, he was discharged, the boat-house official undertaking to produce him when required. There were two men and a boy in the sampan. Webb says he had about \$8 and half a boo when he entered the boat; this was in a pocket-book which the thieves emptied of its contents, and afterwards thrust between the trousers and the belt of their victim. The matter is in the hands of the police, but, since last evening, nothing further has been elicited likely to lead to the discovery of the culprits.

THE U. S. STORESHIP *Idaho*, Lieut. Commander Nelson, which has been for a length of time so prominent a feature of our harbour, has at last been peacefully shelved, having gone out of commission on 31st December last.

The United States Government some time ago secured on lease from Messrs. Walsh, Hall & Co. a large area of land at Nagasaki, with the intention of transferring the locale of the Naval Store Depot thence. The necessary buildings have now been erected and the transfer of the stores effected, and Paymaster

Allen, with his assistants, left Yokohama per s. s. *Golden Age* yesterday, to take charge of the establishment. For the present the Hospital arrangements here will undergo no change, but we believe it is the intention of the U. S. Government to transfer also to Nagasaki, the staff attached to the Naval Hospital here.

We hear it mentioned that, on account of the greater security of Nagasaki as a harbour (real or supposed) American vessels-of-war in these waters will for the future pass the typhoon season there; the choice being made from its sheltered position.

During the repairs at present going on on board the *Ashuelot* the *Idaho* will act as tender and storeship to that vessel; but the latter, we hear, will shortly be put up to auction and sold out of the service. In all probability she will end her days in the useful but inglorious capacity of a coal-hulk. *Sic transit gloria!*

### FIRE AT NOGE.

SHORTLY AFTER eight o'clock this morning the fire bells sounded the alarm, and it was found that the Takashima school building adjoining the Gas works at Noge was on fire.

The wind was fortunately not strong, and from the close proximity of the canal the supply of water was plentiful. A large number of fire engines was quickly on the spot, and the enthusiastic crowd of coolies and policemen manning them worked with a will, and the fire was consequently prevented from spreading. The school building, a two storied one was unfortunately entirely destroyed, and the fire was not wholly subdued until about half past ten. The household goods of the people living by were deposited for safety on board some sampans moored under one of the bridges over the canal, the compound surrounding the burning premises being also heaped up with sundry articles of furniture rescued from the flames. The various engines were in admirable order, and, for a wonder, the hose in every case seemed perfect. The discipline of the firemen (who were under the superintendence of numerous police officials) was, as usual, praiseworthy, and one could not help admiring their indomitable energy and pluck. Some of them were certainly not to be envied, perched as they were on the burning rafters, and drenched with showers from erratic hose. No explanation has been offered, we believe, as to the origin of the fire. We hear, this evening, that two European teachers and one or more scholars were accidentally hurt, but trust the report is without foundation.

A FIRE took place at the U. S. Consulate in Hiogo, about 4. p.m. on the 18th instant, just as the Mail for Yokohama was closing. It commenced in a wardrobe belonging to the Consul, the contents of which were burnt and the wood charred. His loss, including damage done by water, will amount to \$500. Great praise is due to the Fire Brigades, foreign and native, the former having water playing on the burning mass within ten minutes of the alarm being given.

### ANOTHER FIRE.

AT EIGHT o'clock this morning the fire bells again rang out the alarm, the seat of the conflagration being in this instance within the Settlement. The premises destroyed by the second fire of the season, were situate at No. 31, on Water Street, and occupied by Mr. Joseph Thomas as a haberdashery and general drapery store. Just as the establishment was about to be opened, at eight o'clock, the attention of Mr. Thomas was directed to

the ceiling of the dining room which was found to be on fire, near to the stove-pipe. There was but an ordinary fire in the stove, but there cannot be any doubt that the origin of the fire is to be attributed to the overheating of the pipe, although there was apparently nothing wrong with it so far as was seen. The alarm was at once given and willing help was at hand to endeavour to save some of the goods. The premises being of wood the fire of course quickly spread, and the two children of Mr. Thomas, who were confined to their bed-room through sickness, had to be taken out into the frosty air in their night-dresses; Mrs. Thomas having also to effect her escape only partially clad. The Private Fire Brigade Hook and Ladder Company, under the direction of Mr. H. W. Hohnholz, were the first to be on the spot, and did invaluable service; but such was the rapidity with which the fire spread that, although they were on the spot within a very few minutes of the outbreak of the fire, it had then gained a complete mastery, and the building was one mass of flame. The Hook and Ladder men immediately got to work, and by the time the Engines had arrived the burning building had been hauled down bodily. This was fortunate, as from the considerable distance the water had to be forced—the hose being laid down to the French Hato-ba, where the Engines were at work—the stream thrown was very small and feeble. The burning debris being, however, confined in a compact mass between the stone store just vacated by Mons. Bertrand on the one hand and the substantial godown occupied by Messrs. Lane, Crawford & Co. at the corner on the other, it had little or no chance of spreading, and the two Steam Fire Companies with their Engines did good service, assisted by two of the smaller hand engines; so much so, that at a few minutes after nine o'clock the danger was over, and the firemen were preparing to depart. Some small portion of the stock saved from the fire by a number of men-of-war and civilian volunteers, was piled on the further side of the street; somewhat damaged, however, by water and mud. A detachment of French Marines was early on the spot, the European police also being present, assisted by a squad of Japanese. An excited native, who seemed to imagine he had a vested interest in some of the rescued property, endeavoured to get within the cordon of soldiers mounting guard over it, and went so far as to set at defiance a French Marine who was near. He was summarily disposed of, being handed over to a native constable, and passed on to the nearest police station. After the excitement had somewhat subsided the saved goods were transferred to the store just vacated by Mons. C. Bertrand.

The value of Mr. Thomas' stock, we believe, is estimated at \$9,000; he is covered by insurance in an English office, to the extent only of £1,000 sterling, we regret to say. With the exception of the few goods we have spoken of the whole of the stock was destroyed, Mr. Thomas not having time even to save his personal stock of clothing. Although it was apparent, soon after the outbreak of the fire, that there was little danger of it spreading, the authorities of the Oriental Bank Corporation took the precaution to place men, with buckets of water, on the roof of their premises, but fortunately their services were not required. There was a rumour, during the early part of the unfortunate occurrence, that Mr. Thomas was missing, and it was supposed that he might have been crushed in the fall of the building. These fears were eventually set at rest by the appearance of

the gentleman himself, who, however, expressed some apprehension with regard to a man-of-war's man who had been assisting to carry out the goods. Mr. Hohnholz, who was within the burning building just before it fell, speaks with certainty to the fact that it was quite empty when it came down.

The "Independence" (No. 6) and "Volunteer" Fire Companies (steam) with the hand engines, worked well, and particular praise is due to the Hook and Ladder Company, whose services are invaluable in such cases as that under notice where the supply of water is so remote from the scene of the conflagration.

WE took an opportunity last week of looking over the Yokohama Native Hospital on Nogé hill, which is under the superintendence of Dr. Simmons. The beds were clean, and the dormitories light, cheerful, and airy. The Doctor, it is hardly necessary to say, gives his patients all the attention which his skill and great experience in the profession enable him to bestow; and we can recommend the institution to those who may have native friends or servants requiring medical advice; the charges, as will be seen by advertisement in our columns, being very reasonable.

A SMALL robbery took place last night at the Printing office of this paper. The thieves took only two coats, a clock, and all the office lamps. If this should meet their eye, we beg to thank them for doing no mischief with those things that would have been useless to them, but the disturbance of which would have put us to great inconvenience. They left the key of the clock behind. If they will call at the office it shall be handed to them, as it feels lonesome like, and we feel a kind of pity for it—on Christmas Eve too!

The following letter and Report, addressed to Major Kinder, the Director of the Imperial Japanese Mint at Osaka, on the relative assays of gold and silver Yen by the Japanese and British Mints, will no doubt have considerable interest for our readers:—

Royal Mint, 20th Nov., 1873.

SIR,—I have received from the Lords Commissioners of Her Majesty's Treasury a copy of your letter of the 8th September last, transmitting Gold and Silver assay pieces from Pyx Coins and Ingots of the Imperial Japanese Mint; and, in compliance with their Lordship's directions, I have caused test assays of each piece to be made in this Department.

I have the pleasure to transmit herewith a statement furnished by Mr. Roberts, Chemist and Assayer of the Mint, shewing the results of the assays made. Those results are eminently satisfactory, and I trust that you will allow me to offer you my congratulations on the additional proof which they afford of the accuracy of the operations of the Mint under your charge.

In accordance with your request, a statement of the Mint charge for making these assays, amounting to £2.2.6, has been forwarded to the Oriental Bank Corporation.

I have the honour to be,

Sir,

Your obedient Servant,

C. W. FREMANTLE,

To MAJOR KINDER,

Director of the Imperial Mint.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

Our last report bore date December 24th, 1873, and for some days subsequently no business was transacted, the holidays extending into the second week of the new year, and native buyers disinclined to operate. Since then there has been some considerable speculation in Grey Shirtings, and deliveries have been made at about our last quotations; at which figures Woollen Goods may be nominally placed. Cotton Yarns have declined; Nos. 28 to 32 having been quitted at \$1 under former quotations. In metals there is nothing doing, whilst Sugars are firm, although at lower figures than last reported.

Articles.	Price.	Remarks.
Cotton Piece Goods.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—In common with our Import Market Exports have partaken of the dullness consequent on the prolonged holidays; added to which the discouraging advices from the markets of Europe tend to paralyse business. Prices quoted below may be considered almost nominal. Total settlements since last report amount to 600 Bales only, inclusive of all shipped on native account.

**SILKWORM'S EGGS.**—Season closed. The *Vasco da Gama* took 19 cases for Havre and 5 for London. No other shipments since our last.

**TEA.**—Telegraphic advices of a probable re-imposition of duty on Tea in the United States having reached here just after the departure of last P. M. S. S. on the 24th inst., our market at once assumed a lively aspect, it being reported that Teas bought and invoiced, on or before a certain date, which seems not definitely fixed, would be exempt from such duty. This caused some two or three of our leading houses to enter the market, which they succeeded in raising, before the end of the year, some \$6 per picul on the average of classes on hand, and completely cleared out native dealers in Yokohama of their stocks. For the last few days a rather slacker demand is apparent; notwithstanding which, settlements since the 23rd ulto., amount to some 13,000 piculs.

The *Vasco da Gama* took, for all ports, 437,639 lbs. and the *Corea*, which will have early despatch for New York, will take about 450,000 lbs. The steamer *Atalanta* is also on the berth for the United States, and will sail about the commencement of next month. To-days' rates close as under, buyers being rather cautious.

John W. Walter, C. L. Glover, F. M. Wilbor.—2nd D. Law Jr.—3rd class, Mr. and Mrs. Muir.

## FOR NEW YORK.

A. Bellamy.

## REPORTS.

The Am. str. *Relief* reports strong westerly winds and clear weather.

The Brit. ship *Fiery Cross* reports leaving London July 26th and the Downs on the 28th; met with strong westerly gales down Channel and across the Bay of Biscay, after entering the N. E. trades found them very light; crossed the Equator August 31st, in 24° W., the S. E. trades were strong, hanging well to the southward. Rounded the Cape September 24th, met with strong northerly winds, running the easting down. Off the Cape spoke a Dutch barque the *Britius*, Amsterdam to Batavia, 70 days out. Made the passage round Australia sighting Norfolk Island, Hunter Island and the Ladrões. While near the latter a typhoon passed, the vessel experiencing some difficulty in keeping clear of the land having been hove to for 48 hours. The Captain states that from the Volcanic Island of Assumption a great eruption had taken place very recently, immense quantities of fresh lava being seen, down to the waters edge; he says the crater is about 3,000 feet high. In the Pacific had strong N. E. winds most of the time, the vessel taking on board considerable quantities of water, had to batten down the skylights. November 20th, spoke the British ship *Perth*, from Hunters River to Singapore, Lat. 2 deg. 50 N.; Long. 165 deg. 50 E. Took a pilot on board on the 21th, and anchored here on the morning of the 25th, 150 days from London.

The Brit. str. *Bombay* reports left Hongkong, 28th Dec. at noon.

The Am. str. *Japan* reports strong head winds and a heavy cross sea throughout.

"THE P. M. S. S. *Relief* is ashore about seventy miles north east of Nagasaki. The passengers, mails and specie have been brought back to Nagasaki by the *Golden Age*, which left that port for Yokohama on the 17th. The present position of the *Relief* is considered critical; she is likely to prove a wreck."

### "Japan Gazette" MAIL SUMMARY.

FROM 24TH JAN. 1874, TO 23RD FEB., 1874.

#### MAILED.

At Yokohama, February 6th, 1874, at 4 o'clock, by Captain C. J. McDougal, U. S. N., by the Rev. W. Syle, in the presence of Geo. N. Mitchell, U. S. Consul, Captain CHARLES S. COY to Miss ELLEN EYRE, daughter of Manuel Eyre, Esq., of Philadelphia.

At Nagasaki, on the 25th ulto., by authority of J. van der Pot, Esq., Acting Consul for Norway, by Rev. Henry Stout, at his residence, Mr. HANS PETERSEN, of Drewback, Norway, to Miss MATSU INOSUKI Umakusa.—No cards.

At Yokohama, on the 14th February 1874, by W. van Oordt, H. N. M. Acting Consul, and by the Rev. P. V. Veeder, D. D., Dr. T. W. BEUKEMA to Miss C. TORWATER.

#### DEATH.

Suddenly, at No. 60, Main Street, Yokohama, this day, 23rd January, Mr. JAMES KIMBER, a native of Buckingham, England, aged 37 years.

Suddenly, at Hongkew, on the 12th instant, aged 35, MARTHA, wife of S. A. LORD, Master schooner "Clara."

At Kobe, on the morning of the 20th instant, of Cerebro-Spinal Fever, MAY, daughter of the Reverend and Mrs. J. L. ATKINSON, aged three years and five months.

At Hakodadi, 1st February, suddenly, of Apoplexy, M. BARTOFF, a native of Russia.

At the Yokohama General Hospital, February 8th 1874, at 5 P. M., RICHARD RAMSAY, Engineer, a native of England, aged 31.

At Shanghai, on Saturday, the 31st January 1874, GEORGE WHITTINGHAM CAINE, son of the late Colonel Caine, aged 41.

OUR LAST Mail Summary left by the P. M. Steamer *Japan* on the 23rd January. The following are the home mails arrived since the date of our last;—

#### Summary.

THE NEWS which this Mail conveys from Japan, although of a sufficiently sensational character, need give no alarm to our readers at home, either for the safety of their friends out here; nor for the financial condition of the country.

THE uneasiness we have so often alluded to as existing among the samourai, has at length found vent. The samourai of Saga Ken, one of the provinces of Kiusiu, have risen; the primary cause of their doing so being the determination to go to Corea, to punish the people of that country for the insults heaped upon Japan by the Corean government.

THE government has taken measures to put down the rebellion; and has sent Okubo Ichizo, the Minister for Home affairs, supported by a military force, to bring the samourai to terms. Many of the military refused to go; and some of those on the spot refused to fight against their countrymen.

ALL that can be gathered is given in our news columns; but no person, be he foreign-

er or Japanese, can tell how things may turn out. It may be in a success for the government. If not—there remains only the alternative of a general rebellion, or a Corean War. If, however, the present ministers would resign, those might take their places who could at once calm the agitation of the samourai.

THE EMPRESS, on the 29th January, received Lady Parkes, Mrs. and the Misses Bingham, and Mrs. De Groote, the ladies of the English, United States and Belgian ministers.

THE EMPEROR has ordered that his own income shall pay tax, equally with his subjects'. The amount of his payment will be over 25,000 dollars.

KIDO, LATELY one of the associate ambassadors, has been appointed Minister of Public Education. He is still, however, too unwell to attend to his duties regularly.

ENNOMOTO, THE former Tokugawa Admiral, who with the fleet took Hakodate in 1866, and held it against the Imperial troops; but who has since been pardoned and held high office in the Colonization Department; has been appointed Minister Plenipotentiary from Japan to Russia.

THE P. M. S. *Relief* was lost near Nagasaki on the 18th January. The enquiry will be found elsewhere in our columns.

1873.

(Continued from our Summary of January.)

**A**MONG THE political events of the year most worthy of remark was the determined action of the government, with regard to Shimadzu Saburo. He had refused to come to Tokei when ordered by the government to do so, in order that he might undergo an examination in connection with the letter he had sent to the Mikado when His Majesty was in Kagosima, during the preceding year. The government sent down a steamer to Kagosima, with sufficient force to shew the old chief that he was now under a government prompt to enforce obedience. He came, therefore, in the steamer; but both he and the retainers who accompanied him were dressed as in days before the treaties were made; with their swords at their sides, and with fierce menacing looks, such as the good citizens had not been used to for many a long day. Having vindicated its authority, however, the government was no further hard upon Shimadzu; but the Mikado, in remembrance of former loyalty, appointed him, in the most flattering manner, his private War Counsellor. His retainers then returned to their own country quietly, and no more was heard of the ronins who were said to be in the city in anticipation of there being a tumult. Soon after their arrival in Tokei, however, several of the retainers sent a letter to their master, asking permission to lay aside their swords like other people, as they seemed to be marked men throughout the city, and could not even obtain entrance to the tea-houses, as all people were afraid of them.

In October, when, in consequence of the war-like policy of the ministry, the opposition of Iwakura, late Ambassador from the Mikado to Foreign Treaty Powers, led to the resignation of the most important and influential members of the Daijokuan or Council of State, great efforts were made to secure Shimadzu as an adherent of the new ministry. Iwakura for a short time seemed to have it all his own way. He placed his late colleagues in the embassy in the Daijokuan, with portfolios, and Terashima, late minister resident in England, became minister for Foreign affairs; and from that moment an obstructive régime commenced, very different from what might have been anticipated by those who went to so much trouble and expense in Europe and America to entertain the Embassy and facilitate the attainment of its objects. Under the old ministry some points in connection with the revision of the Treaties had been discussed and allowed; but the new men shewed a spirit of opposition to the work of their predecessors, and a very unsatisfactory feeling was engendered between the foreign ministers and the head of the Foreign Office; and on more than one occasion the discussions partook of anything but a cordial character. Early in December it was rumoured that Iwakura was desirous of retracing some of the steps taken in the direction of progress, and this idea was a good deal strengthened by the announcement that he had succeeded in getting Shimadzu—the personification of Old Japan—to accept office as head of the newly formed “Home Office.” This lasted but a very short time, however, and, within a few days, Shimadzu resigned the office. At the close of the year, then, things seemed to be in as perplexing a condition as possible. Nothing of any solid importance shewed itself as a part of the policy of the year. The Mikado had a Council who were thoroughly distasteful to him. The government was without a policy.

The army was disaffected, and hundreds were constantly leaving, with or without leave. The clans best known of old as among the fighting clans, were gathering; and the people, generally so regardless of politics, seeing the movements among the soldiers, talked mysteriously, and were filled with anxious forebodings. As to foreigners, all that can be said is, that the revision of the Treaties had come to a deadlock. There was no apprehension of any danger to them; but business was dull, and appearances were in favour of its continuing so. And altogether the situation with regard to them was of that negative character, that, while they had nothing to fear, they fancied they had much to complain of.

We ought not, in our retrospect of the year, to pass over the numerous “risings” which occurred in various Ken, throughout the country. They were, in some instances, of a very serious character; but the government, in every case, succeeded in putting them down with a high hand. They originated in causes which we trust may not occur again; principally, we may safely say, through the remissness of the government officers, in not properly explaining to the ignorant people the true meaning of the government edicts. For instance, in Fukuoka Ken, which saw the largest and most desperate *émouv*, and in which there was great bloodshed before quiet was restored, the origin was entirely in a badly chosen and misunderstood word. The government order was that all young men of a certain age should be liable to be drawn by conscription for military service; except those who were able to pay a certain sum for a substitute. The word used for this substitution fee bore the meaning of blood-money; and some of the ignorant people set abroad the absurd story that the government had made a contract with foreigners to supply them with a quantity of human blood, and that they who would not redeem their blood by the payment of a fee should be sacrificed. At first it was not credited. But when the farmers went to the Kencho and read the word for themselves their wrath knew no bounds. A little judgment on the part of the officials might have prevented this rising; which resulted in the death of many good men, and the punishment of thousands.

Diplomatically Japan has not been altogether idle during 1873. We admit that the great embassy does not seem to be bearing such good fruit as was expected of it; but probably that may be seen hereafter. The mission of Soeshima to China, however, was a marked success; and the arrangement with Peru on the coolie question must also be considered so. It certainly was a feather in the cap of Japan to be in the van in the settlement of the audience question in China, and to maintain his ambassadorial rights as Soejima did. It is no less honourable to Japan that, in the position she had taken firmly with regard to the coolie trade, she was able to hold her own throughout, without flinching from the consequences, whatever they might be. The Emperor of Russia is to arbitrate between Japan and Peru on the subject; and, for the rest, Peru and Japan are now in Treaty Friendship.

Early in the year, the Japanese Government promulgated a marriage law as between Japanese and foreigners. Although there have been two or three instances of Japanese marrying foreign ladies abroad, and one or two marriages between foreigners and Japanese in this country, the privilege has not yet had much effect. We are quite of opinion, however, that such alliances will gra-

dually become of no uncommon occurrence.

The edicts against Christianity may now be considered as finally withdrawn; and all the Christians who had been under punishment on account of their faith have been restored to their homes, and freed from their persecution.

Another very important matter was made the subject of legislation at the beginning of the year—viz: the subject of *la vendetta*. It is worth while giving the proclamation which put a stop to it, *in extenso*.

PROCLAMATION.—Whereas it has been an ancient custom, and a privilege given to the people, to personally avenge the crime of murder, committed upon a relative, such privilege shall no longer exist. In olden times, when murder was committed, the son or brother or other nearest relative was allowed to obtain revenge, by personally killing the murderer when captured; but the government now considers this custom a bad one; and therefore orders, when crimes of this kind take place, the murderer shall be arrested and placed in gaol, and duly tried according to law—the relations lodging their statements and complaints at the Judicial Court.

Mr. De Long, the Minister Plenipotentiary of the United States to Japan, at the request of his government, sent in his resignation in March; his term of four years having expired.

The same month Captain Garcia y Garcia, of the Peruvian Navy, arrived as ambassador from Peru to the Mikado, for the purpose of making a treaty, and settling the question of the coolie ship *Maria Luz*. The latter has been referred to the arbitration of the Emperor of Russia; the former was satisfactorily accomplished.

The Kioto Exhibition was opened in 1873 with a display still more interesting than that of the preceding year. It was held in the Gosho, or Imperial palace. Foreigners were, as before, permitted to visit Kioto during the time it was open.

A general system of conscription was established about this time. The plan is, that all males who reach the age of 20 years shall be liable to be drawn by conscription, and to serve three years in either the Army or the Navy. After this term of service has expired, they will form a reserve, and assemble for drill once a year. After two years in this reserve, they will only be called out to serve in case of a levy *en masse*. The Peace-footing of the Army, it was arranged should be 35,500, and the War-footing 51,000 men, including 4880 household troops.

And, by the way, we will here mention an inspection of troops by his Majesty the Emperor, which took place at Kamakura—about 12 or 14 miles from Yokohama. The weather was so bad, that the affair was really a failure; and but for the motive which led to it, we should not notice it. It was, however, the first attempt of the Japanese to play at soldiers under the name of a camp. For some days a regiment was encamped, and was loudly talked of as “The Camp at Kamakura.” The Emperor went thither to see them go through the manoeuvres of a sham fight, under the French officers, who, although then little more than a year in the country, had got the troops wonderfully forward. There has been nothing heard of any intention to form another camp; but in that small affair is seen the spirit of imitation which pervades the nation.

On the 21st July yet one more proclamation of prime importance to foreigners in Japan was issued. It provided for the removal of the prohibition of the Export of Rice, which had theretofore been rigidly maintained—with the exception of a few cargoes shipped on government account in the preceding year. The exportation was permitted ‘free of duty’ from the 1st August 1873. Kebé has benefitted by this more

than any other port. We expect that the bulk of whatever export trade arises, will be done at Kobe and Nagasaki. Already a considerable business has been effected, and several ships have found cargoes, which but for this export would have had to leave in ballast.

The Duke of Genoa, nephew of the King of Italy, arrived here in September; and was received by the Mikado with the same hospitalities as had formerly been extended to Prince Alexis of Russia. In the earlier part of the year also, two princes of the house of Coburg Gotha, passed through; and were received by His Majesty *en route*.

Mr. Bingham, the U. S. Minister in succession to Mr. De Long, arrived early in October, and at once assumed his diplomatic functions. Mr. De Long left by the Mail of the middle of November, having been before his departure invited to a grand banquet by the Citizens of America and the Dutch residents, in Yokohama. The affair was quite an ovation for the retiring Minister.

At the beginning of November His Excellency the Viscount de San Januario, the Governor of Macao, and Envoy Extraordinary from the King of Portugal to China and Japan, arrived in this country. He was lodged at Hama Goten, and received every kindness befitting his rank from the Emperor. Mr. Loureiro, formerly Portuguese Consul in Yedo, was promoted to the office of Consul General.

Thus have we glanced in the most superficial manner at the main events of the past year. And though at first sight it seemed that there was almost nothing of special moment during the whole twelve months, yet we have found as we passed from month to month, that there really has been a good deal of very considerable importance. The movements of the Court shew a certain advance towards the position held by constitutional monarchs elsewhere. The improvements in the Financial Department, and the publication of a budget have had a good effect. The cessation of religious persecution; the withdrawal of the prohibition of the export of rice; the settlement of the Treaty between Japan and China; the legalizing marriages between Japanese and foreigners; and many other things; all have their significance and their peculiar value.

The return from Europe of Iwakura and his colleagues in the late embassy, has, however, been one of the most potential occurrences throughout the year. What the embassy has reported of its visit to foreign countries, we are not informed; but whilst it was anticipated that more enlarged and liberal views would have been gained of foreign affairs, by the members of the embassy, it has proved that the reverse is the case. The leader, Iwakura, is, at all events, more conservative than ever; and lost no time in shewing it. Still, in one respect he did good; viz., in preventing the government from going to war with Corea and Formosa. On this subject he succeeded in causing several of the ministers to resign office, and replaced them with others who appear to take their cue from him. We do not believe that so much unpleasantness has occurred between foreign ministers and the Japanese foreign office, since the days of Sir Rutherford Alcock, M. de Bellecourt and Mr. Harris, as have occurred since the change of ministry; and at the close of the year, it really seemed as if the revision of the Treaties was as far off as ever.

But one evil has resulted from the change of ministry, which, if not quelled, may lead to very bad results. Certain of the clans

who are most eager for war have withdrawn their men from the army and police, and these deserters have not been opposed by the government. They have joined their clans; and now drilling is going on in several directions, quite irrespective of the government. The original intention of those who take the lead in this movement, was openly expressed. It was to go to Corea, with or without government consent. We are of opinion that the government is able to prevent this; but it requires the most careful course of action to guard against bringing on civil strife, and at the close of the year there was a great feeling of uneasiness in the minds of all classes, as to the state of the country.

Writing as we do now, when the month of January is nearly at a close, we are hopeful that something has been done to allay the excitement that existed among the samurai of the discontented clans. A memorial has been presented to SA IN (the lower house) asking for a representative parliament, and freedom of discussion of government affairs. To this a favourable answer has been returned. Although, therefore, no proclamation has been issued, withdrawing the prohibition of such discussion, people already are satisfied that ultimately the will of the nation will be declared on the subject of war or peace, and that their voice will not be altogether unheeded. Besides, a great many samurai are very much scandalized by a barbarous and cowardly attack which was made about a fortnight ago on Iwakura; and although, as yet, it has not been certainly ascertained who were the murderous assailants, the majority of the samurai repudiate such an act, and hesitate to act in any manner which would seem to give a colour of approving it. Happily Iwakura was but slightly wounded, and will soon be restored to health.

We have not, however, to deal with the occurrences of this year, but of last; and we need not dwell on the politics of the Empire, further than to say that internal affairs are in that condition which renders it impossible to prophecy from month to month what will happen. Our confidence is not strong; yet we are at least hopeful that peace will not be disturbed.

As for foreign trade, we believe that 1873 has been the most unsatisfactory to foreign merchants of any since the opening of the ports; and there seems to be little likelihood of speedy improvement. However, the whole year is before us, and we trust that at the beginning of 1875 we may be able to give a more cheery account of 1874 than we have done of 1873, or than present prospects indicate.

WHILST FOREIGNERS jog quietly on in Yokohama, thinking principally of the badness of the times, and the difficulty of moving off their superabundant stocks of imports, they hear as though they heard it not, of uneasiness in the empire; and regard not the fact as one of special importance, that among those who are disaffected towards the government are thousands of the very men who have been drilled and disciplined with the expectation of their being relied upon to support the cause of good order, in the event of any outbreak.

The *Japan Mail* is angry with us because we have sometimes alluded to facts within our knowledge, which we have not considered ourselves justified in speaking of in plain terms. But we certainly cannot be accused of sounding any uncertain note as regards the probability of troubles in the south. Indeed if the very

articles to which our contemporary took exception, are referred to—they are those of the 13th and 15th December, and the text of them was “coming events cast their shadows before,”—it will be seen that we most distinctly and most emphatically told our readers of what was afoot: viz., that there was a fast growing feeling among certain of the Japanese for the open expression of public opinion; and that there was an extraordinary movement among certain clans; and further that although the name of the Satsuma clan was that most often heard, still that the disaffection was by no means confined to that clan.

This latter fact was quietly admitted last week by the *Mail*, although the previous week it had, in its usual supercilious way, given the whole credit—or discredit—of the attack on Iwakura at least, to the Satsuma men.

Of the correctness of our information, we suppose there can now no longer be any doubt. The Public Opinion movement was brought out of obscurity even in a more decided manner and much earlier than we could have expected. And the telegram received by the government the night before last, and published in the *Gazette* last evening, telling of serious disturbances in Hizen is simply the outcome of what we told our readers was going on.

Of course it is impossible to foresee what the effect of this rising may be. If the Hizen men have broken out generally, and raised the cry “To Corea!” they will not long be alone. The peculiar notions of honour among the Japanese will secure the immediate co-operation of the others who have the same burning desire to avenge the insults heaped upon Japan by Corea; and if this be the case, the government must either send a strong force to the south to crush the discontented, or they must yield to their demand and let an expedition be fitted out. Either alternative is very bad. In the one case a kind of internecine war; in the other a foreign war, which even if ever so successful, must first pretty well drain the country of its pecuniary resources in the mere preliminary equipment and transport.

We have no idea that the present government will sanction the latter alternative. But whatever they resolve upon, they have an immense responsibility upon them. Indeed the more we ponder the state of the country, the less hope we see of the present ministers being able to grapple with it. Their personal influence is far too limited. The present crisis will, however, shew what they can do. The situation is full of difficulty. If they do not act promptly and take the proper steps for putting down the rising, it may speedily become a wide-spread insurrection; and if they do send troops to the south, it is very doubtful whether their loyalty can be relied upon, and whether they will not sympathise with the disaffected clans.

We shall watch events as closely as circumstances permit; and shall not neglect to publish whatever reliable information we receive. If the drama begins to assume a more sensational character than hitherto, it is no fault of ours. We saw that it must do so sooner or later;—but what the issue will be now no man can foretell.

THE FOLLOWING is the report sent in by the Minister of Finance to the Emperor, at the opening of government business this year:

REPORT OF SHOSHIIS OKUMA SHIGENOBU.

I have the honour to report to Your Majesty the improvements which have taken place in the department under my charge.

As under the Feudal system the rules of the land tax and the provincial boundaries became involved so that neither the number of fields

and the amount of the land tax was uncertain. Now the form of government having been centralized as in ancient times, the laws and the taxes can be controlled, for the first time, over the whole empire.

Although after a stagnation of a thousand years all things cannot be perfected in a day, the account of the rice fields and the taxation was diligently enquired into last year.

1.—The extent of the rice fields in this country is 3,516,679 cho, 4 tan, 8 se, and 7 ed to 11,588,600 kok. The revenue from these lands amounting to 11,588,600 kok. This calculation is based upon the reports sent in to the Okurasho by Fu and Ken during the Meiji (1872). The Customs duties and other taxes are omitted.

2.—The registration of the people has been disregarded for a long time; but it has now been accurately accomplished, and the census shews the population of the empire to be 33,110,000. The increase in the people may be thus seen.

3.—Although the gold and silver coinage has been perfected, the copper coins were not completed, and the want of them caused much inconvenience. Lately the Mint has notified the Okurasho that this is now finished; and now, the three kinds of money being circulated, the inconvenience has been removed.

4.—The Japanese government has borrowed money in America and England. Last spring the price of the stock was 92½ yen per 100, but gradually the price has risen, until during the present winter it has reached 100½ yen per 100. Such is the rise within a year. If our country were looked upon as poor and weak, this rise in price would not have taken place, even though we paid double the amount of interest. This shews the confidence of foreigners in Japan; and it serves to illustrate to us the progress we are making.

5.—I formerly estimated the debts of the old hans as amounting to 60,000,000 yen. But having closely examined the accounts, I find it greatly reduced:—being only 20,800,000 yen. Besides this, many samourai have gladly returned the old paper money, evidencing the accord between the people and the government.

6.—Last year, by the imperial command, I made minute estimates for the year. At that time I calculated that the surplus of income over expenditure would be 2,140,000 yen; and I reported accordingly. I became apprehensive, however, lest several heavy and unexpected demands would not have prevented this. But the surplus in rice and money is actually 4,916,951 yen 32 sen; and this was the real balance in hand on the 1st January 1874. Although this is not exactly calculated (the accounts are not yet closed) yet when revenue and expenditure are compared, there will be a surplus. This I had doubted,

Although I am but ignorant, Your Majesty's benevolence appointed me Okura Kiyo; and, as in duty bound, I strive night and day to fulfil the duties of my office.

Looking back upon the history of the Empire, I see that never has there been such rapid progress as in the present reign. Therefore I humbly believe that if Your Majesty shall further promulgate your wise designs, prosperity, surpassing that of foreign nations, shall be established for ever (lit. for a thousand years).

January 4th, 1874.

Yamagata Aritomo, the Minister of the Army Department, and Ito Hirobumi, the Minister of Public Works, also presented short reports, but neither of them possess any special interest.

THE UNIVERSAL theme in all men's minds, among the foreign communities of Japan, is now, once more, the political condition of the country; and there can be but one opinion as to the threatening aspect presented by the attitude of the samourai, and the uncertainty as to the strength of the government.

We have no hesitation in reiterating our opinion that foreigners have nothing to fear. Of course individual *budmashes* may get excited and "run amuck" should they get the opportunity; but such a thing has been witnessed in the most quiet times—for instance, in the attack on Messrs. Dallas and Ring, and, more recently, in the assault on Mr. Blockley. But although such reports as that conveyed in the telegram we published a few evenings ago, that among the disaffected are some *jo-i* (anti-foreigners), should make us keep our forces at hand, still we do not apprehend any hostility to foreigners from those who are earnestly engaged in this rising.

But we do perceive great danger to the country itself, and in that we must take our chance with other citizens.

In a few words, this appears to us to be the position of affairs:—

The country is desirous of calling Korea to account for the insults heaped on Japan. For, to all intents and purposes, the samourai represent the country—the mercantile classes and the farmers being, with few exceptions, utterly indifferent.

The government had successfully resisted the pressure for a long time; but, at length, they considered that the time had come to comply with the wishes of the samourai. Then Iwakura returned from his foreign tour and opposed the war so strenuously that the ministers resigned with the exception of two, and Iwakura got all his colleagues in the late embassy into power; whilst Okuma, a very clever man but a waverer, withdrew his resignation.

It would be easy for us to go much deeper into the causes of the dissolution of the government, but it is not within the scope of our present intention. Suffice it that the five men who left the government were most emphatically the strongest members of it. For not only were they men of energy and with far more than the average of intelligence found even amongst the more advanced Japanese, but they were powerful in the strength of military force at their disposition.

It is useless attempting to disguise the fact. What we stated long ago is strictly true, that in spite of all the changes that have been made, and the mobilization of some portions of the army, the samourai are as much clansmen as ever; and those leaders whom they followed of old can command them at any moment.

So it is that at this, or at any moment, the clans throughout the whole empire could be gathered, and advanced shoulder to shoulder, by their former chiefs or generals, whithersoever they desire; and a single word from Saigo Kitchinoske or Soejima, is sufficient at any time to call into existence in fact, a far larger number of troops than the Imperial Army is composed of on paper.

There is one strong counteracting force; and that is, the veneration of the majority for the person of the Emperor. This alone, we are convinced, is that power which has prevented the leaders of the war-party from permitting their clansmen to make such demonstrations as they are anxious to do. And this alone has led the samourai to bide their time.

But there is a limit to endurance; and now there appears to be a threefold incentive to action on the part of the samourai. First, they

have been baulked in their hopes of the government undertaking the Korean expedition; secondly, they see their leaders ousted from the ministry, which is supposed to be a slight upon them, besides removing the chance of any Korean expedition; and thirdly, they hear that the first thought of the men who have come into power is to carry a measure respecting the commutation of their hereditary incomes, which is most unpopular with them as a body.

Thus it has become more and more difficult to restrain them. And we have seen in the last few days the symptoms of what is undoubtedly a very deep-seated and general affection.

How it is to be stopped or kept within bounds is now the question. The least action on the part of the government to settle the matter of the Korean war would allay the sent irritation; but if it were not followed by very prompt measures towards the fitting of the expedition, it is impossible to say how long the patience of the samourai will endure.

If, however, the ministers refuse to take this point, and attempt to hold their office, they shall not have to wait long for the demand. They have sent Okubo, as a special commissioner, to the disaffected. They could have made a better choice; for Okubo is at the same time a singularly unassuming and a strong man. He is therefore not likely to be intimidated, nor to attempt in the first instance to intimidate the clansmen. It will not be the first time in Japanese history that an official has made peace by his persuasiveness in the same district.

But supposing his eloquence should fail. What then? He has a force to back him. Will he order them to treat the samourai as rebels and attack them? Should he do so, we would immediately see what is to be expected. For the whole of the samourai who side with the war party will declare themselves at once of victory or defeat will equally enable us to read pretty plainly what is to follow.

THE REPLY of SA IN to the Memorial published by us, yesterday, was given to-day as follows:—

SOEJIMA TANETOMI, Shizoku of Saga, and seven other Shizoku, addressed to the Board a memorial for establishing a representative Parliament.

As the subject approves itself to our mind it has been already formerly referred to in a memorial from this Board, and has been assented to and the rules inquired in we think the memorial should be adopted.

But as each Fu and Ken throughout the country has been ordered—during last year—to establish a local assembly in every province, and as the department of Naimusho has been lately established, we have desired SA IN, that after the memorial has been referred to that department, the local assembly shall be opened at once, and the Parliament gradually established.

22nd January 1874.

SA IN.

To SOEJIMA TANETOMI and OTHERS.

ON THE morning of the 23rd January an interesting ceremony was witnessed at the presenting colours to one of the Imperial regiments, by His Majesty the Emperor. Shortly before 11 o'clock A.M. the soldiers were assembled on the Hibiya Park ground, and punctually at 11, His Majesty arrived, accompanied by several high officers.

of State. The public had been officially notified that their attendance would be permitted, and consequently there was a large concourse of people present. A seat had been prepared for His Majesty, on each side of which were ranged Military, Naval and Civil officers, the chief of the Shikiburiyo (the chamberlain) being near the Emperor with the standard.

The regiment was posted opposite, and between the two were 8 officers and non-commissioned officers.

The Mikado having taken his seat and all being in their places, His Majesty arose and advanced towards the 8 officers, followed by his suite. The chamberlain handed the colours to the Tenshi who then addressed the commander of the regiment in appropriate terms, and presented him with the colours. The commander having respectfully replied, thanking His Majesty, the Mikado then retired to his seat, followed by the high officials. The forces then saluted, and His Majesty returned to the palace. Today was observed as a public holiday in Yedo.

\*\*\* The above has been sent by a Japanese gentleman, and we insert it; but we hardly think it takes in all the proceedings, which were more than ordinarily interesting.

PERHAPS THE *Herald* in its anxiety to catch us tripping has been a little too sharp. We long ago, indeed directly the word "Parliament" was objected to by one of our watchful contemporaries, explained what the body was, but continued to call it by that name, because it is what any of its members who get the length of one word of English, call it; or did so before the passage of arms between this journal and an opponent.

We have always stuck to the word because everyone knew, from the explanation we had given, what it really meant; but what is required now is a representative consultative body, not an officially appointed one as before. We choose to use the word parliament for both, and probably shall continue to do so impugn it who list.

ONE OF the most remarkable coincidences we ever remember to have heard of has just been brought under our notice, as having occurred within the past twenty-four hours. Last evening we published our usual Mail Summary, for despatch by the *Japan*; which was delivered along with the ordinary issue of the *Gazette*. The Summary contained our Market Report of Imports and Exports, which we take some pains to render as accurate as possible.

The *Japan Herald* Summary, which, it is true, did not appear until this morning, also contains a Market Report, which is *verbatim et literatim*, a copy of ours. This, to our mind, exhibits a most astounding coincidence of thought. Had our Report been furnished by one person only we could have conceived the possibility of our contemporary getting hold of a duplicate, but, as it was, in reality, written by more than one and exclusively for us, we can only look upon the affair as furnishing an instance of the possible aberration of laws hitherto considered immutable, tending to set at naught all preconceived ideas on the subject. We write thus because we know that there can be no other solution of the difficulty; it being a well known, and we may say, invariable, law of courtesy, that when one journal borrows matter from another, an acknowledgment is made. This, we are satisfied, the *Herald* is generally willing to do; the more especially as, on reference to its last issue, we find that the extracts from the *Gazette* (which, by the way, make up the greater part of its matter last evening) are duly credited.

THE NATIVE thieves in and around the settlement are becoming daily more and more audacious in their depredations. "To rob a church" has passed into a proverb, as an illustration of the depth of rascality; and the latest sample of the villainy of the petty thieves who seem to infest the neighbourhood of the Bluff partakes as nearly as possible of the nature of that offence. Yesterday afternoon, a visitor to the Cemetery informs us he was much surprised to find that the iron railing surrounding six or seven of the graves had been carried bodily away. It appears that about noon they were intact, but at half-past 5 when the person, whose duty it is to look after the place, came to examine the grounds, he discovered the theft. Only yesterday morning a marble slab to the memory of a child, which had been stolen a short time ago, was replaced, and the thieves sentenced to two years hard labour; and, yet, in the very light of day, and near to a bustling neighbourhood, the thieves go boldly to work and consummate a similar sacrilege. One thing seems to us evident: the petty thefts and housebreaking exploits so frequently chronicled of late are the work of a regularly organised gang of desperadoes, and the sooner the police get them into their hands the better for their credit and the safety of the property of the public. It is time, too, that a proper watchman were appointed, to prevent a recurrence of the sacrilege.

WE HAVE at our elbow, as we write, one of the neatest and best got-up little volumes in the shape of a dictionary that we have met with in the East; and probably it may prove one of the most useful—at least to residents in this country, whether native or foreign. It is an abridgment of Dr. Hepburn's Japanese-English and English-Japanese Dictionary, which the author availed himself of his recent visit to New York to have printed there. It is quite a handy pocket volume; and is only an abridgment of his large work so far as to leave out the Chinese and Japanese characters, the synonyms, and, in some cases, the examples shewing the use of the words. Of course the larger work is essential to the earnest student of the language; but none should be without the abridgment, as a kind of ready reference book, handy at all times. We are unable to say more in commendation of Dr. Hepburn's *magnum opus* than we have already repeatedly said; but we feel sure that, in its new shape, the sale, both among foreigners and Japanese, will be very great. It is to be had of Messrs. Carroll & Co., Lane Crawford & Co. and C. & J. Favre Brandt.

WE are happy to say that Iwakura is progressing favourably, and may be at his duties again in a fortnight or so.

On the 18th January, Enomoto Bnyo was appointed Minister Plenipotentiary, (Ito-zen ken-Koshi) to Russia. We suppose his appointment is instead of the late Sawa, and that Hanabusa will be second in rank.

THE FAVOURABLE reply given by SA IN to the recent memorial has had a most beneficial effect in allaying popular excitement; and if the present government are content to carry out the proposed measures with a greater liberality than they have hitherto exhibited, things will quickly calm down. The ministers and officials have got over their sickness, and attend office regularly again.

THE CHIJU of Tokei Fu has ordered all the Cho yakunin to send in a list of foreigners living within their districts, with all particulars concerning them, and why they live out of Tskidji.

ON THE 20th January, the Emperor ordered the Kunaisho (Imperial Chamberlain's office) as follows:—

"As the payment of Tax on hereditary salary has been established to pay the expenses of the Army and Navy, in order to strengthen the empire, I, the Emperor, am willing to pay the tax; so, you officers, must with this object lessen the expenses of your department."

It is stated that 36,000 yen will be paid by the Emperor annually on account of this tax.

THE BAZAAR held last week in the School-rooms of the "American Mission Home," 212 Bluff, proved, we are informed, a great success; and we congratulate the ladies upon the inauguration in Japan, of a mode of doing good, which, conducted as this was, is certainly unexceptionable. We are at liberty to state, that the proceeds of the sales amounted to nearly eight hundred dollars; and we are also requested, in the name of the ladies of the "Home," to return their sincere thanks to all who in any way assisted in producing such gratifying results; and particularly to those ladies whose presence added so much to the pleasure and attraction of the occasion.

By a telegram received by government yesterday evening, dated the 2nd February at 7 A.M., we learn that:

The Samourai of Saga Ken (Hizen) have assembled in the temples, demanding that an expedition be dispatched to Corea. Their number is constantly increasing. On the night of the 1st February they went to the Bank of Ono in Fukuoka, and used such violence that all the clerks fled away.

THE NEW Minister for Education, Kido, whose appointment we noticed yesterday, was one of the Associate Ambassadors with Iwakura in the Embassy to Europe.

A CORRESPONDENT, writing from Yedo, remarks as follows:—

During my early movements this morning I noted the disappearance, off Shinagawa, of the Ironclad *Stonewall*. Rumour has it she has gone towards Nagasaki,—via Tsushima!

For the information of those who assert that Japan has no transports, it may be noted that the following steamers are now lying at anchor here, flying the Japanese flag—the names by which they were known to foreigners are given:—*Dumbarton*, *Nepaul*, *Osaka*, *Philipino*, *Elgin*, *Orissa*, *Undine*, *Aroostook*. To which may be added, *Zadkia*, *Sakura*, *Chili*, *Tazuri*, *Shoi-leen*, *Vulcan*, *Mowtan*, and some others, shortly expected.

Those who were formerly in the dark on the subject may now be able to realise the facilities the Japanese government have for moving an army, if required. And, it will readily be seen, that, in addition to the accommodation provided by the P. M. S. S. Co.'s fleet, it will be an easy matter for "passengers" to get to and from Nagasaki, and ports adjacent, during the coming spring.

*Apropos* of the departure of the *Stonewall*, we hear that a Yokohama firm disposed of several charts of Corea yesterday, and there is a brisk demand, generally, we believe, for hydrographical literature relating to the Sea of Japan and its neighbourhood.

ON JANUARY 17th, Tokei Fu ordered that the sum of 3,851 yens which had been received for the tax on rabbits, should be applied to the support of the Alm-house.

WE TOLD our readers when the new brick house of the great Mitsuigumi, Suruga cho was commenced; we now record its completion. On the 11th instant, the ceremony of *muneagô* (a celebration at the finishing of any building) was performed. Mitsui Hachiroyemon and his employés wore the *hawori* and *hakama* (samurai's coat and loose trowsers). The superintendent of works wore a dress called *kariginu*, and all the employés wore linen *kamishimo*. The workmen and coolies, above 250 persons, wearing new uniform coats made a procession, and with banners and various emblems paced the streets, screaming after the old fashion of the country. All the windows and rooms were decorated, and mochi, saké and fruit were liberally dispensed. For about two hours also, copper money, mochi of three colours, and oranges, were thrown into the street to be scrambled for by the crowd. The people seemed to think it all exceedingly jolly.

AS YET no clue has been obtained likely to lead to the detection of the perpetrators of the last successful raid of the Bluff burglars we chronicled—that at No. 38, the residence of Mr. Howard Church. Mr. Daniel Sharp, jr., was a very heavy sufferer on that occasion, having lost the whole of his wearing apparel, trinkets, valuable books, etc., which he estimates as worth \$600. The thieves made a clean sweep of his effects. On enquiry of the police authorities we find that nothing has been heard likely to lead to the apprehension of the burglars. From other sources we learn that a quantity of European clothes has been offered for sale in the neighbourhood of Mississippi Bay. Whether they are the missing goods remains to be proved.

ONE of the samurai of Kochi Ken, captured on suspicion of being concerned in the attack on Iwakura, has confessed his guilt; but he has resolutely, in spite of examinations under what in Europe or America would be called torture, refused to name, or give any clue to the discovery of, his companions. We are informed that he was found out through his having lost one of his wooden clogs in the scuffle; and this being found with the name of its maker upon it, that person was sent for and at once recognised the prisoner among all the accused, as a man who had purchased the clogs from him. Up to yesterday no proofs have been found against the other suspects.

The morning after the occurrence the police thought they had a very good trace. They found a lantern with a device upon similar to that upon the Kaigunsho lanterns; but upon enquiry at the Naval department, it was proved that it was not a lantern belonging to the department. Ultimately it turned out that it belonged to a poor woman who was passing the palace, leading a blind Amma (shampooer); and that frightened by the presence of those samurai whom she deemed to be waiting there for no good purpose, she and her companion hurried away, the lantern being dropped in their haste. Endeavours are still being made to discover the guilty ones.

THE MEMORIAL which was sent in to the government, was published the same day in the *Nisshin Shinjishi*. The reply was also published in the same paper, the day after it was given. Since then, there has been in many of the papers quite a spirited discussion—*pro* and *con*.

signed the memorial, bring the subject forward whilst they were in office?" The memorialists reply by referring to the memorial itself, which states that they did so. As long ago as November, 1872, we told our readers that the subject was before the government; and that it was so far advanced that they expected to have an elective parliament at once. That must be in the recollection of our readers, because it gave one of the Yokohama journals a text for attacking us after its manner. Twice during the course of 1873 was the subject a prominent one with the government as recorded by us at the time; and in the reply to the memorialists, SA IN asserts that it has already not only referred the subject to SER IN, but that it was approved. Thus gradually, and little by little, do the public obtain verifications of the statements made by us which have been most ridiculed by those who of themselves knew nothing; and who obtained their information from the very source of all others, which it was policy to keep as little informed as possible.

SOME of the native papers do not yet feel at liberty to speak freely on the subject of the memorial; but one publishes the following allegory, a free translation of which will be read with interest by our foreign readers:—

"In the city of Tokei there is a large merchant, whose house is very old, and whose forefathers and family have been famous for many generations. The head of the house is young, and a great many clerks conduct his affairs for him.

"By the progress around him, he became animated by the desire to surpass in greatness all other merchants. He therefore followed the example they set, changing the old customs of his house, and adopting the new methods. He gave foreign cloth, foreign umbrellas and waterproof coats to all his employés; and making them cut their hair and otherwise follow foreign customs, he rejoiced in the belief that now, all the people in his shop were civilized. Moreover, as the business did really increase, each clerk felt himself entitled to urge his own individual opinions.

"Opinions indeed are plenty; but they never agree. Some say the advance is too rapid. Some say it is right to advance as fast as possible.

"As last, the master suddenly reduced the wages of his servants; took part of their rice salary, and imposed a tax upon everything belonging to them. In the morning he would order them to do one thing; in the evening he changed his mind; and every day hundreds and thousands of orders are given without object. And all the time, the master rejoices thinking 'My house is highly civilized and well arranged; and I am very proud of it.'

"But, sad to tell the servants and clerks would assemble in the corners of the premises, and talk privately among themselves, saying 'We are not free, but enslaved under the selfishness and despotism of our master.' They obey in his presence, but speak evil of him behind his back. Finally they got quarrelling among themselves—some wishing to fight their fellows boldly like the lion or tiger, others to gain their ends by cunning like the badger and the fox.

"Although the house is very large; yet if such disturbances take place there is much danger that fighting from this disturbed condition will suddenly happen.

"I am very anxious about this house; and although I have no right to inform the master, yet as I am nearly related, I inform the clerks, of the evil speaking of the servants and shop-boys, which I really and truly, hear constantly with my own ears."

THERE IS a great deal said just now of the samurai; and some persons are under the impression that they are a class still idle as an incubus on the country. It is true that many of them still receive allowances from government, bearing some proportion to what they would have received under the old regime when their duties being either military or civil, they were entitled to pay; and it would have been manifestly unjust and impolitic to withdraw from them the only support on which they had been taught from childhood to rely, until other means of support were found. It speaks well for them, that so many thousands of them have sought and obtained occupation, and from experience of them we can say that a better class of men are not to be found elsewhere.

We know that in the *Nisshin Shinjishi*, where nearly 50 of them are employed, they work with alacrity, industry, and quietness. They never quarrel among themselves, or hesitate to obey orders; and it is always a perfect pleasure for the proprietors, the only foreigners who have anything to do with them, to go amongst them. And from our samurai who are brought into contact with samurai in a similar way we hear a similar report. We simply make this remark that those who are new-comers or do not yet understand who and what the samurai are, may disabuse their minds of the idea that they are mere idlers. Most of them have had an occupation, and others would be glad to do so. But there are exceptions.

See, for instance, how a samurai writes a wilful idler in the *Nichi Nichi Shinbun*. The writer says, he visited a house where was a samurai wearing two swords. He asked him who he was, and why he continued to wear two swords? The answer was that then in the first year of the change, when the samurai became common people, refused to go to his own country, and hated the idea of coming on a level with shopkeepers, and agreed with some of his samurai relatives to continue to wear the two swords; and he felt ashamed to put them aside.

His wife and son are frugal and industrious. They have tried to persuade him to cease wearing them, and to try and obtain work. But he refuses, and is content to be fed by his wife who works at home, and his boy, who is engaged in a store.

It is high time that samurai should live on their own work. They ought to feel ashamed to receive rice they have not earned. But the contrary this samurai is ashamed to be a man, but is proud to be a dependent child.

WE CREDIT the *Mail* with the following:—

It is reported that 'Htotsubashi (the late Shôgun) has left Shidzuoka and taken up his residence in Yedo, where he has been staying for some time past.

THE *Herald* of 29th January has the following:—

"It is stated that Mr. Acting-Assistant Judge (Hannen is shortly to be superseded, and that his successor) will be Mr. Goodwin of Shanghai."

This gives an incorrect impression in regard to the circumstances referred to, which are as follows:—

Mr. Hannen, as his title-Acting-Assistant Judge, denotes has been acting for the Assistant Judge, Mr. Goodwin and naturally that when Mr. Goodwin returns to his post, Mr. Hannen vacates it. When the Supreme Court was first constituted in 1865 the Chief Justice was Sir Edmund Hornby, and Mr. Goodwin,

Assistant Judge were both stationed at Shanghai, but when the judicial business at Yokohama attained large dimensions while that of Shanghai decreased, it was (with good reason) thought desirable to transfer the Assistant Judge to Yokohama and thus give the chief port of Japan the advantage of a Court presided over by a Professional Judge. Sir Edmund Hornby leaving at this time for England, Mr. Goodwin officiated for him as Chief Judge and on Sir Edmund Hornby's return to China Mr. Goodwin then in turn took leave, and thus Mr. Hannen's acting appointment has continued for three years.

Mr. Goodwin is not expected in Yokohama before the end of April.

ON THE 29th January the Empress received the families of the Foreign Ministers. Lady Arkles, Mrs. and the Misses Bingham, and Madame De Groote, were presented. The Empress expressed pleasure at seeing them, and received their congratulations on the New Year, and wishes for Her Majesty's health and happiness. The Mikado was present and added a few words of welcome. The New Year's reception had been delayed in consequence of the indisposition of Her Majesty.

ON 30th Jan., we alluded to the discussion which had already arisen on the subject of the Memorial recently sent in to SA IN; and particularly mentioned a reply sent to the *Yishin Shinjishi* on behalf of the Memorialists.

It will interest many of our readers, if we give a translation of the reply in full.

"We see that there are persons, who, criticizing our Memorial, sent in to SA IN, ask such questions as the following:—

First:—'How it happens that we should lose our mouths while in office, and open them on a sudden, after our retirement?' Our answer to this is simple; viz, that in the introduction of the Memorial we have spoken of this; and do not think it necessary to repeat what we have already said. But the affairs of the State have, of late, assumed somewhat alarming symptoms; and we are so strongly convinced of the necessity of allowing utterance to the public voice, that should the government at once declare its intention of listening to it, that very Imperial proclamation will have the effect of blessing the State with harmonious concord throughout the empire. This leads us to advocate the exigency of the establishment of a popular assembly more strongly than ever.

Secondly:—'Was there no such evil as the oligarchical whilst we were in office?' We consider this evil attributable mainly to the very defect in the institutions of our government. And we cannot but calmly acknowledge the charge that we could not prevent it from distorting government measures. We venture to prophesy that no ministers, however able, including the present as well as future ministers, can avert the last mentioned evil, so long as this very defect is left alone. We need scarcely describe how people are oppressed under such a despotism as that of the few; and, this being so, can the State be prosperous in an inverse ratio to the groanings of the people? We could not, therefore, help demonstrating this very defect in the terms we used in the Memorial; pleading guilty as accessories with the members of the present government to the despotism exercised by the few; in order that this oligarchical evil may no longer tarnish the glory of the Imperial government of the Islands of the Rising Sun.

THE ADVOCATES OF A  
POPULAR ASSEMBLY IN JAPAN.

ONE OF the most curious phases of Japanese feeling we have ever heard of, has to-day come to our knowledge. Our Japanese informant assures us of its truth. Among the Kochi men who have been taken on suspicion of being concerned in the attack upon Iwakura, one named Takichi was set aside as most strongly suspected because he was known to have expressed a wish for Iwakura's death. When this was made known, two Hosakawa men went to Shihosho, and offered to take their places beside Takichi, as they had expressed a similar desire! Another man, named Aminomiya was examined, and replied that he had nothing to do with this attack, but he would not promise he would not be in the next. It is hard for a foreigner to get to the bottom of this affair—but for some reason or other, Iwakura seems to be the *bête noir* of Japan, at present; and we do not at all like the temper of the times respecting him.

A TOKAI paper reports that Tanaka Fujimaro, the Shoyo of the Education Department, presented Mr. Verbeck with 20 valuable old gold coins, and 3 silver ones, besides the large Japanese History called *Dai-Nihon-shi*; as a mark of friendship and respect, on the occasion of Mr. Verbeck's retirement from the post of Principal of the Kaisai Gakko.

ON THE 11th instant, the festival of Kigen Setsu was celebrated at the Imperial palace, in honour of the first Emperor Jinmu Tenno.

The palace was gaily decorated within and without; and at 11 a.m., high officers and nobles visited His Majesty. They all were seated, but the Emperor occupied a higher seat than the others. On His Majesty's entrance, each noble rose and presented himself before him and made obeisance, immediately returning to his seat. The Emperor then spoke to some of them, and received their replies. Saké was introduced, of which the first cup was quaffed by the sovereign. The old imperial band, as well as that of the Imperial Marines, added to the pleasures of the reception. Of course the offerings to the gods were not forgotten.

IN A small paper published in Kofu, and called the *Kofu Shinbun*, we find the following. There are many foreigners who will entirely agree with the writer.

"Looking about me, I see many young fellows, who prate about "civilization," disregarding the wisdom of the aged, and thinking themselves very enlightened. I would bid them remember that when a pupil commences to learn the alphabet, and gradually comes to understand the form of the earth, the power of gravitation, the course of the heavenly bodies, and the use of simple machinery, he begins to imagine himself possessed of all knowledge. He talks about freedom; and he speaks as proudly as if the nobles or even the Emperor could not be his equal. He calls old friends ignorant. But alas, he is himself ignorant of the true moral of all his knowledge; so that when he has finished his foreign education, he has become totally blind. I would warn all the scholars in this Ken to beware of this folly."

ON 30th Jan. being the anniversary of the birth of Komei-Tenno, father of the Emperor, which is held as a fête day by the Japanese, business in the native town was suspended, and the public offices closed. A liberal display of the national flag was indulged in, and Mr. Takashima contributed his quota to

One writer asks, "Why did not the members of the government, who lately resigned and who the general rejoicings in the shape of an illumination at the gas-works and at his residence. In the evening, Nakashima Nobu-uki, the new Governor of Kanagawa, entertained at dinner the foreign Consuls. Several other foreign officers were also present.

THE *Mail* told us a day or two ago, that Hitotsubashi was in Tokyo. He has not been in the city since he left it in 1868. He is living quietly in Tsuruga Ken, amusing himself with hunting, shooting, painting, &c. He is also having a large brick house built for himself; and, so far as could be gathered by one who visited him within the past ten days, he washes his hands utterly and absolutely of all politics. He reads certain of the native papers, and views with much interest all that passes; but he is content for the future to be a spectator rather than an actor.

SHORTLY after 7 a.m. on the 31st January, a fire was discovered on the premises of Mme. Labine, No. 136, Homura Road. A supply of water being fortunately at hand, the damage did not extend beyond the kitchen, where the fire originated. It is said to have been caused by the carelessness of Japanese servants. Some of the engines were quickly on the spot, but the affair was all over before Noge had begun to sound the alarm.

ONE of the priests attached to the French Mission in Yokohama, was, last evening, robbed of a sum of about 90 dollars. The theft was committed by a Japanese servant, who abstracted the amount from a drawer where it had been placed.

The Pony Hunt, for the Silver Cup presented by R. H. Brunton, Esq., which was run off this afternoon in consequence of a dispute having arisen last Saturday, was won by Dr. Buckle on *Mai Saki*, Mr. Abbott on *Kingcraft* coming in second. The finish was very fine, Mr. Urquhart having the race apparently in his own hands, when, unfortunately, at the last ditch his pony refused, and he had to walk in. We regret to add that a severe accident happened to a spectator, Mr. Silva, whose pony threw him twice. On the first occasion he fell under the animal and was kicked. The second fall was a most dangerous one, as he was thrown amongst the feet of Mr. Abbott's mount and received exceedingly severe injuries in the face, his jaw, we are informed, being broken.

MR. LOWDER, formerly in Her Britannic Majesty's Consular service, and now legal adviser to the Board of Revenue and Customs in Japan, has just published at the office of the *Japan Herald*, in book form, a translation of "The Legacy of Iyeyas"; the hundred articles or chapters which we used to hear of long ago as the "Laws of Gongen Sama," which until Mr. Lowder translated them in 1865 were generally believed to be a myth. To students of Japanese history they will not only prove most interesting, but really necessary; for in them alone will be found the foundation of many of those customs and notions of honour which were marked features of the people in the early days of foreign intercourse.

The following extract from Mr. Lowder's introduction has much of truth in it, and will tell to those who only hear of the feudal times as something of the past, and thus are not so eager to search for the history of those who

gave them the peculiar colour they possessed in Japan, an idea of the importance of the "Legacy of Iyeyas."

"A strong man's will left a mark upon the history of Japan, that time has not succeeded in effacing in two centuries and a half. With foresight almost superhuman, Iyeyas looked into the future, and, by the creation of a political machine nearly perfect, assured to his dynasty a security almost unparalleled. There is nothing in history to compare with the Legacy of Iyeyas, except the will of Peter the Great. In it, the student of Japanese history will find the solution of many difficulties; and its readers will have before them the Constitution under which this country was governed, until the time, within the recollection of all, when it gave way to the irresistible momentum of a higher civilization."

We feel inclined to quote largely from the "Legacy"; but we think it would be hardly fair to Mr. Lowder or his publisher. We shall attach some value, however, to the little book ourselves, and every one who comes to Japan either as resident or visitor, ought to make a point of procuring a copy. It is creditably got up in every respect.

THE EMPRESS-MOTHER has removed from the palace at Akasaka, where she has resided since she came to Tokci, and whither the court removed after the destruction of the Imperial palace by fire. A yashiki at Awoyama has been prepared specially for Her Majesty, which goes by the name of Awoyama Gosho.

A LETTER appears in the *Shimbu Zasshi*, on the subject of the encroachments of Russia, which contains a somewhat racy suggestion.

The writer says that the Russians will not be content to extend their settlements over Saghalien, but are likely to covet Yeso and finally the whole empire. Peter the Great was anxious to have the whole world under his dominion, and this desire has descended to his successors. They have already annexed several portions of Asia, and have had their eye upon Europe and America. Siberia they swallowed up; and half of Manchuria; so that now nearly all the country from the Black sea to the borders of Corea are Russian. They are eager for Turkey, and last year took Khiva; the latter a step towards the conquest of India. If once Russia extends its dominion in a south-eastern direction, the fortune of Europe is uncertain.

"For this reason all European nations are apprehensive, and in 1854, England and France joined together to help Turkey to prevent Russian encroachment. It was no sympathy for Turkey which caused this alliance, but alarm at the progress of Russia.

"Last year a large English army was sent to India for fear of a Russian advance from Khiva. Even such large nations are afraid of Russia.

"In 1856, at the Treaty of Paris, Russia agreed with England, France, Turkey and Austria, that it would have no ship of war in the Black Sea. But some years ago, this promise was broken. What then is the use of International law in protecting the weak?

"I privately think that the reason which actuates Russia in advancing in Asia, is that, in Europe, if all the powers unite against her, her success is uncertain. She will therefore first annex Asia, because she is afraid of this combination.

"Twenty years ago, a Russian named Moravieff, arrived in Nagasaki, and asked permission to land troops on the western coast of Yeso. This was at the time of the siege of Sevastopol.

"About ten years ago, a Russian squadron suddenly arrived at Tsushima, and wished to build a fort, to guard against other European powers.

"Every European nation was alarmed; and as they had already aided Turkey, so now they think to help the countries of Eastern Asia.

This being so, I propose a plan to guard against Russian aggression in the north.

"Let Hokkaido (Yeso) be divided into two parts—North and South. The northern part should be again divided into several portions, and these given respectively to Germany, France, England, America &c. These should be encouraged to colonize the territories; and then fortresses should be built in Amashiwo and Nemuro and filled with a strong guard of the Imperial army. Thus will Russia be restrained; and settlement will be difficult.

"It is not a pleasant alternative: but, if it be not done, the whole empire may fall to Russia."

A MEMORIAL has been presented to the Daijo Daijin Sanjo and Udaijin Iwakura by seven of Kazoku (nobles)—viz., Yamauchi, Kawahire, Akidzuki, Hiramatsu, Mibu, Gojo, and Okimachi—praying that they may build a large Library for the nobles, and also form an assembly for discussing public questions.

THREE HUNDRED warriors and one chief have left for Tsussima. It is declared that 70,000 well-armed men are at once to be concentrated there, under the supreme control of this chief; and from thence they are to proceed to Corea.

\*\*\* We give to our readers all important information of a really reliable character, as it reaches us. The above we give full credence to; although we confess that it has taken us by surprise to find that events are culminating so rapidly. Now the situation develops itself so plainly that it is impossible to disregard it. It is absurd to wait for the revelations which the government may be disposed to make. There has been enough of this silly thing already. It is now plain be-

—whether of our ill-temper-  
yond all dispute, those officials whose duty  
ary the *Mail*, or on the other hand, hiding disagreeable  
seems to be comprised in the same class of facts and tele-  
facts (as if in these days of pseudo-secrecy),—that the samurai are determined  
to go against Corea; and that the army will  
not act against them to keep them quiet.

It is hardly likely that the mission of Okubo can be of any use. There are men of far greater influence than he in Sasshiu, in Hizen, in Geyshiu and Chikuzen. Those men, we believe, can effect more with a word than Okubo with his battalion of Marines. It is a most unfortunate position that the Mikado is placed in—without a man in the ministry who can be said to possess any weight at this crisis. Kido is still sick; and, were it otherwise, our opinion is that neither he nor Okimachi nor Sanjo Daijin, (who are the most influential) would oppose this movement *vi et armis*. We believe that each prefer to see an external war with Corea to a civil war in Japan. Besides which, although their reason tells them that a Korean war is both difficult and expensive, and that it is also injudicious in the present state of the empire, still they all feel as others do, indignant at the insults the Koreans have hurled at Japan.

Events are assuming so definite a shape that we cannot suppose anyone will be any longer deceived. As to the removal of the foreign force now in Yokohama, it would be highly injudicious at this juncture; and we hope that nothing of the kind will be thought of. For, although we have no apprehensions of danger from the samurai at large, there are always a number of those jō-i, of whom we used to hear, and who have declared themselves in Higo, who would, if they dared, molest foreigners.

A LADY of rank in Yedo now lies in a very precarious state through the error of a Japanese apothecary, who made a most serious mistake in compounding a prescription prepared for her by an eminent native physician of Yedo. Certain powders were required, into the composition of which Dover's Powder and Morphia entered, the proportion of the latter being 7 grains. Instead of weighing out the latter quantity the apothecary dispensed 70 grains, just ten times as much. It was fortunate that it was even so, the dose being so large that it was rejected almost immediately after it was swallowed. The patient, nevertheless, and an infant nursing at the time, are both in a very low state, and it is yet doubtful whether they will recover. The fault lies entirely with the apothecary who made up the prescription, and it seems evident that some sort of examination ought to be insisted upon before native dispensers are permitted to handle dangerous drugs, to the detriment of the health (rather than its improvement) of the Japanese public.

A TELEGRAM has been received to-day stating that a large fire had broken out at Nagasaki at 2 o'clock this morning, resulting in the destruction of over 200 houses (probably native). No other particulars are to hand.

WE ARE glad to learn that Iwakura is now convalescent, having again begun to "take his bath," which, after a sickness, is with the Japanese synonymous with perfect recovery.

THE HIZEN affair turns out to be very much more serious than was at first believed. The government are said to be almost at a *nonplus* as to what is best to be done, and important changes are pending.

AN INTERESTING launch took place this morning from the yard of Mr. H. Cook on the Creek, in the presence of a large number of spectators, including many Japanese, to whom such a sight was somewhat of a novelty. The

which was named the *Jupiter*, has been built to the order of Mr. Hoffmann, and is intended for the sea otter-trade. She will be tenderly rigged, and is expected to be ready for sea in about fourteen days. Her dimensions are as follows:

Tonnage.	Keel 41 feet.	..	50
Length of ..	..	..	41
.. over ..	..	..	49
Beam ..	..	..	14.9 in.
Depth of Hold ..	..	..	6.4

Great expedition has been used in her construction, the keel having been laid only last month.

The *Jupiter* is built of R. .. throughout, and is coppered and copper fastened to the trade for which she is intended.

VERY IMPORTANT news has been received from Geyshiu. The troops at Hiroshima, .. of .. shiu, have risen under the command of one .. ve .. the prominent men of the country, and have destroyed much government property. They assumed such an attitude, that government will hardly be able to put them down by force of arms; and it will, in all probability, be necessary to yield in some measure to their demands, to prevent the outbreak becoming general.

The first effect of the rising is that the resignation of Iwakura has been called for; and we believe that at this moment

IWAKURA IS NO LONGER UDALJIN.

## YOKOHAMA FIRE BRIGADE.

THE ANNUAL General Meeting of the Yokohama Fire Brigade, (adjourned from 20th inst.) was held on the 28th January, at 3 o'clock, at the Chamber of Commerce, the use of which had been kindly tendered by the Committee. There was a small attendance. Mr. Wilkin presided.

The Chairman said the present was the adjourned meeting, which had been put off from last week on account of the sparse attendance on that occasion. He was sorry to see the advertisement had not brought together a larger number of those interested. He then called upon the Secretary to read the Report and Statement of Accounts for the past year.

Mr. J. A. Fraser, Hon. Sec., then read the  
**REPORT OF THE YOKOHAMA FIRE  
BRIGADE FOR 1873.**

The Committee of the Yokohama Fire Brigade beg to submit their Annual Report, and the Accounts of the Hon. Secretary and Treasurer for the year 1873. The subscriptions collected during the past year shew a decrease of \$252 as compared with 1872, the contributions from Insurance Companies being \$200, and from Chinese Merchants \$52, less than the previous year. On the other hand, the Working Expenses of the Brigade have been slightly smaller than in 1872, the total Expenditure being \$874<sup>10</sup>/<sub>100</sub> against \$939<sup>10</sup>/<sub>100</sub>. At the last General Meeting, held on the 5th February, 1873, an expenditure was authorized for new engines, and it was left to your Committee to decide whether it would be better to purchase a Steam Fire Engine, or two more Hand Engines. Their decision having been given in favour of the former, negotiations were opened with the Japanese authorities, with the view of purchasing a Steam Fire Engine belonging to the Kaitakushi Department, and then stationed at Hakodate. Through the courtesy of the Agent of the Pacific Mail Co., a report on the engine was obtained from one of the Company's Engineers, and this being considered satisfactory, your Committee offered to buy it from the Department. The price offered was not, however, accepted by the Japanese, who asked a much larger sum, and your Committee, unable to come to an agreement, had finally, in May last, to give up all idea of purchasing the Engine for the Brigade.

The next step taken was to obtain estimates from Messrs. Shand, Mason & Co., and Merryweather and Sons, of London; and these having been received, a careful comparison of them led your Committee to decide on ordering from the former firm, a London Brigade Steam Fire Engine, of best quality, with full supply of Hose, &c., capable of pumping 300 Gallons of water per minute, to cost, laid down here, about \$2800. The order was sent in September last, and although no reply has been received as yet from Messrs. Shand, Mason & Co., the engine may be expected to arrive here in the course of a month or two from date; as instructions were given to ship it by steamer, via the Suez Canal.

Your Committee have pleasure in stating, that, during the past year, fires have been even less frequent than in 1872, four only having occurred in the foreign settlement; and they take this opportunity of thanking the other Fire Companies of Yokohama for all assistance rendered on such occasions.

The two hand engines, which are the only ones, of any use at present owned by the Brigade, (the remaining Dutch Engine having been disposed of for the sum of \$285), are in tolerably good working order, but they are 10 years old, and cannot be expected to last much longer; and Your Committee would accordingly

recommend, that their successors in office be authorized to order out, during the year, one or more new ones to replace them, as the funds at their disposal may warrant. The old engines might then be disposed of here, as occasion offered. Your Committee have, further, much pleasure in testifying to the satisfactory manner in which the Superintendent, Mr. Davis, has discharged the duties of his post.

In conclusion, your Committee, consisting of Messrs. Benson, Hurlbut, and Fraser,—Messrs. Spence and Glennie having left the Settlement (the latter temporarily)—beg to tender their resignation, and they venture to express the hope, that the community of Yokohama will continue to afford its cordial support to the Brigade, as has hitherto been the case.

For the Committee,  
(Signed) J. A. FRASER,  
Hon. Secty., and Treasurer.

Yokohama,  
January, 1874.

Since the foregoing Report was written, a reply has been received from Messrs. Shand, Mason & Co. stating that the Steam Fire Engine, ordered for the Brigade, would be ready for shipment about the middle of November last.

E. & O. E.,  
Yokohama, 31st December, 1873.

(Signed) J. A. FRASER,  
Hon. Sec. and Treasurer.

The following fires have occurred during 1873:—

January 9th.—At the United States Consulate—outhouses.

January 28th.—At Nos. 37 and 38 Water Street.

March 22nd.—In the native town (Honcho) a very large fire, consuming about 1500 houses.

May 30th.—At No. 114 on the Creek.

June 15th.—At No. 32 Water Street.

Mr. Fraser mentioned that there would be a small liability of, say, \$200, balance of cost of Steam Fire Engine; this would be payable to Shand, Mason & Co., in addition to the £568, odd, remitted them, and would reduce the balance in hands of Treasurer by so much.

The Chairman then called on the Hon. Secty. to read the Minutes of the last General Meeting, held on 5th Feby., 1873; the reading of which was omitted at the last adjourned meeting.

Those Minutes were then read and approved; and some general conversation ensued as to the number of Engines in the Settlement.

The Chairman said it was a very satisfactory feature in the Report that the Committee had been enabled to purchase a Steam Fire Engine costing \$2,800, leaving, still, a balance of \$1,000 to the good. The Fire Engine power of the Settlement was, he considered, still inadequate. Although we should be very powerful in that respect when we got the new engine, we should still be undermanned. We required one or two smaller ones, to assist in cases where the larger and more powerful engines could not be made available; this, the Committee would no doubt take into consideration. We congratulate ourselves, he said, on the small number of fires during the past year. That, no doubt, had arisen from the great caution the Fire Insurance Companies now exhibited in taking risks; so that builders had to be much more careful in the construction of buildings than formerly; especially with respect to stove-pipes, which, he considered, were a very fertile source of fires. He was happy to say, however, that they were gradually going out of use, and he hoped soon to see them entirely abandoned in European houses.

Mr. W. H. Smith proposed that the Report and treasurer's statement just read be passed; adding a vote of thanks to the Retiring Committee for their exertions during the past year, which had tended to bring our engine force into a very efficient state. If they would kindly re-offer themselves for re-election, there could be no doubt that the people of Yokohama would be only too glad to accept the continuation of their valuable services. Two or three members of the Committee had left Yokohama, and it would be therefore necessary to fill up the ranks, but he hoped the other members who had shewn such activity in the interests of the Yokohama public would permit themselves to be again called to office.

The Chairman said it would be necessary to pass the Accounts, &c. whereupon

Mr. Leckie seconded Mr. Smith's motion, and the Report was adopted, and the accounts passed.

The Chairman said he hoped the small attendance did not indicate the interest the Yokohama people took in the Fire Brigade. Indeed, he felt sure it did not. He thought the state of the subscribers list and balance sheet might be considered a better index.

Mr. W. H. Smith then proposed that the Retiring Committee be requested to serve again; with the exception of those who have left.

After some conversation, the following gentlemen were proposed as Committee for the current year:—Messrs. Fraser, Benson, Hurlbut, Leckie and Dodds. This being put to the meeting, they were elected, unanimously, by show of hands.

The Hon. Secty. (Mr. Fraser) on behalf of Messrs. Benson, Hurlbut, and himself said they would be glad to serve, and do their best for the interests of the public.

Mr. Benson said perhaps he had, in one respect, misunderstood the remarks of some of the speakers with reference to the hand engines. He thought the incoming Committee should have power to purchase two small Steam Engines, if it were thought necessary. He would be glad to hear the matter put into shape, by some one not on the Committee. He praised the Japanese firemen; they were prompt and reliable, and rendered

invaluable assistance in the case of fires in the foreign settlement. He thought they ought not to separate without tendering their thanks to the Japanese for the help they had given. He therefore proposed "that a vote of thanks be accorded to the Native Fire Brigade for the able assistance they had rendered in putting out fires in the foreign settlement during the past year."

Mr. W. H. Smith seconded, with much pleasure. Carried *nem. con.*

The Chairman said he observed that the Report thanked the other Companies, but not the Native.

Mr. Smith enquired the price of the Shand and Mason Steam Fire Engine, laid down here.

The Secretary replied that including hose, &c., the Steam Engine cost \$2,800; two hand engines would cost \$1,800. The work done by the steamer was about equal to three hand engines.

Mr. W. H. Smith, said, considering the assistance rendered by the natives, and the efficiency of their engines, they might calculate upon being able to cope with any ordinary fire. He suggested that it be left to the incoming Committee to procure another Steam Fire Engine, in place of two fire hand engines; arguing that the Steam Engines were very much better in every way. With two Steam Fire Engines the expense would not necessarily be double, as there was no doubt one European engineer could superintend the two engines, with the assistance of a Chinese, or a Japanese; the latter now having had some considerable experience in the matter of steam. It would be advisable, in every way to have Steam. There was now, according to the Treasurer's Statement, a balance in favour of the Brigade of \$1,000. At the end of the present year they might reckon on \$3,000 more, say \$4,000. And, no doubt, arrangements could be made with Shand, Mason & Co.,—supposing that were insufficient to pay for, in full, another Steam Engine—to pay for the balance after the end of the year. He advocated all steam; experience had shewn it was much to be preferred; with the assistance of the hand engines of course. He would not suggest doing away with them altogether. They would then be enabled to assist the Japanese in case of fire, and could, of course, reckon upon their helping them. He proposed that the meeting should therefore, empower the Committee for the current year, in addition to the Steam Fire Engine coming out, to add another, should the funds permit.

Mr. W. H. Hohnholz—being a member of the Fire Brigade presumed that the Chairman would allow him a voice in the proceedings. He said he was a Hook and Ladder man, and had, as they no doubt were aware, instituted that company, seeing the disadvantage they were put to from a scarcity of water. He thought there was already plenty of engines. What they wanted was more water. The small engines were useful enough; in fact they couldn't be done without; they were wanted in the main streets, away from the water, to assist the large ones. The steam fire engines had to contend against a scarcity of water, especially when the tide was low, and they had to draw their supplies from the Band.

Mr. E. S. Benson said the question of Water supply had engaged the earnest attention of the Committee. The well they had sunk in the Fire Brigade lot was equal to 100,000 gallons at all times, which was as much as two Steam Fire Engines might be expected to require. They were now endeavouring, and had been for some time to procure plans and estimates from competent authorities for wells to be sunk in different

parts of the Settlement, so as to be available in case of fires. In that respect they had many difficulties to contend with; as there seemed to be some trouble in getting estimates from architects and others. During the present year, they hoped, however, to have wells and cisterns provided in various parts of the Settlement. Of course, permission would have to be obtained from the Japanese authorities, but there was not likely to be any difficulty in that respect. At the end of 1874 the Committee hoped to be able to present a report shewing that they had established wells in different parts of Yokohama.

In reply to the Chairman, Mr. Benson said the Committee were not in a position to state as to what could be done in getting a supply of water brought into the settlement by the Water Company, but they would make enquiries from the Native authorities. The pipes would not be laid in the Settlement without a guarantee; the Water Co. being a private one. The water was brought from some distance in wooden pipes, across paddy fields and open country, and was very impure; it was, however, suitable enough for their purpose.

The Chairman said with two steam fire engines and the hand engines they would be able to reach any part of the Foreign Settlement. Then there was the Homura drain.

Some discussion here ensued as to whether the latter could be relied upon, Mr. Smith stating that he was under the impression that there was usually 3 feet of water in it.

Mr. Benson said (in reply to Mr. Smith) that the steam fire engines could not draw water from the Canal, at the bridges, at all states of the tide.

The Chairman said that Mr. Smith's proposition was in favour of Steam Fire Engines, instead of hand. Mr. Hohnholz advocated improving the supply of water.

Mr. W. H. Smith said he proposed to leave the question of purchasing the Steam Engine in the hands of the Committee.

The Chairman said there was no formal motion on the matter; he agreed (with Mr. Smith, who spoke to the same effect) that they ought not to be entirely without a hand engine. They could often go where a steamer couldn't.

Mr. H. W. Hohnholz said the question of the supply of water was a very important one. On the occasion of the fire on the Swamp, there was no water to be had. It commenced in a small shed, and might easily have been put out, but in consequence of the absence of water a large godown was destroyed. Even a powerful steam engine would be of no use if there were no water. If the water were too far off they were useless; on the other hand the Japanese and other small engines are exceedingly useful where there is a supply. If they only had water in Main Street there would be no difficulty whatever; there would be the Band, the Creek, Homura Road; water all round in fact.

Mr. W. H. Smith, before separating, would like to mention one important matter in which action had never been taken, although it had been spoken of for two or three meetings. He referred to the very defective condition of the roofs, which were covered with shingles, beneath the tiles. During a fire the wind carried the sparks under the tiles and thus increased the mischief. The attention of the Fire Insurance Companies should be called to it, as great loss would be likely to result from defective roofs.

The meeting separated after the usual vote to the Chair.

## CHURCH MEETING.

The Annual Meeting of Subscribers to the British Episcopal Church Establishment, Yokohama, for the election of office bearers for the current year, was held in the Court Room, British Consulate, at 4 o'clock on the 27th January, Russell Robertson, Esq., H. B. M.'s Consul, occupying the Chair. The whole of the Committee, with the exception of Mr. Murray, were present. There was but a small attendance of the general public.

The Chairman, in opening the proceedings, said that no doubt those present were conversant with the object of the meeting, which was mainly formal: the election of office-bearers for the Church Establishment for the current year. In addition, the Committee of Ways and Means appointed at the adjourned general meeting, held on December 30th last, would hand in their Report. On the question of voting on the Report, the Chairman referred to, and read, the Foreign Office Act, and said that, after the election of officers had been proceeded with, he should prefer to vacate the chair, that the subject might be discussed and action taken upon it as in public meeting. According to the Act, only those who were subscribers of £20 sterling, in addition to the annual subscription of £3, were entitled to vote, but there were many seatholders who had not that privilege, who would strongly object to the raising of the pew rents, which was the main feature, it seemed, of the Report to be presented. Some of those were present, and had attended, no doubt, with the expectation of being able to vote on the matter; the advertisement calling the meeting stating, that matters of importance affecting the future governance of the Church would be discussed. Under the circumstances, it would be, perhaps, better that the formal business should be disposed of at the present meeting, and an Extra-ordinary Meeting called for the consideration of the Report; power being given him, by the F. O. Act, to do so, on the requisition of two subscribers of £20 each.

Mr. Wilkin asked if the Committee had taken any steps towards the reduction or payment of the debt on the Church, as suggested at the last general meeting, and was informed, by one of the Committee, that no actual steps had been taken.

The Chairman read the Minutes of the Adjourned General Meeting held in December, which were confirmed.

Mr. Cargill said it seemed, from the Report just read, that the Retiring Committee formed, with three other gentlemen, the Committee appointed to enquire into the question of Ways and Means. He, therefore, suggested that their Report be presented.

Mr. James then read the

REPORT of the Special Committee on Ways and Means, appointed at the Adjourned General Meeting of Subscribers to the Episcopal Church at Yokohama, held 26th December 1873.

To the Subscribers of Christ Church, Yokohama.

GENTLEMEN.—We beg to submit for your consideration the results of our various consultations, which are as follows, viz:—

ORDINARY EXPENDITURE AND RECEIPTS:—Upon careful examination of the Accounts, and taking the average of the past three years, we find that the ordinary expenditure on the Church Buildings and Parsonage is

made up in the following manner, viz:—  
Ground Rent \$179; Fire Insurance on \$10,000, \$290; Lighting and Petties \$60; Wages &c. \$77; Coal and Printing \$60; Tuning Organ \$100; Repairs (average) \$500; together \$1266; and that the Receipts from pew rents at present rates amount to \$2773, leaving an overplus of only \$1507. It is therefore evident that some means must be devised to increase the receipts, so as to provide an adequate salary for the Incumbent.

**INCREASE OF PEW RATES:**—We have fully discussed the scheme suggested by Mr. James at the Adjourned General Meeting of Subscribers held on the 26th ulto., whereby he proposed that the pew rents should be raised, from their present rate, to \$25 per single sitting, and \$130 for the whole pew; and, after taking the opinion of nearly all the seat-holders on the subject, we are unanimously agreed that it would be better to adopt a rate, from the 1st January 1874, of \$20 per single sitting, and \$120 per pew, per annum; excepting only a few sittings situated near the organ, which should be let a cheaper rate, to be fixed by the Trustees. And we are also of opinion that all subscriptions should be paid up to the 30th June and 31st December, in each year. Persons subscribing during the intervals should pay ratably up to those dates.

We estimate that the Income accruing from the foregoing scheme will yield, in round numbers, about \$3600, which, after deducting the Annual Expenditure, will leave a balance of about \$2400.

We may mention that nearly all the present seatholders have agreed to pay the proposed increase of pew rents, and, in many instances, have expressed their willingness to agree to the payment of a larger subscription, if found necessary.

**LIQUIDATION OF DEBT:**—With regard to the liquidation of the debt, as decided at the last meeting of subscribers, we received a letter from Mr. Consul Robertson, dated 26th Dec., stating that, on reconsideration, he thought it unadvisable to telegraph the Secretary of State for Foreign Affairs, but that he was prepared to pay at once the equivalent of £400 sterling, the Government grant for 1873, and to write to the Foreign Office for permission to hand over the remaining £400 (grant for 1874) as soon as possible.

We have taken upon ourselves to accept, with thanks, Mr. Robertson's proposal, and have further made application to one of the Banks to advance the equivalent of the second £400 sterling, at a lower rate of interest than the subscribers are at present paying, so as to enable the Committee to discharge the whole of the debt of \$3,600 with as little delay as possible, and we are glad to say that our application has met with success. The Manager of the Hongkong and Shanghai Bank has agreed to advance the required sum at 5 per cent. per annum; taking an hypothecation of the Government Grant for the year 1874.

**THE REV. G. W. SYLE:**—The subscribers are aware that the arrangements made with the Acting Incumbent, for one year, terminated on the 31st March, 1873, and that Mr. Syle has continued to officiate up to the present time without any formal renewal of the said arrangement. The monthly payments made to this gentleman by the Committee, as shewn in the account, were as follows, viz:—

From 1st April, 1872, to 31st Mar., 1873, \$200 per month.....	Less: £40 Sterling per year for
From 31st Mar., 1873, to 31st Dec., 1873, \$275 per month.....	Rent of Parsonage.

We have, through the Treasurer, acquainted Mr. Syle with the condition and prospects of our finances; and, in paying him, in advance, (as usual) the allowance of \$275 for the current month, have given him to understand that the funds available will admit of payments at the same rate until the end of the current quarter (March 31st); from which date such new arrangements must be made as the next Committee may deem expedient.

We remain, Gentlemen,

Your obedient Servants,

W. W. CARGILL,  
T. JACKSON,  
W. H. SMITH,  
E. D. MURRAY,  
F. S. JAMES.

Mr. Howell moved the adoption of the Report; Mr. Pitman seconded.

The Chairman pointed out that if the Report were passed the whole of the recommendations of the Committee would necessarily be adopted; amongst which was the question of the raising of the pew rents, which, there could be no doubt, did not meet the approval of all the subscribers. He thought the present seat-holders should be entitled to vote on the Report. At present, as he before stated, only those subscribing £20, in addition to the £3 yearly, had a voice in the matter, as the Church Establishment was still under government control. In another 6 months the present state of things would probably be at an end, and all seat-holders would then be able to vote on such important questions as that of the raising of the pew rents.

Mr. Cargill said if the Report were adopted the newly elected Committee would have to deal with it.

Mr. R. Vicars Boyle suggested that, in order to meet the difficulty, the Report should be submitted paragraph by paragraph. If there were any dissentient voices, now would be the time to hear them.

Mr. Wilkin pointed out that they were still a Consular Church, and would remain so for another six months. He could see no objection to the passing of the Report. The clauses contained in it referring to the pew rents, might have been made last year, or, in fact, any year. If those who were entitled to a vote were not present it was their own fault, and those who had no vote could not complain.

The Chairman said it would be preferable to have the Report read in presence of the general body of seat-holders and others interested.

As a solution of the difficulties which had arisen as to the voting on the Report, Mr. Wilkin suggested that the whole of the votes given should be recorded, or registered.

Mr. Howell said they were a regularly constituted meeting. He deprecated going out of the regular course of procedure.

The Chairman said he was bound to consult the interests of the large majority of the seat-holders who were not voters.

Mr. Cargill suggested that, a doubt having been expressed by the Consul as to whether this meeting was competent to deal with the Report, an Extraordinary General Meeting be called, during January, to take action with respect to it.

At the request of the Chairman Mr. Howell then withdrew his motion as to the adoption of the Report.

Mr. W. H. Smith moved, as an amendment, that this meeting continue the discussion of the Report of the Committee of Ways and Means, as advertised.

The Chairman said that, in the interests of the seatholders, he must object to such a motion.

Mr. Smith said, then it really resolved itself into the fact that the Chair refused to receive the Report.

The Chairman agreed; that was already entered in the minutes.

Mr. Cargill's motion—that, a doubt having arisen as to the right of the meeting to deal with the Report, it be therefore remitted to an Extraordinary General Meeting, to be called in the manner provided for in the Act,—which was seconded by Mr. Wilkin, was then put to the meeting and carried by shew of hands, there being two dissentients.

Mr. Jackson (Treasurer), Mr. W. H. Smith, and Mr. Murray, (through Mr. Smith) tendered their resignation as office-bearers.

Mr. Cargill, in moving a vote of thanks to the Retiring Committee, said they had conducted their duties so well that he thought it a pity they should go out of office; more especially as the present state of Church affairs was likely to come to an end in another six months. A successor would, however, have to be appointed to Mr. Jackson, who, he was sorry to say, was about to leave Yokohama.

One or two gentlemen were then requested to stand, but declined.

Mr. Cargill then proposed that the following gentlemen be appointed to act as the new Committee:—Mr. W. H. Smith, Mr. E. D. Murray, and (in lieu of Mr. Jackson) Mr. James.

Mr. Wilkin seconded the proposition, which was carried *nem. con.*

Mr. Cargill then suggested that the meeting should consider what steps should be taken with respect to calling an Extraordinary General Meeting, to consider the Report of the Committee of Ways and Means.

The Chairman said that, on requisition to him of two freeholders, the meeting would be advertised. Mr. Cargill might write him a letter.

After the usual vote to the Chair the meeting separated.

### CORONER'S INQUEST.

AN INQUEST was held on the 24th Jan., at 10 o'clock, at the premises of Messrs. J. Thompson & Co., No. 60, on the body of James Kimber, who was found dead yesterday morning at his residence, No. 60; it was supposed, from the effects of a dose of prussic acid, administered by his own hand.

Russell Robertson, Esq., H. B. M.'s Consul, acted, *ex officio*, as Coroner. The Jury empanelled was composed of Messrs. F. Townley, C. J. Frischling, and H. J. Snow. After they had viewed the body the inquiry was opened:

J. B. Siddall, M.D., sworn:—Yesterday morning at twenty minutes past 11 I was in the Oriental Bank; the boy came in to say I was wanted. I went down stairs and saw Mr. Wilson, who told me that Mr. Kimber was supposed to have taken prussic acid. I drove round to No. 60. Went upstairs and found Mr. Kimber lying on the bed. He was not then in the position in which the Jury saw him this morning. He was lying on the bed sideways, thrown back, with his arms across the chest, with his head wrapped up in a travelling rug. He appeared to be lifeless, but, on holding a looking glass over the mouth, it was very slightly dimmed by the breath. I used a galvanic battery to him, and tried to excite a little respiration, but it had no effect. All signs of life, in that respect, ceased at a quarter to 12. Mr. Rees shewed me the bottle which he found on the

wash-hand-stand. It was said to have been full, (of prussic acid) in the morning. The quantity taken, on measurement, is an ounce. I do not exactly know how long it was before I saw him that he had taken it. Between the time of his taking the poison and my seeing him could not have been more than ten minutes, but to all intents and purposes he was dead. The dose taken was an excessive one, but he had apparently drunk a little water after it, which made it rather longer in taking effect. I smelled his breath, but could not perceive the odour of prussic acid. Usually it smells very strongly. The acid used does not appear to be as strong as usual, otherwise death would have ensued earlier. (Bottle produced.) There is hardly any smell to be perceived. Prussic acid is generally kept in blue bottles; this was contained in a white one, which would tend to weaken it; besides which, the smell has no doubt evaporated. There seems to have been wax placed over the mouth of the bottle. The quantity taken was far in excess of what would be necessary to cause death. Forty-five drops is the smallest dose recorded as having been found sufficient to do so.

Harding Rees, sworn:—I am a Chemist, employed with Messrs. Thompson & Co. Yesterday morning at 11 o'clock, or a few minutes after, I went to the cupboard in the store to get a bottle I required for a prescription, and, having arranged the bottles a day or two previously, I immediately missed the prussic acid bottle. A few minutes after (not more than one or two) I heard some one groaning upstairs, and, knowing Mr. Kimber had been very much depressed for several days past, I sent a chit to Mr. Wilson, and, on his arrival, immediately asked him to go up upstairs and speak to Mr. Kimber; to see if he could comfort and sympathise with him. On my telling him that I had missed the bottle, he asked me to go up, whilst he remained to look after the store. I went up, and found Mr. Kimber apparently sleeping comfortably, with his rug wrapped round his head and shoulders. I asked him if he would come down and see Mr. Wilson; he gave a kind of murmur, as though understanding me, but not attempting to move or get up. I did not speak to him any more, but came down stairs and told Mr. Wilson, who then suggested that I should go upstairs, and, if Mr. Kimber was asleep, look for the bottle of Prussic Acid; also for his revolver and razors. On going into his dressing room, where I knew his razors were, I immediately saw the prussic acid bottle, half empty, on the wash hand stand; with the water bottle standing by its side, and a tumbler with a little liquid left in it. I immediately came down stairs with the prussic-acid bottle, and Mr. Wilson at once went for a doctor. Dr. Siddall came, and applied the galvanic battery for almost half an hour. For a few minutes the breath seemed to come more freely; there was more dimness on the handglass, but, almost immediately after, there ceased to be any sign of breath at all. Dr. Siddall then disposed the body on the bed, and left. Afterwards, I took possession of the keys, watch and chain, and some letters in the pocket of deceased; his gold breastpin, revolver, and several papers I found in one of his drawers. I then put them all in his desk, locked it up, and also both the rooms, and reported the matter to the coroner.

By Jury:—About a quarter of an hour elapsed between my missing the bottle and the arrival of Dr. Siddall. The bottle was in the cupboard on the night before. I think deceased must have taken it out of the cupboard in the morning. At half past 10 he washed and dressed, and came down stairs; he seemed to be in much better health than he had ordinarily been. Some Bank Bills (of Lading) came at a quarter

past ten, and he told the boy he was going over to the "Chartered and Mercantile Bank." The bills seem to have been the cause of this occurrence. He came down at half-past ten; he came into the shop. He was walking to and fro in the shop, and he must have then got the bottle, which was in the cupboard at the other end of the shop; he then went upstairs. Whilst walking up and down he asked me several questions about people I was attending to (regular customers); as to what they were having. He then went upstairs again; with the intention, I thought, of getting his coat to go across to the Bank to see about the bills. I did not hear anymore of him (except when he walked across the room once or twice) until about 10 minutes past 11, when I heard him groaning; I then went upstairs, as before stated. I had not the least idea that he had the prussic acid bottle with him; I thought it had been mislaid. I had reason, some time ago, from what he said, to suppose that he was likely to take his life. He, then, said "If it had not been for you, Rees, and Wilson, I should have been dead long ago." He was then quite cheerful again. Once or twice on Tuesday and Wednesday he seemed strange in his questions, but afterwards he got all right again. These last two days he had been so ill that Dr. Klotz was called in, to see whether he had not better be removed, he had been so strange the day before. Dr. Klotz saw him yesterday morning at 9; he only remained a few minutes. Yesterday evening Dr. Klotz came in to see why the shutters were up; I told him Mr. Kimber was dead. He said he had been round to Mr. Swaby, of the Comptoir D'Escompte, about Mr. Kimber. Deceased's family all lived to a great age; I know of nothing, with regard to them, which would lead me to suppose that there was an hereditary predisposition to commit such an act. I live on these premises; deceased and I messed together. He left no paper or statement referring to the deed; I have looked this morning. The Bills referred to were Bills of Lading, and he appeared to be under the impression (although they were for very small amounts) that he was not able to meet them. I found in the store almost double the amount necessary to meet them, besides what there was to credit at the bank. Deceased was ordinarily a most abstemious man, and always went to bed early. On Thursday noticed he had been drinking very heavily. I found brandy bottles empty that I had noticed quite full before. The drinking referred to has been quite recent; from about Tuesday last. I never knew him to drink before. On Thursday evening, when a customer came into the store, he dropped the pen and fell over the desk, saying he was ill and could not do anything. I have been with deceased just 2 months, within a day or two. He was a single man. The act, I believe, resulted from the heavy drinking of the last few days. He was perfectly sane and rational up to within the last two days. He commenced to be unwell about Christmas. He couldn't get his bills made out, and complained that he couldn't collect them. His illness was bodily—nervousness; there was no sign of mental illness. He had been all right until within the last 2 or 3 days. I knew Mr. Kimber in London. Never knew him to drink anything to excess until within the last two or three days.

Jas. Wilson, sworn:—I can corroborate Mr. Rees' statement. I have made the acquaintance of deceased since his arrival in Yokohama. I called in nearly every day. I can confirm what Mr. Rees said as to the general sobriety of deceased. His appearance indicated heavy drinking during the last few days. For the last fortnight he, on several occasions, asked my assistance in regard to accounts that remained overdue.

To Jury:—He was unreasonably anxious; I could see nothing about his accounts to cause such anxiety—there were probably 150 accounts (small amounts) unpaid. He remarked to me in this room on Thursday morning, "Oh, Wilson, it's all up a tree with me now;" but, he having used that expression many times before, I took no special notice of it. I did not think he intended taking his life. I thought he referred to his incapability for conducting business. Upon leaving his room he called me back again, and, while standing before the fire place, he said—"Old man, I think I shall poison myself;" he used the word poison. I remarked it was foolish, &c.; this was on Thursday morning at 8 o'clock. He also said, when I asked him to come in and have a glass of beer, "Oh, no more beer for me in this world." Nothing that I know of, except his accounts or matters of a business nature, troubled him.

Wm. Swaby sworn: On Thursday afternoon about half-past four, I went to the shop (Thompson & Co.) to make a purchase and was served by Mr. Kimber, who spoke to me in a very strange manner. After a few minutes conversation, induced by this strange manner, I concluded he was out of his mind. Mr. Wallace came in, and, after a moment or two, we went out together. I told Mr. Wallace I thought he was quite mad. Mr. Wallace agreed that he had acted very strangely lately. Hearing that deceased was known to Dr. Klotz, with whom I am acquainted, we agreed to go to the Doctor. He was not at home then, but we saw him latter in the day, and made known to him the state of deceased. The doctor said he was interested in watching deceased, because he made up his prescription; he could do nothing that night, but would see him in the morning. Next morning the doctor said he had seen deceased: he could see nothing unreasonable: he appeared calm, but he would watch him more closely from time to time. This was referring to a visit he made in the morning. I think if Mr. Kimber was not mad there was never a madman in the world. He exhibited mental depression; said people were conspiring against him and accused me of having taken an article out of the shop. He said I was like the rest. This induced me to question him more closely, as I could not understand what he meant. He did not appear to be intoxicated; I thought it was the effects of delirium tremens or madness.

This concluded the evidence.

After consulting for some twenty minutes, the Jury returned the following

#### VERDICT.

The deceased, James Kimber, died on the 23rd January, 1874, between the hours of 10.30 and 11.25 A.M., at the Medical Hall, Yokohama: by poison administered by his own hand, whilst in a state of temporary insanity.

F. TOWNLEY,  
C. J. FRISCHLING,  
H. J. SNOW.

#### LOSS OF THE P. M. S. S. "RELIEF"

PER FAVOUR of Capt. Lane we are enabled to give the following particulars of the loss of the P. M. S. S. *Relief*, furnished by a passenger of the ill fated vessel.

S. S. *Golden Age*, at Sea.  
50 miles north of Nagasaki,  
January 20th, 1874.

To ———

Long before this comes to hand you will no doubt have heard by telegraph of the disaster which has befallen the *Relief*.

The *Relief* sailed from Hiogo at 2.0 P.M. on the 16th inst., for Nagasaki, and through the day of the 17th, as well as the night; encountered strong head winds and cold snowy weather, which gave indications of a hurricane out at sea; consequently the Captain, having in view the safety of the ship, deemed it prudent on arrival at Simonoski to anchor, and await more favourable weather. Accordingly we lay at anchor in the Straits from about 9.0 A.M. of the 18th instant until 7.0 A.M. of the 19th, when, the storm having moderated, we got under way again and all went well until 8.10 P.M., when the ship ran on a shelving rock near the Obree Channel, smashing in her stem for fifteen feet, and so securely fastening her to the reef that the engines were helpless as regards backing her off. She made water fast, and it was soon evident that there was no hope for her. In a few minutes after striking, the boats were all lowered and manned in an orderly manner; and one of them, in which the women and children were placed, was at once sent to a Japanese village, some two miles distant, to call the assistance of the fishermen's boats; meantime the whistle was sounded and minute guns fired. The treasure, mails, despatches, and baggage were brought on deck ready to send on shore.

There was no hurry or confusion in the work, the ship was perfectly steady, and every one felt safe, at least for the time being.

Soon the boat that had been sent on shore returned with a number of sampans, in which, and the ship's boats, the passengers, treasure, mails and baggage were all safely landed and accommodated in the Japanese houses.

With the exception of the Purser, who had charge of the treasure, mails, &c., all the officers and crew remained in the vessel all night, and did all in their power to save property. The natives were kind and attentive, and ready to lend a helping hand, and the officers and crew worked admirably.

This morning the *Golden Age* on her way to Hiogo arrived at the scene of disaster, offered her assistance, and, at 1 P.M. with passengers, mails and treasure on board, turned about, and proceeded on her present trip to Nagasaki, where she will probably arrive at 7 P.M.; when the *Relief* treasure, &c., will be handed over to the Agents there.

Mr. Mills is the only officer of the *Relief* on board the *Golden Age*, the Captain and others remaining by the stranded ship; which is now lying on her starboard bilge, and has about three feet of water in her Engine room.

The Captain hopes, with the aid of Japanese boats, and the assistance which may be sent from Nagasaki, to save the greater part of the cargo, and strip the vessel of her working gear. The hull will probably never float again, being too much damaged to repair. \* \* \*

I forgot to mention that Capt. Corning ascertained his position shortly before the vessel struck, and reversed the engines; but she had too much headway and ran hard on the reef. She struck at the northern entrance of the Channel, about one mile due west of the spot where the *Oregonian* ran aground. \* \*

I have not time to add more now.

I am, &c.,

As the ship went ashore at the top of high water, she will most certainly become a total wreck.

ENQUIRY INTO THE LOSS OF THE BRIG "WANJA,"  
HELD AT THE BRITISH CONSULATE, HAKODATE,  
4TH DECEMBER, 1873.

REGINA (Board of Trade) vs. THOMPSON & BEWICK.

The Board of Trade, London, charges: that Thompson & Bewick, owners of the British Brig *Wanja*, on

or about the 28th day of February, in the year of our Lord 1873, did send said Brig to sea in an unseaworthy condition, or did allow her to proceed to sea in an unseaworthy condition, and that they should therefore be prosecuted under Section XI of the "Merchant Shipping Act 1871."

The Court being cleared of witnesses,

Capt. Kennet was called, and sworn. States:—I was master of the *Wanja* when she was wrecked off Yagigawa Shindzu. I was appointed as master to her about four weeks before she left Hakodate; that would be towards the end of January 1873. I saw all the repairs that were being made after Thompson & Bewick bought her and took her in hand. The vessel was surveyed by Capt. Porter and Capt. Will. I heard the Certificate of Survey read out by Capt. Porter. To the best of my recollection I do not know that this Certificate was among the papers I took down with me, as I lost very nearly every thing. The *Wanja* was making about one inch of water per hour before leaving. It might have been one inch and a quarter, which was nothing for that vessel, she was so sharp. Very few strokes of the pump would take this out of her. I mean if she were pumped every hour. I really do not recollect whether she made more than this, or even one inch and a half; it is so long ago. No note was made in the Log Book as to how much water she was making per hour whilst in harbour. Every morning and night she was sounded, to see what water she had made, and from this sounding I knew she was making so much. I saw the mate sound the pump myself several times. I was not living on board; I was staying with the owners. Sometimes I went twice a day on board, some times three times. Whilst the repairs were going on I often went to see what was being done. I thought these were done in a strong and complete manner; quite sufficient to make her seaworthy. She was about one month under repairs. After the repairs were completed she was three or four days in harbour. I did not report to the owners that the vessel was making one or one and a quarter inches of water per hour. I did not report this, although it was my duty to do so, because I thought they knew this as well as myself. Mr. Thompson was present once when she was sounded; I think he saw as well as myself how much water she had made; I am not quite sure. I think it was in the morning when we went to the vessel; I cannot be sure, it is so long since. So far as I knew, it was not known outside the ship what amount of water she was making.

To the best of my belief, I thought I was speaking the truth when at Yokohama at the Naval Court. I stated that the owners knew the vessel was making 1½ inches of water per hour (in my cross examination), although I had no positive proofs; no more than what I have said above about Mr. Thompson seeing the pump sounded. I think Thompson noticed, when at the pump, how much water the vessel was making. To the best of my recollection he made no remark. The subject was never again alluded to during the three or four days she was in harbour.

I cannot mention the name of anybody also in Hakodate who knew the *Wanja* was making 1½ inches of water per hour. Not even one name. When I made the statement in Yokohama that every body in Hakodate knew this, I was thinking of no one in particular. Some of the freight was insured. I knew nothing about the cargo. I think we cleared at this Consulate on 26th February; I cannot be sure. I think we went, the next day, nearly out to the light ship. I think we sailed on 28th February. We went out to the Straits, and turned back again outside the Light-ship. We returned, the weather was so bad. We stopped there one day. She continued to make the same amount of water as in harbour. I never had the slightest objection to go to sea in the *Wanja*; for, if so, I would not have gone in her. What I meant, when I said at Yokohama that I did not like to come away in her, was, that, after we got to Siria Saki, I dreaded to go in her, but I could not help myself, as I could not turn back, the wind being against me and the weather so bad; and I attribute the great leakage in the Straits to the bad weather we encountered. We were wrecked on 4th March. We remained twelve days by the wreck. On the morning of the 5th the stern was washed ashore; the weather was moderate, the surf washing over the vessel. I suppose it was that which caused the stern to give way; also, imperfect fastening, for no surveyor could have detected this, unless he took the ceiling out of the vessel. The stern was fastened on by only two small iron knees, each about fifteen inches long. This defect was not Thompson's repairs, but must have been made in former times.

Whilst under repair, the vessel's stern looked good and strong, the same as the other part of the vessel. I saw this with my own eyes. I am confident Thompson did not touch the stern of the ship, as that part did not require any repairs, to all outward appearance. A new false keel was put on. The copper was stripped up to the bilge, the vessel was caulked,

felted and recoppered, topsides caulked from the covering boards to the copper, and, as far as I am able to judge, all this was done in an efficient manner. Had I been cross-examined at Yokohama, as you have now examined me, my evidence there would not have been so misunderstood and led to such trouble.

Cross-examined by J. R. Thompson:—The morning after the vessel was righted, (she having been hoisted down,) you went to Tatsupi Saki, across the Straits, so that you were not in Hakodate all the time the vessel was loading, nor when she left. You left me in charge then, to see the rest of the work completed. It was previous to the repairs being finished that you saw how much water there was in the bottom of the ship; she having been righted the evening before; the pumps, at that time, not having been replaced. You sounded with your rule, and found there were 13 inches of water in twelve hours. I do not think it is likely the ice caused so much water to be in the ship; as it was frozen tight, and I had to split it with an axe to get the blocks out.

(Signed) G. S. KENNET.

Geinoske, (warned to speak the truth) through an official interpreter said:—I was boatswain on board the *Wanja*. She was not making much water when in harbour; every morning and every evening there were 16 inches of water. I think it was so; I did not take any particular notice. We did not pump all out, as the pumps did not reach so low. I did not think much water was getting into the ship. No one spoke to me in Hakodate about the amount of water the ship made daily. I never said, in Yokohama, that the vessel took in large quantities of water, owing to heavy seas. Two days after we were wrecked, the stern was washed on shore; I am sure of this. I was never afraid of going to Yokohama in her.

(Signed) GEINOSKE.

J. Albinson, of Howell & Co, sworn, states:—In February 1873, we were agents for the North China Insurance Company. We took a risk on the *Wanja* (Register produced in Court and risk found as stated, on 25th February, 1873). We saw Capt. Will's certificate of survey before accepting risk and were satisfied with it. After a little explanation, Capt. Porter said he considered her a better risk than when she first entered the port. It is not customary for an Insurance office here, at Hakodate, to have a special survey held. It was a general rule of our firm, when we were Insurance agents, to be very particular in accepting risks. We had not heard that the *Wanja*, whilst in harbour, was making one and a half inches of water per hour. I never heard a word about it.

(Signed) J. ALBINSON.

This concluded the evidence for the prosecution. The charge having been read over to Thompson and Bewick, and the witnesses having been severally examined in their presence and hearing, and their depositions having been read out in open Court, the usual caution was administered to them:

On behalf of defendants, G. Bewick then requested that witnesses might be called to prove that the vessel was seaworthy.

J. H. Duus, Danish Consul:—I am Agent for the British and Foreign Marine Insurance Company, London. I was several times down at the Custom House when the *Wanja* was hoisted down, and saw the repairs as they were going on; sometimes by myself, and with Howell and Wilson. I consider the work was done as well as it could be in Hakodate. I had not heard she was making one and a half inches of water per hour after she was repaired; and only knew it, for the first time, when Wilson drew my attention to the Naval Court held at Yokohama; which he pointed out to me in a Yokohama paper.

Cross-examined by H. B. M.'s Consul:—I accepted no risk on the *Wanja*. Would not have accepted any, if asked, as my instructions are, only to accept insurance on first class risks.

(Signed) J. H. DUUS.

Capt. Will, sworn:—I am Master of a Japanese steamer now. I have been five years and six months a Master Mariner. I surveyed the *Wanja*. This is a true copy (exhibit A), to the best of my knowledge and belief. After she left Hakodate, I had not heard she (the *Wanja*) was making one and a half inches of water per hour. After she was lost, I learned it from the papers.

Cross-examined by H. M.'s Consul:—I saw a good deal of the repairs as they were going on. My idea is, they were well enough done. The *Akino*, when I came out in her from England, was a new ship, and made one inch of water per hour the first two months. I mean she made a great deal of water. A ship, being wrecked on shore, and the sea washing over her during two days, would most probably break up. I do not think the stern of the *Wanja* being washed ashore, under the circumstances above mentioned, is anything extraordinary. Of course it would depend on where she was wrecked.

(Signed) JOHN WILL.

Capt. Porter, sworn, states:—I was at sea from 1842 to 1859. I usually survey vessels in harbour. I am not surveyor for Lloyd's. This is a press copy (Exhibit A) of the original of my survey Report. To the best of my recollection, when the *Wanja* was loading, and before she sailed, I went on board and asked the mate what water she was making, and he replied, next to nothing, 1½ to 2 inches per day. The *Wanja* was never condemned by me. To my knowledge she was not condemned by any one else at Hakodate.

Cross examined by H. M.'s Consul:—My report states how the repairs were done; which says they were well done.

(Signed) ALEX. P. PORTER.  
Master Mariner.

Capt. Hescroff sworn:—I am Captain of the *Gipsy*. I was herein Feb. last, whilst the *Wanja* was being repaired. I saw the bottom, port side, before the false keel was put on. As far as I can tell, the bottom looked very well indeed. I consider the keel was put on as well as anyone could do it. I considered the *Wanja* seaworthy. I would not have been afraid to go to sea in her. I recollect making a remark at the time, that I would as soon take the *Wanja* as the vessel I have got.

Cross examined by H. M.'s Consul:—I left before she sailed, and therefore cannot say anything about her making 1½ inches of water per hour.

(Signed) J. HESCROFF.

Mokitiz:—I was a common sailor on board the *Wanja*. Whilst in harbour she was pumped out morning and evening. It would take the men about half an hour each time to pump her out. I was not afraid to go to Yokohama in her; had I been afraid I would not have gone in her.

(Signed) MOKITIZ.

G. Bewick:—I wish to hand in an affidavit (Exhibit B) of the mate of the *Wanja*, which was taken, lately, owing to his having to go to Yokohama, before this examination took place. Also, copy of a Survey Report by Capt. MacDonald, Yokohama, (Exhibit E.) Surveyor for Lloyd's agent. Also, receipt for Premium paid to Messrs. Howell & Co. (Exhibit D.)

(Signed) THOMPSON & BEWICK.

Court adjourned until next day.

December 6th, 1873.

Court re-opened at 10 A.M.

J. R. Thompson, stated as follows:—After buying the Brig *Wanja* we repaired her, she having been on shore a few hours only. During the repairs we ourselves were present all the time, (I myself working) and the agents for two Insurance Companies; as also two surveyors, as stated in the evidence, constantly seeing what was going on; who all declared the work was done well. Had this not been so, Howell & Co. would not have insured her, as they are, it is well known, very particular in accepting risks on sea-going ships. While the repairs were going on, we agreed with Mr. Allen, of Yokohama, to carry ice to that port, he having the privilege to send her two trips. Surely, had she not been seaworthy, he would not have made that arrangement with us. The repairs being completed, we loaded her with ice for Mr. Allen, and about 300 bags of rice of our own. She had a complete outfit, was well manned, had a good supply of provisions and everything to make the ship and those on board comfortable. The ship being surveyed, we could have insured everything in her; but we had such confidence in her that we only insured freight to the amount of \$600, (the receipt for the premium of which we handed into Court yesterday) for the benefit of Mr. Allen, who had advanced us that amount. Neither our own cargo nor the freight did we insure; and, furthermore, the British Consul, Mr. Troup, sent four shipwrecked sailors in her to Yokohama. We also gave two other British seamen a passage; so, if we, or the Consul, or any one else had thought the ship unseaworthy or making 1½ inches water per hour, was it likely the Consul, above every other, would have risked the lives of four British seamen in her. Also, if we had thought the ship unseaworthy, we would never have repaired her, but broken her up; she being entirely copper fastened. All the evidence goes to prove that the ship did not make 1½ inches of water per hour; neither had any one in Hakodate heard of it. The build of the ship was so sharp, as Capt. Kennet stated, that even 1½ inches of water per hour would have been nothing. In a flat bottomed ship this would have been different. We beg to hand in a drawing showing the difference. (Exhibit E.)

The evidence also proves that we were not aware what amount of water the ship was making. As to the repairs: you have heard they were well and efficiently executed; not only by one witness, but

by all the witnesses on both sides, who actually saw each repair as it proceeded. We beg to refer you to the evidence in corroboration of this; as also to our being entirely ignorant that the ship was making 1½ inches of water per hour; which, however, she was not; as borne out by the same evidence. Thus we are of opinion that everything proves we did not send or allow the *Wanja* to proceed to sea in an unseaworthy condition.

(Signed) THOMPSON & BEWICK.

DECISION.

[In Her Britannic Majesty's Court at Hakodate.]

Friday, 5th day of Decr., 1873.

Thompson & Bewick, Ship builders, and owners of the Brig *Wanja*, were, on the 1st of day of this month, charged before this Court for that, on or about the 25th day of February in the year of Our Lord 1873, they did send said *Log* to sea, or did allow her to proceed to sea, in an unseaworthy condition, and that they should therefore be prosecuted under Section XI of the Merchant Shipping Act 1871. And now the said Thompson & Bewick appear before this Court, in order that it may hear the said charge.

Whereupon the matter of said charge being by this Court duly considered, this Court dismisses the same.

(Signed) R. EUSDEN,  
H.B.M.'s Consul.

Hereupon Thompson & Bewick asked, whether they could not be granted a certificate of dismissal of charge, to which H. M.'s Consul replied that, as the instructions had emanated from H. M.'s Legation, to institute proceedings on the charge brought, he would have to wait, before acceding to their request, until he had further heard from H. M.'s Minister on the subject.

(Signed) R. EUSDEN,  
H.B.M.'s Consul.

#### EXHIBIT B.

In the matter of the British Brig *Wanja*:

I, John Gustave Isaacson, late Chief Officer of the above mentioned Brig, make oath and say as follows: That, to the best of my knowledge and belief, the *Wanja* was making nineteen inches of water every twenty-four hours, whilst lying in Hakodate Harbour, loading. That we pumped her out night and morning. That, during our voyage from Yokohama to Hakodate—I then being 2nd Officer—the ship was pumped out, in light weather, night and morning; in bad weather, every watch. That, after leaving Hakodate on 26th February, we returned, and lay outside Lightship for two days; no considerable increase of leakage being noticed, if so I would have reported it. That Capt. Kennet was not living on board ship in Hakodate. That, after leaving the Lightship on 28th February, we did not find the ship was making extra water until 7 or 8 o'clock at night. That, after throwing cargo overboard, we could easily keep the ship afloat. That the Log Book was kept from the time of leaving Hakodate; but was lost with the vessel. That, to the best of my knowledge and belief, the *Wanja* was not run on shore to save life.

JOHN GUSTAVE ISAACSON.

Sworn before me, this 22nd day of November, 1873.

R. EUSDEN,  
H. B. M.'s Consul.

#### In H. B. M.'s Court at Hakodate.

Friday, the 2nd day of January, 1874.

This is to certify, that a charge, made on the 1st day of December 1873, at the instance of the Board of Trade, against Thompson & Bewick, for that, on or about the 25th day of February, 1873, they did send or did allow the Brig *Wanja* to proceed to sea, in an unseaworthy condition, is now considered by this Court, and is by this Court dismissed.

R. EUSDEN,  
H. B. M.'s Consul.

#### Law Reports.

##### In H. B. M.'s Consular Court.

Before RUSSELL ROBERTSON, Esq., Consul.

Friday, January 30th, 1874.

(Capt. H. Leet, R.N., H. M. S. *Thistle*, was accommodated with a seat on the bench.)

Harvey Jeffries, who was sentenced to 7 days imprisonment, on the 23rd inst., for refusal of

duty on board the British ship *Ferry* was this morning brought up, charged being a deserter from H. M. S. *Rinaldo*, pleaded guilty.

George Jones, Sailmaker's mate, H. *Thistle*, sworn:—I recognise the feature accused. Did not know his name. He was the *Rinaldo* for a few days before I left her, joined on 3rd or 4th April, and I left her on 6th, I am sure he is the man.

Charles Bremner, Ship's Steward, *Thistle*, sworn:—I recognise prisoner as a man-of-war. I was on board the *Manilla*, and never seeing him there.

David Galloway, Chief Quarter-master, *Thistle*, sworn:—The face of prisoner is very familiar to me, as that of a dingy boy of the *Rinaldo*.

Court ordered prisoner to be handed over to the Senior Naval Officer of the Station.

#### In the United States Consular Court

Before GEO. N. MITCHELL, Esq., Vice-Consul.  
Thursday, January 29th, 1874.

Patrick Henderson, Artizan, employed at Railway Works, Shinbashi, was charged stealing a quantity of coals at Shinbashi property of the Japanese Government. Pleaded not guilty.

Mr. W. W. Cargill, Director of Railways, appeared to represent the Japanese Government. Mr. A. S. Aldrich, Chief Accountant, conducted the prosecution. Prisoner was defended by F. V. Dickens.

Peter J. Hellendoal, Yardsman, Imperial Government Railways, Yedo, sworn:—On morning of 7th inst. I saw prisoner, with aid of some coolies, removing a quantity of which was in a freight car on a side track, standing on the platform in a bag; this was between 7 and half past seven. With the assistance of the coolies, he removed it to his own residence and placed it in a shed. The coal was property of the Railway Department, and shed in which it was placed was his own. I was about 1½ cwt., contained in two bags, watched him throughout the whole transaction from the time it was taken from the freight until it was put into prisoner's shed. When coolies reached the shed with the coal they couldn't be found, and prisoner made a row about them on account of the delay.

By Court:—Prisoner had the coals removed from the open car to his shed; which was within the Railway premises, and supplied Government for the use of prisoner.

By Mr. Dickens:—I saw prisoner move coals, assisted by coolies, from the car to a shed. This was in broad daylight. There were a number of people about. He did not see that I am aware of. I was about 30 or 40 yards away, at the Goods Freight House. From 10 or 15 minutes past seven to half past seven was the time consumed in taking them. He was at my watch. I did not remonstrate with him, nor attempt to interfere with him. I knew he was doing wrong. It was part of my duty to stop him. I am supposed to look after Government property. I am yardsman, and have general control of the yard. On the same day I made an official report of the affair, and sent it in next morning. In it I mentioned what has now stated. I have never known prisoner to take anything before. I have known him since he was first employed on the Railway Works; some 4 or 5 months. I am on friendly terms with him. He is in a different department; the Locomotive Department. There is no connection between the two departments. I have never had any quarrel with him; he has never done any harm to me. He did not carry any of the coals

conveying away the coals was not done; it was in broad daylight. The Freight is about a quarter of a mile from prisoner's quarters.

The coal was the property of the Railway. I have no official document to prove it. It has not been prisoner's own. The coals got out of the car I speak of; I am positive of this. This was on the morning of the 7th, at 7 o'clock. I swear prisoner is the man; his face. He was dressed in his working clothes.

On the permission of Court, Mr. Dickins made the Report made to the authorities by this prisoner.

Mr. Aldrich:—I should know the coolies. Those (pointing to two coolies in Court) are the two men who assisted him.

Court:—They removed about 150 weight of coal. I don't know its value.

Messrs. Annand, Head Foreman, Government Railway, sworn:—I received a memo., handed by the Locomotive Superintendent, from the Engineer-in-Chief. It was to the effect that a certain quantity of coal had been taken from the Railway premises by the prisoner; I was to investigate the matter. I went to prisoner and asked him if he had taken the coal as stated in the Report. He said he had taken a handful.

I asked him what the weight of it would be. He said, 7 to 10 lb. I asked him if he had any other coals to assist him; he brought forward one. I learned there were two engaged in the matter. I had them both brought up before the Court, and questioned. I then got a bag about the size of that in which the coal was supposed to have been contained. I took it to the platform, had it filled and weighed, and found it contained 80 or 90 lb. I accordingly included in my Report, to the Locomotive Superintendent, to that effect.

Mr. Aldrich handed in, and (the Court concurring) read, the Report of Mr. F. C. Christy, Locomotive Superintendent, referred to. It appeared there was one bag (not two, as stated) removed from the car to the smithy, and thence to the house of prisoner.

Mr. Dickins:—The coals were removed to the smithy to the house on the morning of the 7th. Can't say when they were removed from the cars to the house. Don't know of prisoner ever having taken coals before. He is in my department; have no complaint against him. I spoke generally when I asked him if he had taken any coals. Don't remember what day it was.

Court:—When I spoke to prisoner about the coals, he said he was not aware he was doing anything wrong.

Mr. Dickins:—I am not aware that Government officials are in the habit of using Government property, such as paper and envelopes. I possibly have done so.

Mr. Christy, Locomotive Superintendent, stationed at Yedo, was here sworn.

Mr. Aldrich explained that, on the 16th December, 1872, the Director of Railways, Mr. Christy, having heard that some of the foreign employees of the Department had been detected carrying coals from the Shinbashi and Yokohama depots, wrote Mr. Christy that, on detecting such pilferers would be prosecuted and dismissed. This was duly notified, being posted at the termini at the time.

Mr. Christy said Henderson had been engaged in the matter. It was likely he heard of it; although Mr. Christy was not prepared to say the notice had been continuously posted since it was first issued.

Mr. Aldrich:—I remember receiving the notice from Annand, and making the endorsement on it; which was to the effect that there should be no doubt that he (Henderson) had taken the coals, and that he ought to be dismissed.

By Mr. Dickins:—Prisoner was in my department. I knew of nothing against him. He brought no character or recommendation when he first came. He was sent to me by Mr. Boyle, the Engineer-in-Chief. I know the shed spoken of. The coals were first removed to the smithy, and thence to the shed, at the quarters allotted to prisoner.

By Court:—Prisoner's quarters are about 300 yards from the station. Several mess together, but each has a separate bedroom. They supply their own fuel. They generally buy it from the government, and pay for it.

Kometow, cautioned:—Is a blacksmith, working at the Railway Works, Yedo. Knows prisoner. Saw him on the morning of 7th Jan. Assisted to carry the coals for prisoner from the Government car; the other coolie also helped. Prisoner asked the two of them, on that morning, to do so; there was little more than half a bag. The other coolie brought the coals from the car to the place where witness worked, and prisoner told him to take them to his own place. Took them to prisoner's compound, where the coals are kept at his house. Did not go to the car to get the coals.

By Mr. Dickins:—Never took any coals, except this half bag, to prisoner's house. Never saw any other coolie carry coals there. On the 7th, between 7 and 8 o'clock, prisoner came to his place and told him to carry the coals to his house. Does not know where prisoner had been then. It was at his smithy where he saw prisoner on that occasion. Had not seen him before he asked him to carry the coal.

Foomengo, cautioned:—Is employed at the blacksmith's shop in Shinbashi, in assisting prisoner. Remembers, on 7th January, going with prisoner to carry away the coals from the car; carried them on his back. Prisoner asked him to carry the coals, which were lying on the ground where the goods were weighed, just at the entrance of that place; distant about one mile from his house. On the 6th, at about nine in the morning, he went to that place to assist in repairing the engine, and prisoner then asked him to carry the coals. No one was there but prisoner. Took more than half a bag; about two thirds. The coal was already in the bag. Carried it to the smithy and left it there; where it remained all the night. Next morning (7th), went back again and took it to prisoner's house. Work commences at 7 o'clock; it was soon after that hour, on the morning of the 7th, prisoner came and asked him to take the coal to his house. On that morning took the coal from the smithy to his house.

By Mr. Dickins:—On the morning of the 6th, opened four bags of coals, by prisoner's order. This closed the evidence for the prosecution. For the defence, Mr. Dickins called

Francis Doherty, Engine Fitter, who being sworn, said:—I work at Shinbashi. I know prisoner. Work commenced, after the holidays, on 5th January, and he was there every morning until last Friday. He commenced work at 7 o'clock; the work was carried on in a shed. I saw him at work at one end of it. He was working in the shed every day. Work went on from 7 o'clock till 1. We had breakfast before we started. He was at work up till Friday. I do not mess with prisoner.

Thomas Senior, Fitter and Driver, sworn:—I work at Shinbashi. I know the prisoner. Do not mess with him. I work near him. On the morning of 6th, about 8 o'clock, had occasion to go out; on my return met Hellsdoal, and, at the place where we put our coals, saw some coolies emptying coals at a shed recently built for the use of all in those quarters to keep coal in. I remarked to the man who was with me, that Henderson had been buying coal. I said to Henderson, "Holloa, you've been buying coal." He answered, "Yes."

By Mr. Dickins:—Saw prisoner at 7 o'clock on the morning of the 7th, when he went to his work. Did not see him about the cars between 7 and 8. When we get coal, some buy it from the Government, and some outside. In the former case we go to the office and order it, and they have it weighed, and send coolies to deliver it at our quarters. The price is deducted from our wages. It is Japanese coal.

By Court:—I think there were two coolies emptying coal at prisoner's quarters. Cannot say how much coal there was.

By Mr. Aldrich:—I know it was the 6th because I was having my holiday. It was a Tuesday.

Mr. Dickins produced, for the inspection of Court, an account for coal supplied prisoner, and the father of Shimaya, Coal Merchant, Yedo, appeared to testify, on behalf of his son, who had supplied the coal. Court objected to hear any evidence. Unless the witness could prove delivery of the coal, his evidence could not be received.

Mr. Dickins said the father was present to represent the firm. It was a mistake; the son, who had sold the coal, should have appeared. However, he merely wished to prove to Court that accused had bought coal about the time he was accused of stealing it from the Railway. He would put in the account. (A bill, in Japanese, was accordingly handed in for Court's inspection. It was for 4 bags coal, \$2. The date seemed to be 4th inst.;—(supposed to be 5th, after inspection). It was collected on the 5th. The son sold the coal to prisoner.

Mr. Dickins applied that, under the 13th Article of Rules applying to Criminal Proceedings, prisoner might be allowed to testify, under oath, on his own behalf, so as to explain.

P. Henderson, sworn:—I am employed on the Government Railways. On the evening of the 5th inst., and on the 6th, I was working on the waggons at the Shinbashi station. I took a portable forge there for the purpose of repairing some rivets. There were some small fragments and sweepings of coal left lying about the forge. I told the coolie to pick up the remainder, and take it to the shop, as it was better than the charcoal we were using. He went to the shop and got a small charcoal bag and picked up what was left. On the evening of the 6th he took it up to the blacksmith's shop. Had previously ordered, on the 4th, some coal, from a Japanese merchant. It came on Monday night, 5th; four piculs. It was put into my coal house without the bags being opened. On the morning of the 6th, told the coolies to go to my house and open the bags. They had been thrown into the shed unopened. Senior was present and remarked that I had been buying some coal. Those were my bags; I paid for them. I did not tell the coolies to take away any coal from the smithy to the shed. If they took any it was without my orders or consent. On the morning of the 7th I was working in the shed; all day in fact. I never went out. I finished on the goods waggons on the 6th.

By Court:—On the morning of the 7th, I did not take, or order or assist anybody to take, any coals from the cars. Did not, on that occasion, see Hellsdoal. He is a stranger to me. Never had any quarrel with him. When Annand spoke to me, on the 8th, about two days after, he said, "I am informed that you have been taking coals from the cars." I replied, "What I took, I thought there was no harm in taking." He then went away. I don't exactly remember the words he used. I have taken no coals belonging to the Railway. I told the coolies to take the coals and put them in the smithy. I remember nothing about ordering coolies, on the morning of the 7th, to take any coals to my shed.

By Mr. Aldrich:—The coals I ordered were delivered at my quarters on the evening of the

By Mr. Dickins:—Saw prisoner at 7 o'clock on the morning of the 7th, when he went to his work. Did not see him about the cars between 7 and 8. Mr. Dickins said the father was present to represent the firm. It was a mistake; the son, who had sold the coal, should have appeared. However, he merely wished to prove to Court that accused had bought coal about the time he was accused of stealing it from the Railway. He would put in the account. (A bill, in Japanese, was accordingly handed in for Court's inspection. It was for 4 bags coal, \$2. The date seemed to be 4th inst.;—(supposed to be 5th, after inspection). It was collected on the 5th. The son sold the coal to prisoner.

Mr. Dickins applied that, under the 13th Article of Rules applying to Criminal Proceedings, prisoner might be allowed to testify, under oath, on his own behalf, so as to explain.

P. Henderson, sworn:—I am employed on the Government Railways. On the evening of the 5th inst., and on the 6th, I was working on the waggons at the Shinbashi station. I took a portable forge there for the purpose of repairing some rivets. There were some small fragments and sweepings of coal left lying about the forge. I told the coolie to pick up the remainder, and take it to the shop, as it was better than the charcoal we were using. He went to the shop and got a small charcoal bag and picked up what was left. On the evening of the 6th he took it up to the blacksmith's shop. Had previously ordered, on the 4th, some coal, from a Japanese merchant. It came on Monday night, 5th; four piculs. It was put into my coal house without the bags being opened. On the morning of the 6th, told the coolies to go to my house and open the bags. They had been thrown into the shed unopened. Senior was present and remarked that I had been buying some coal. Those were my bags; I paid for them. I did not tell the coolies to take away any coal from the smithy to the shed. If they took any it was without my orders or consent. On the morning of the 7th I was working in the shed; all day in fact. I never went out. I finished on the goods waggons on the 6th.

By Court:—On the morning of the 7th, I did not take, or order or assist anybody to take, any coals from the cars. Did not, on that occasion, see Hellsdoal. He is a stranger to me. Never had any quarrel with him. When Annand spoke to me, on the 8th, about two days after, he said, "I am informed that you have been taking coals from the cars." I replied, "What I took, I thought there was no harm in taking." He then went away. I don't exactly remember the words he used. I have taken no coals belonging to the Railway. I told the coolies to take the coals and put them in the smithy. I remember nothing about ordering coolies, on the morning of the 7th, to take any coals to my shed.

By Mr. Aldrich:—The coals I ordered were delivered at my quarters on the evening of the

5th. They did not go to the smithy. I do not know who delivered them; they were there when I got home. I authorised my boy to pay for them, and get a receipt; he did so. When I said to Mr. Annand that I thought there was no harm in my taking the coals, I thought he referred to my taking them to the shed. I did not exactly know what he meant.

By Court:—I told Mr. Annand that I had taken the coals into the shed to weld some iron. I cannot exactly say what I remarked to the coolies when I told them to take the coal to my shed. I remember telling them, on the morning of the 6th, not the 7th. They might have taken the coal or not, I went into the shop. I would not be sure whether I told them or not: I have never taken any coals before. I mean by that, before this accusation.

This closed the evidence for the defence. The Court adjourned until 2 o'clock.

On resuming, Mr. Dickins addressed the Court, on behalf of prisoner, as follows: First of all I have to draw Your Honour's attention to the fact that the damage in this case is so small that one cannot but regret that an important Department of the Government should prosecute the prisoner for so paltry an amount—100 lb. or so of coal; the value of which could not exceed half a dollar. At the most there could not have been more than 40 or 50 lb., worth about 50 cents. Taking the value of the coal at that, my client is dragged up before the Court, dismissed from the department, his chance of employment is taken away, and a stigma is cast upon his character which may stick to him through life. Even supposing the evidence for the prosecution (which has been contradicted by itself) to be true in the first place no coal has been taken away from the Railway Department. At the most, it was only taken from one part of the Station to another. It was not taken away from the Railway premises; it was put into a house set apart for the use of employés of the Railway Department. There was no evidence of that feloniously taking away which is the essence of the crime of larceny. There must be a criminal intent shewn. The ordinary and common rule by which an English Court judges, is the old English Common Law, which is just the same, in this case, as the American. I am willing to admit that a certain portion of coal was removed from the car to the smithy, and thence to the shed. But it was not done clandestinely. On the contrary, by the evidence of Hellendoal, the yardsman, it was in broad daylight. It is impossible to suppose that at the Railway Station, a public place, where there is always a number of people knocking about, and a great number of employés in sight, that a man could be so foolish as to lay himself open to such a charge as that my client is accused of, for the sake of a small quantity of coal worth a quarter of a dollar. The person charged had no need of the coal he is accused of taking; he had just bought a quantity of coals, on the 6th. This is so far corroborated by the evidence, that, on the morning of the 6th, he ordered the two coolies to go to the shed for the purpose of emptying the coal he had bought, out of the bags. This was corroborated by the witness Senior, who remarked to my client that he had been purchasing coal. Consequently, what I have to urge is, that the taking away, from the smithy to the shed, of the small amount of coal was no felonious act. There was no criminal intent. This is fortified by the evidence, which I will review. (Counsel here went over the evidence of Hellendoal, which he said was quite false and contradictory, on

the face of it.) As to the mode in which the coal was taken, the prisoner's own evidence shews that, at the most, it was a misapprehension between the coolies and himself; which probably arose from his imperfect knowledge of Japanese.—If he has done anything wrong it is by an error of judgment, and not by an error of will. It is plain from the evidence of Mr. Henderson, that, when he was asked by Mr. Annand if he had taken the small quantity of coal, he replied that he had, not imagining he had done anything wrong. The coal had been taken to the smithy, and, by some misapprehension, removed by the coolies to his premises. No doubt he was technically wrong in allowing even so small a quantity to remain there, but it was evident he had no felonious intent. It was only the sweepings of the forge, and, no doubt, he thought it was not of sufficient importance to say anything about it. He did not attempt to hide it. Mr. Christy's evidence went to shew that a notice was posted in 1872, referring to the pilfering of coal by employés; but I cannot see what it can have to do with 1874. There is no presumption that, because it was posted then, it could be supposed to be understood by prisoner in 1874.

Mr. Dickins reviewed the evidence of the Yardsman, who actually admitted, he said, watching prisoner, for half an hour, taking away the coal, the property of the Railway Department, without taking any steps to prevent him. The evidence of a man guilty of such conduct could not be held to be of much importance. Under all these circumstances, continued Mr. Dickins, I must ask the Court to dismiss the charge against the prisoner. He has already been sufficiently punished by being dragged up on such a charge, and by being discharged from his employment. He has to again a livelihood by the toil of his hands, and there is every probability that he will be debarred from getting employment whilst such a stigma sticks to him. From the facts of the evidence I contend that there was no felonious intent. He had a good character; no one had anything to say against him. The authorities found him a good workman. No fault or blame ever attached to him, until the bringing forward of this paltry charge. What is it? He simply gathered together a few sweepings of the waggons, and had them put into a bag, and when he found that the bag had been, in mistake, removed to his own place, he made use of the coal, or rather allowed it to be used. The assertion in the charge that the coal was conveyed away from the premises of the Company is disproved. Under these circumstances, taking into consideration the very small damage done, and from the character the prisoner seems to have held, being apparently without blemish; taking also into consideration the fact that there was no adequate inducement for my client running such a risk, I must ask Your Honour to be lenient, give the prisoner the benefit of the doubt, and dismiss the charge against him.

Mr. Aldrich, for the prosecution, said:—The learned counsel for the defence having admitted that his client had removed the coal, from the cars to the smithy, and thence to his own shed, it is therefore not necessary that I should re-capitulate the evidence of the witnesses for the prosecution to that effect. I may say that it is not for the mere value of the coal that the Government have undertaken this prosecution, but in consequence of the notice posted at the Shinbashi and Yokohama depots, warning the foreign employés of the department of the consequences of such pilfering as that now in question. And even

supposing that prisoner was unaware of the existence of such a notice, as contended by his counsel, there was no doubt he was aware that he was doing wrong in appropriating any of the property of the Department. With regard to the criminal intent of the act, when a man deliberately does what prisoner is proved to have done he must know what he is doing is wrong, and cannot be ignorant of the consequences of discovery. With regard to the plea of "error of judgment," urged by Mr. Dickins, it might be asked, if a thief were to ease him of his watch in the public streets, whether he would attribute that act to an "error of judgment," or whether it might not be more reasonably attributed to an "error of will." Although the coal was not absolutely taken off the Government premises, it was conveyed away to prisoner's own private quarters, where he usually kept his stock of coal. With regard to the evidence of the yardsman, Hellendoal, although it did not exactly agree with that of some of the other witnesses, there being a slight discrepancy as to the date on which the coal was taken, yet, in the main, it was corroborated by the statement of Mr. Annand, and other witnesses the Department had brought forward. The coal was not the sweepings of waggons, it was coal that was being used for the repair of the waggons on which prisoner was working, as he had before admitted. The evidence of the coolies was conclusive. There could be no mistake in this instance. He directed them to carry it away from the car, telling them he was going to use it in the shop for the welding of some rivets. As to the evidence of other witnesses, Henderson himself admits that there was no quarrel or ill-feeling existing between them and him. There could not be the slightest doubt that there was a criminal intent on the part of the prisoner, and the Court, I trust, will make an example, for the benefit of the Government, of this abuse of the kindness and consideration with which the workmen are treated. They are paid high wages, are allotted quarters, and have many minor privileges; being even supplied with coal, by the Department, at a low price. The Government does not wish to press for any severe punishment against prisoner. They merely wish to shew that they will not quietly submit to such a state of things as is evidenced in the case now before the Court. With these remarks I will leave the matter in the hands of Your Honour.

Court, addressing prisoner, said:—After a careful hearing of the evidence on both sides, I have not the slightest doubt that you are guilty of the larceny with which you are charged. Indeed, your own admission to the witness Annand is conclusive on the point, and I fine you in the sum of \$5, with the alternative of 10 days imprisonment. This is the second time you have been convicted before a Consular Court of the United States; a charge, upon which you were found guilty, being recorded against you at Kobé. By the 23rd Clause of the Consular Court Regulations a person convicted of felony, or twice convicted of misdemeanour, may be sentenced to deportation, and I warn you that any further appearance of yours before this Court will be dealt with accordingly.

The first Japanese man-of-war which has visited Hongkong, anchored in the harbour this morning, (22nd ulto.) and saluted the British flag, as well as those of the other nationalities flying in the man-of-war anchorage. She is called the *Kasuga-kan*, and is of 1,000 tons burthen.—*China Mail*.

YOKOHAMA CHAMBER OF  
COMMERCE.

## ANNUAL MEETING.

The Annual General Meeting of the Yokohama Chamber of Commerce was held at the Rooms of the Chamber at half-past two o'clock yesterday afternoon. There was a comparatively small attendance of members.

The Chairman (A. J. Wilkin, Esq.) having stated the object of the meeting, which, being the Annual one, was to receive the Report of the Committee, and the statement of Accounts for the past year, the election of office bearers, &c., called on the Secretary (Mr. J. J. Dare) to read the minutes of the last General Meeting, held Oct. 22nd, 1873. They were accordingly read and approved.

The Report and Statement of Accounts for the past year were then read.

## ANNUAL REPORT

OF THE

Yokohama General Chamber of  
Commerce.

JANUARY 1874.

In presenting their report for the year 1873, your Committee have in the first place to lay before you the accounts duly audited.

It will be observed that the balance in hand has again somewhat diminished. On comparing the accounts with those of previous years, it is evident that it is the cost of Telegrams which thus encroaches on the funds of the Chamber, and notwithstanding that the Telegram as received since the 1st July has been shorter and thus less expensive than had been estimated, the increased subscription at the rate of \$30 per annum has been barely sufficient to meet the cost.

The Half-yearly Statistics of trade are attached hereto, and the Committee while fain to hope that steady progress in securing greater exactitude in returns of Stocks and Deliveries, renews their earnest appeal to members, to give their careful attention to this subject, for the sake of their own and the common good.

The important matter of the storage of Kerosine has been agitated from time to time during the year. The Chamber received in March a communication from the Consular Board submitting a proposition of the Japanese Government to provide a locality at a safe distance from the settlement. To this your Committee responded, with a strong recommendation that steps of the kind should be taken, but suggesting some modifications in the working details of the scheme as essential to its success. It is feared, however, that this matter is still in abeyance.

It is satisfactory to be able to report, that through steps taken by Her Britannic Majesty's Minister, it has been promised that the Mint at Osaka shall be closed at stated times, instead of as heretofore at irregular dates and without due notice. In the appendix will be found correspondence on the subject, viz:—

Letter from H. B. M.'s Minister dated 31st July, marked **A**.

Reply of the Chamber dated August 8th, marked **B**.

Letter from H. B. M.'s Minister dated October 2nd, marked **C**, with enclosures **D**, and **E**.

The thanks of the Chamber are due to Her Britannic Majesty's Minister for his prompt intervention in this important matter.

The Proceedings of the Ki-ito Aratame Kaisha, or Silk Examination Guild, have forced themselves upon the notice of the members of the Chamber more than once during the year, and the action of this body at length became so obnoxious, that after two general meetings held in October, it was decided to memorialize the Foreign Representatives, upon what was considered to be the illegal powers exercised by the Kaisha. This was done by letter dated 5th November, marked **F**.

To this, cordial replies were received from the various Foreign Ministers: the British Minister addressing the Chamber as per annex **G**.

In answer to this request for further details and evidence, the Chamber placed before Her Britannic Majesty's Minister, for the use of himself and colleagues:—

Copy of the constitution, or Rules of the Kaisha, shewing the powers it assumed, and the restrictions it placed upon trade:—

Copy of the Ordinance issued by the Kaisha dated February, 1873, forbidding the continuance of the usage of *packing fees* under pain of a fine of 500 Yen:—

The two Notifications from the Kanagawa Ken Gonrei, dated 11th month, (1872,) and 14th day of 1st month, (1873,) to much the same effect:—

Circumstantial details of cases in which transactions between native merchants and Messrs. Bavier & Co. had been stopped through the medium of the Kaisha's interference; and of a case in which the Kaisha, on the 27th of October last, stopped at the Yokohama Railway Station a quantity of boxes of Silk-worms' Eggs, belonging to Messrs. L. Kniffier & Co., and called in a large body of police to enforce its behests:—

And further, an account was given of the restrictions which had been placed upon the free exercise of the seller's own choice in the manner of disposing of his produce, and of various circumstances tending to indirectly further establish the fact that the Kaisha assumed Governmental powers:—

All these, and subsequently some important oral testimony, furnished most conclusive proof of the correctness of the representations which the Chamber had made.

The case thus put before the Foreign Representatives received their prompt and earnest attention, as the letter from Her Majesty's Minister of 31st December (Annex **H**) with enclosures (**I J & K**) will testify.

These documents, in themselves, are all that could be wished, and it only remains to see them faithfully carried out.

Some considerable delay occurred in the publication by the local authorities here of Notification **K**, but the Chamber took advantage of the translations kindly supplied by H. B. M.'s Minister, to print and circulate in pamphlet form in the Japanese language the documents **I J & K**.

The Chamber feels that its best acknowledgements are due to the Foreign Ministers for their action in this matter.

Your Committee has had its attention again attracted to the quantities of Notes of the "Yokohama Bank" (Kokurin Ginko) which are in circulation, and feeling that it would be better for all parties, if the position of this Bank were better understood, a

Examined and found correct, 3rd February, 1874.

THOS. JACKSON, }  
W. D. HENDERSON, } Auditors.

E. & O. E.  
Yokohama, 1st January, 1874.

J. J. DARE,  
Secretary.

request was addressed under date 26th November, to the Managing Directors, for information on the constitution of the Bank, the number of its Shareholders, the amount of its Capital, the quantity of Notes issued, and the Bullion in reserve. Reply, of which the document marked L is a translation, was received, and although somewhat indefinite, yet it may be considered satisfactory to have established something of a basis of communication. In acknowledging this letter, occasion was taken to request a copy, when issued, of the Rules or Constitution of the Dai Nippon Bank, and to urge on the Directors the desirability of publishing periodical statements of the position of the Bank.

As already intimated, the weekly Telegram has been, since the 1st July, considerably enlarged by the addition of some important items, in accordance with the recommendations of a special Committee.

It had been estimated that when the above enlargement was made, an extra subscription of \$40 would be required. The message has been shorter than was anticipated, (the average having been 16 words), and the cost has not exceeded about \$100 for the six months. This perhaps mainly arises from the small opportunity there has been to give free quotations from week to week for many of the classes of Silk:—still the \$30 is evidently barely sufficient for its continuance.

It had been expected that, ere this, the Revision of the Treaties would have been accomplished, and although no progress in this direction has yet been announced, it is satisfactory to be able to say that some important points urged by the Chamber in its special report, have been conceded in advance. In July last, the restrictions on the export of Rice and Corn were removed, subject to two months notice of re-impost; and in November a supplementary Notification added Flour made from the above, to the free list. The exportation of Saltpetre is also permitted subject to a five per cent duty.

A considerable trade in grain quickly sprang up, and, with scarcely an exception, every vessel arriving in Japan has secured a good return freight, and so also many steamers. Thus, while the agricultural resources of the country are realized, and a stimulus given to agricultural activity, foreign shipowners have now a fair inducement to send their vessels to Japan. It is to be remarked, however, that owing to the distance the producer has often to send his grain for sale, a very heavy portion of the value of his produce is lost, which might often be saved to him, were the coasting-trade open to foreign bottoms.

No official intimation has yet been given as to what has delayed the work of the Revision of the Treaties, but it is to be feared that the Japanese Government has met the Foreign Representatives in a spirit so far from liberal, that at the very outset anything like agreement has seemed impossible. If this be so, there is cause for much disappointment, especially after all the desire shown by Japan to be no longer behind Western nations, and after all that Japanese and Japanese Statesmen have seen of the freedom of travel in other countries.

Turning to some other points which occupied the attention of the Chamber in connection with the expected Revision of the Treaties, it is disappointing to have to remark in relation to the Custom House that some of the vexatious and unseemly exactions, before complained of, as for example, in connection with trivial errors in Manifests, are still maintained, and there is moreover, still a regrettable disposition to make and to interpret Regulations in an arbitrary and one-sided manner.

It is a matter of regret too, that the accommodation at the Landing Sheds has not been improved, nor have any steps been taken towards facilitating the discharge of vessels and the landing of cargo.

The position of those Foreigners who have to seek redress against native defaulters is as unsatisfactory as ever.

*The Customs Returns.*—The Chamber is not yet in possession of complete Returns for the years, but hopes shortly to receive them.

An attempt is being made by the Committee to tabulate under the names of each vessel, the daily returns of Imports and Exports. If the experiment proves successful, it is believed that it will provide information of great value in various ways; and that thus statistics of quantities and values of many articles, the sum of which is considerable, but of which hitherto no returns of the kind have been obtainable, will be at hand and available at once. The Chamber has to thank the Commissioner of Customs for his courtesy in placing these daily returns at its disposal.

A young native has been experimentally engaged as Interpreter and Banto, with a view of facilitating the acquisition of information upon matters daily occurring in the native commercial community, and to aid in such business as that above named in connection with the Custom House.

The sale of the Market Report has been rather more than that of last year, but of late shows some falling off; probably partly traceable to the unrecuperative state of trade.

One more subject, and that of a painful character, remains to be noticed. The Chamber lost in September last, its respected Chairman, Mr. Marshall. His long interest and his valuable services had been known to the Chamber for long, and his death is felt as a general calamity.

A. J. WILKIN,  
Chairman.

The Chairman said the Secretary would read a letter communicated to him by Sir Harry Parkes, respecting the Ki-ito Aratame Kuaisha.

Yokohama, February 4th 1874.

SIR,—I have the honour to acknowledge the receipt of your letter of the 8th ultimo, stating that, up to that date, the notification of the General Government bidding interference with trade by the Ki-ito Aratame Kuaisha or any other guild had not yet been published by the Japanese Authorities of this port, and you add that this is not the first occasion on which the said authorities have seemed to assume partisanship with the said Kuaisha.

I have now to inform you that on receipt of the above letter the Foreign Representatives addressed another note to the Minister for Foreign Affairs complaining of the delay in the publication of the said notification, and I have to add that in a reply which, common with my colleagues, I have received from His Excellency, this delay is attributed to the inattention of the Kenrei, who, the Minister informs me, has been severely reprimanded for his neglect. I may mention that the publication of the Notification in question by the local authorities of Yokohama, followed immediately on the receipt by the Foreign Ministers of the above mentioned note of the representatives.

I have the honour to be, Sir,

Your most obedient humble Servant,

(Signed) HARRY S. PARKES.

A. J. WILKIN, Esq.,  
Chairman,

Yokohama General Chamber of Commerce.

The Chairman said the Report and Accounts were now before the Meeting for disposal, and required no words from him. The Tables and Statistics were in the Secretary's hands and would be read, if any of the members wished it.

Mr. A. Milsom proposed that the Report and Accounts, with the Appendices, as read, be passed, and printed for circulation amongst the members.

Mr. Melhuish seconded. 'A shew of hands having been taken they were declared duly passed.

The Chairman said the next business was the election of Members. Two new members were proposed for election: The Banco Asiatico, proposed by the Agent of the Hongkong and Shanghai Bank, seconded by Messrs. Farfara and Grenet; and Messrs. E. Fischer & Co., proposed by the Agent of the Hongkong & Shanghai Bank, seconded by Messrs. Gilman & Co.

Mr. A. Winstanley enquired if an agency of the Banco Asiatico had been established here.

The Chairman replied that during the blackworm season they had an agency in Yokohama.

The ballot for the election of the Banco Asiatico and Messrs. E. Fischer & Co., as members, was then proceeded with, Messrs. Milsom and E. J. Fraser, at the request of the Chairman, acting as Scrutineers. They were declared duly elected.

The next business being the election of a Chairman, the ballot was proceeded with, resulting in the unanimous re-election of Mr. Wilkin, who thanked the Chamber for the honour they had conferred on him. The ballot being favourable, Mr. A. Winstanley was declared elected to the post of Vice-Chairman.

The Chairman said the election of the Committee—7 in number, besides the Chairman and Vice-Chairman—would be proceeded with. The names of the Retiring Committee were, Messrs. Johnstone, Thomas, J. A. Fraser, Pistorius, Brent, Dodds, and Evers. Mr. Johnstone did not offer himself for re-election, but he trusted the rest of the old Committee would allow themselves to be nominated. The Tellers having completed their duties the following gentlemen were declared duly elected as Committee for the ensuing year: Messrs. Brent, Pistorius, Evers, Sichel, Dodds, Melhuish, and Bisset.

Mr. Sichel having stated that he would be unable to do full justice to the duties of the office, in consequence of pressure of business matters, Mr. Barlow was declared elected in his stead.

The Chairman said it would be necessary to appoint two Auditors. Mr. R. B. Baker would no doubt kindly serve again. Mr. Jackson was leaving Yokohama; Mr. Vouillemont of the Comptoir d'Escompte would probably give his services.

The Chairman said it would be necessary to bring the subject of telegrams before the meeting. Some of the members had written to the Chamber objecting to pay the additional subscription for telegrams, and some objected to pay at all. According to the rules they were bound to pay, and much as he would regret to see their numbers weakened there could be no other alternative, it only remained for them to pay their subscriptions, or withdraw their membership. (Mr. Wilkin here read Rule IV, with reference to the matter). They did not wish to lose their members, but, he repeated, there could be no alternative, they must either pay or withdraw.

Mr. Winstanley enquired why the telegraph subscription was not collected with the ordinary subscription.

The Chairman said it would be this year. It was left to be decided from year to year. There could be no question that the \$30 was not sufficient. It would perhaps be more in order to state formally that the subscription will be \$30 for the next year. The Report had been adopted, in which it was stated that the \$30 would be required.

In reply to a question as to how matters would stand in the case of members who, having paid the \$30, refused to pay the other, the Chairman said their \$50 would have to be returned. It would be tantamount to withdrawal. It was almost impossible to over-estimate the value of the telegram to Members. Some firms, such as the Steamship Cos., might not care about them, but they were certainly invaluable to merchants. The charge of \$80 was a great convenience to members. It was but the cost of two or three telegrams, and placed them continually *au fait* as to the state of the markets. He had taken the trouble to compare the quotations received per telegram with those afterwards arriving by mail; the result was eminently satisfactory. Especially so in the matter of silk, the quotations being wonderfully correct, considering the difficulties in the way. Of course, as regarded quotations for Manchester goods, bank rates, &c., there could be no two opinions, as they could take them from circulars. The Committee had not addressed those members who had refused to pay. Two or three did so in July. The Committee considered it better not to take any action then, but in the beginning of the year there was no alternative.

He then called on the Secretary to read a letter which had been received from the Hiogo and Osaka Chamber of Commerce with reference to a daily telegram between Kobe and Yokohama, as to the state of the market for staple products, rate of exchange, &c.

hama, as to the state of the market for staple products, rate of exchange, &c.

Mr. Winstanley said, some little time ago the Chamber combined with the Hiogo Chamber of Commerce to send a fortnightly telegram to England, but, soon after, from some cause or other, the latter became dissatisfied and seceded. They now find they are not able to support the cost of the European telegram, and want to come into the benefits of this arrangement. He proposed that they should be told that, having made their own arrangements, this Chamber was not inclined to accede to their proposition.

The Chairman said the proposed arrangement seemed to contemplate only local matters; of interest between the two ports. Perhaps Mr. Winstanley would put his proposition into form.

Mr. Winstanley then proposed—

That the trade between the two ports, Kobe and Yokohama, is not of sufficient importance to warrant any expenditure for local telegrams on the part of this Chamber.

Mr. Winstanley said he did not think they would be warranted in incurring further expenditure. Members were always receiving private telegrams.

Mr. Milsom seconded, and the motion was carried *nem. com.*

Mr. Sichel asked what steps would be taken with regard to those members who had refused to pay the extra-subscription for telegrams. It was manifestly unfair that they should be allowed to participate in the benefits afforded Members by the telegrams conveying Market intelligence and other information. He thought if they refused to pay they should be requested to resign.

The Chairman said the Rules of the Chamber stated that the subscription should be \$30, plus any sum not exceeding \$50. It was certainly not fair that those who refused to contribute their share of the expense should come here to see the telegrams, and, if they refused to adhere to the Rules of the Chamber, there was no other alternative left them but to resign.

Mr. Dodds said, when Mr. Sichel stood up he was just about to propose that, in view of the financial statement rendered at the meeting, the full amount of \$30 be called up, and that Members declining to pay be requested to withdraw.

After some general conversation on the subject it was

Proposed by Mr. Dodds, seconded by Mr. Sichel, and unanimously carried,—That, in view of the Financial Statement read at the meeting, the full amount of the subscription for telegrams, viz. \$30, be called up at once; that members declining to pay be notified that they are no longer Members of the Chamber, in terms of Amended Rule 4, and that the \$50 already paid, be returned to them.

Mr. J. M. Jaquemot said, this being the first general meeting since October last, when they had requested the Foreign Ministers to take steps with regard to the Ki-ito Aratame Kuaisha, he considered it his duty to request the Chairman to convey the thanks of the Chamber to Sir Harry Parkes and the rest of the Foreign Ministers for the great pains and trouble they must have taken in the matter. And he also tendered his thanks to the Chairman for the trouble, energy, zeal and perseverance evinced by him on that occasion, for there could be no doubt he had spared no pains to bring the matter to a successful issue. Although the question was not yet finally settled, he had heard from a good and reliable (though not official) source that the present operations of the Ki-ito would soon be brought to a conclusion, and that they

were about to adopt a new system of weighing and inspecting, which would be an exceedingly valuable thing to them. By last mail he had received advices respecting bales of silk shipped in October, by which it was shewn that the dessication had been very great; there had been extreme dampness. Although he could not state it officially, he had been informed, if it had not been for the agitation which had been going on, on the part of the ministers, there could be no doubt things would still have been as bad as ever.

The Chairman then read the Resolution of Mr. Jaquemot:

That the thanks of this Chamber are due and are hereby tendered to His Excellency Sir Harry Parkes, K. C. B., H. B. M.'s Minister, and to the Representatives of the other Treaty Powers, for their valuable assistance with reference to the recent question of the Ki-ito Aratame Kaisha.

With reference to the Foreign Ministers he could corroborate what had been said about the pains and trouble they had taken, and especially in pushing the matter of the neglect of the native authorities here. He thanked them for the kind expressions of opinion which had fallen from Mr. Jaquemot and others. No doubt there was a great deal of trouble in the matter, but he was very much indebted to the members for their assistance and information, without which matters would not have been rendered so complete.

Mr. Winstanley thought it would be invidious to mention Sir Harry Parkes, especially, in the resolution; the other Ministers having taken part in the affair.

Mr. Jaquemot said his object in mentioning Sir Harry Parkes was because he had carried on the correspondence in his own name, on behalf of the other Representatives. If there was any objection on the part of the Chamber he would withdraw it.

Mr. Siebel said the name of Sir Harry Parkes ought to remain in. He was their pillar. Thanks ought to be given to him who fought their battles, and he did not consider that the other Ministers had taken much trouble in the matter. He seconded Mr. Jaquemot's Resolution.

The proposition as read by the Chairman was then put and unanimously carried.

The Chairman said that would conclude the business of the meeting. There remained one or two important questions for future consideration. One of the most important was that of the Revision of the Treaties, and as the Ministers had shewn every willingness to facilitate matters between them and the Japanese, they should be prepared to discuss the question. There was a point involved, the question of travelling in the interior, whether on business or pleasure, which has of special interest; the question should be strongly urged and greater liberty demanded. Greater facility for the loading and discharge of ships was very much needed, and in view of the great delay some vessels were subjected to, he thought that many would gladly prefer to pay \$1000 to be enabled to lie alongside a wharf. The case of the *Fiery Cross* was one in point. She arrived here before Christmas and had not yet completed her discharge. He concluded by saying that the Chamber had no fear that its influence would extend, and it would be likely to extend in its connection with the Japanese, especially in such cases as that of the Guild. He trusted the members would work in harmony; the object in view being their common good.

Mr. Winstanley would like to ask whether it would not be possible to get some reliable information by wire as to the state of the tea market in America.

The Chairman said they knew they could get nothing of the kind from London. Some of the American houses here would no doubt be glad to put them in the way of getting the information from New York. The Chamber would be ready to receive information on the subject. Many of the Members didn't care for it.

After the usual vote to the Chair, the meeting adjourned.

### BRITISH EPISCOPAL CHURCH ESTABLISHMENT, YOKOHAMA.

#### MEETING OF SUBSCRIBERS.

In accordance with the Foreign Office Rules, on the requisition of two subscribers to the Church Establishment of Yokohama an Extraordinary General Meeting of Subscribers was called by H. B. M.'s Consul, Russell Robertson, Esq., for Saturday afternoon last, at 4 o'clock p.m.

The meeting took place in the Court Room of the Consulate, the Consul occupying the Chair. The attendance, as on the occasion of former meetings, was small, the interest attaching to Episcopal Church matters in this community being evidently centred in one small band of workers, who have been indefatigable in their efforts to meet the exigencies which have arisen consequent on the prospective disestablishment of the State Church in Yokohama. At this meeting—called especially for the consideration of matters connected with the important question of the future conduct of the Church, independent of all subsidy—about a dozen gentlemen were present; with hardly an exception the same array of faces being presented as on the occasion of the many meetings which have been held of late, adjourned and re-adjourned, with the hope of arousing some popular interest in the matter.

The Chairman, in opening the proceedings, said the present was an Extraordinary Meeting, called, in terms of the Act, for the purpose of passing resolutions in respect to the raising of the pew rents, the adoption of the Report of the Committee of Ways and Means—read at the Annual General Meeting on 27th ulto. and withdrawn, for consideration at this meeting—the reconstitution of the Church, and other matters relating to its future management; as stated in the advertisement. The Report of the Committee of Ways and Means embodied the various objects of the meeting, but, as the question of the raising of the pew rents was a very important one, he suggested that it had better be considered separately.

Mr. Cargill said the object of the present meeting was, as the Chairman had stated, for the purpose of receiving the Ways and Means Committee's Report, which, although read at last meeting, could not be received then. Perhaps it would be better for Mr. James to read it.

Mr. James then read the Report of the Special Committee on Ways and Means, appointed at the adjourned General Meeting of Subscribers held on Decr. 26th last, which was published, *in extenso*, in our issue of 28th ulto.

Mr. A. Winstanley proposed a vote of thanks to the Committee for their very able Report; also that it be received.

The Chairman pointed out that the proposition "it be received" was tantamount to the adoption of the Report, and that he would consequently have to put the whole Report, *en masse*, to the meeting. If such were Mr.

Winstanley's intent he would do so; otherwise it might be discussed in detail.

After some general conversation, the meeting ultimately agreed to substitute the word "adopted."

The Chairman then put the motion, and several were about to vote on the question, when

Mr. Wilkin asked if the whole report was to be adopted. A general discussion ensued and

Mr. McDonald remarked that he thought they couldn't do better than adopt the whole report; the matter was then generally discussed.

Mr. Macdonald asked if the government grant would be sufficient to cover both principal and interest on the Church debt.

Mr. James replied that it would.

The Chairman reminded Members that the Report was still before the meeting for action.

Mr. Winstanley asked the Chairman if he thought they would be able to get a clergyman for \$200 a month.

The Chairman said they would be paid away two thirds of their whole income.

Mr. Winstanley replied that he was not afraid that they would be able to support a clergyman.

Mr. Wilkins pointed out that the report did not fix the salary of the Chaplain; it was left to the Committee.

The motion of Mr. Winstanley adopting the Report, seconded by Mr. McDonald, was put to the meeting and finally unanimously agreed to, being carried by shew of hands.

Mr. Cargill spoke at some length on the necessity of taking some steps for careful consideration as to the future government of the Church. The Committee ought to take some steps for the change, and consider what should be done when they take over the charge of its affairs from the State. And, in preparation, they ought to take time before having correspond with Shanghai on the important subject of clerical assistance. In view of the change he had drawn up a resolution, which with the permission of the Chairman, he would read:

That a Special Committee be appointed to consider and report upon the reconstitution of the Church, rendered necessary by the discontinuance of the allowance by Her Majesty's Government, and other matters incident thereon.

Prospective of that motion being approved he had added a clause, which he would afterwards like to submit separately.

The Chairman then put Mr. Cargill's motion which was seconded by Mr. Murray, and carried unanimously.

Mr. W. H. Smith proposed that the members of the Special Committee be—Mr. Cargill, Mr. Ness, and Mr. Henry Allen.

Mr. James seconded the motion, which was carried.

Mr. Cargill then put to the meeting the clause he had drawn up, contingent on the passing of his last proposition:

That the members of the Special Committee just appointed, together with the present Treasurers and Treasurer, be requested to form themselves into a General Committee to gather the sense of the subscribers, and report on the subject of the intermediate and permanent appointment of a Chaplain.

This was seconded by Mr. Murray, and carried *nem. con.*

The business of the meeting being finished the usual vote of thanks to the chair brought the proceedings to a close.

## SOME FACTS ABOUT PETROLEUM.

PETROLEUM OIL is an article comparatively new to commerce, and its introduction is remarkable for the exactness in time, with which its discovery corresponded to the need that was felt for it. Up to 1860, Whale and Sperm Oils had supplied the wants of the world in the matter of a lamp oil that was at once safe and powerful; but at that time, the whales, from the incessant warfare waged upon them, became so scarce that fears were entertained of their complete extinction, and the oil itself nearly doubled in price. It was thought that we would have to do without a luxury to which we had been accustomed, and that the world would retrograde to the days of candles.

But just at this time, the northwestern part of the state of Pennsylvania was found to be rich in lands producing an oil, which was at one and the same time a brilliant illuminator and of unparalleled cheapness.

The extent to which the trade in this oil has grown since its first introduction is something marvellous, (its export from the United States has more than doubled for every three years of the last twelve) and may be inferred from the amount of capital engaged and the magnitude of the works in which the article is refined and packed for shipment.

The largest works of this kind in America, and those of which the name is best known in Japan and China, are the works of the DEVOE MANUFACTURING COMPANY, of New York. Their establishment, covering several acres of ground, and including yards, docks, stables, machine shops, tin can factories, packing sheds, etc., etc., should be visited by every one interested in Petroleum, or in seeing the ingenuity with which mechanical appliances are adjusted to the work which they are destined to perform. The surprised visitor will see there a complete can made out of blank sheets of tin in less than four minutes, and, proceeding to the oil shed, will see twenty four of these cans filled with their exact complement in less than a minute and a half. The business of this house is, simply, immense. Scores of vessels are either waiting at their docks for their cargoes, or at points remote, are being supplied by barges and lighters, sailing between them and the Company's docks. The number of cases daily put up by this concern is from 6,000 to 10,000.

In refining their oil, the first object of the Devoe Manufacturing Company was to make an oil that should be perfectly safe. Their experience in this matter, in one point at least, has been somewhat curious.

They found that the safety of an oil bore no sort of uniform relation to its gravity. Perfectly safe oils were found with a gravity no lighter than 780, while a gravity of over 800 was found as a quality of an oil which was known to be thoroughly dangerous. The safest oil that the Devoe Manufacturing Company put up, an oil that will extinguish a lighted match suddenly immersed in it, and that has stood the severe test of being upset and spilled from a lighted lamp without taking fire or exploding, is less than 785. Crude Petroleum itself, with all the volatile and highly dangerous parts unextracted, will stand the same gravity as the refined product from which all the Benzine or Naptha has been removed. This last fact alone is sufficient to show the utter unreliability of a gravity test for the safety of an oil. Yet the fact is shown to be a perfectly reasonable one, by an examination into the nature of the parts of which Petroleum (the crude article) is composed.

The illuminating part of the oil is the middle part. The Residuum of the Crude oil is

heavier, and Benzine is lighter. Neither has any fire test, or in other words, both the very heavy element and the very light element are dangerous. So that an oil may be very heavy and yet unsafe, or very light and yet very unsafe; or crude oil, with both the light and heavy elements uneliminated, may stand the same gravity as a perfectly safe refined oil from which both these elements have been extracted. —Or, as the weight of the illuminating portion of the oil varies between its two extremes, touching Residuum on the one hand and Benzine on the other, different samples of refined oil may largely vary in weight, and yet be all perfectly safe. In fact, there is no reliance whatsoever to be placed on a gravity test for the safety of an oil. It is not a sure test of the safety of an oil that it is heavy; on the contrary, a heavy oil may be both a very poor illuminator and very unsafe.

The Messrs. Devoe say there is no other question concerning the nature of Petroleum more widely misunderstood than this question of the relation of gravity to safety. In their own business they say they have discarded the test by gravity altogether, and rely upon the test by fire, (i.e. heating a small portion of the oil up to the required point and then applying a flame to it), and in this matter, they are extremely particular. The oil in the first place is "run" at the Refining Works in a way to eliminate every particle of the dangerous constituents of Petroleum, and is then subjected to two tests, one at the Refinery before the oil is moved, and afterwards at the Canning Establishment where the oil is put up. No oil is allowed to go into their cans which will not stand these tests perfectly.

A few statistics in regard to this business might not be devoid of interest to those to whom the brand of "DEVOS BRILLIANT OIL IN IMPROVED PATENT CANS" is familiar.

Their cans are made of tin plates imported from England in boxes containing 112 sheets each, of these boxes they use in a single month over 8,000. For making their cases they consume about 60,000 feet of lumber a day. The wire they use for making the handles to their cans they buy in half mile bundles, and it takes 16 of these bundles, or 8 miles of wire, per week to supply their needs for these small handles. Their hands, men and boys, average about 300; and their pay roll about \$4,000 per week.

The most surprising fact about their business is the celerity with which they execute orders.

The President or Secretary of the Company in their office in New York will take an order for 4000 cases of oil one day and guarantee to ship it the next. Their yard is 7 miles distant from their office, but by a private telegraph line the particulars of the order are sent to the superintendent of the yard in less than half a minute. He sends to the Tin Can Factory to have them make the cans, and to the box makers to slide in the cases, and in less than half an hour the order is started, and that night the whole 4000 cases is on the dock marked and ready for shipment. The next morning by 8 o'clock they are on lighters and being towed down to the vessel on which they are to be shipped, and by 4 or 5 o'clock the receipt for the goods is handed to the shipper.

In busy times there is no stock on the premises of the Devoe Manufacturing Company at all—nothing is allowed to stand still. Everything is used as fast as received and tested. The boxes of tin-plates are scarcely arrived and tested before they are opened, cut up, put together, examined, and rolled down to the oil yard on a long slide, enclosed

on all sides and furnished with small iron wheels on the bottom, by which the descent of the cans is facilitated. The oil is being pumped into the tanks from tank-barges lying alongside the dock at the same time that it is flowing out to supply the cans. Cases are being rode in empty at one end of the yards while they are being shipped full at the other. Everything is in motion, and one visiting the yard one morning is surprised to see how different everything looks from the morning before.

But celerity in the business of this concern is not inconsistent with thoroughness, because the dispatch is the result of order and system, a system that has grown and been shaped with the growth of their business. They started business in a very small way in the first years of Petroleum, and have had ample time to systematize every addition and improvement they have made since. You go up to their yard while an urgent order is being filled—you see no man hurried. Every man is doing that portion of the work he has to do, with the regularity and precision of clock work. The dispatch is accomplished by the aid of machinery, a large force of men, and by the order and regularity with which every man's work is managed and harmonized with the work of all the others.

*Thoroughness first and dispatch afterwards* is the motto of the concern, and overseers and examiners are found at every step, both in the Factory and the Oil Yard.

We might give other facts and a more detailed account of the business but we doubt if it would be sufficiently interesting to the readers of this journal at large, so that we have contented ourselves with the most interesting, and those most likely to give an idea of the magnitude of the business carried on by the Devoe Manufacturing Company, and their well-deserved success; and also in making our readers familiar with this concern—their responsibility, and the care that they take with the quality of their goods to give them a confidence in the merchandize that they sell, and on which they put their name.

## LOSS OF THE P. M. S. S. "RELIEF."

Court of Enquiry, held at the United States Consulate, at Nagasaki, relative to the loss of the P. M. S. S. Co.'s Steamer, "Relief," off Do-misa Island, January 19th 1874.

Before W. P. MANGUM, Esq., United States Consul, and

Captain J. U. SMITH. }  
A. S. ARNOLD. } Assessors.  
D. R. SPEDDING. }

Captain Corning's statement—Left Kobe January 16th, 2.20 P.M. Experienced head winds and adverse tide through the Inland Sea. Passed Simonosaki Straits on the morning of the 18th, blowing a hard gale from the westward, with heavy squalls, accompanied with hail and snow. Considering it imprudent to proceed, at 10.45 P.M. anchored in Whited Bay, where we remained until the morning of the 19th instant, when, the gale having abated, at 7.15 P.M. weighed anchor and proceeded on voyage; during the day moderate wind and sea with heavy swell. Passed Yebosu at 4.30 P.M.; at 6.31 P.M. passed Madara Island, and steered for the Obree channel; the night was moderately starlight with a few clouds about the horizon. Having been on my feet all day, and knowing I would have to be on deck the most of the night, I left the deck in charge of the 2nd officer, with these orders: Steer S.W. ½ W., nothing to the westward; and be very careful about your steering. Keep a sharp look out, and give me a call if there is any change; we have from 12 to 14 miles to go to the entrance of the passage. I then went into the chart room, and laid down on my lounge for rest, but not to sleep, and was in readiness to go on deck at an instant's notice. During the afternoon the ship had been averaging seven knots an hour. After passing Madara, and whilst steering down the passage, I supposed the tide was at the last quarter flood;

which I have usually found sitting to the eastward of north east, and at times east. Hearing nothing from the 2nd officer I did not go on deck until a few minutes before eight o'clock. I found the night extremely dark, so much so that I could see nothing. When I got my sight I saw land, which I supposed was the high land of Hirado, which I judged to be some two miles distant. A few minutes later I found it was not Hirado, but the peak of Do-sima. I immediately gave the order to starboard, and then finding we were much closer, I called hard a starboard, which was promptly answered by the quartermaster at the wheel. Just then I saw a streak upon the water which excited my fear. I said to the Chief Officer, "what is that?" He replied, "the shade of the land, I think;" but by that time I became very well convinced that it was more substantial than a shadow, and said, "it is no shade," and started for the pilot house, and at once rang three bells. I heard the engines stop, and at the first click of them reversing, I told the quartermaster to put his helm hard apart, then left the pilot house and went forward when I saw the rocks right under the bow. A few seconds afterwards she struck heavily, and remained immovable. Soundings were taken about the ship, and the pump well sounded, after which the report was made that the ship was not making water. The Chief Engineer reported the engines were reversing at full speed, and that the ship was not making any water, saying, "I am running up the steam, and will keep you acquainted with what water may be in the ship." In a few minutes the Chief Officer reported the steam all gone; the ship's bow lying over a shelving rock, and about fifteen feet of the plates badly rent. I then gave the Chief Engineer orders to stop the engine, but to keep up his steam. About half an hour after she commenced making water and increased pretty fast. The Chief Engineer went into the forward compartment to ascertain if the rent extended abaft the bulkhead. He reported four feet of water, and said, "I think she is all right abaft the forward compartment; let me have the carpenter and I will secure the hatch so that the water cannot rise above it," which was done. Being fully satisfied the ship was hard and fast, I gave orders to the Chief Officer to have all the boats lowered and in readiness for immediate use; and to the Purser to notify the passengers to be all ready to leave the ship, also to get his treasure and mails on deck. The gig was then manned, and sent, in charge of the Freight Clerk, with the saloon passengers, to a town from which we saw lights, to engage boats to come to our assistance, and to get back to the ship as soon as possible. A little later I sent the 2nd Officer with a boat and two men to a town from which lights were seen still nearer the ship, with orders to get as many boats as he could find and return promptly to the ship. During all this time the whistle was blown at short intervals and several shots were fired from the gun. At 11 o'clock the water in the ship had increased to four feet, but, by working the engines we could keep it from increasing. About the same time the gig returned, followed by several native boats. Fearing the ship, at low tide, might break in two, I considered it prudent to send the passengers, mails, and treasure on shore, which was done in charge of the Purser. At 3 A.M. the ship lay over so badly as to completely disable the engines, when the Chief Engineer reported that he could no longer use his engines to keep the water under. I then gave the order to all hands to pack up their traps, which was done and they were sent on shore. At early daylight the Company's steamer *Golden Age* was sighted passing the ship. I sent on board and requested Captain Coy to return to Nagasaki with the passengers, mails and treasure; to notify the Nagasaki Agency of the condition of the ship; and to send me assistance to remove and forward the cargo, as I considered the ship a total wreck. Before leaving the ship to go over to Oosima to attend getting passengers and treasure to the steamer *Golden Age*, I gave the Chief Officer orders to be governed by circumstances. If he found the water increasing to proceed to disembark the cargo, either by landing it on the island or putting it into small boats.

Upon returning to the ship at 2 P.M. I found all hands getting out cargo which was transported in small boats to a town on Do-sima; which was continued until nightfall, and was resumed on the following morning and continued till all dry cargo was out of the ship. The remainder being of a perishable nature was not removed. On the morning of the 21st the *Golden Age* passed by on her return, and gave me the word that a steamer would be sent to my assistance. After finishing with the cargo we proceeded to wreck the ship and transport the material on shore. On the night of the 21st, at low water, the ship broke in two, and the after end nearly filled with water. Most of the people were removed on shore, leaving a few on the island, protected by a sail, to look after the property.

On the afternoon of the 22nd the Japanese steamer *Kagosima Maru* came up from Nagasaki, with instructions from the Agent to place on board all cargo saved from the ship, together with wrecked material and crew, and return to Nagasaki, all of which was done, and she returned to Nagasaki at 11 P.M. on the 23rd instant.

Question by Court.—Is it usual to take the Obree Channel on dark nights?

Answer.—That depends; I have been in the habit of using Obree Channel for over a year. When I shaped the course from Madara, the night was starlight.

Q.—Do you consider it a safe passage?

A.—I do. It is used by the P. M. steamers; also by the pilots, with the heaviest men-of-war vessels.

Q.—Do you attribute the vessel being out of her position to unknown currents?

A.—Yes. The tide, instead of being at the last quarter flood was probably nearly full, and setting to the westward.

Richard Swain, Chief Officer, sworn:—On the afternoon that the ship struck it was my watch on deck from 4 to 6. At  $\frac{1}{2}$  past 4 we passed the Island of Yebosa; the captain was down below at the time. While at sea it was seldom that the captain went below, with the exception of changing his clothes or getting his meals, as he used to lie down, with his clothes on, in the Chart Room, which opened into the Pilot House. Soon after passing Yebosa the captain came on deck, and remained until  $\frac{1}{2}$  past five. While on deck, the weather looking fine and the night clear and no indication of a change, he concluded to pass on the inside of the Madara Island and, pass through Obree passage. At  $\frac{1}{2}$  past 5, it being dinner time, he left the deck in my charge, leaving orders that, after passing the Island of Madara, the course would be S.W.  $\frac{1}{2}$  W., but not to leave the deck until he returned from dinner. At six o'clock the captain returned on deck, also the 2nd Officer, the latter relieving me as is customary at the change of watches. I saw no reason why we should not pass through Obree passage, as the night was clear. I remained below until I was called at eight o'clock. A few minutes after eight, on arriving on deck, I found it very dark and overcast, with a few sprinkles of rain, but still I could distinguish the high land on both sides; it did not appear to me that we were so near on the starboard side as I walked forward. I looked at the compass and noticed the ship was heading about S.W.  $\frac{1}{2}$  S.; at that time the captain was on deck changing the course. I walked forward, taking with me the marine glasses to see if I could distinguish anything near. The captain said to me, "What is that ahead?" I replied I thought it was the shade of the land,—as I just came up it was a little hard for me to see, coming out of the light—the captain said "no," and started for the bell. I then saw that it was the land, but before we could get the ship's headway stopped she struck heavily upon a low point of land projecting out about  $\frac{3}{4}$  of a mile from the main land, and about 12 feet high, the top of which was formed of light stone partly covered with earth, and, on a dark night, it was very hard to distinguish it from the water. Immediately after striking, the captain ordered the boats to be cleared away in readiness. I placed the 2nd Officer in charge clearing away the boats, while I went forward to ascertain what damage was done, and to see how much water was in the forward compartment; also for the carpenter to sound the pumps. I found that the bow was very badly stove, and, having about 3 or 4 feet of water in the forward compartment, reported the same to the captain. He then ordered the starboard quarter boat to be manned, placing the Freight Clerk in charge, taking with him the European passengers, and starting for the nearest settlement. I was also told to despatch the 2nd Officer to see if boats could be procured to take the passengers and baggage on shore, as we thought it best to send them in native boats instead of our own. Saw some native boats coming, which soon clustered around the ship. The captain stood on the gangway and passed all the women and children first, with their baggage; afterwards allowing the men to take their departure. Soon after striking, the carpenter reported there were six inches of water in the hold. Fifteen minutes later he reported the water had not increased any; but, in about an hour after the ship struck, the water commenced gaining so much that we were obliged to work the main engines at times, to keep the water down during the night, and along towards morning the main engine became disabled, so the ship's pumps were worked by hand. Soon after daylight we sighted the Co.'s steamer *Golden Age*, coming up through Obree passage. I was sent on board to report, and for assistance. On my return, the captain left the ship to go on shore and see about the passengers, mails, and treasure, and to get junks for cargo; leaving strict orders with me to use my best judgment in regard to discharging freight, providing he could not get junks to take it and land

it upon the island. Soon after his leaving I found that the deck and donkey pumps could not keep the water under so I commenced, with the assistance of the Engineer's crew, to discharge freight into small boats and land it at a settlement about two miles distant, placing the Freight Clerk in charge on shore.

Q.—From what cause do you attribute the steamer to have been over on that shore?

A.—By a strong current setting to the westward, which was unusual with a flood tide, as the courses which were steered ought to have taken her a mile or a mile and a half from this point. At the time, the land appeared to be very deceptive, as we could see high land on both sides; and it appeared to me that we were further from the land on the starboard side than what we really were.

Q.—How do you account for the unusual strong current and setting to the westward?

A.—As a usual thing with a flood tide the ships are set to the northward and eastward; but the tides are not always to be depended upon.

Q.—Did you see land right ahead when you came on deck?

A.—No; as the ship was turning to port, heading about S. W. by S., and on that bearing she was heading about for Yokosima, an island between two large high islands.

Q.—Have you made many passages through?

A.—I have.

Q.—Were the compasses of the *Relief* to be depended upon?

A.—They were.

Second Officer, William Lawton, sworn:

Q.—What was the condition of the weather when the vessel struck?

A.—Moderate, but cloudy and very dark.

Q.—What was the course given to you by the 1st Officer, on going on deck?

A.—The only order I had from the 1st officer was, that is Madara Island—pointing it out to me on our starboard quarter.

Q.—What were the orders the captain gave you when he left the deck at 6.35 P.M.?

A.—The captain told me to keep a good look out for vessels, and see that the ship did not set over to the eastward; although the captain said he thought there was not much fear, because we were 12 or 14 miles off.

The course given to me by the captain was S.W.  $\frac{1}{2}$  W.—to keep a sharp look out and call him if any change. The captain might have said to me, Keep nothing to the westward—that I do not recollect.

Q.—What was the condition of the weather when the captain left?

A.—Clear starlight night.

Q.—How long after the captain left the deck did the change in the weather take place?

A.—About 7 o'clock.

Q.—Why did you not call the captain?

A.—Did not think it necessary; first, as there was nothing in the way, the sea was smooth.

Q.—When were you relieved?

A.—About 8 P.M., or it might have been a minute or two after.

Q.—At that time what was the condition of the weather?

A.—Very dark and cloudy.

Q.—Were there any bearings taken previous to the captain going below at  $\frac{1}{2}$  past 6?

A.—Not that I know of.

Q.—Would you have known it if there had been any taken?

A.—I think I should.

Q.—Do you recollect if you saw the captain take the bearings of Madara Island?

A.—I do not.

Q.—When you were on deck at 6 o'clock, did you take any bearings of any points of land?

A.—I did not.

Q.—Did the Chief Officer make any remarks about the bearings of different points of land?

A.—He did not.

Q.—Did not the Chief Officer point out to you the Island of Madara, on the starboard bow, and tell you after passing it the course would be S.W.  $\frac{1}{2}$  W.?

A.—I do not recollect; but I recollect the course was S.W.  $\frac{1}{2}$  W., given to me by the first officer.

Q.—(By 1st Officer to 2nd Officer).—What time did you pass the Island of Madara?

A.—I cannot tell exactly, but I think it was 20 minutes past 6.

Witness.—I believe I have made a mistake as to the bearing of Madara Island. I think it was on the starboard beam, or a little forward of the beam.

Q.—Was the course changed when Madara Island was abeam?

A.—No.

Q.—Was the course of the ship altered at any time during the watch from 6 to 8?

A.—Yes: the course was changed a little before eight.

Q.—What orders did the captain give you when he came on deck immediately before eight?

A.—He asked me what I saw ahead: I told him I saw that high bluff on our port bow; and then the captain gave orders to the man at the wheel to starboard. The high bluff was then right ahead and the order was then given to starboard again. I recollect him saying Steady, but at what point I do not know.

Q.—Do you know the coast?

A.—Not thoroughly: there are some places I do not know.

Q.—Was the course S. W.  $\frac{1}{2}$  W. from 6 P. M. until the captain came on deck at a little before eight?

A.—It was.

Jacob Burton, Quartermaster, sworn:

Q.—What was the course given you when you took the wheel at 6 o'clock?

A.—S. W.  $\frac{1}{2}$  W. Steered that course until ten or fifteen minutes to eight, when the captain said "Starboard," and I did so, and then said "Steady." When steady the course was S. W.  $\frac{3}{4}$  S. Captain asked, "how are you steering?" I said S. W.  $\frac{3}{4}$  S. He then said "keep her on that course," and I steered that course until eight o'clock. When I was relieved I gave my relief the same course and then went below.

Q.—Did the 2nd Officer come into the Pilot House during his watch?

A.—He did not come into the Pilot House, but looked at the compass on deck.

Q.—When you were relieved at 8 o'clock did you see any land at all?

A.—No.

Q.—How was the weather at that time?

A.—Very dark and cloudy.

Q.—Did you hear what conversation took place between 1st and 2nd Officers on their relieving each other at 6 o'clock?

A.—No, I did not.

William Wren, Quartermaster, sworn:

Q.—What course did you give the man who relieved you at the wheel at 6 o'clock?

A.—S. W.  $\frac{1}{2}$  W.

James Cameron, Quartermaster, sworn:

Q.—What course did you receive at eight o'clock, when you took the wheel?

A.—S. W.  $\frac{3}{4}$  S.

Q.—How long did you steer that course?

A.—Two or three minutes.

Q.—When you came on deck at 8 o'clock did you see any land ahead?

A.—No, it was very dark.

Q.—(To 1st Officer): What order did you give to the 2nd officer on leaving the deck?

A.—That that Island on the starboard bow was Madara, and that, after passing it, the course would be S. W.  $\frac{1}{2}$  W., and to give it a fairway berth.

Captain Corning, to First Officer:—What course was being steered when you left the deck?

A.—S. W.  $\frac{3}{4}$  S.—About that time we were not steering by compass courses, but shaped our course by land on the starboard bow.

By Court:—Did you, during the hours from 4 to 6, take bearings to ascertain how the current was setting?

A.—Yes: I took bearings so as to shape the course to pass down on the inside of the Island of Madara, leaving it about  $\frac{3}{4}$  of a mile off.

Q.—Previous to 6 o'clock, did you observe the vessel drifting to the eastward or westward?

A.—No: nothing more than what the course ought to have taken her.

#### DECISION OF THE COURT.

From a careful consideration of the circumstances attending the loss of the Pacific Mail Steamer *Relief*, on the night of the 19th instant, in Obree Channel, I am clearly of the opinion

that it was due solely to an unknown current driving the said steamer from her course upon the land, which, being a low point, but a few feet above the water, and the night cloudy and very dark, it was impossible to see in time to avoid the accident; that no blame can be attached to Captain Corning or his officers; and that the skill, energy, and sound judgment displayed by them after the steamer struck, in saving the Passengers, Crew, Mails, Treasure and Cargo, are deserving of high commendation.

#### DISASTROUS FIRE.

YESTERDAY MORNING, shortly after 8 o'clock, a fire broke out close to the site of the last one at No. 31, which destroyed the store of Mr. Thomas. The French Military Hospital at No. 9, (L'Hôpital Jaurès, named in honour of a French Admiral of that name) facing the Bund, and having also a frontage to Water Street, was discovered to be on fire, the alarm being given by a sentry, who saw flames issuing from the kitchen attached to the apartments of the Officer in Charge of the Commissariat Stores. Efforts were, of course, instantly made to extinguish the flames, and the alarm having been given, the Steam fire and hand Engines, the Old "Volunteer" hand engine, and the Hook and Ladder Brigade were quickly on the spot, and from the close proximity of the sea a plentiful and powerful head of water was available, the engines being stationed right on the edge of the sea wall, close to the burning premises. The French Marines were quickly to the fore, and a portion of the Royal Marine Battalion, at service in the Church, were called out, and rendered invaluable assistance. The whole of the vessels of war in harbour, of various nationalities, sent levies of auxiliaries, and the systematic uniformity which seemed to pervade their efforts, together with the pluck and daring exhibited by all engaged, firemen, blue jackets, jollies, police, and volunteers, made it pretty evident that, with the fortunate accidents of a near supply of water and the absence of wind, the range of the devouring element would be confined to the Hospital itself, which was evidently doomed to destruction. Whilst the efforts of the regular corps of firemen were directed to the burning building the volunteers were engaged in the salvage of the stores and property contained in the premises. And they worked to perfection, as only volunteers can or will work, each nationality vying with the others in turning out the largest quantity of salvage in the shortest space of time. *Bourayne* against *Saco*, *Ashuelot* versus *Thistle*, at it they went until everything had been got out that was get-at-able, and by that time the upper story of the building had pretty nearly burnt itself out, or had been extinguished by the immense volumes of water ejected from the various engines, numbering about 10 in all. The grapnels and ropes were then fixed to the Bund *façade* of the upper story, and the marines and blue jackets "tailing on" to the ropes in this new game of "French and English," down it came with a grand crash at about 10 o'clock. All danger was by this time virtually over, there being little left that was combustible; the ropes were, however, kept at work, and in another hour there was not a stick left standing of the upper story. The firemen were enabled to gain commanding posi-

tions on the roofs of the houses on either side, whence the operations of the hose could be directed with some effect; the whole arrangements, indeed, seemed to be admirable, and the utmost order prevailed. The ground in Water Street and on the Bund was kept by a company of French Marines, inquisitive spectators being thus kept at a respectful distance, much to the convenience of those engaged in actual work.

The patients occupying the Hospital, 13 in number, were got out safely at the commencement of the fire, being placed for safety in the adjoining houses, and ultimately conveyed to the General Hospital. Notwithstanding the extreme danger attendant on the pulling down of heavy masses of timber, we believe no serious accident occurred. One French Marine received a blow on the head, of a superficial character only, we understand.

A large quantity of the Government Stores contained in the building was saved, pertaining both to the Medical and Commissariat Departments, but we regret to hear that some of the officials of the establishment lost nearly everything they possessed; clothes, books, professional instruments, everything, engulfed in the common ruin.

In view of the approaching departure of the French garrison we believe the Hospital was likely to have been vacated altogether a couple of months hence.

The narrative of the origin of the fire adds another instance to the long catalogue of property destroyed by negligence; the inevitable story of the overheated stove pipe, added to the culpable carelessness of a Japanese boy, again being assigned as the cause of the destruction of the Jaurès Hospital.

A FEW days ago, a *mêlée* occurred between the police and the military in Nichome Hongo, Yedo, in consequence of interference, on the part of a constable, with a delinquent soldier. The day being a holiday, a number of the military were absent from barracks on leave. A party of three was walking along the street named, when one of them, misbehaving himself, was reprimanded by the policeman. The soldier replied insolently, and, the constable resenting this, a quarrel ensued, the comrades of the soldier taking part with him. Soon large numbers both of the police and the military reached the spot, and the scrimmage became general. Finally, the number of soldiers increased to about one hundred and fifty men, whilst the police mustered only some eighty; the former, as might be expected, were eventually victorious, the latter being knocked about like so many ninepins, and damaged considerably. The soldiers, in the end, carried off two or three of the police by force, as far as the side of Kanda-Miyo-jin, with the intention of conveying them to the barracks as trophies. An official, however, there interfered, and they were allowed to return to their quarters.

THE ACCEPTANCE by Kido of the position of Minister of Education, which has been officially announced in the Department and throughout the country, gives great satisfaction to the Japanese. The Department has been without its regular head ever since Oki became Sangi. Kido is one who is not afraid to take the responsibility when necessity arises, and his well-known energy bodes well for the future of education throughout Japan.

COMPLAINTS ARE rife in Tokei that robbers are increasing in number and audacity. Ushigome is the scene of their last exploits. The police will have to look to their laurels.

ANOTHER ORNAMENT has been added to Tokai, and another great convenience exists for the benefit of the travelling public. The old wooden bridge called Asakusa Bashi has been replaced by a most substantial stone arched structure. Formerly at the end of Yanagiwara Dori, was the Asakusa Go Mon and bridge. A few months ago the old gate was demolished, and the buttresses, which were standing quarries of dressed stone, were levelled, and the bridge taken away. The stone was utilized in making the new bridge, which was opened to public use a few days ago. It is over sixty feet long, of a single arch, and built in the most durable manner, the stone being of the hardest, and the pavement, posts, and railings of great thickness. On a column at the left hand side of the southern end is an inscription in Chinese, setting forth that the bridge was built in the 2534th year from the foundation of the empire, first month. The Kanda river, or canal, over which the new structure passes, now boasts of two new stone bridges.

THE HALF-YEARLY examinations in the Kai Sei Gakko began on Monday of this week, and will continue for several weeks.

A JAPANESE gentleman is now engaged in translating Irving's *Life of Washington*. It is to be hoped he will succeed well, and give his countrymen the genuine George, of cherry-tree and hatchet fame, and not a modernized man of the period who sports the fashions of the present degenerate decade; as was done by a would-be translator, some months ago, in a great many volumes.

THE HALF-BRED mongrels known as Japanese dogs seem to be setting the biped portion of creation in Yokohama entirely at defiance. The columns of the press lately have been full of complaints on the subject and we almost daily hear of cases in which children, and even grown persons, have been attacked by these wolf like animals, and in many cases, severely bitten. On Tuesday last, we are informed, a pack of Japanese dogs attacked, worried, and killed on the Bluff 6 sheep, or rather 3 sheep, and 3 grown lambs, one of the latter being carried bodily away. Last night the owner of the mutton, with a couple of friends, lay in wait for the aggressors, and on their putting in an appearance a *battue* ensued, resulting in the slaughter of one "consecutive" dog, as A Ward has it. The remaining hits were all misses, as the pistol wielded by our informant missed fire; whereupon he threw it down, and grappled with the beast aimed at, a very large and fierce looking customer, of the wolf persuasion. But the dog turned the tables, and went for the "human", the result being that the latter received a most severe bite extending right into the muscles of the wrist. This occurred in the middle of night, but the wound was of so serious a nature that it was thought advisable to seek the aid of a doctor. Whilst the injured man made the best of his way to the settlement his friends accounted for the canines, the result being that the brute that inflicted the wound was killed, and the remainder of the pack were put to flight.

WE REGRET to hear that highway attacks are recommencing in Tokai. The night before last, at about 10 o'clock, so near to the gate of General Capron's residence, that the moban heard the scuffle and saw the end of the affair, a native merchant in a jinrikisha was assaulted. The jinrikisha man was killed on the spot; and the merchant wounded with seven cuts. The next morning two fingers were found on the ground. We have not heard

whether the merchant is still living; but it is clear that it was a most desperate attack. The merchant had a large sum of money upon him, but we do not quite understand whether this was taken or not.

### ANOTHER STEP IN ADVANCE IN JAPAN.

The S. S. *Undine*, belonging to the Imperial Mail Company of Nippon, arrived at Shinagawa yesterday from Yokoska, having completed her repairs and alterations. Great interest has been felt with regard to this vessel, especially in engineering circles, as she furnishes the first instance, in the Far East, of engines being altered from the single to the compound principle.

Most of our readers will have heard of the compound engines first introduced into steam vessels by the late John Elder, of Randolph, Elder & Co., Glasgow. His earlier experiments were with the side-wheel ships of the South Pacific Steamship Company, from Panama to Valparaiso; and, after years of labour, amidst all the difficulties and anxieties attending the introduction of new inventions, it is not too much to say, that by his talent and unceasing efforts, that Company was raised from comparative insolvency to its present high position. The Company now runs a line of 3,000-ton steamers, weekly, from Liverpool, *via* Lisbon, Rio de Janeiro, and the once justly dreaded Straits of Magellan, to Valparaiso, a service which, at one time, would have been deemed impossible and certainly unprofitable.

But for this system of high expansion, reducing the consumption of fuel from 5 lbs. per indicated horse power per hour to 2.0 lbs., (and as low as two, even), the Suez Canal route would have been too expensive to use, and steamers, except for very valuable goods, could not have competed with the old Cape route.

So rapid has been the advance of this system of late, that quite new and valuable engines and boilers have been taken out of ships and broken up, to be replaced by compound engines, and the expense has often been repaid, by the saving of fuel and the extra cargo carried, in one year.

In the case of the Royal Mail Company, the saving in coals alone has amounted to £60,000 a year, besides really doubling the freight capacities of the ship, while the same or rather higher speeds have been maintained. Some of their latest vessels, of 3,000 tons, steam 300 miles a day on 29 tons Welsh Coal. The £60 shares of the Co., which, before the introduction of screw ships and compound engines, in place of the now obsolete side wheels, were as low as £45, are now £86; paying a dividend of 16 per cent, besides giving a bonus of 10 per cent to all their officers and engineers, on the amount of their salary.

But to return to the *Undine*. The alteration, though under the disadvantage of using the old but originally strongly made boilers of the ship, by Wingate of Glasgow, has been singularly successful. The ship has two boilers, with two furnaces each, and under the old *regime*, great difficulty was experienced in getting up steam, especially with inferior coals; but on the trip from Yokoska the engines made 61 revolutions per minute, and steam was kept up with the greatest ease with *one* boiler. The saving of fuel must, evidently, be over 50 per cent.

The external appearance of the engines has been but little altered. The high pressure cylinder, cast and finished by Mr. Darbier of the Yokohama arsenal, in a most creditable

manner, has been placed inside the old forward cylinder, and the difference of appearance is not perceptible.

To obtain the requisite power a new propeller was necessary, and this beautiful casting was made by Messrs. Boyd & Co. Nagasaki, in the short space of *nine* days from the date of the order, a feat of moulding unparalleled in this country.

The greatest credit is due to Mr. Joseph Taylor, the Consulting Engineer of the Co., from whose designs and under whose personal care the whole work has been executed. Such a profitable example for the owners will be certain to be followed up in the case of other vessels.

The performances of the engines and boiler were officially noted and reported upon by Mr. Wylie, Engineer Surveyor for Lloyd's Agents; the trial being watched, on behalf of the Directors of the Company, by Mr. C. P. Pfounds.

HITHERTO THE operations of the thieving fraternity, whose movements we have had such frequent occasion to chronicle of late, have been confined to that class of crime known as petty larceny. Emboldened, no doubt, by the invariable success which has attended their efforts, the gang of burglars (for we have no doubt there is a gang) have struck out a more audacious line for themselves, and, this time, have "gone for" the booty in a wholesale manner.

On last evening, Sunday, the residence of Mr. Howard Church, No. 38 Bluff, was forcibly (though quietly) entered by burglars, who seem to have gained an entrance by one of the front windows, and property, valued by the owners at nearly twelve hundred dollars, annexed. Amongst the valuables taken were three bronzes—very large, very heavy, and hundreds of years old—presented to their *late* owner by Daimios, for which he was offered, three years ago, five hundred dollars.

In addition the thieves managed to abstract such articles as the following: 2 clocks, new overcoat and sundry other articles of wearing apparel, rings, lockets, albums, boots, shoes, and various miscellaneous articles "too numerous to mention;" the whole being valued at \$1170, as nearly as could be estimated. The house adjoining happens, at present, to be vacant, and there is no doubt that this was taken advantage of, and the premises used as a base of operations. Nothing was heard through the night to lead the occupants of No. 38 to suspect that anything was wrong, and it was not until this morning that the state of affairs was discovered. The police, both European and Japanese, have been communicated with; it remains to be seen with what result. Those who know something about affairs of this sort say that, when a complaint of the kind in question is made to the municipal authorities, the native police are set to work, which "they" think, accounts for the burglars having such a run. At all events it is time some energetic measures were put in force, otherwise the Bluff will become, in place of the very pleasant suburb it is at present, a regular thieves' paradise; in which the knights of the jemmy and the picklock may hold undisputed sway; where they may carry on their nefarious operations with impunity.

To shew that the burglars are no respecters of persons, we may add that our Japanese Interpreter, in place of putting in his usual appearance at the office this morning, sent a note of apology. In consequence of the thieves having paid him a visit last night it seems he is unable to attend to his duties. They took all his clothes!

## GAIETY THEATRE: DRAMATIC PERFORMANCE.

COURSE there was a good house assembled at the Gaiety last night, to greet the Amateurs in their first appearance after a "spell" of nearly three months; and although the theatre was not absolutely full—the number present being short of that of the last performance, in "The Critic" was presented, and a pause in the attendance of ladies being noticeable, we fancy that neither the Amateurs nor Mr. Pauncefort could have any reason to be dissatisfied with the results of last night's representation, which was emphatically a success in every way. This, indeed, was to have been expected, from the very careful training the company have had under their indefatigable manager, Mr. Pauncefort, to whom they had tendered their services, and to whom is mainly due the intelligent production of the excellent play rendered last evening.

When the Amateurs deviated somewhat from the beaten track on the occasion of the production of "The Critic," there were not wanting certain cavillers who sneered at the idea of their attempting so heavy a piece, but the result showed that their audacity (if such it might be called) was justified, by the almost perfect manner in which the piece was put on the stage and played throughout. And now they have been afforded another opportunity of shewing that, under judicious direction, it is comparatively as easy to produce creditably a really good play, as it is to get up a rapid burlesque—depending very often on showy costume or inane witticisms for its effect—or a pointless farce; too often, indeed, a farce, in the dreary attempts at humour and what is supposed to be fun, which characterises nine-tenths of the farces, so called, nowadays presented to the public.

The play of last evening, "Still waters run deep," is a modern drama of home life, and contains nothing improbable, or at variance with what may be met with in everyday life. For many years it has been such a favourite with the public that it may be said to have taken its place amongst the few standard productions which keep their place on the boards, amidst the ephemeral "sensations" of the play-writing hack.

The advantages to be derived from the coaching of a professional man of large experience on the principal stages of Europe and America, such as Mr. Pauncefort was enabled to afford the amateurs in the play in question, is hardly to be over-estimated, and it must have been a matter of satisfaction to that gentleman that his efforts were crowned with the success evidenced by the performance of last night. It is no flattery to say that each one was well up in the study and conception of his part that only the benefits of a more lengthened practice on the boards could be required to render the representation more finished.

The set of the various scenes was particularly admired: that opening the piece, the drawing-room of Mildmay, which also closed it, being very effective.

In the criticising of amateur performances a certain latitude is allowed; and a certain leniency is supposed to be extended towards them. In the case of the Yokohama amateurs, however, some of whom are no novices on the stage, either in this community or elsewhere, there is really little concession to be made. And although some of those taking part in "Still Waters" are comparatively new to the boards, the laborious training persisted in by them, and enforced by their tutor, could hardly have failed to eventuate in anything but a triumph for the latter gentleman, who was really on his mettle to turn out

something alike creditable to himself and satisfactory to the public. Indiscriminate praise, we know, is almost worse than unqualified condemnation, but we feel sure that those amongst our readers who were present at the "Gaiety" will acquit us of any defalcation either way. Not that we mean to say that the representation was absolutely perfect. There were no doubt defects that one couldn't help noticing; but in the main they were unavoidable, and resulted perhaps in the defects of nature and the necessity of adapting the means to the end rather than from the failure to avail of all the facilities for a comparatively perfect production.

Mr. Pauncefort of course played John Mildmay, and it is a character in which he has gained considerable renown since its first production. It is not necessary to say more than that it was rendered with that easy grace which, as a rule, is only acquired by a lengthened experience of the stage. Naturally, it is a quiet part and requires to be portrayed without any semblance of "forcedness," and although there was a slight suspicion of tameness in some of the scenes, we think as a whole it would have been difficult to have improved upon either the conception of the part or its realisation.

The play contains only two female characters, one of which was undertaken by the old favourite, "Miss Herbert." It is really a most difficult thing for a gentleman, however favoured by nature, to sustain the part of a lady, but Miss Herbert (for so it seems she, or he, must be called) comes as nearly as might be expected to the recognised standard, and, to our mind, has improved perceptibly since her last appearance with the amateurs. We do not ignore certain defects, which, as we said before, result from natural causes only, and we can only say that the representation of Mrs. Mildmay on Tuesday last, must have struck every one as excellent.

Lieut. Tracy, who is somewhat new to the stage—at all event in the line he assumed in "Still Waters"—we fancy surprised everybody by his admirable delineation of Mrs. Hector Sternhold, which was at once natural and unconstrained. His voice did not militate against the realisation of the part, and his make-up was in excellent taste; the portrait presenting as a whole just what one would imagine of such a person as the strong minded sister of Mr. Potter. The little graces and gestures peculiar to woman were perhaps not exactly imitated, but otherwise the character was an undoubted success.

The difficult part of Capt. Hawksley was entrusted to a gentleman who, we believe, has not hitherto ventured on one so important, but it was evident he had worked hard at the study of it, and the result was a very fair conception. The rôle of characters of which it is a good example is not only an unthankful one but also far from easy to do justice to, and although its impersonator evidently was aware of what was required at his hands, he perhaps failed to convey the idea of the sublimely cool *insouciance* which characterises the *roué* and confirmed blackleg. Nevertheless the audience evidently appreciated his efforts, as was proved by the applause which followed him on his exit in his principal scene.

Mr. Potter, the comedy part, was immense, and created great laughter. It is hard to steer clear of exaggeration in such a character, but Mr. Vernon managed to keep away from the danger, and if there were any faint suspicious of a little over-warmth now and then they might fairly be ignored, in consideration of the general excellence of the whole. Capt. Walsh's *Dunbirk* was not a large part, but he made the most of it, acting with ease and

gracefulness; a rich brogue lending an additional attraction to the original creation. *Gimlet*, the Detective, had not much to do, coming in only at the death; that little, however, was well done, and the manipulation of the handcuffs where Capt. Hawksley finally gets into his clutches was quite a professional piece of execution. Messrs. Coventry and Brani, as *Langford* and *Markham*, also had but little to get through, and of the rest of the characters it is needless to speak.

A latent tameness observable in the opening of the piece soon wore off, and the affair went so smoothly that there was but little need of the prompter. Capt. Bridgeford was however at his post, as energetic as ever.

The play, which was in three acts, constituted the whole of the evening's entertainment, it being quite twelve o'clock before the green curtain finally descended. The applause of the audience was continued until the performers again shewed themselves and bowed their acknowledgements.

## PROFESSOR VANEK'S ENTERTAINMENT.

IF WE had found an audience composed of 100 or 150 persons at Professor Vanek's introductory performance of 19th instant we should not have been in the least surprised, for it would be difficult to imagine more disagreeable and persistently unpropitious weather than we had last night. But, we confess we were surprised to see the Hall almost packed at nine o'clock, so that later comers were fain to be content with standing room. No doubt there were very many residents on the Bluff especially prevented by the weather from putting in an appearance. Had it been otherwise, we fancy it would have been somewhat of a puzzle where to put them; for the Hall certainly could not have held more than it contained when the entertainment commenced. Unless indeed the subtle conjuror who managed to draw such a crowd had means of *diablerie* at his command wherewith to provide sitting accommodation for the overplus, or at all events persuade them, mesmerically or otherwise, that they were really and truly comfortably seated.

When the curtain drew up and the Professor appeared, he was greeted with a hearty reception; there being many present who remembered the pleasant hours for which they were indebted to him six years ago.

Those who had not seen him had of course heard of his marvellous feats, and he commenced his performance with the assurance that he possessed the sympathy of his audience to the fullest.

The tricks presented in the first part of the entertainment, though by no means new, were so neatly and gracefully performed as to secure an invariable meed of hearty applause. The first was a clever card feat. The audience were requested to select cards, these were collected by the Professor and placed in a sort of young blunderbuss, which being loaded was fired in the direction of a stand, somewhat in the shape of the star jets used at gas illuminations, and having six arms formed of slender rods of brass. Presto! there were the six cards selected by the audience at the extremity of the rods; how they got there was the mystery. About that time someone perceived a strong smell of gas. Perhaps it was sulphur! The next feat was the dexterous transposition of a wine bottle and glass, placed on different tables, to their reverse positions, the Professor now and then dispensing wines at call from both bottle and glass, which latter must have been filled by some mysterious agency, as the magician certainly did not touch it, and the

vessels were both covered by small envelopes of wood. A "gentleman of the name of Potter" who volunteered to test the quality of the fluid dispensed, declared that what he had was Port wine, and most excellent liquor at that. *He* knows what a good wine is. Various interesting feats followed in rapid succession; such as the transmission of three very lively canaries from a transparent glass box to the cage whence they had been taken, which hung from the ceiling, suspended by cords; the passing of a number of watches, borrowed from the audience, from out of a box tightly held by a terrified youngster, to a tablet on a table some distance off; the production of articles of baby linen, a wig, pretty baskets, and nick-nacks of various kinds from the "bell-topper" of a gentleman amongst the audience, and finally, the extraction from the same receptacle of a perfectly inexhaustible supply of sweetmeats, which were distributed to those present.

An interval of twelve minutes was observed between the first and second parts; the latter consisting of a series of very beautiful dissolving views of a great size and most exquisite finish, with mechanical effects of a lifelike character. One scene, a view of Milan cathedral, had the accompaniment of distant organ music, producing a very good effect. Then followed a collection of exceedingly droll caricatures, quite life-size, which created intense amusement.

The entertainment was brought to a close by an exhibition of the beautiful changes of the chromatope, and every one seemed to be delighted with the evening's amusement.

The next performance will take place tomorrow night. We fancy it will be necessary to ask people not to go, rather than the contrary, as there is sure to be a crowded house. However, it would be well, perhaps, not to "stand on the order of one's going, but go early"—the Professor having some rare feats in reserve and particularly the decapitation trick.

### THE TWO MILE RACE, (By "ATHLETIC.")

The leaden sky and cold wind of Saturday afternoon did not prevent the attendance of a large number of spectators at the Athletic Club's running track to witness a two mile race between two of its members, Messrs. A. H. Dare and J. Jaquemot, Jr. for a Cup.

Little chance was afforded of seeing the condition of the men, for they no sooner left the dressing room than they toed the mark and were away, Mr. Dare moving with more elasticity than his opponent. To complete the journey they had to travel eight times round the track, and below will be found the time at the end of each round.

Mr. Jaquemot had the inside place at starting, but lost it before reaching the dressing room, where Mr. Dare took a decided lead, evidently intending to cut out the work; finishing the first round, twenty yards ahead, in 1m. 20s.

During the second round, Mr. Dare increased his lead, and was 50 yards ahead when he finished, the time being 2m. 45s. The same order was maintained during the third lap, Mr. Dare gradually increasing; Mr. Jaquemot going steadily, but not with the same freedom as his opponent, and he was a long way astern when the leader finished the third round, which he accomplished in 4m. 7s.

Both kept going as in the previous round until a little beyond the dressing room where Mr. Dare increased the pace, leaving his man nearly half a round behind at the end of the fourth round and first mile—Time 5m. 35s.

After this Mr. Dare eased down a little and

Mr. Jaquemot decreased the gap a few yards; the former finishing the fifth round in 7m. 7s.

Sixth round—Mr. Dare, still going easily, allowed his opponent to further decrease the gap, but, coming down the home side, he shot out and finished the sixth round in 8m. 38s.

In the seventh round, the positions were not altered, and the leader finished in 10m. 8s.

Eighth and last round—After passing the stand Mr. Jaquemot shot out, and had no show of catching his man, who, on reaching the last turn, spurted out and finished in good style, doing the two miles in 11m. 36s. his opponent being half a round behind.

The time was not good, but, considering that the winner was not called upon to put his best foot first, and could have finished in a walk had he liked, there is no doubt that, if drawn out, he would be able to cover the distance in 10 minutes, or under.

MONDAY 16th inst. was observed as a holiday by British residents, in celebration of the marriage of H. R. H. the Duke of Edinburgh with Her Imperial Highness the Grand Duchess Marie of Russia; the Consulate and Court being closed, and business mainly suspended.

At noon the Battalion of Marine Lt. Infantry stationed here fired a *feu de joie*, in honour of the event, at the Camp, His Excellency Sir Harry Parkes, the Russian Minister, the Governor of Kanagawa, and other official personages being present. The troops afterwards marched past, and saluted; some very ably executed manoeuvres bringing the celebration to a close. In the evening His Excellency Sir Harry Parkes entertained a distinguished company at dinner, which was followed by a "At Home," the various Foreign Ministers being present. The grounds were prettily illuminated, and, throughout the day, the Russian and British Legations and Consulates, the P. & O. Co.'s flagstaff and the men-of-war in harbour were gaily decorated with wreaths, flags and streamers. The *Thisle*, the only British war vessel in harbour, was profusely adorned. The day was beautifully fine.

Two more cases of theft by native servants are reported. In the one instance the thief got away with several coats and a stock of boots, and has not, as yet, shown up. The other "nimmer" was caught red-handed, and compelled to carry the articles appropriated to the Saibansho, where he received his deserts this morning. He was employed by Mme. Mantelin at No. 174.

It is to be hoped that his case may serve as a warning to others of the light-fingered gentry, so common in his class, but we fear it will have no effect in the prevention of similar larcenies, which have been very frequent of late.

NOTWITHSTANDING THE apparent need of greater police protection against theft and burglary, on the Bluff and in the Settlement, we hear that the recently appointed Governor of Kanagawa has inaugurated a system of retrenchment in the Ken, the first-fruit of which is the discharge of over one hundred native police, from the Municipal Station, the Bluff, and elsewhere around the Settlement.

In addition, a very large number of supernumerary bantos and hangers on—have been paid off from the Saibansho; the salaries of those retained being augmented from the saving effected.

ON DIT that a Yokohama speculator has contracted with the Government to supply 200 ammunition waggons at once.

THERE OUGHT to be a special policeman detailed nightly for the cemetery. Again have several of the graves been deprived of the iron railings which surrounded them. It is a small matter perhaps as regards the value of the material stolen. Still we look upon it that a fellow who would rob a cemetery is as vile as the vilest, and the lowest of the low. We call upon the authorities to prevent these robberies.

THE SATSUMA, Kochi, and Hizen men belonging to the fleet, have begged to be allowed to resign, and return to their country.

The seamen of the fleet have expressed themselves strongly that it is hard that, after being drilled and taught their duty as men-of-war's men, they are required to serve themselves, or convey soldiers to fight, against their own people.

YAMAO KOBUTAIYO and Oyeno Gaimu Shojin lately visited Takashima Colliery, and are much satisfied with their inspection.

THE TELEGRAPH line, northwards, has been completed so far as the post station Utsunomiya, Shimotsuke, and it was opened for messages on the 1st of this month.

ON THE 1st of this month, the representatives of each district in Kumagaye Ken met in the temple Anyo-in—which has been appropriated for their purpose temporarily—in the post town of Honjo. The Kenrei was present, and a great many things were brought forward for discussion.

\*\*\* This appears to us of special interest, as it is the first report specially received by a newspaper that the popular representative assemblies in Fu and Ken are commencing their duties.

### GOVERNMENT TELEGRAM. FUKUOKA KEN.

Left Fukuoka, 11 A.M. February 11.  
Arrived Tokei, 5.40 P.M. " "

THE SAGA insurgents propose to attack the city of Tokei as soon as they can complete their arrangements.

The Samourai of this (Fukuoka) Ken conduct themselves patriotically, closely abiding by the late proclamation. So put your mind at ease.

THE JAPANESE steamer *Hokai-maru* (*Zadkia*), which was in process of loading for Hakodate, has suddenly stopped taking in cargo, and that already put on board has been transhipped to a smaller steamer, the *Negapatam*. To some this news may appear of no moment, but those already somewhat informed in the matter are engaged in conjectures as to whether her destination may not be toward Tsussima. Japanese passengers intending to proceed southward, per P. M. Co.'s boats, or otherwise, are required to produce Government permits, or passports, native police being stationed on board the *New York*, outward bound to-day, to enforce these regulations. This is significant, and means—what? We shall hear, no doubt, in a few days.

A GOVERNMENT order has been sent round to the Japanese newspapers to-day. It is signed by Daijo Daijin Sanjo Saneyoshi, and forbids the Government Departments to furnish any news concerning the Saga disturbances to any newspaper. This may interfere in some measure with our giving such early intelligence of the affairs down south as we had hoped to continue to do, but doubtless the only difference will be a little delay.

## GOVERNMENT TELEGRAM.

Left Fukuoka, 9th Feb., 1874, 25 minutes past 8 A.M.; arrived Tokei, 9th Feb., 1874, 15 minutes past 10 A.M.

"The Korean war party in Saga, assembled in the old School. The Feudal party assembled in the monastery of Horimbo. Both parties together number about 2,500. Besides these, there is a party of jo-i (anti-foreigners).

"On the night of the 5th instant the sanji of Saga Ken went to Mitsuma; and the gon-sanji of Mitsuma yesterday went with him to Bakan." This (Fukuoka) Ken is quiet. The question asked by Tatsuké Kenrei requires a prompt answer."

## FUKUOKA KEN TELEGRAM

Despatched .. 16th Feb., 10.30 a.m.

Arrived in Tokei .. 12.35 p.m.

Last night, at midnight, fighting commenced between the samourai of Saga Ken and the imperial soldiers.

SHIMADZU SABURO left for Kagoshima yesterday in the Japanese Mail steamer *Senri-maru*.

## LATEST INTELLIGENCE.

The disturbance has extended to Shikoku and various parts of Kiusiu and Hirakawa. The soldiers when called upon to fight against the rebels laid down their arms.

## FUKUOKA TELEGRAM.

17th February, 1874.

Forwarded 1.50 P.M.

Received 5.00 P.M.

On the night of the 15th, half of the regiment of Kumamoto Chindai escorted the Kenrei of Saga Ken by sea to the castle (formerly Nabeshima's headquarters). The Saga samourai surrounded the castle and attacked the soldiers, who were helpless, their comrades who were to have come by land, not having arrived.

We wait for Okubo Kiyo. We will act to the best of our judgment under the circumstances.

THE *Hôchi Shimbun* says of the affairs in Kiusiu, that information has been received of disturbances in Saga Ken. The party (discontented) has now increased to the several thousands, and spread over the neighbouring Ken, so that it is gradually becoming stronger.

There are in Saga Ken three parties—the Seikanto, Hôrinto and Chiusanto. The two first seem to be opposed to each other:—the first wishing to approach Tokei with the view of ousting the present ministers, and then going to Corea; the Hôrinto will protect the Emperor, but they want to come to Tokei to drive out the ministry. The Korean business is not of much consequence to them. The Chiusanto offer to join the other two if they will but settle their difference and agree on a defined line of policy.

Yeto Shimpei, one of the late Sangi, arrived just at the time of the outbreak; and the samourai at once went to him, and asked his opinion on what they had done? He answered them favorably, and told them that in a few days Soeshima would arrive; at which intelligence they expressed their pleasure, shouting for joy. Ever since they have protected Yeto, day and night, with a guard of 50 men.

The editor of *Hôchi Shimbun* thinks that Yeto is apparently yielding to them, that he may gradually calm their excitement, and restore them to tranquillity.

ON THE 11th instant a large mirror which has hitherto been in the temple of Mochiwoka, in Hiuga (Kiusiu), was solemnly placed in the Nishitori-koyé temple, Asakusa. There was a large procession of Shinto priests with fine standards, followed by a great number of Fuji-ko (Fujiyama pilgrims).

YONAGEN SHIMPO, a Loo-Chooan who has been for some time in Tokei, has been appointed to a post of responsibility in the Gaimusho (Foreign Office).

ON THE 13th instant the following telegram was received from Yamaguchi Ken (Choshu).

"Saga Ken is troubled, and the disturbance appears to have been extended to Fukuoka. Yamaguchi Ken people are excited; but shew no outward signs yet. It is reported that the Saga Ken have communicated with them. The day before yesterday, we sent general information to the government in Tokei; but we have also sent Chihara Nobuyuki with all details in writing. He will arrive in Tokei on the 20th. We use our efforts, day and night to allay popular excitement. The Saga Ken Sanji came here to consult us as to the best way to tranquillize the discontented, but no good plan was discovered. This should be reported to Sei In and Naimusho. We await telegrams as to the state of Tokei."

OKUBO (Sangi) goes down to the South as Commissioner from the Mikado to the disaffected people. He takes with him a strong battalion of Marines; as other regiments have refused to go.

CEMENT IS NOW made in Tokei, which the Japanese say is superior to Roman or Portland Cement, and which can be sold at 4 to 5 yen a cask, whereas the foreign cement is \$6 to \$8.

DURING THE last seven years there has been published in America a monthly illustrated journal called "The Aldine." Those who have seen it must agree with us, that as a journal of Art it is unsurpassed; whilst, considering the quality of the engravings with which it abounds; the paper on which it is printed; the interest of its literary matter; and the excellence of its typography, the low price at which it is published renders it a marvel of cheapness. We have before us the Christmas number of 1873. It contains no less than six full page engravings, four three quarter page, seven half page, and nine smaller ones; some of them in the highest style of art, and all of them of sterling excellence. A yearly volume of this publication must be a delightful book, to wile away an occasional hour in the pleasant society of artists, whose works in this far away land we are little likely to see. But besides the twelve monthly numbers, there are a pair of fine CHROMOS presented to all yearly subscribers, those for the year 1874 being from paintings by Moran, an American artist, entitled the "The East," and "The West."

We believe that we are not only furthering the object of the praiseworthy artistic aims of the publishers, but doing a service to our readers in thus prominently noticing the "Aldine;" and in further mentioning that Messrs. F. R. Wetmore & Co., have been appointed the agents for it in Japan.

SOME TIME ago, before the attack made upon him, the Udaijin Iwakura declared his intention of visiting Yezo and personally looking into the work done by the Kaitakushi. The visit was to have been made in the spring, at which time the officials return from Tokei to the Hokkaido.

It is not known whether his late experience with assassins has changed his mind, but, having experienced the benefit of seeing things for himself abroad, he doubtless wishes to carry out the same line of policy at home. The Yezo scheme, and the past attempts to develop its resources, should be examined by some high officer of the government before another long lease of life is given to the Kaitakushi, and the prevailing bad impressions concerning it should be fairly examined into. Thus far it has been freely criticized by all sorts of people, both competent and incompetent. Very few people have ever seen any of the actual doings of the foreign or native officials on the island itself, and even the printed accounts of visits there are said—by those who have seen all sides of the question—to be rather one-sided. Considerable feeling exists among the Japanese officers of the Kaitakushi relative to the recent published accounts of travels in Yezo by one who is acknowledged by all to be a sharp observer, though some declare that all was not seen that might have been. We are glad to know that such a visit, by one of the highest Japanese officials, is seriously spoken of. If actually made, the question of the efficiency or inefficiency of the Kaitakushi will be looked at with eyes unprejudiced by rivalries or jealousies of a purely national character.

SINCE THE Bureau of Posts has been transferred from the Okura Sho to the Nai Mu Sho the mails have gained in promptness and certainty, rather than lost by the change. Among the improvements is the employment, in Tokei, of a postal wagon, by which the mails from Yokohama are quickly transferred to the central office. The redistribution is made, and the bags for the various divisions of the city are carried to the sub-offices, by mountain postmen. The service, even between Yokohama and Tokei is by no means perfect yet, and newspapers, especially, occasionally fail to reach their proper *destinataires*. One reason of this is the policy of changing the carriers at regular intervals, or at least so often that the changes appear to be regular and expected things. Whether this arises from the fact that the salary of the carriers is very low, or whether a large number of men are being regularly educated to their duties, in anticipation of the time coming when all mail business whatever shall be under the control of the Japanese, or whether, again, "rotation in office" is the settled policy of the chief of the bureau is unknown. We hope it all works for the best, though we cannot see the wisdom of it. A man who has to deliver such precious things as letters, and such eagerly expected necessities as daily newspapers, cannot know his duties too thoroughly, and, while the system—if system it be—of changing the carriers so frequently exists, perfection, or approximation to it, cannot possibly be attained. The present status of postal business is such that all its affairs can be managed by a bureau. The time may not be far distant, however, when the present bureau may become a Department, with its Minister, like the others. Before that time comes, however, we should like to see a much closer approach to perfection than has yet been reached. So long as any of our subscribers fail to receive, on an average, three papers a month even, when properly directed in English and Japanese, and postage fully paid (a fact in several instances) we cannot say that the postal arrangements in Japan are yet as perfect as it is quite possible to make them.

THE FOLLOWING has been published by the Chiji of Tokei Fu, as having been received from Sanjo Daijin. In reading it, care must be taken to separate the chaff from the wheat. "Information has been received that the

samurai of Saga Ken have openly rebelled since the end of January, on the subject of the Korean expedition, and the restoration of the Feudal system. The government being firmly determined, has sent Naimu-kiyo Okubo Ichizo, and several other officers to the west to put them down. Naval and military officers, with a sufficient force, and Judicial officers, were ordered to follow, and left on the 14th instant; so they will be quieted in a few days. Though there are reports that Saga Ken samurai have tried to excite popular feeling on the above subjects in other clans, none of the people in the neighbouring Kens agreed with them. The Kagoshima samurai, in particular, have been very quiet since Saigo has been amongst them, although they were somewhat excited before. This was the report of Naimu Daijo Hayashi who was an eye witness; and besides, reliable information of the quiet of this Ken has been continually received.

Although at one time the Kochi Ken (Tosa) people were said to have been excited, yet repeated examination proves that much of this is a mistake, and at present the Ken is perfectly quiet.

The persons who committed the outrage on Iwakura Udaijin were captured within a week and have confessed their crime. As, however, there are still some fellows who were accomplices, strict search must continue to be made; and this must be in every Ken. The Udaijin was very slightly wounded, and is recovered now. In a few days he will return to his duty.

Information having been received that some part of Kiushiu is disturbed, Jiunii Shimadzu made application to His Majesty that he should be sent to quiet them. As he was actuated by pure patriotism, the Emperor complied with his request. He subsequently left for Kagoshima. There may be some who imagine that Shimadzu has gone for a bad purpose; this therefore is declared to remove this apprehension.

Tokei is very quiet, and since the misfortune of the Udaijin the officers have been most industrious. The newly raised police are gradually arriving, so protection is perfect. The object of government is unchanged; and the Ken have been ordered to increase the vigilance of the police, that public safety may be relied upon.

In some districts, scoundrels sometimes excite the people by spreading false reports; and it is made much of even if a high officer moves from his place. Each Ken should strongly guard each main cho, and be careful to let the people understand their duty."

SANJO SANEYOSHI, DAIJO DAIJIN.

#### NI-IGATA.

January, 22nd 1873.

LAST WEEK a woman was executed for the murder of her husband, and her head was exposed for three days in front of the jail.

THE SANJI or second officer of the Ken, M. Matsdaira, has been recalled to Yedo. He had been here about two years and was very popular. It is said he will have a good appointment in the capital.

SNOW HAS fallen during the last three days, but it is now thawing.

THE SALMON catching season is now finished; it has been an exceptionally bad one.

February 2nd, 1874.

A native paper has been started; it appears every alternate day. It is not very popular with the shopkeepers, as its first three numbers were entirely filled with articles denouncing their sharp practices, and this it did in a very decided way, in one very bad case giving the name and address of the person accused. The price is twelve tempos a month.

A part of the old Daimio's Castle at Nagakoka is now used as an oil refinery.

The pig mania is on the increase, and a Company has been started here to purchase and breed pigs. By a town rule they must not be kept in the Settlement.

A European doctor here was called in to see a native woman, who was said to be suffering from "Kama-itachi." Dr. Hepburn explains this as "a sickle weasle, an invisible animal, supposed to inflict wounds on people." The patient was found lying down with a severe clean cut, such as might have been caused by falling on some sharp substance, but to all questions as to how she came by the wound the only answer was "Kama-itachi". By dint of questioning the servants, it appeared the patient had come down in the night to go out to the back, and had fallen, but had not noticed the cut until she got back to her room. On examining the yard it was found paved with stones that would easily cause such a wound, and most likely for reasons of her own, the blame was laid on the Kama Itachi, but the faith in it has been severely shaken since this explanation.

During the last year 4,696 ships entered Niigata, representing 70,904 tons. 4,881 left representing 74,007 tons. The junks range from 20 to 1,600 kokus burthen. This includes the American steamer *Ariel* which came here three times, the Japanese steamer *Atlanta* which came twice and the *Bahama* once. The rice export is the largest for some years past.

The weather continues fine and dry, and, as yet, there is no snow on the ground. Houses are being built in great numbers, and large tracts of swamp land filled up for building purposes, great numbers of coolies and prisoners being employed in this way.

## The New York Agent

FOR

THE "JAPAN GAZETTE," published every evening in Tokei (Yedo) and Yokohama;

The "Japan Gazette Mail Summary," published for every United States Mail Steamer;

The "Nisshin Shinjishi," the Official Organ of the Japanese Government, published daily in Tokei, in the Japanese language;

The "Nippon Advertiser" a weekly advertising sheet, published in Japanese, and distributed gratuitously in all parts of the Empire — guaranteed circulation 5000 copies;

And,

The "Far East," a monthly Journal, published in Yokohama, illustrated by photographs;

## GRAND HOTEL

No. 20, Yokohama.

THE above fine Hotel has lately been opened to the Public, and offers great advantages to Residents and Tourists.

It is situated in the best location in Yokohama, at the extreme end of the Praya or Bund, and view from it, for marine scenery, is unsurpassed any part of the world.

The Hotel is replete with every western convenience and accommodation, and may safely be said to be, without exception, the finest Hotel in the East. It contains splendid Suites of Private Apartments, most elegantly furnished, after the first European and American styles; Ladies' and Gentlemen's Sitting Rooms, Sitting Rooms, Reading Rooms, Private and Private Dining Rooms, and commodious Rooms.

There is a fine Billiard Room attached to the Hotel, with English and American Tables, by the very best makers.

The Cuisine is under the superintendence of a accomplished French chef, with able assistants, and the table is furnished with every luxury. Only the best of the best brands provided.

Experienced European Stewards are employed to look after the well-being and comfort of guests, and thus save them the many little annoyances to which residents in the East are subject, from the ignorance of native servants.

A European female is retained specially for lady guests at the Hotel.

The Hotel will really (despite the hackneyed phrase) be found to contain all the comforts of home, with luxuries that can never be found in any but establishments on a large scale.

A European will always attend the arrival of vessels, and take charge of the Baggage of Passengers, thus saving them the trouble and inconvenience of passing it through the Custom House.

Every information afforded to Travellers wishing to visit the interior of the country, and they can be supplied with experienced Native or Foreign Guides.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

In our last issue of the Mail Summary, dated this day month, we reported the Import market as generally dull, business being materially affected by the New Year's holidays, which are now observed by natives according to the new style. Since then the festivities of the Chinese New Year have somewhat tended to shackle transactions, and, at the moment of writing, business has not yet been fairly resumed. Beyond this, and chiefly, the exceedingly important intelligence—foreshadowed in our last—respecting the rebellious risings in Kinsiu and other provinces in the South has had very much to do with the restriction of business to the narrow limits to which it has been confined. As a consequence, nothing has been done in the way of speculation, and only lines for immediate requirements have been placed, and then at low figures. In face of all this, vessels continue to arrive with heavy consignments, and stocks are assuming proportions by no means satisfactory to those anxious to quit in order to make room for further anticipated shipments.

Altogether prospects are gloomy, and, in view of the troublous news which daily continues to arrive, we fear that our next advices will not record any improvement in mercantile matters.

SHIRTINGS, and COTTON GOODS generally, are difficult to get rid of, and prices are lower, whilst actual transactions have been very small. In YARNS some little business has been done at less prices than last quoted. WOOLLENS are absolutely stagnant, and quotations below quite nominal. Our stocks of IRON, already large, have been augmented by recent arrivals, and prices remain nominally at last figures; except wire, which is worth less money. Nail rod has been quitted at unsatisfactory figures, and stocks are large. Nothing quotable has been done in other metals. Two cargoes of Formosa SUGAR are to hand since our last, the *Rebecca's*, 3,730 baskets, fetching \$3,77½ per picul. The *Schiller* brought 9,100 bags. Other sorts remain at about former quotations, with little doing. RAW COTTON is down, and KEROSENE enquired for, holders shewing some inclination to hang back for even higher rates.

Articles.	Price.	Remarks.
Cotton Piece Goods.

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—Since our last we have no improvement to note in the condition of the Silk market, and prices of all sorts have receded as much as \$30 to \$50 per picul. Good quality Hanks are hardly to be had, and a very great deal of that offered has been rejected.

The cold weather has put a stop to reeling, and arrivals from the interior have been unimportant; producers asking impracticable prices. There is, nevertheless, a fair demand for really good Silk.

The stock has been brought down to 2,000 bales; the greater portion of which is hardly marketable, except at considerably lower figures than even the present low quotations. European advices are much of the same tenour as noted in our last, prices having still a downward tendency. Settlements here are of an unimportant character.

**TEA.**—Our Tea market has on the whole been rather more tranquil this month than as reported by last American mail which left this on the 24th ultimo, notwithstanding which settlements for the period to date amount to nearly Piculs 8,000.

The demand continues on Medium to Good Medium parcels, of which the market is nearly stripped, and some few lots of "fine" to finest amounting in all to Piculs 800 of these latter grades.

Stocks in first hands are limited, and consist chiefly of rejected parcels. Supplies come in slowly as native holders seem anxious to maintain rates.

Our Export for Season to date amounts to some 10,522,645 lbs. against corresponding period last season of 10,302,994 lbs. and it now seems very probable that the total Export from Yokohama will reach 12,000,000 lbs.

**SUNDRIES.**—The minor items of native produce remain pretty much at last quotations; perhaps at slightly lower figures. Business done has been of little importance.

Description.		Prices per Picul.		Remarks.

 Feb. 13, Brit. ship *Fiery Cross*, Bates, 694, for Kobe, general, despatched by Van Oordt & Co.  
 Feb. 14, German barq. *Forget Me Not*, Rost, 231, for Chefoo, ballast, despatched by Captain.  
 Feb. 16, Brit. barq. *Vanguard*, Lucas, 632, for London, general, despatched by Wilkin & Robison.  
 Feb. 17, French str. *Volga*, Flambeau, 961, for Hongkong, general, despatched by M. M. Co.  
 Feb. 18, Swedish 3-masted schr. *Anna*, Linddull, 164, for Takow, ballast, despatched by Captain.

## PASSENGERS.

Per P. M. S. S. *Japan*, for San Francisco.  
 Mrs. M. S. Holmes, Mrs. S. Mayers, Messrs. A. Jacobs, M. Mervay, Jose, Lujares, W. Wanrabe, McDonald, U. S. N., Hailner, J. S. Gamble, J. C. Porter,

J. A. Reed, Rear Admiral Parrott, Jas. Stiles, A. H. Ferguson, Thos. Weitzel, A. Joshua, R. W. Phillips, S. Luproil, Mr. Wilkins and Wife, and Jas. Chalk.

## FOR NEW YORK.

Mr. Colgate Baker, Wife, 4 Children and Nurse, Mr. A. H. Macomber, M. Bazing, D. H. Nichols and wife, Mr. O. S. Fearon, D. S. Gilbert, A. C. Elliott, Lt. Commander Philip, U. S. N., and Lt. Commander Nelson.

## FOR EUROPE.

E. A. Schoyer, Mr. Fall.

Per Am. str. *New York*, for Hakodate.

Rev. Mr. Harris, Mrs. Harris, and 17 Japanese.

Per French str. *Menzaleh*, from Hongkong.

Père Sacconi.

Per Am. str. *Golden Age*, from Shanghai.

Messrs. E. Bibby, Yamao, Ishiaashi, Keata, P. A. Ramie, J. G. A. Godfrey, Woyeno, wife and child, Yoshikawa, R. V. Boyle, W. Rae, 6 Japanese, and 2 European, 21 Japanese, 1 Chinese in the steerage.

Per Brit. str. *Orissa*, from Hongkong.

Mr. and Mrs. Simous and children, J. B. Yerry, Takeda, Mr. H. Greig, Miss Wright, Messrs. Grubb, and Hall, and 3 Chinese.

Per Brit. str. *Orissa*, for Hongkong.

Messrs. J. Maltby J. Pinel, James Smith, Thomas Cross, and 12 Chinese.

Per Brit. str. *Delta*, from Hongkong.

Mr. and Mrs. Hughes, Mrs. Williams, Mrs. Titjen, Messrs. Longham, Ritchie, Roderiques, Perpetua, and Goff.

Per Am. str. *Costa Rica*, for Hiogo.

Mrs. Titjen, Chas. Wiggins, J. D. Carroll, R. M. Greaves, Wm. Goodfellow, P. A. Ramee, 3 Japanese, and 43 in the steerage.

## FOR NAGASAKI.

F. S. Jacobs, Mrs. Martin and 3 children, Bishop Petitjean, and 25 in the steerage.

## FOR SHANGHAI.

Miss Elizabeth Bernard, Miss Blanche Elliott, Rev. H. Ambruster, H. P. Andrew, V. M. Vickers, N. P. Kingdon, and 7 in the steerage.

Per French str. *Nil*, for Hongkong.

M. Medan, S. L. Ginsburg, Lee Sing, Sear St. Mathilde, M. Pochge and wife, M. Piconet, Mademoiselle Theresa Négroté, and M. Goltz.

Per P. M. S. S. Co.'s Steamer *Alaska* from San Francisco—Cabin

## FOR SHANGHAI.

Rev. S. A. Davenport, Messrs. Jules Benavider, G. R. Hall, T. Hall, C. Roberts, P. B. Hope. Steerage—Chung Mau, and J. Weed.

## FOR YOKOHAMA.

Miss E. Eyre, Miss Anna Fredericks, Captain Banfather, Messrs. W. D. Richardson, F. Knoblauch, T. Hogg, S. W. Jones, G. A. Wadley, Kemisson Hatton, Lamoni Shissi, Yohachi Shebyamae, Skerchi Oyame, Shingsin Tokomo, Rigi Koe, Ingo Monata, Tanctano Yamas, S. Ichique, Y. Tanaka, Goro Mogame, Chohachi Laicho. Steerage—S. Kakehi, J. Vanek, Y. Nishikikossi, G. Rama, T. Oshawa, Y. Kusaki, Jos. Vanek, Miss Vanek, J. Eazuka, M. Rona, W. P. Brown, A. Roos, A. Karahashi.

## FOR HONGKONG.

N. Mastrodomenico, and 589 Chinese.

Per P. M. Steamer *New York*, from Hakodadi—Mrs. Dr. Eldridge, infant, and Nurse, Mr. Atachi Yezo. 25 Steerage.

Per Am. str. *Alaska*, for Hongkong.

T. W. Richardson, S. W. Jones, G. A. Wadley, H. Hart, and family.

Per Am. str. *Golden Age*, for Shanghai.

Rev. H. H. Wolff, J. B. Young, Miss Friedricia Mr. and Mrs. G. M. Remedious, Mr. Smith, C. Illies, 5 Japanese, and 95 in steerage.

Per French str. *Volga*, from Hongkong.

Mr. and Mrs. Dallas, M. Darbier, Koutta, Takchoutz, Ogota, Odda, Pozau, and Mr. Faber.

Per Brit. str. *Delta*, for Hongkong.

Mr. C. H. Coaster, Miss Winsor, M. Borg, and 7 Chinese.

Per P. M. Steamer *Volga*, for Hongkong:—Mr. & Mrs. Gerard, Messrs. E. Schnell, Richter, Thos. Cochrane Bair, and child, A. Veron, A. Geran, Thevenier, A. Kai, A. Chan, de Sonret, Eutra, 1 Sergeant Major, 79 Corporals and Soldiers.

Per Am. str. *New York*, for Shanghai.

Messrs. W. Galway, C. S. Tanogue, W. E. Clark, E. Fischer, F. Crighton, Rev. Dr. Davenport, Mr. and Mrs. Bradfield, and 10 in Steerage.

## REPORTS.

The German barq. *Lotte* from Hamburg, reports favourable weather in the Atlantic, rather rough and stormy off the Cape, with the usual strong winds while running the easting down. Came up through Dampier Straits, after trying to get through Macassar; where they met with continuous calms. On nearing the Japan Coast, met with very stormy weather and a heavy sea. Arrived here on the 3rd inst., 160 days from Hamburg.

The Brit. str. *Vasco da Gama* reports strong head winds during the passage.

The Brit. brig *Georgina* reports experienced heavy N. W. and westerly gales. On the 19th, had a very severe gale from the westward.

The P. M. S. *Great Republic* left San Francisco Dec. 1st at 12.15 P.M. To December 4th had strong gales from N. W. and heavy sea; then to Dec. 9th light winds from W. and heavy swell. Dec. 10th lat. 30.09, W. longitude 149.09 W., communicated with s.s. *Alaska*, all well; then to Dec. 17th, light variable winds and calms. Dec. 19th, lat. 30 10 W. long 179.35 E., communicated with str. *China*, all well; then to December 29th fresh breezes from W. N. W., and heavy swell. Arrived at Yokohama Dec. 29th at 2.15 P.M.

The Am. str. *Golden Age* reports left Shanghai January 17th, 9.20 a.m., arrived at Nagasaki, January 19th 6.29 a.m., experienced strong N. W. gales, with very heavy sea throughout the passage. Left Nagasaki, January 20th 0.16 a.m., stopped at wreck *Relief* near Ohree Channel 7.47 a.m., took on board 27 passengers, the purser, baggage, 12 packages of treasure and 5 bags U. S. mail-matter. 1.06 p.m., proceeded on our way back to Nagasaki, where we arrived at 6.54 p.m., landed passengers, treasure, mails, &c., and left again Jan 21st—11 a.m., stopped and communicated with wreck *Relief*, 7.25 a.m., started again on our voyage, 7.40 a.m., passed a French frigate 11.14 a.m., bound south. Arrived at Hiogo January 22nd, 5.59 p.m., Had pleasant weather, from Nagasaki. Left Hiogo January 23rd, 5.19 p.m., very pleasant weather, smooth sea. Arrived in Yokohama January 25th, 6.47 a.m.

The P. M. S. S. Co.'s Steamer *Alaska*, 4,012 tons, H. G. Morse, Esq., commander, left San Francisco on Thursday Jan. 1st 1874, at 0.15 p.m., with 631 Passengers, 706½ tons of Freight, 38 pkgs. U. S. Mails, and \$603,007.00 in Treasure. Jan. 1st to Jan. 3rd strong N. W. gales, thence from Jan. 11th to Feb. 2nd successive hard gales, with heavy head sea and swell from S. W. to N. W., thence fine weather to Yokohama, Feb. 5th, 5.47 p.m., all well on board. Freight to Yokohama, 56½ tons.

The P. M. Steamer *New York*, left Hakodadi 0.30 P.M. on the 4th instant, arrived at the anchorage at 1.0 p.m. to-day, reports fine weather throughout the passage.

The Brit. ship *Dorothy* reports nothing remarkable to have happened during the passage till off the coast of Australia, on 23rd December, when a heavy sea broke on board, carrying away bulwarks, and staying in the front of the poop, the water deluging the cabin, and damaging a great quantity of stores. Passed South Cape of Van Dieman's land, December 25th; and crossed the Equator in the Pacific, January 18th, in Long, 167 deg. East.

The German barque *Schiller* reports strong northerly winds during the passage.

### "Japan Gazette" MAIL SUMMARY.

FROM 23RD FEB. 1874, TO 9TH MARCH, 1874.

#### BIRTH.

On the 5th March, at Yokohama, the wife of Mr. JOSEPH L. MAYES, of London, gave birth to a son. The father, being in California, and Nevada papers please copy.

#### MARRIED.

At the British Consulate, Shanghai, on the 21st inst., and afterwards at Union Chapel, by the Rev. Jas. Thomas, ALEXANDER GRANT MERRILEES, *North China Herald* Office, to ELIZABETH BELBIN, of Salisbury, Wilts, England.

At the British Consulate, Shanghai, on the 21st inst., and afterwards at Union Chapel, by the Rev. Jas. Thomas, WM. THOMAS MILLEY, *North China Herald* Office, to MARTHA BALDWIN POLTON, of Reading, Berkshire, England.

#### DIED.

On the 23rd February, at Yamato Yashiki, Yedo, A. J. CRUICKSHANK, aged 26 years.

At the Yokohama General Hospital, Feb. 28th, at 6.30 A.M., ROBERT DEVINE, a native of Germany, aged 34 years.

On the 3rd March, PETRUS ABEL, aged 38 years.

On the 4th March, FILOMENA MARIA, the beloved wife of D. L. Noronha, aged 27 years.

At the Yokohama General Hospital, March 6th, at 9.15 p.m., of disease of heart (and consumption,) Alvino von Brussa, a native of Germany, aged 23 years.

OUR LAST Mail Summary was despatched on the 23rd ulto. by the P.M.S.S. *Great Republic*. Since then the following Mails have arrived :—

	DUE.	ARRIVED.
The French Mail	23rd Feb.	24th Feb.
„ English „	1st March	27th „
„ U. S. „	4th „	27th „
„ French „	7th „	8th „

Our latest public telegrams are to the 28th. February.

### Summary.

IF WE are able to write more hopefully of the prospect of the Imperial Government to-day than we could by the last mail, it must be observed that it is only hopeful—and not with certainty.

The Imperial troops sent to the province of Saga, in which rebellion had broken out, have been successful in crushing the rebellion there.

But that is only one province, and the disaffection is in every direction. The excitement in Satsuma and Choshu has been very great, and still continues to be so, though the samurai have not taken up arms as their friends in Saga did. But at the town of Karatsu in Ogasawara, at Bizen and Tottori, the government has admitted there is trouble; and in other provinces both north and south there is much uneasiness.

But the hopeful feature in the case is, that the government is about to make concessions which will have the effect, if done promptly, of restoring more peaceful feelings throughout the Empire; and the turbulently disposed will be in a minority.

The action taken by the government after the departure of the last mail continued to be prompt and decisive. They hired more transports and sent more troops to the seat of disturbance, including the second regiment of the Go Shimpei (Imperial Guard). They also sent an uncle of the Emperor, Higashi Fushimi no Miya, as Commander-in-chief, with very stringent instructions; but happily the news arrived on the very day he left of the success of the troops already sent. Higashi is the Miya who returned from England about a year ago, after two years residence there. He has only lately been admitted into the army, at his own request; and it seems rather questionable policy to give him such rank as has been accorded to him in this expedition. However, his abilities were not called into action; and the whole of the credit of the expedition will remain with Okubo, the Minister for Home Affairs, of whom we spoke in our last as having gone with the troops with full powers.

This rising is much to be regretted, for many reasons. But there are some aspects in which it will serve a good purpose. It will shew the government that warnings are not to be disregarded, and that there is a real and deep-seated disaffection among the samurai. The folly of the Saga men in breaking out by themselves, instead of biding their time with the other samurai, has had the good effect of arousing the government from its lassitude and we sincerely hope that they will not relax their efforts to prevent the general rising that was threatened for the spring.

Besides this, it has shewn them that even Japanese, whose obedience to government, ordinarily, is proverbial, are awaking to the sense of power inherent in the people. The recognition of this fact is the first-fruit of this rising, and means will be very soon adopted of giving the people a voice in the government, and upsetting the old oligarchical system.

If, therefore, the government can only allay the existing excitement and prevent the principal clans from uniting with arms in hand, the small amount of blood shed in Saga will be the means of saving the country from what would be a most dire and calamitous crisis. But this can only be done by the concessions above alluded to.

On the 7th February at about 8 p.m., a violent concussion was felt in the villages on the south side of Volcano Bay in the island of Yezo, sufficient to break in paper windows. Flashes of flame were seen, and, on the following day, a great column of smoke in the direction of Taromai mountain, a volcano situated near the south-east coast about midway between Moorau and Saporu. The flashes of light were seen from Hakodadi, but were taken to be lightning.

A small steamer the *Karato Maru* (Capron) runs regularly between Moorau on the north side and Mori on the south shore of Volcano Bay, but she has not come over for ten days. Fears are entertained for the Kaitakushi model settlement at Saporu, which is not over twenty miles in a direct line from Taromai volcano.

Some shock of earthquake have been felt since; one, on the 14th, lasting three minutes, and being unusually severe for Hakodadi.

THE case *Regina vs. Smyth*, tried last week before Judge Hannen and a jury of five, which resulted in the acquittal of the accused awakens us to a danger which all foreigners in Japan are exposed to; and we think notice should be taken of it.

The warrant was granted upon an information upon oath, laid by a gentleman employed in one of the government departments. The criminatory statements, as we understand, were drawn from a translation supplied by the department of a report made to it by the husband of the real complainant. The husband therefore appears simply to have stated, not on oath, or under any kind of binding declaration, not what he saw or knew of his own knowledge, but what he had heard from the person against whom the offence was alleged to have been committed. The department simply stated the substance of the report, but no certified translation of it was produced to the committing magistrate; so that the gentleman who was instructed by the department to initiate proceedings merely restated what the department ordered him to restate. Thus the warrant was granted on evidence which was hearsay three times removed.

We do not call in question the power of the Court to act as it did. In England a magistrate might probably be justified in so acting, and if so no doubt the Court here was legally right.

In cases of manslaughter or theft where the fact of the slaying and the stealing are beyond doubt, and the only question is as to the guilty party, the interests of society render it necessary that individuals should submit to arrest upon mere suspicion. But where, as in this case, the fact of the alleged offence having been committed is not certain, and has not been declared to the magistrate by the person chiefly interested, or indeed by any directly interested party; where the charge, too, is one, from its very nature, pecuniary easy to make, and difficult to disprove; the same reasons for prompt procedure do not appear to us to exist.

In the one case it is practically certain that a crime has been committed; in the latter it is not certain.

Again, the charge was laid early in November; but so far as we can see, no intimation of the charge was conveyed to the accused, until he was arrested on arriving in Yokohama, about the middle of December.

It was stated as a reason for arrest, in the first instance, that there was reasonable ground to suppose that accused would convey himself out of the jurisdiction. We have seen no single fact in support of this statement. It was said on the trial that the accused had all ordinary opportunities for constructing his defence. In one sense this is true enough. But what might be ordinary and sufficient opportunities in an ordinary case in England, is not necessarily so in a case like that under consideration; and the Order in Council in speaking of the application of the rules of English law to cases arising out here, says specially, that such rules are to be applied so far as circumstances permit.

Now an answer to such a charge as was made against the accused, could only be chiefly based upon the character of the accuser and the witnesses; and it is hard to see, how, under the circumstances already adverted to, it was possible for the accused to obtain any sufficiently satisfactory evidence of their character. He would have had a better chance had the charge been brought at once in the court of the nearest Consular district.

Now if the laws is—and we do not presume to say it is not—that an Englishman may be

dragged before a court of Justice charged with a felonious offence, not proved to have been committed at all by any one whatsoever, (the stigma of which charge even if he be acquitted must attach to him for a long time, and work him no small harm) upon mere hearsay evidence of parties who know nothing directly of the facts, or of the persons making the charge;—if, in a word, it is not only legal but proper to arrest a man under such circumstances, and to treat him in such a manner that practically it is impossible for him to procure the evidence most needful to rebut the charge—especially such a charge—we think that it is right to call attention to the fact as a warning to all that such is the law of England and the practice of Her Majesty's Court in Japan.

We do not call in question the propriety, far less the perfect impartiality of the judge; nor do we here critically notice the verdict of the jury—although the verdict of acquittal strengthens our objection to the state of the law. But we do simply but emphatically call attention to the facts we have adduced, and warn all British subjects of their liability to such proceedings as have been brought before them.

THE WONDERFULLY healthy seasons that we have enjoyed in Japan during the last three years have restored to it the high character for salubrity the country originally enjoyed.

The last small-pox epidemic may have been the means of incalculable good; inasmuch as the exertions made by the late Dr. Newton to induce the Japanese government to insist on compulsory vaccination, and the provisions made by the authorities to ensure the universal adoption of this simple preventive, must have conduced to the improved state of the country, as regards that dire scourge which formerly seemed never absent from the people. And, in all probability, the deepening of the canal, the filling in of the swamps at the back of the settlement, and the improvement in the roads and the drainage have all borne their part in keeping us free from typhus and other fevers.

We need read our fellow residents no homily on the gratitude we all ought to feel for this state of things. But we may be permitted to remind them that, besides the improvements noted above, there is an institution, peculiarly their own, which has done its part towards the removing of danger from the settlement, and relieving us from the sight of suffering and sickness in our midst.

The Yokohama General Hospital still stands with open doors, to extend to the sick such attendance and comforts as they may not be able to obtain in their own habitations; and no one will regret that, of late, it has been less occupied than for years past. That it is, of all others, the institution most deserving of support, few will be found to deny; and many who think twice before they decide on the worthiness of other claimants for public sympathy, will gladly make their offering to this. The Hospital is not yet out of debt, and funds are much required. We trust that those who have not yet subscribed to it will do so now, however limited their contributions may be. We are glad to hear that the Yokohama Amateur Dramatists are again about to give a performance for its benefit, which will assuredly be a great help to the committee. But individual donations are still required, and surely will not be withheld.

BY THE mail just in from America, we have another batch of extracts from American papers, on matters concerning Japan, which would serve admirably to promote harmony amongst all foreigners resident in this country, were it not for the harm done in the districts in which the papers which avail themselves of the effusions of such correspondents circulate. One man, whose facts are published under the heading "Life in Japan," "Interesting Extracts from the letters of a Californian," writes:—"You have no idea of Japanese life in America. You see only the bright side of the picture, and have formed an erroneous judgment from the higher classes of Japanese which you see only in your country. You cannot form any idea of the people from them. They do not represent the mass of the people, who are ignorant, prejudiced and opposed to foreigners. They will bow and cringe to you in every shape and manner, but, at the same time, if they dare, would cut you down, as they have often done, until all the foreign powers not only demanded barracks in which to keep troops in all the principal ports, but they also keep war vessels here for protection of their citizens. This is the case with every nation except the United States, which has only two or three war vessels in this vicinity. I am registered in the United States Consulate, Yokohama, and must report myself by letter, once a month. If I fail in this, an official demand would be made for my appearance, and they would have to bring me. This is what keeps the people civil to foreigners, and, if this was not done, there would be no safety to foreigners, particularly where I am now located—600 miles from Yedo."

From the next paragraph we gather that the writer is engaged at "the mines of Onzusa, Province of Uyo." We never heard of such a province. But passing over his further descriptions, we come to this concluding paragraph:—"Tell — to give up the idea of coming to Japan, as there are plenty of Americans here who wish they were out of it. Tell him that anything in California is better than the best thing here."

If this advice be seriously given, and founded upon the writer's experience, what a pity it is that he does not hasten from such a miserable country. But, remaining in it, how much more lamentable is it that he cannot speak the truth respecting it. We fancy that the Acting Consul for the United States must read the above statements with some degree of alarm—for the omission of his duties. For we dare swear that neither have the American subjects in the interior of Japan reported themselves monthly at his consulate, nor has he made any application to the Japanese for their production. Is, then, the man who thinks that the worst thing in California is better than the best in Japan, and who resides in the mythical province of Uyo, guilty of trifling with the truth? Or, are the United States officials neglectful of their duties, and careless as to the safety of their countrymen?

But there is one man, who, if not more venacious, is more dangerous than the letter writer above-quoted, because he appears to write with editorial authority. In the second edition of the *Daily Evening Bulletin* of the 29th January, is an article, headed "Japan—Her Present. Her Probable Future." Of course it is founded on the valuable correspondence which has been supplied from hence; and which has occasionally lightened the columns of the local press. From this article we receive the following reliable information:—

"Great Britain desires to get Japan so much in her debt that it shall at first make her

tually a vassal, and in time, a second India. Asia, having already appropriated the islands of Saghalien, casts her covetous eyes on the island of Yesso, from which she can dominate the northern seas of Asia. The representatives of France, Germany, Italy, Austria, Spain, Belgium and Portugal, give their blind support to Great Britain and Russia, in the hopes that some crumbs of profit will fall to their respective people in the immediate present. Meanwhile, the representative of the United States holds himself aloof, taking no action at all."

Here is a splendid subject for our illustrious "Wagoman," and we hope he will avail himself of it in his next "Poncho."

The article concludes:—"The question for a government of the United States to decide promptly, or it soon may be too late, is, whether Japan shall continue to exist as a nationality, benefiting American trade and commerce, or fall a prey to the avarice and ambition of Great Britain and Russia."

Aye, that's the question! All the sentimentalism of the long article respecting the "air hadden down" condition of Japan, the sentiment of "generous feeling of consideration towards her government," and the absence of sympathy for the aims and objects of the patriotic and public spirited men who, with the view of regenerating their ancient and time honoured nation, have accepted offices of responsibility and even personal danger;—"all the perplexities and embarrassments her statesmen are labouring under;" and every ought of the "most difficult and even perilous position" in which Japan is placed, resolve themselves into this one question "Shall the ambition and avarice of Great Britain and Russia seize upon Japan! (as is their inviolable aggrandizing policy): shall they close Japan against all the rest of the world (as they have done all other countries where their power prevails)? Or, shall "Japan continue to exist as a nationality, benefiting American trade and commerce?"

Will none of our well-informed American citizens give the *Bulletin* a hint that it has been altogether deceived; and that the interests of Americans and other nationalities in Japan are not so diametrically opposed as it has been led to believe? Can no one be found to assure the American people that their countrymen are here in perfect peace and friendship with citizens of other nations? And that the English and American ministers do not find it necessary to carry revolvers, when they meet at banquets and guests of the Japanese ministers.

#### TELEGRAM FROM OKUBO SANGI.

On the 21st instant a battle was fought at Todoroki in Hizen. The rebels were totally beaten, and the spirits of the Imperial troops were high. Hopes were entertained of taking Saga yesterday.

On the 14th February Iwamura Gonrei led a regiment of Imperial troops to Saga. On the night of the 15th, the samurai attacked the kencho, and the soldiers were completely beaten. Iwamura and the Rikugun taii (general) are both reported to have been killed in the fight, but this is not quite certain. The rebels are strong, and have so arranged their troops on the boundaries of the Ken that all information is stopped.

It is said that all Hizen, with the exception of Omura, Hirato, and Shimabara, have risen, and the numbers now amount to 7 or 8 regiments of insurgents; all with arms and plenty of ammunition.

Mori Nagayoshi, the Sanji of Saga Ken, raised troops in Kokura, and marched upon Saga. In Fukuoka Ken, three regiments have been supplied with arms.

TOKYO is quiet but full of reports. One is that the *Stonewall* has been given up to the samurai.

#### GOVERNMENT TELEGRAMS.

##### FUKUOKA IMPERIAL CAMP.

23rd February—3.55 P.M.

Yesterday, the 22nd, the Imperial troops and Samourai of Fukuoka divided into four parts, and attacked the insurgents. This morning a fight commenced at Tajiro-guchi.

##### KOKURA.

Left - 23rd Feb., 10.40 A.M.

Arrived - 24th " 9.30 A.M.

Yesterday, fighting began at Saga. Imperial troops victorious. To-day Imperial troops overwhelmed the Saga men. Particulars later.

Naimukiyo ordered the volunteer samurai and the Inkiyo (people retired from business) to go to Fukuoka to assist against the rebels.

##### FUKUOKA.

Left 24th 130 p.m.

Yesterday great battle with insurgents, and after a very hard struggle defeated them, and proceeded to Kansaki.

\* \* It must be understood that Tajiro-guchi and Kansaki are on the road, about half way between Fukuoka and Saga. The real Saga force has yet to be met and encountered at Saga itself. Those already dealt with are but, advance guards.

FUKUOKA, 26th Feb., 1874—6 A.M.

No fighting since 23rd, but rebels not yet obedient to government. We intend therefore to make a strong attack to-morrow. Dissensions among the rebels, part separating from the main body.

MESSAGE FROM SHIJÔ SHÔSHÔ TO FUKUOKA KEN.

Received at Fukuoka, 26th Feb—4.55 P.M. Gradually preparing to attack Saga castle. Please send 13 in. mortar and ammunition from Fukuoka.

HIROSHIMA, 26th February.

3,200 troops with provisions and ammunition commanded by Eda, starting for seat of war.

FUKUOKA, 26th Feb., 1874—8.25 P.M.

To-day, fighting at Sakaibara. Imperial troops victorious. Saga samoura between 40 and 50 killed—only 5 or 6 Imperial troops killed. Encamped one mile and a half from Saga castle. Kuboyama occupied by Imperial troops.

FROM OKUBO.

FUKUOKA, 27th Feb., 1874—9.30 A.M.

Did not fight yesterday, but to-day the rebels attacked with insufficient means and gradually fell back upon Saga and shut themselves up in the castle. Their commander Nabeshima Ichinojo was killed. It therefore seems that their means of making war are exhausted, and that it will be easy to quiet them.

OSAKA, 26th Feb., 1874—2.30 P.M.

One division of Imperial troops embark to-night for Fukuoka.

ON THE 27th ulto., Takashima Jijû Bancho, the chief of the Imperial attendants, has been sent to the South, by His Majesty, on imperial business.

MONEY for wine and fish has been presented by His Majesty to Okubo Naimukiyo, and to all officers and soldiers of the "expedition-army," to show his kind consideration for the troubles endured through the war.

FUKUOKA, 28th Feb., 1874—10.10 A.M.

Scarcity of money. Send 500,000 rios in small satsz', as soon as possible. Neither Naimusho nor Finance Department here have so much. Therefore request government to send it.

#### GOVERNMENT TELEGRAMS.

FORWARDED FROM SAGA KEN, MARCH 1st, 1.10 P.M.

To the Metropolitan Office of the Ken, Tokyo.

"A substitute Kencho has been established at Hasuanoiké. We require to be sent duplicates of all government notifications.

(Note:—The Kencho having been burnt by the insurgents, the archives were all destroyed.—Id.)

FROM FUKUSHIMA KEN TO NAIMUSHO.

March 2nd, 3.15 P.M.

"Yeto Shimpei escaped from site of rebellion, and all insurgents surrendered to Government."

FROM OKUBO NAIMKIYO TO DAJOKUAI.

March 2nd, 10.30 P.M.

"Insurrection of Saga is at end. Therefore, 1st March, entered Sag castle."

Go SHIMPEI, the Imperial regiment, under Fushi no Mia, leaves to-day for the South, and two war steamers also go down.

THE S. S. *Canton* leaves for the South to-morrow morning, with reinforcements for the Imperial army.

A TELEGRAM has been received in Yedo to-day from the seat of trouble in the south, urgently requesting that a number of officers be sent to the scene of action, as a great many have already been killed or disabled.

ON THE 24th instant a telegram was received from Fukuoka Ken, that at Kansaki, a post station between Saga and Todoroki, the Osaka chindai-hei (Imperial soldiers) together with the samurai of Fukuoka Ken, attacked the rebels. After a dreadful battle was fought for a time the Imperial troops gained the victory.

THE SAMOURAI of Karatsz', Ogasawara, have risen in favour of the Saga samurai.

We hear that the samurai of Kumamoto, Higo, have offered to go against the Saga men, and that the Government has accepted their offer. There is an old jealousy between Higo and Hizen which is probably at the bottom of this movement.

A NOTIFICATION has been issued to all students in the government schools, informing them that all who are over twenty years old may, if they wish, enter the army until the present troubles are over. It is a grave 'sign of the times.' So few of them have arrived at the age of twenty, that the forces of the government will not be materially increased even if the maximum of such volunteers should be forth coming.

YEDO, March 2nd, 9 A.M. 1874.

Important despatches were yesterday received from Fukuoka by the War Department. They appear sufficient to warrant the opinion, which was confidently expressed by Officials of rank, that the Rebellion is virtually at an end. The most satisfactory intelligence which they contained was the announcement of the surrender of the great body of the Saga insurgents, and the capture of that town. It is considered probable, however, that smaller detached bands may still be at large, although nothing positive on this head was stated. To guard against the possibility of future disturbance by these, should any such exist, and to ensure the complete pacification of the district, the troops already destined for Hizen will proceed on their way under the command of Fushimi no Miya. The Government is of conviction that the work which has thus far progressed with remarkable success must be carried out to the fullest and firmest extent, as the wisest method of preventing any recurrence of disorder.—*Japan Mail*.

A PRIVATE letter from Fukuoka Ken says:—"The samourai of Saga Ken are declaring themselves for the Korean expedition. They openly formed themselves into regiments and took possession of temples (monasteries). It is quite clear that their intention really is to declare war against Korea, without waiting for the government orders. The samourai of four or five Ken have also risen, excited by them.

"Although they may be actuated by pure patriotism, yet they are wrong in taking up arms of their own accord.

"However, our samourai, although invited by them, refused to join them; and are disposed to oppose them. We obey the four words of Choshi Jyunpu—Obey the Imperial Commands."

"\* The Fukuoka Ken samourai cannot oppose the Saga men, because they have no arms; and they wonder where the Saga men got theirs. We think we gave quite plain enough warning about that long ago.

THE NEWS which we published 2nd inst., and that we transferred to our columns from the *Japan Mail Daily Advertiser*, is supposed by many to have settled the affair between the Samourai and the government.

We most heartily wish that we could confirm this view. But we are sure that it is far from being correct. With facts within our knowledge of which we cannot suppose the government to be ignorant, our belief is, that if the fighting policy is continued, the real struggle has hardly yet commenced. Our only desire is that the government would be wise in time; and whilst they are enjoying the éclat attending their success in Saga, take the opportunity of making concessions. If they do not, we are more than ever satisfied of the terrible task they have before them. It matters not at all, how tranquil an interval may follow the surrender of the Saga men, the storm must burst over the country or long, unless the necessary concessions be made; and this we state broadly and unequivocally, whatever may be the statements to the contrary. If, however, the ministers would forbear from war, and yield in certain particulars, all might be settled amicably. At this moment, it is useless to cry "Peace, Peace," when there is no peace.

A MEMORIAL of a nature very objectionable to the government has been drawn up in Mito. It is to the effect that as the government is now not that of the Emperor, but of a few officials who are irresponsible, they have determined to elect a parliament of their own, to manage their own affairs. And the Memorial further alludes to the Emperor as no longer a boy to be controlled in the way he has hitherto been, but a man who ought to have ability to govern. Following up this idea, the Memorial speaks very plainly as to the superiority of a Republic over the present state of things. The gentleman who drew up the Memorial, having delivered it to certain of his clan; in token of his sincerity and the strength of his conviction as to the propriety of acting upon its contents, forthwith committed seppuku.

NEWS HAS just reached us that an insurrection has broken out among the Samourai of Bizen and Tottori.

BEFORE THE departure of the Imperial troops the Emperor thus addressed the commanders:—

"To the General of the Imperial regiment, and the Generals of Battalions proceeding to the South:

The second regiment of my Imperial Body Guard is sent to the general-in-chief of the expedition for the purpose of subduing the insurgents in Saga Ken. Hereby I give evidence of my anxiety for the protection of my people.

You, the generals, bear this constantly in mind, and exert yourselves to the performance of meritorious deeds in quelling the insurgents."

WE HAVE been favored with the following very important news, to hand by the S. S. *Acantha*, which arrived from Nagasaki to day. The source of the information is beyond question.

"The news of the burning of the castle of Saga, and of the destruction of the garrison (estimated at four hundred men, under the command of Iwamura) caused considerable excitement at Nagasaki. At 3 o'clock in the afternoon of the 20th, the Governor assured the Foreign Consuls that danger need not be apprehended at Nagasaki; but, at 10 P.M. on the same day, he warned them that four hundred rebels were marching upon the place. The British and United States Consuls visited him the next morning, and found that the authorities were preparing to decamp. The people were greatly alarmed and were clearing out, and some of them had applied to the foreign merchants to store their property in foreign godowns.

The Consuls and commanders of the foreign ships-of-war in port were about to hold a meeting when the *Acantha* left, in order to devise measures for the protection of the foreign settlement.

The men-of-war present were, two Russian, one American, one English. A second English vessel of war was expected immediately from Shanghai, so we consider the port to be well protected, as far as foreign interests are concerned.

THE S. S. *Acantha*, from Nagasaki, with coals to the I. M. Co., was detained there for two hours, to await the arrival of H. M. S. *Ringdove*.

She reports heavy fighting in the neighbourhood of Nagasaki.

Dr. Sloane was compelled to retire into town, on account of the shelling of buildings in the vicinity of the Hospital, (*Quere*, Saga).

It is reported that Nagasaki is in the hands of the rebels, and that a rebellion has broken out in Satsuma, and in Chiosiu, similar to that in Saga Ken. We believe this to be authentic.

Since the publication of our last number, rumours concerning the disturbances in the South-West have been more than sufficiently plentiful, but many of them are unworthy of repetition. On Saturday a telegram was received from Sir HARRY S. PARKES, in consequence of which H.B.M.'s gunboat *Ringdove* left here in the evening for Nagasaki. The arrival of the P. M. steamer thence at almost the same time, threw little more light on the matter, except that a message had been sent to the Consul from the Acting Governor to the effect that he had heard that a party of insurgents were approaching the town he had despatched all his troops at his disposal to meet them, and consequently should not be able to protect the foreign residents, but nothing had occurred up to the time of the steamer's leaving. Since then we hear that the insurgents, who have apparently made Saga their first point of attack, have burnt the castle and yashikis there, though they failed to secure the Governor, who with a small body of men made his escape to Mitsuma, where the Government troops are awaiting reinforcements. The *Ringdove* had passed Shimoda, and should before this have reached Nagasaki, and the *New York* had landed at Fukuoka, where troops she took from Temposan. As no sedition movement is said to have occurred between Fukuoka and Fukuoka—the furthest station to which the Telegraph is in working order—we presume the reported rising at Hiroshima has as yet not turned out to be anything serious, but there is said to be symptoms of serious disaffection at Yedo.—*Idem*.

### The Insurrection.

For several days past, extraordinary rumours have been circulated at Nagasaki concerning the movements of the rebels, although some of these may have but no foundation to rest upon; the affair is beginning to wear a serious aspect.

It is commonly reported that the new Governor of Saga has been killed with all his retinue. Report states, that being repulsed by the insurgents, he retreated into the Castle of Saga which was soon surrounded, and burnt to the ground; all the inmates, except six, perishing.

Since then, however, Dr. Sloan, who has been residing at Saga has come down to Nagasaki. Saga becoming too hot to hold him. He reports that heavy cannonading was heard at Saga after he left; and that the state of the country was most unsettled.

A rumour that a village two or three miles from Nagasaki was burnt down on Wednesday, is unworthy of belief; as something would have been seen in connection with the supposed disaster before night. A report of a grave nature however has commenced to find credence, and came we believe from a native source, viz: that at a recent conference, the following plans of action were proposed.

- 1st.—That the officers under the present government be put to death wherever found.
- 2nd.—That the insurgents organize an attack upon Corea.
- 3rd.—That an attack be made upon European settlers.—No doubt with the object

embroiling the present government with foreign powers.

Whether these things are real or no, is difficult to determine; for what with the love of exaggeration on the one hand, and Japanese officialism on the other, it is not easy to arrive at the truth; whilst the fact, that the telegraphic communication with the interior has been interrupted for some days, serves but to complicate matters, giving them an importance they may not deserve.

Between 4 and 500 insurgents are now in Nagasaki, and are doubtless ready for anything that may transpire. On Wednesday night the *Satsuma Maru*, Japanese steamer, arrived, it is reported, with a number of government troops on board; this however has been contradicted.

Government soldiers are standing sentry in Nagasaki with rifles loaded. Whilst others again who are regarded as insurgents stand sentry in other places with swords at their sides.

The sympathy with which the insurgent movement is regarded by many in Nagasaki; and the presence of government troops, justifies us in expecting a struggle. The greatest danger will doubtless be to the native town, which could very be easily destroyed by fire.

But it is not an impossibility that the Europeans may have to look out for their own; in which case no doubt they will do their part. At present the number of men-of-war here is limited to two, but before long we shall have others, and the Japanese authorities have promised to acquaint the foreign Consuls should danger be imminent.

There is much in the vexed question between the present government and the insurgents, to cause on the part of the rebels a strong dislike to foreigners; and it is only prudent to prepare as best we can for what might occur. We think it exceedingly unwise to do what some are doing—ridicule the whole thing; and we advise the Europeans of Nagasaki to be exceedingly careful, so that should complications arise they may be found blameless.

How far foreigners are justified in selling indiscriminately ammunition and firearms, we leave for others to determine; but it does seem strange, that those enjoying, and under the protection of one party, should sell to the opposite side munitions of war. During the present week a large sale of cartridges has been effected; but the Government ascertained the fact and seized the lot confiscating them at once. Of course the answer to this will be "trade"; we acknowledge that it is trade; but that does not make it necessarily right.—*Rising Sun*.

WE GIVE a few extracts from the *Nisshin Shinjishi* of Wednesday, which will be interesting to our readers:—

When most of the Saga samurai opposed the imperial government upon the subjects of the Korean expedition and the re-establishment of the old feudal government, Maiyama Seichiro, one of the Saga samurai, who in the former revolutionary war, six years ago, was engaged as the Sambo, (military officer next in rank to general) on the imperial side, used his persuasions to induce the samurai to submit, and about 900 samurai who agreed with him added their influence to his. Being unsuccessful, he left Saga with his party, on the 17th February, for the town of Yamagawa in Mitsuma Ken. On arriving there he sent to Kumamoto, Higo, to ask that the chindai (imperial troops) should be placed at his disposal to attack the Saga insurgents. Among the chindai

there were over a hundred Saga men, and they at once prepared to leave the ranks and join the insurgents. Maiyama, however, succeeded in persuading them to remain loyal, and they marched to attack Saga. The insurgents had by this time become very powerful, and they repeatedly defeated these troops.

Maiyama was so ashamed at his failure that he committed suicide in the old way, by cutting his abdomen with his sword.

IKEDA NORITAMI, formerly a small daimio, having applied for military employment, was called to the War department on the 1st of this month, and received a commission as officer of the 7th rank. He was at once appointed to join the staff of Higashi Fushimi no Miya, the new commander in chief.

Many as are the nobles of Japan, Ikeda Noritami alone of them all has taken such a step; thus securing the admiration of the people, and setting a good example of loyalty and patriotism to the other nobles.

At the very time when the samurai of Saga began the excitement which led to the rebellion, under the plea of attacking Corea and restoring the old feudal system of government, Iwakura was attacked and wounded by a band of rebels. The Gon-sanji, or Assistant Vice-Governor of Fukuoka Ken felt the matter very keenly. He therefore summoned the samurai to assemble at the Kencho, and explained to them the state of affairs, advising them to be firm and loyal. The samurai yielded to the opinion of the Gon-sanji, and bound themselves by oath never to oppose the government, and the substance of this oath they put in writing and delivered it to the Gon-sanji. It is as follows:

"We have respectfully considered the difficulties surrounding His Majesty the Emperor, that his mind can never be free from trouble, and that the high officers of government are engaged from early morning until late in the evening in their anxious business, so that the liberty of the people is increased and all his subjects equally cared for by His Majesty. The benevolence of His Majesty cannot be compared to the height of Fujiyama, nor to the depths of Biwa Lake.

Now, although we, the humble servants, are, for no service of our own, living at this time upon the hereditary salaries gained by our forefathers, we are desirous to perform meritorious deeds to requite the kindness of His Majesty, and we feel ashamed that we have not been able to do so.

As, of late, the adjoining province of Saga has been disturbed, and the minds of our own people have been agitated by the current reports everywhere circulated, we have judged it right to hear argument in an assembly, and have determined how to act in the present crisis.

We, therefore, have the honour earnestly to desire, in case of any untoward events occurring, to do meritorious deeds for the Emperor, to requite a millionth part of the kindness received from him.

This is our earnest desire, and we offer it in writing that our loyalty may be known.

2nd month, 7th year Meiji

ALL THE SAMOURAI OF THIS KEN.

To the Gon-sanji of Fukuoka Ken,  
Yosamé Hidosuka Sana.

THE RABBIT mania has broken out again in Ts'kidji.

THE FIRST meeting of the Quazoku, (nobles), which took place recently, does not seem to have been altogether a success. We learn that most of those present appeared to be more anxious for their own affairs than for those of their country. Eventually one of the Secretaries (Sho-ki-kan) addressed them somewhat as follows: "The opinions you express relate to subjects too far removed from those bearing on the improvement of our country. Why do you not confine your attention simply to such matters, instead of thinking only of yourselves?" The native reporter concludes, significantly, thus: "There was no reply to his question, and that was all of that meeting."

SITE OF "war's dire alarms" the social festivities and ceremonies of the people are unforgotten, and are celebrated as of yore. The day of the "girl's matsuri," or Feast of Dolls, which comes annually on the third day of the third month, or in modern phrase, on the 3rd of March, is now being prepared for. On the Main street in Tokei, between Nihon Bashi and Kanda river are the most celebrated shops for the sale of the gorgeously dressed dolls, emperors, and empresses, and all grades of nobility. This year the display is not fully up to that of the past, when booths were erected in the centre of the street, and crowds thronged to purchase the dolls and picture books and mimic household furniture for the decoration of the chief room of the house on the day sacredly set apart for the little girls of Japan. Whoever has visited a Japanese home on the girl's matsuri day, and seen the splendid display of dolls and girl's toys must be impressed with the pains taken with, and the affection lavished upon Japanese children by their parents. The great day for boys is on the fifth day of the fifth month, when the toys are of a martial and masculine character. It is to be regretted that these beautiful customs are slowly dying out. Though still observed, they are by no means as general as formerly, and parents especially do not enter with the old zest into the games and decorations.

"IT NEVER rains but it pours," is a old proverb of which we are reminded on many occasions. Hitherto, the Buddhist priests throughout Japan have been shaven-pated celibates who were not allowed to have wives, even if they wanted them. Now, however, not a few of them avail themselves of the government permission to do so. One, in Echigo, a short time ago, having previously taken unto himself a good wife, was delighted to find that his spouse was in a condition to make him a happy father. The extent of his joy was not however revealed to him, until, upon a certain day, his wife presented him with four miniature copies of himself. We have not learned whether the mother and her quadruplets are doing well, but we hope they are; and the paterfamilias and his fruitful vine gave our congratulations, or our condolence, which ever they wish. The native chronicler indulges in the wonder whether such instances of fecundity occur in foreign countries.

SEVERAL BRITISH vessels of war are shortly expected from the China Station, and from England to reinforce the rather small squadron at present stationed in Japanese waters.

THE PROGRESS of Okubo as given in the telegrams and in the reports received from government looks very bright for the ministers; but there are two sides to every medal; and, in this case, we regret to be told that the action

YEDO, March 2nd, 9 A.M. 1874.

Important despatches were yesterday received from Fukuoka by the War Department. They appear sufficient to warrant the opinion, which was confidently expressed by Officials of rank, that the Rebellion is virtually at an end. The most satisfactory intelligence which they contained was the announcement of the surrender of the great body of the Saga insurgents, and the capture of that town. It is considered probable, however, that smaller detached bands may still be at large, although nothing positive on this head was stated. To guard against the possibility of future disturbance by these, should any such exist, and to ensure the complete pacification of the district, the troops already destined for Hizen will proceed on their way under the command of Fushimi no Miya. The Government is of conviction that the work which has thus far progressed with remarkable success must be carried out to the fullest and firmest extent, as the wisest method of preventing any recurrence of disorder.—*Japan Mail*.

A PRIVATE letter from Fukuoka Ken says:—"The samurai of Saga Ken are declaring themselves for the Korean expedition. They openly formed themselves into regiments and took possession of temples (monasteries). It is quite clear that their intention really is to declare war against Korea, without waiting for the government orders. The samurai of four or five Ken have also risen, excited by them.

"Although they may be actuated by pure patriotism, yet they are wrong in taking up arms of their own accord.

"However, our samurai, although invited by them, refused to join them; and are disposed to oppose them. We obey the four lords of Chōshū Jyūmpu—Obey the Imperial Commands."

"\* \* The Fukuoka Ken samurai cannot oppose the Saga men, because they have no arms; and they wonder where the Saga men got theirs. We think we gave quite plain enough warning about that long ago.

THE NEWS which we published 2nd inst., and that we transferred to our columns from the *Japan Mail Daily Advertiser*, is supposed by many to have settled the affair between the Samurai and the government.

We most heartily wish that we could confirm this view. But we are sure that it is far from being correct. With facts within our knowledge of which we cannot suppose the government to be ignorant, our belief is, that if the fighting policy is continued, the real struggle has hardly yet commenced. Our only desire is that the government would be wise in time; and whilst they are enjoying the éclat attending their success in Saga, take the opportunity of making concessions. If they do not, we are more than ever satisfied of the terrible task they have before them. It matters not at all, how tranquil an interval may follow the surrender of the Saga men, the storm must burst over the country or long, unless the necessary concessions be made; and this we state broadly and unequivocally, whatever may be the statements to the contrary. If, however, the ministers would forbear from war, and yield in certain particulars, all might be settled amicably. At this moment, it is useless to cry "Peace, Peace," when there is no peace.

A MEMORIAL of a nature very objectionable to the government has been drawn up in Mito. It is to the effect that as the government is now not that of the Emperor, but of a few officials who are irresponsible, they have determined to elect a parliament of their own, to manage their own affairs. And the Memorial further alludes to the Emperor as no longer a boy to be controlled in the way he has hitherto been, but a man who ought to have ability to govern. Following up this idea, the Memorial speaks very plainly as to the superiority of a Republic over the present state of things. The gentleman who drew up the Memorial, having delivered it to certain of his clan; in token of his sincerity and the strength of his conviction as to the propriety of acting upon its contents, forthwith committed seppuku.

NEWS HAS just reached us that an insurrection has broken out among the Samurai of Bizen and Tottori.

BEFORE THE departure of the Imperial troops the Emperor thus addressed the commanders:—

"To the General of the Imperial regiment, and the Generals of Battalions proceeding to the South

The second regiment of my Imperial Body Guard is sent to the general-in-chief of the expedition for the purpose of subduing the insurgents in Saga Ken. Hereby I give evidence of my anxiety for the protection of my people.

You, the generals, bear this constantly in mind, and exert yourselves to the performance of meritorious deeds in quelling the insurgents."

WE HAVE been favored with the following very important news, to hand by the S. S. *Acantha*, which arrived from Nagasaki to day. The source of the information is beyond question.

"The news of the burning of the castle of Saga, and of the destruction of the garrison (estimated at four hundred men, under the command of Iwamura) caused considerable excitement at Nagasaki. At 3 o'clock in the afternoon of the 20th, the Governor assured the Foreign Consuls that danger need not be apprehended at Nagasaki; but, at 10 P.M. on the same day, he warned them that four hundred rebels were marching upon the place. The British and United States Consuls visited him the next morning, and found that the authorities were preparing to decamp. The people were greatly alarmed and were clearing out, and some of them had applied to the foreign merchants to store their property in foreign godowns.

The Consuls and commanders of the foreign ships-of-war in port were about to hold a meeting when the *Acantha* left, in order to devise measures for the protection of the foreign settlement.

The non-of-war present were, two Russian, one American, one English. A second English vessel of war was expected immediately from Shanghai, so we consider the port to be well protected, as far as foreign interests are concerned.

THE S. S. *Acantha*, from Nagasaki, with coals to the I. M. Co., was detained there for two hours, to await the arrival of H. M. S. *Ringdove*.

She reports heavy fighting in the neighbourhood of Nagasaki.

Dr. Sloane was compelled to retire into the town, on account of the shelling of buildings in the vicinity of the Hospital, (*Quere*, Saga).

It is reported that Nagasaki is in the hands of the rebels, and that a rebellion has broken out in Satsuma, and in Chiosiu, similar to that in Saga Ken. We believe this to be authentic.

Since the publication of our last number, rumours concerning the disturbances in the South-West have been more than sufficiently plentiful, but many of them are unworthy of repetition. On Saturday a telegram was received from Sir HARRY S. PARKES, in consequence of which H.B.M.'s gunboat *Ringdove* left here in the evening for Nagasaki. The arrival of the P. M. steamer thence at almost the same time, threw little more light on the matter, except that a message had been sent to the Consul from the Acting Governor to the effect that as he had heard that a party of insurgents were approaching the town he had despatched all the troops at his disposal to meet them, and consequently should not be able to protect the foreign residents, but nothing had occurred up to the time of the steamer's leaving. Since then we hear that the insurgents, who have apparently made Saga their first point of attack, have burnt the castle and yashikis there, though they failed to secure the Governor, who with a small body of men made his escape to Mitsuma, where the Government troops are awaiting reinforcements. The *Ringdove* had passed Shimonoseki and should before this have reached Nagasaki, and the *New York* had landed at Fukuoka, where troops she took from Temposan. As no seditious movement is said to have occurred between this and Fukuoka—the furthest station to which the Telegraph is in working order—we presume the reported rising at Hiroshima has as yet not turned out to be anything serious, but there are said to be symptoms of serious disaffection to Yedo.—*Idem*.

### The Insurrection.

For several days past, extraordinary rumours have been circulated at Nagasaki, concerning the movements of the rebels, and although some of these may have but small foundation to rest upon; the affair is beginning to wear a serious aspect.

It is commonly reported that the new Governor of Saga has been killed with all his retinue. Report states, that being repulsed by the insurgents, he retreated into the Castle of Saga which was soon surrounded, and burnt to the ground; all the inmates, except sixteen, perishing.

Since then, however, Dr. Sloan, who has been residing at Saga has come down to Nagasaki. Saga becoming too hot to hold him. He reports that heavy cannonading was heard at Saga after he left; and that the state of the country was most unsettled.

A rumour that a village two or three miles from Nagasaki was burnt down on Wednesday, is unworthy of belief; as something would have been seen in connection with the supposed disaster before night. A report of a grave nature however has commenced to find credence, and came we believe from a native source, viz: that at a recent conference, the following plans of action were proposed.

- 1st.—That the officers under the present government be put to death wherever found.
- 2nd.—That the insurgents organize an attack upon Corea.
- 3rd.—That an attack be made upon European settlers.—No doubt with the object of

embroiling the present government with foreign powers.

Whether these things are real or no, is difficult to determine; for what with the love of exaggeration on the one hand, and Japanese officialism on the other, it is not easy to arrive at the truth; whilst the fact, that the telegraphic communication with the interior has been interrupted for some days, serves but to complicate matters, giving them an importance they may not deserve.

Between 4 and 500 insurgents are now in Nagasaki, and are doubtless ready for anything that may transpire. On Wednesday night the *Satsuma Maru*, Japanese steamer, arrived, it is reported, with a number of government troops on board; this however has been contradicted.

Government soldiers are standing sentry in Nagasaki with rifles loaded. Whilst others again who are regarded as insurgents stand sentry in other places with swords at their sides.

The sympathy with which the insurgent movement is regarded by many in Nagasaki; and the presence of government troops, justifies us in expecting a struggle. The greatest danger will doubtless be to the native town, which could very be easily destroyed by fire.

But it is not an impossibility that the Europeans may have to look out for their own; in which case no doubt they will do their part. At present the number of men-of-war here is limited to two, but before long we shall have others, and the Japanese authorities have promised to acquaint the foreign Consuls should danger be imminent.

There is much in the vexed question between the present government and the insurgents, to cause on the part of the rebels a strong dislike to foreigners; and it is only prudent to prepare as best we can for what might occur. We think it exceedingly unwise to do what some are doing—ridicule the whole thing; and we advise the Europeans of Nagasaki to be exceedingly careful, so that should complications arise they may be found blameless.

How far foreigners are justified in selling indiscriminately ammunition and firearms, we leave for others to determine; but it does seem strange, that those enjoying, and under the protection of one party, should sell to the opposite side munitions of war. During the present week a large sale of cartridges has been effected; but the Government ascertained the fact and seized the lot confiscating them at once. Of course the answer to this will be "trade"; we acknowledge that it is trade; but that does not make it necessarily right.—*Rising Sun.*

WE GIVE a few extracts from the *Nisshin Shinjishi* of Wednesday, which will be interesting to our readers:—

When most of the Saga samurai opposed the imperial government upon the subjects of the Korean expedition and the re-establishment of the old feudal government, Maiyama Seichiro, one of the Saga samurai, who in the former revolutionary war, six years ago, was engaged as the Sambo, (military officer next in rank to general) on the imperial side, used his persuasions to induce the samurai to submit, and about 900 samurai who agreed with him added their influence to his. Being unsuccessful, he left Saga with his party, on the 17th February, for the town of Yamagawa in Mitsuma Ken. On arriving there he sent to Kumamoto, Higo, to ask that the chindai (imperial troops) should be placed at his disposal to attack the Saga insurgents. Among the chindai

there were over a hundred Saga men, and they at once prepared to leave the ranks and join the insurgents. Maiyama, however, succeeded in persuading them to remain loyal, and they marched to attack Saga. The insurgents had by this time become very powerful, and they repeatedly defeated these troops.

Maiyama was so ashamed at his failure that he committed suicide in the old way, by cutting his abdomen with his sword.

IKEDA NORITAMI, formerly a small daimio, having applied for military employment, was called to the War department on the 1st of this month, and received a commission as officer of the 7th rank. He was at once appointed to join the staff of Higashi Fushimi no Miya, the new commander in chief.

Many as are the nobles of Japan, Ikeda Noritami alone of them all has taken such a step; thus securing the admiration of the people, and setting a good example of loyalty and patriotism to the other nobles.

At the very time when the samurai of Saga began the excitement which led to the rebellion, under the plea of attacking Corea and restoring the old feudal system of government, Iwakura was attacked and wounded by a band of rebels. The Gon-sanji, or Assistant Vice-Governor of Fukuoka Ken felt the matter very keenly. He therefore summoned the samurai to assemble at the Kencho, and explained to them the state of affairs, advising them to be firm and loyal. The samurai yielded to the opinion of the Gon-sanji, and bound themselves by oath never to oppose the government, and the substance of this oath they put in writing and delivered it to the Gon-sanji. It is as follows:

"We have respectfully considered the difficulties surrounding His Majesty the Emperor, that his mind can never be free from trouble, and that the high officers of government are engaged from early morning until late in the evening in their anxious business, so that the liberty of the people is increased and all his subjects equally cared for by His Majesty. The benevolence of His Majesty cannot be compared to the height of Fujiyama, nor to the depths of Biwa Lake.

Now, although we, the humble servants, are, for no service of our own, living at this time upon the hereditary salaries gained by our forefathers, we are desirous to perform meritorious deeds to requite the kindness of His Majesty, and we feel ashamed that we have not been able to do so.

As, of late, the adjoining province of Saga has been disturbed, and the minds of our own people have been agitated by the current reports everywhere circulated, we have judged it right to hear argument in an assembly, and have determined how to act in the present crisis.

We, therefore, have the honour earnestly to desire, in case of any untoward events occurring, to do meritorious deeds for the Emperor, to requite a millionth part of the kindness received from him.

This is our earnest desire, and we offer it in writing that our loyalty may be known.

2nd month, 7th year Meiji

ALL THE SAMOURAI OF THIS KEN.

To the Gon-sanji of Fukuoka Ken,  
Yosamé Hidosuka Sana.

THE RABBIT mania has broken out again in Ts'kidji.

THE FIRST meeting of the Quazoku, (nobles), which took place recently, does not seem to have been altogether a success. We learn that most of those present appeared to be more anxious for their own affairs than for those of their country. Eventually one of the Secretaries (Sho-ki-kan) addressed them somewhat as follows: "The opinions you express relate to subjects too far removed from those bearing on the improvement of our country. Why do you not confine your attention simply to such matters, instead of thinking only of yourselves?" The native reporter concludes, significantly, thus: "There was no reply to his question, and that was all of that meeting."

SPITE OF "war's dire alarms" the social festivities and ceremonies of the people are unforgotten, and are celebrated as of yore. The day of the "girl's matsuri," or Feast of Dolls, which comes annually on the third day of the third month, or in modern phrase, on the 3rd of March, is now being prepared for. On the Main street in Tokei, between Nihon Bashi and Kanda river are the most celebrated shops for the sale of the gorgeously dressed dolls, emperors, and empresses, and all grades of nobility. This year the display is not fully up to that of the past, when booths were erected in the centre of the street, and crowds thronged to purchase the dolls and picture books and mimic household furniture for the decoration of the chief room of the house on the lay sacredly set apart for the little girls of Japan. Whoever has visited a Japanese home on the girl's matsuri day, and seen the splendid display of dolls and girl's toys must be impressed with the pains taken with, and the affection lavished upon Japanese children by their parents. The great day for boys is on the fifth day of the fifth month, when the toys are of a martial and masculine character. It is to be regretted that these beautiful customs are slowly dying out. Though still observed, they are by no means as general as formerly, and parents especially do not enter with the old zest into the games and decorations.

"IT NEVER rains but it pours," is a old proverb of which we are reminded on many occasions. Hitherto, the Buddhist priests throughout Japan have been shaven-pated celibates who were not allowed to have wives, even if they wanted them. Now, however, not a few of them avail themselves of the government permission to do so. One, in Echigo, a short time ago, having previously taken unto himself a good wife, was delighted to find that his spouse was in a condition to make him a happy father. The extent of his joy was not however revealed to him, until, upon a certain day, his wife presented him with four miniature copies of himself. We have not learned whether the mother and her quadruplets are doing well, but we hope they are; and the paterfamilias and his fruitful vine have our congratulations, or our condolence, which ever they wish. The native chronicler indulges in the wonder whether such instances of fecundity occur in foreign countries.

SEVERAL BRITISH vessels of war are shortly expected from the China Station, and from England to reinforce the rather small squadron at present stationed in Japanese waters.

THE PROGRESS of Okubo as given in the telegrams and in the reports received from government looks very bright for the ministers; but there are two sides to every medal; and, in this case, we regret to be told that the action

of Okubo himself has made matters far worse than they were. The Satsuma men had been kept quiet; and it was pretended that with the exit of Shimadzu from Yedo, and his return to Kagoshima, there was the certainty that the clan would be held within bounds. But as well might the ministers attempt to bind the ocean. Their turn was sure to come if the government continued in the course it had taken, and the action of Okubo has hastened the catastrophe. Seven men were taken prisoners by the imperialists and they were ordered to be beheaded at once. The order was obeyed, and the news conveyed to Kagoshima and Choshu. The result was the immense excitement of both clans. It is more than likely that by this time a third great fighting clan is in arms; and if not, it will be before many days. And then what can the government do? The few troops available, have their work cut out for them in Saga. How is it likely they can do anything decisive? The soldiers are not likely to be found who can be sent southward in sufficient numbers. Supposing that all now in Tokei are reliable, which they are not (for this particular purpose), they are wanted for the protection of the city. Already samurai are swarming into Yedo, and were the soldiers removed, there would be danger. Taking all things into consideration, and relying on the excellence of our information as to the current facts, we are at a loss to see what more the government can do.

But the samurai who have risen declare that they are no rebels. They will maintain and defend the Mikado with their best blood. They are set at defiance, however, by the present ministers, and they are determined to let those ministers see that, whether they be right or whether they be wrong, they are strong and determined. We are quite satisfied that this is a true state of the case, and that if these men would resign, the cause would soon be satisfied and calmed.

The Choshu men have demanded that Ito shall go down and take his place with them.

We do not know whether there is any truth in the report of the *Stonewall* having got into the hands of the disaffected. If so, it only leaves six Imperial men-of-war available for service; and some of these would be none the wiser for a short turn in dock.

TWO STEAMERS have been cruising about, a little outside the Shinagawa anchorage, all yesterday and to-day. We are informed that they are detailed for the duty of examining all vessels that arrive in the harbour. They have more than once had occasion to fire blank to bring junks too.

TUESDAY, the third day of the third month, being the day devoted entirely to the female part of the rising generation of Japan, was observed in Tokei as a day of rejoicing and pleasure in most Japanese households. The day was perfectly clear, and the weather all that could be desired. In consequence of this happy conjunction of lovely weather and an auspicious day, the streets of the capital were crowded with the little folks and their mothers, grand-mamas, and nurses. The shops were unusually gay, the theatres were crowded to repletion, the audiences being largely composed of delegates from female baydom. In many streets, flower-shows were held, and the display of blossoming plum-tree was fully as fine as on former years. At night, full of cakes, candy, and other delights and indigestibles, the little ones, tired and sleepy, lay

down to sleep and dreams, with doubtless the usual colics and infantile troubles to disturb the rest of anxious mammas. The boy's matsuri occurs on the 5th of May.

THE BRICK pavements along the newly-built portion of the Tori or Main Street in Tokei, from Shimabashi to Kiobashi, have been worn to the level of waves in a breeze, or of spines on a sturgeon's back. The bricklaying having been done by mere tyros at the business was not well done at first. The bricks had not been thoroughly burned, and even well-burned bricks could scarcely be expected to stand the chipping and grinding action of the heavy Japanese clogs. Bricks and boots ought to go together. The clogs of the natives not only keep the sidewalks thickly coated with mud, but break the bricks continually. They are now in a sad condition, and their condition a few months hence will not be improved. Seeing the present and prospective condition of these boasted foreign sidewalks, it is not surprising that some of the tax-paying grumblers, the "frogs in a well," and the conservative countrymen, begin to think that foreign improvements are not worth much after all, and very expensive in the bargain.

THE BUILDINGS on the Main Street in Tokei being finished, the erection of similar brick and stone two-storied buildings has been begun on some of the side streets running westward.

MOST OF the old residents of Yokohama and Yedo remember the old ferry-crossing at Kawasaki, on the road to the capital. In the days when the journey was made by kago, horse, stage, or jin-riki-sha, the delay of crossing by the ancient method of flat-boats and poles always necessitated a delay which was sometimes tedious and often vexatious. Foreigners wondered much why a bridge was not built at this place, where thousands crossed daily. After the railway was finished and the journey to the capital was a slow one of an hour, and a quick one of a third or fourth of the time formerly required, foreigners ceased to care or wonder. Now, however, one notices out of the carriage window a neat bridge spanning the river, built in the usual convex style, but painted black. Thus, the river Rikugo, which foreigners usually call Logo, by a corruption, is now very much modernized.

OVER THE river Rokugo there is yet another bridge to be built. It will be a little above the present railway bridge; and is to be constructed on a solid foundation. It has been found by boring that there is solid rock 54 feet below the bed of the river; and as the shifting nature of the river's bed may sooner or later weaken the present railway bridge, it has been determined to take time by the forelock and guard against possibilities. The old ferry at Kawasaki has long since been done away with, a good bridge having been thrown across the river in its place.

It is said that the government have determined that all Japanese scholars now studying abroad at the public expense are to be recalled; and those only who have made a satisfactory progress in their studies will be allowed to return for further instruction; the remainder being retained here.

WITH REGARD to the rumour that the government has placed policemen at the Japanese

newspaper offices, we cannot confirm it. Certainly there are none anywhere near the office the *Nisshin Shinjishi*.

THE FOLLOWING is the reply of the Emperor to the application of Shimadzu Saburo to go to Kagoshima:—

"You, Hisamitsu being anxious as to the present condition of Kiushiu, have often asked my permission to go to Kagoshima. I appreciate your loyal feeling.

"Although I can ill spare you at such a national crisis, yet it is necessary. Therefore go to your Ken, and do all in your power. But I shall especially await your speedy return."

As is well known, Shimadzu left on the 17th instant in the steamer *Chihli* for Kagoshima. His followers were but few; but they were all his old high officers.

ONE OF the Yedo newspapers reports that just before Yeto Shimpei returned to Saga, he applied to the chief of his old clan for a sum of money towards the expenses of the coming strife; but was refused.

ON THE 18th instant the Japanese Mail Steamship Co. informed the Yekitai Riyo, that it was impossible to dispatch a steamer to Osaka on the 21st instant (to-day); as three of their steamers have been hired by government. By telegram from Osaka, they also receive information, that a fourth steamer was engaged to take Osaka troops to Kiushiu.

The heartlessness of the coolie class among Japanese is often shewn by items that appear in the native papers. One of them tells in its yesterday's issue of a poor woman, who was taken in labour in a jinrikisha at 11 p.m. on the 14th instant. The jinrikisha man lifted her out, and went away, leaving the poor creature to her fate. She found shelter only in a most offensive place, and being unable to move away, was discovered in the morning, embracing her still living child, but sadly in need of professional attendance.

ON THE 15th instant a young man was found dead in the street near Asakusa Bashi, Tokei. He proved to be a Samumai of Wakayama Ken, Kishiu, and had been visiting a countryman of his at an inn at Bakuro-Cho. They quarrelled, and the young fellow was so enraged as to seize a sword and wound his friend. The sword was knocked out of his hand, but he succeeded in recovering it; and, rushing out of the house with it, he committed suicide by stabbing himself in the lowest part of the abdomen and cutting a wound six inches upwards.

AN OFFICER of the Gaimo sho has recently been sent to the Loo Cheo Islands to take charge of affairs there.

BY THE kindness of John Robertson Esq., O. B. C., we have received from the Imperial Mint at Osaka, specimens of the new bronze coinage now ready for issue, of the respective values of 2 sen, 1 sen,  $\frac{1}{2}$  sen, and 1 rin ( $\frac{1}{10}$ th of a sen), which are really very pretty specimens of the medalists art.

The two sen piece is about the size of an English penny, and a substantial piece of money. On the obverse, in the centre, is depicted the Imperial dragon (Riyo), surrounding which are inscriptions—in Japanese, Dai Nippon, Meiji Roku-nen, (the coin having been minted last year) and, in European characters,

the value, 2 sen. The reverse has the value in Japanese characters in the centre, Ni-sen, and over it, the edge, the Mikado's mon, the Chrysanthemum flower; on either side of which is an inscription in Japanese stating that "50 pieces make 1 yen." Branches of the Kiku (Chrysanthemum) and the Kiri complete the bordering, the *tout ensemble* being altogether pretty. The one sen and half sen pieces are substantially the same in design, the only difference being in the description of the values, Ichi-sen, and Han-sen, and the equivalent of pieces, to the yen. The 1 Rin piece is diminutive, yet substantial, and is intended to replace the cumbersome cash, the value of which it represents. The obverse has the mon in the centre, and in European characters, the value 1 Rin. The reverse simply contains the value in Japanese characters, Ichi-rin.

The execution of the whole is exceedingly good, and the Mint authorities have just cause to be proud of their work.

WE ARE glad to hear that there is prospect of Yokohama being lit with gas by next winter: Takashima having come to terms.

WE see by a paragraph in the *Mail* of Saturday last, that a project has been formed among the members of the congregation which for some time past attended the services at the Gaiety Theatre, to build an edifice for the purpose of public worship, and exclusively dedicated to the services of religion. In this work we most heartily sympathise. It occurs to us that a sum of \$1,500 has already been subscribed by the two first American Ministers to Japan, Mr. Harris and General Pruyn. If we are not mistaken in this, it will form a nice heading for the subscription list, which we suppose will ere long be sent round. We do not know in whose hands the \$1,500 were placed; but we believe we can hardly be wrong as to the fact.

ON SATURDAY night about 9 o'clock four Japanese burglars entered a native house in the vicinity of Nogé, armed with swords and a revolver, with which they threatened to instantly despatch the inmates should they attempt any resistance or endeavour to raise an alarm; and, whilst one of the ruffians kept guard with the revolver, the others ransacked the premises, and succeeded in securing booty to the extent of \$83 and a valuable gold watch. Nothing further has been heard of them.

A JAPANESE constable on beat in Otamachi on Sunday night heard a cry of "stop thief," and the sound of some one approaching rapidly. Surmising it to be his man, he quietly ensconced himself in a by-way, and "nobbled" the fugitive, as he passed, with his baton.

It turned out he was right, and, on raising the thief from the ground, he relieved him of a clock which he had annexed. He was accounted for at the Saibansho.

THE news which has been spread throughout the settlement to-day is said to have been brought by the *Shooreylen*.

It is to the effect that Nagasaki is in the hands of the samourai, and that the *Zadkia* having arrived there, was not allowed to land her passengers, nor even to take in a supply of coals. The foreigners, however, had received an assurance that they had nothing to fear.

This being a holiday in Tokai, we are unable to fathom the report. Under any circumstances, we do not suppose that "Nagasaki has been taken"—in the sense of its having fallen into

the hands of rebels who attacked it from outside. If there be any truth in the reports, it will most probably be that the samourai of the place itself have risen; but until we receive information from the sources we most rely on, we shall hesitate in yielding credence to any such rumours.

Government profess to place full reliance on the certainty of Okubo's success. We suppose he cannot have done anything yet; or we should certainly have heard of it.

THE PRACTICE of Hara-kiri seems to be reviving amongst the samourai. A few days ago, a citizen of Ishikawa Ken who was originally a samourai of the Ken, took up his abode at a Japanese hotel, Sugitoya, in Tokio. Whilst talking with some friends, a dispute arose, and at last he drew a sword and wounded one of them, whereupon they all surrounded him, and endeavoured to secure him. He got away and ran as far as the second Kayacho, a distance of about 5 cho, where he committed suicide by cutting his abdomen.

THE GIRL'S festival, matsuri, formerly observed, in the Tokugawa times, with great *éclat*, was due yesterday, the third day of the third month; but, beyond the display, in Oto-machi and Homura, of a few tawdry dolls, there was nothing to remind one of the former splendours of the little girl's festival. Yokohama never boasted anything great on such an occasion, it is true, but former residents of Nagasaki—always tenacious of old customs—will remember the brilliant spectacle presented by the long procession which usually sallied forth about 10 o'clock in the morning, bearing ingenious works of native art, in glassware and other material; and not a few will view with regret the gradual disappearance of the old-time fashions, (typical and significant as they frequently were) of an ancient people.

ONE NIGHT last week, two men and two women (Japanese) entered the house of a farmer near Homoco, and one of the latter, pointing a sword at the breast of the householder, demanded his money. Whilst the Amazon kept guard, the others quietly "burgled" the house, and secured a sum of money in satz. They have, however, been caught, and are likely to finish their career at Tobé.

THE NEW "Shand and Mason" Steam Fire Engine, ordered last September for the Yokohama Fire Brigade, reached here in the S. S. *Canton* and, this morning, a trial was made in the compound of the Brigade of its capabilities which seemed to be eminently satisfactory. It is similar in appearance to the one already in use, but is said to be a better engine, and to contain some later improvements. Its powers were not, however, fully brought out, which was, perhaps, judicious, the trial being conducted with a head of 80 lbs. of steam, afterwards worked up to 100 lbs. Two hose were in use, the supply of water being drawn from the capacious tank of the Brigade within the lot, and steady streams of water were thrown over the watch tower adjacent. It is capable of throwing, under ordinary circumstances, 300 Gallons per minute, and is undoubtedly an acquisition to the settlement.

The necessity of obtaining a reliable supply of water was prominently brought before the notice of the Committee at the Annual General Meeting of the Yokohama Fire Brigade. It is to be hoped they will not fail to give the matter their early attention, the question being of paramount importance.

IN our issue of the 23rd inst. when referring to the proposed erection of a church for the use of the congregation worshipping at No. 68, we stated our belief that there were already fifteen hundred dollars in hand for the purpose, the gifts of the Hon. Townsend Harris and Gen. Pruyn, which would materially aid in the accomplishment of the object. We have since learned that this is a mistake, and the Union Church can derive no benefit from the money given by those gentlemen, as it was for another purpose. The new church project must therefore depend upon the liberality of the members of the congregation and the community for its success.

WE are informed that Mr. G. K. Dinsdale has been appointed Secretary of the Chamber of Commerce.

THE LARGE "Volunteer" hand fire engine, after having undergone a thorough overhaul and refit, was this morning taken on to the Bund near the Grand Hotel, and put to a test, with the object of proving the efficiency of the repairs. This engine, which is yet a most excellent one, although by no means new, requires at least 50 coolies to bring out its full capabilities; this morning only 20 were available, and the trial was therefore not quite so complete as would have otherwise been the case. On the whole, however, the result was eminently satisfactory, both hose working well. The new steam fire engine recently landed from the S. S. *Canton*, underwent a further and complete trial, on the day following that on which we chronicled the testing of her powers at the Yokohama Fire Brigade Company's lot. On that occasion the development of the full powers of the engine was not advisable, care and prudence being of course the first objects in the starting and working of new machinery. The following day, however, afforded an opportunity of showing what the engine was really capable of, and we understand the result was eminently satisfactory; it being said to be even a better engine than that of the "Independence" Company. It is a pity that these practices are not more frequent; not only for the sake of the discipline of the corps, but also for the benefit of the machinery, which is certainly not improved by being allowed to remain inactive for any length of time.

At last, and none too soon for the benefit of the health and morals of the imitative Japanese, the authorities have made a raid on the Chinese opium-smokers of Yokohama. This morning a number were brought up at the Saibansho and sentenced to lengthened terms of imprisonment, two years and a half being the usual punishment. The offence was formerly a capital one.

LAST EVENING, nine "kom-ban-was" were arrested in the vicinity of Homura, charged with publicly plying their avocation, to the annoyance of European gentlemen whom they accosted.

This sort of thing has been going on for some time, but has lately attained such a pitch that complaints have been laid before the municipal authorities; the result being that a number of police, who were detailed for the duty, in plain clothes, succeeded last evening in effecting the capture mentioned. The delinquents were brought up at the Saibansho to-day, and are likely to be severely dealt with.

## ENTERTAINMENT—TEMPERANCE HALL.

Once or twice we have taken occasion to bring before the notice of the public the enjoyable entertainments which have of late been provided on Thursday evenings by the Committee of the Temperance Hall. They are not pretensions in their character, the gentlemen who tender their services claiming to be no more than amateurs; what is desired and aimed at being mainly the drawing together for a rational evening's amusement such of our community as might perhaps be otherwise less innocently employed.

Last night, a very nice programme was offered to the full house assembled to enjoy the promised good things in prose poetry and song provided for the occasion. A large proportion of blue-jackets, English and American, with a goodly number of "jollies," shewed an appreciation of the efforts of the committee to please which must have been gratifying to them; affording an encouraging proof that jack-tars and soldiers can, notwithstanding the vilification frequently bestowed upon them, heartily enjoy themselves in a really "temperate" way, instead of having recourse to that which they are usually credited with, the bottle. That there are many good men and sober in the ranks and on board ship we know; all honour to them, say we, but, alas! it seems as though the class must suffer for the peccadilloes of the black sheep of the flock, and the whole body is frequently set down as being radically bad. Such gatherings as that of last night serve to refute the aspersions so generally cast upon the characters of our defenders; it would have been difficult to have brought together a more orderly and respectable assemblage.

We do not intend to criticise at length the endeavours of the various gentlemen who last night volunteered to amuse. Although all were amateurs none were novices, and everything went smoothly and, well. An overture by the Band, (two of the *Thistle* "boys") opened the proceedings, and readings, songs, recitations, glees, and negro eccentricities followed in rapid succession, the noticeable feature of the entertainment being the exceedingly amusing absurdities of three colored gentlemen, Messrs. O'Connell, Baker and French, who contributed to negro sketches which fairly convulsed the house. The quartette "*The Harp that once*," and "*Oh, Hush thee*" were sweetly rendered by the Glee party, who earned the applause bestowed on them and hardly escaped an encore.

Altogether the entertainment was a complete success, in spite of other attractions at the "*Gaiety*." A few ladies were present, but not so many as we should have liked to have seen. The affair was brought to a conclusion about 10 o'clock, in order to accommodate those having to go any distance.

OUR CONTEMPORARY, *L'Echo du Japon*, seems to have got into a fog this morning with respect to certain (supposed) distinguished arrivals yesterday. It says; "Amongst the passengers arrived by the steamer *China* yesterday evening we observe Mr. Waite, chief of the United States judicial service in Japan; and Mr. Thomas W. van Buren, the new U. S. Consul at this port, replacing Col. Shepard."

Latest telegraphic news received per *China* states that Judge Waite, after a great deal of fierce party rivalry, had been appointed Chief Justice of the United States, but that General Van Buren, who gained an unenviable notoriety from certain discreditable proceedings arising out of his official connection with the Vienna Exhibition, although appointed

by the President to the post of Consul at Yokohama, had been rejected by the Senate; as yet, we believe no one has received the office.

Mr. Wayne, of Georgia, who was spoken of some little time ago as having been accredited to the post, was really offered it, but refused the honour.

## NI-IGATA.

February 15th, 1874.

THE FARMERS all prophecy a bad year for rice and other crops owing to the lack of the usual heavy fall of snow.

THE NEWSPAPER lately started here moved into new quarters, and set up outside its door a large box, intended to receive communications for the editor. This was quite a novelty; and a country woman passing, stopped, wondered a little, then taking it for a temple shrine prayed very earnestly for a time, threw into the box her offering of cash and passed on. The editor the next morning came out with a long article lauding the religious feeling of the country people.

FROM WAKAMATSU we hear of much poverty among the old official class, who find it hard to make a living. The native paper speaks of a new earthenware manufactory that has been started there, which bids fair to do well and has given employment to quite a number of people. The school is well attended; and many of the merchants having given considerable sums for its support have been rewarded by the local government for their assistance by trays of silver and lacquer, with suitable inscriptions on them.

THE INFORMATION we receive to-day leads us to believe that Nagasaki may be in the hands of the samurai; but that it has been yielded quietly without fighting, to avoid the evils that resistance would have led to.

The Saga Ken samurai sent to the Kenrei of Nagasaki Ker, and stating their intention of marching upon and taking the town, demanded that he should yield it to them, to avoid the danger of innocent citizens and foreigners being slain, and business totally put a stop to. The Kenrei, considering that he had not force sufficient to oppose them effectually, deemed it prudent, on receiving a promise that nothing should be disturbed and nobody molested, to step aside; and the chief authority was quietly handed to a proper officer, without any unwonted excitement. The town is perfectly quiet and likely to remain so.

We believe we may go the length of expressing our conviction that a means has been found which may lead to a termination of the present governmental troubles, in a manner creditable to all parties. We eagerly watch for the decision of the government in the matter.

IT BEING reported that 400 samurai had started from Osaka and several from Saga for Tokio, the greatest vigilance is observable on the part of the authorities. At all the Railway termini, a number of policemen are on duty, to watch the arrival of every train, and question or otherwise examine any persons they may suspect.

Feb. 22nd, 1874.

A LOT OF rice merchants here agreed together to keep up the prices of rice, with an understanding that any one selling under the agreed rate should forfeit a large amount. They have got themselves into trouble with

the authorities, who found out the scheme in consequence of a rice dealer who would not agree to the combination having complained of their annoying him for so refusing.

A MAD man ran out of a tea house, and before he could be caught jumped into the river here. As the current was running very fast, although every effort was made by boatmen who were near, the poor fellow was drowned. The people of the tea house say he was a quiet man, living near them, but that one day about a month ago he had killed a fox, and since then he had become mad, and no doubt the spirit of the animal had been the cause. Amongst the farmers and lower class this idea is very prevalent.

A BRIDGE is shortly to be built across our river, the Shinanogawa. It will be placed near the Custom House, and will connect this town with Nottare, a thriving place on the opposite bank. This will be a very great convenience, as there is much traffic between the two places; and, when, as is now often the case, the river is swollen by floods, communication by the ferry is difficult, and sometimes impossible. The bridge will be built of wood, and its length with approaches will be 300 Ken or 800 ft. The local government will provide R.20,000 and the rest will be raised by a tax and toll, to be levied on passengers. Another bridge over the river has been built higher up, at Hazeima; this is 300 feet long, and has been constructed by a contractor named Matsaga at his sole expense. To recoup himself, he has been permitted to levy a toll of half a tempo on passengers, during the next eleven years.

A NEW Bank has been started here, named the Fourth National Bank of Japan, capital 200,000 rios, in 100 rio shares. It has permission to issue notes to the amount of 12,000 rios.

THERE IS a good sized theatre here, and, during the summer months, when professionals from the capital come starring, some very good acting, so the natives say, may be seen. During the winter months times are dull and little going on; but, lately, a country troupe of twenty five performers have been keeping open house, and their mishaps have caused much merriment, their wardrobe &c. being so scanty that the shifts they have been put to remind one of the strolling players seen at an English country fair. For instance, during a scene in which the hero of the piece was to commit the "happy despatch," in the most approved manner, he had already the dirk pointed against his belly, but the lights, which were dull, did not please him; and no doubt wishing to have this part well seen by the audience, he put off the deed, and called for a light, which was brought by a clumsy fellow, on the end of a long bamboo. He then stabbed himself, but, in place of the rush of blood (which is so well done in Yedo) the actor drew out a roll of red cotton waste. This caused much fun at his expense; but what brought the house down was the following. A little later on a ghost is supposed to appear through a trap in the floor, and the man who was taking this part, perhaps being in close quarters under the stage, was heard to ask, Is it time to appear?—and even when he did come he had to be lifted through the hole on the shoulders of an assistant, who could be plainly seen by the audience.

RICE is quoted at Boos 7½ per picul. The rise in price is said to have been caused by the arrival of speculators from Osaka and Tokio.

## Statement of the Japanese Trade at Niigata during the last year.

NIIGATA, Feb. 22, 1874.

## BY SEA.

## IMPORTS.

## EXPORTS.

1869, \$ 2,028,782	1869, \$ 1,953,797
1870, 1,971,154	1870, 1,257,618
1871, 1,133,316	1871, 988,624
1872, 1,068,662	1872, 626,788
1873, 1,659,048	1873, 1,348,424

The most valuable articles of European manufacture are brought here overland, owing to the uncertainty of communication by water; and as each merchant hires his pack horses and brings his purchases from Tokio himself, it is almost impossible to get, true return of the value thus imported; but the goods passing the Mikune for the towns of Niigata, Nagaoka, Midsuki, Sanjo, Shirone and Kameda certainly averages \$1,000,000 per annum, and consists chiefly of Cotton Yarn, Shirtings, T. Cloths, Turkey Reds, Velvets &c., &c. The export this way is even larger, and consists chiefly of Silk, Cocoons, Cartons, Tea, Copper &c., &c. The trade here by boats on the river is very large, amounting to \$1,400,000 in the year. The chief things so carried are Colours, Soy, Tea Dyes, Paper, Corn, Saki, Rice &c. The boats average from four to twelve tons—about 600 coming from Nagaoka, 540 from Idzu, 850 from Sango and 810 from Kudzuzuka and Shibata during one year. But of this traffic also returns are very difficult to obtain correctly.

One of the chief reasons for the increase in both import and export trade during the last year may be found in the fact of a good rice crop and in the largely increased quantity of saki that was made; and on the other hand the cotton crop, being short and the take of the fishery small, brought up the import of these articles; to which may be added wood which makes an important item, it is required in building the many new houses that are springing up all around. Many goods have been re-exported, but to what extent it is impossible to discover from the customs returns. The natives here largely use Grey Shirtings, T. Cloths and Drills which they dye to suit their own taste; buying them principally in Yedo and bringing them overland. This would certainly not be the case but for the fact of the uncertainty of communication with Yokohama by ships.

The Export of rice has been as follows:

1870-	-	Piculs	309,978-	-	-	\$ 783,357
1871-	-	"	311,884-	-	-	467,826
1872-	-	"	366,245-	-	-	448,811
1873-	-	"	532,956-	-	-	676,014

Of this years crop all but 6,700 piculs, which were shipped in the Japanese S. S. *Bahama*, have been carried in Japanese bottoms often at a mere nominal freight, as the price ruled too high to leave a margin if sent by steamers; and even that shipped by junks often hardly cleared expenses. The lowest price was in April, 34 boos per picul, and the dearest in July, 7 boos per picul.

The shipping is as follows:

ARRIVED.			DEPARTURES.		
	<i>Junks.</i>	<i>Tons.</i>		<i>Junks.</i>	<i>Tons.</i>
1870	3,340	85,331	1870	3,153	88,149
1871	2,537	81,110	1871	2,599	87,964
1872	2,446	60,878	1872	2,431	60,614
1873	4,696	70,904	1873	4,881	74,008

It will be noticed there is an increase in the number of Junks but not a corresponding increase in the amount of tonnage. This is caused by the setting up of the bar preventing large Junks from coming here. The Japanese Steamer *Atalanta* came in over the bar drawing

9 feet; but it was a risky thing as the depth is constantly changing. Many Junks that are being now driven off the East coast by the increasing competition of Steamers come here seeking.

The large canal that is being cut to take the flood water of the Shinanogawa into the sea near Tera-do-mari, is progressing slowly; and it is estimated will cost fully R. 800,000 before it is finished. It was the extra taxes on this account as well as the influence of the discontented priests and samurai that caused the outbreak near that place in 1872. The work is not at all liked here as it is thought it will make the bar worse, and even the people for whose benefit it is being made, having been free from heavy floods for some years past, do not much appreciate it.

The revenue of the Ken which is the largest in the Empire, is 1,133,418 kokus. There are in the town 8,155 houses and a great many new ones building, and 32,256 inhabitants.

Of the crops this year those of Corn, Beans and Rape seed were very good; but those of Tobacco, Hemp and Cotton were poor, the two former being much damaged by worms. The rice was satisfactory but the quality is expected to suffer, as much of it was harvested during wet weather.

There is very fair coal brought from Akatane, price 26 boos per ton; it is used in Sado for the engines at the gold mines.

The copper mine at Sungawa has been working during the past year under a contract made in Yedo, and all the ore raised is run into slabs and bars, and sent to that city at once, overland.

Herewith a few of the principal things imported in Japanese Junks—during 1873:

Raw Cotton, ...	5,004 pels.	\$120,114
Manufact'd goods, 6,946 "		41,676
Salt and dried fish, ...		286,500
Wood, ...		213,543
Earthen-ware, ...		9,888
Mats, ...		16,971
Medicine, ...		20,856
Oil, ...		12,893
Paper, ...		51,850
Salt, ...	6,443 pels.	78,111
Sugar, (white) 5,785 "		57,850
" (black) 12,942 "		77,652

## EXPORTS IN JAPANESE JUNKS.

Sugar Brown, 2,089 piculs, -	-	12,534

I have to thank C. E. A. Leysners, Esq., and the customs authorities here, for their kind assistance in gathering these few statistics which I hope will prove interesting.

E. J. MOSS.

## AMATEUR ATHLETIC ASSOCIATION—ANNUAL MEETING.

THE Annual General Meeting of the Amateur Athletic Association of Yokohama was held yesterday afternoon at 3 o'clock, in the rooms of the Chamber of Commerce; the use of which had been kindly granted. Thirteen members were present.

On the motion of Capt. Purves, Lieut. Sandwith took the chair, and called upon the Hon. Sec., (Mr. W. Brent) to read the Report for the first year, and the Statement of Accounts:

## REPORT.

The Committee have the honour to lay before the members the first Report and Statement of Accounts for the past year.

The establishment of the association and obtaining suitable ground were matters of considerable difficulty. So long ago as the early part of 1869 the formation of a similar association was mooted, and a subscription list, limited to ten boos each, met with ready support, a sum of 1,640 boos being promised. It was not, however, until the close of 1872 that the scheme assumed a definite form, and, at a meeting held in the Public Hall on 26th December, 1872, the present Committee were appointed. Inquiries for a suitable piece of ground were commenced, and the result brought before a second meeting of members, when a majority decided in favour of the Rifle Range.

Formal applications for the use of the Rifle Range were made in the proper quarters, and, after some delay (28th July, 1873), the Japanese Government granted permission to use the ground named, in consideration of the association paying an annual sum of \$47.63, for farm land encroached upon in making the running path.

The subscription list before alluded to was then sent round, and 1,000 boos were collected. The remainder, from various reasons, could not be collected.

The association now numbers 45 active and 8 honorary members.

The accounts show receipts amounting to \$961.69, and 1,000 boos, leaving the association in debt for the past year to the extent of \$98.31.

This balance carried down, the account continued to date, and the dependencies taken into consideration, shows a balance of about \$8. to the credit of the association.

The Committee regret that the financial result of the year is not more favorable, but they ask the attention of the members to the details of the expenditure. The cost of members' house, roller, dressing room, grand stand, rag and fencing—in all about \$460—will not be incurred in future working, while they consider it equally probable the revenue of the Association will be increased. The Committee further ask attention to the fact that out of a gross expenditure of \$1,407.88, about \$700 may be considered an asset, contained in the path, enclosure, and buildings of the Association.

At the close of 1872 the Committee decided in favour of a Skating Rink, and a general meeting was called to consider the proposal. The meeting was very thinly attended, but those present being in support, the scheme was carried into effect, and scaffolding, matting, &c., for the protection of the ice from the sun, were obtained, at a cost of \$180. The unusual moderation of the season rendering the undertaking abortive, but the materials are in possession of the Association, and can be used next season at a trifling cost.

In conclusion, the Committee desire to express their obligations to Colonel Richards, Capt. Bridgford, and the officers of the Royal

Marines, and to Russell Robertson, Esq., H. B. M.'s Consul, for their support and valuable assistance, so freely rendered, in obtaining the use of the Rifle Range, and to thank the ladies and gentlemen of Yokohama for the prizes given by them in encouragement of this young institution.

E. & O. E.

Yokohama, 23rd February, 1874.

W. H. TALBOT,

Honorary Treasurer.

The Hon. Sec., in reply to a member, said no minutes were taken at the meeting held on Decr. 20th to decide upon the formation of a Skating Rink. There were three members present on that occasion, which took place at the Rifle Range, immediately after a paper hunt. Mr. Brent read Rule 6 authorising the meeting.

Mr. Dare said he was present on the occasion referred to, and neither saw nor heard anything about it. He thought it altogether wrong that two or three members should take upon themselves to meet together and squander the money of the Association in such a useless manner.

Capt. Purves explained that the Skating Rink was intended for the use of members; open to the public on payment of a small sum. The season had been unusually mild, and, as a consequence, there had been no skating, but the Rink was still to the good, and available for next year.

Mr. Watson stated, in reply to a member, that the skating season usually commenced in January. The present season had been almost unprecedentedly mild; the ice at Hakodadi being only 6 inches thick this year, whereas it was usually eighteen inches.

A warm discussion here ensued, some members strongly deprecating the action of the few who undertook to authorise the erection of the Rink, without consulting the body of the members.

The Hon. Secty. said the meeting had been duly advertised for a considerable time beforehand, in accordance with the rules. Had the season been propitious and the affair consequently a success there would not have been a word said against it.

Mr. Longford said it was a question requiring decision, whether three members should be entitled to meet together and pay away so much of the Association's money. He thought there was no authority for it.

It was then proposed by Capt. Purves, and seconded by Mr. Kilby, that the accounts as read be passed.

Mr. J. J. Dare proposed, as an amendment, that the sum disbursed in the erection of the Skating Rink be disallowed, as not having been authorised by the members—Seconded by Mr. Taylor.

The matter having been put to the meeting, the original motion was declared carried; the numbers being—for the proposition 6, for the amendment 4.

The Chairman said the next business was the election of a Committee for the current year—5 in all.

Mr. Dare asked why a gentleman he had proposed in January had not been put up to ballot.

The Hon. Secty. said it was simply because it was not thought worth while to ballot for one gentleman, when the whole Committee would have to be so soon elected.

Mr. Dare read the Rule bearing on the case, shewing that the election should have been proceeded with at once.

The Hon. Sec. said, virtually the Committee ceased to be on 31st December. There was really no occasion to elect a Committee-man in place of Lieut. Wright until the whole were elected.

The balloting for the Committee was then proceeded with. Capt. Purves, at the request of the Chairman, acting as Scrutineer.

The Hon. Sec. explained that it was for the Committee to elect their own Secretary and Treasurer, out of their number.

The following gentlemen were declared duly elected as Committee for the current year:

Messrs. A. T. Watson, Abbott, Reed, Hungerford, and J. J. Dare.

Mr. Longford desired to suggest a resolution—he did not wish to propose it as a new rule—to be put upon the minutes for the consideration of the Committee. That at future meetings the majority of events be handicaps, and that second and third prizes be presented.

Mr. A. H. Dare seconded the proposition, which was favourably spoken of by members, who thought it would be an encouragement to those hitherto unsuccessful. It was carried by shew of hands, *nem con.*

Mr. Townley spoke of the difficulty of getting a sufficiency of members to attend to form a quorum. It was a great stumbling block in the way of the transaction of business. There was a larger number present than they had seen for a long time, and, out of nearly 50 members, they numbered about a dozen. According to the Rules they required 20 members in order to be able to do anything, and it seemed that they couldn't even get the 20 together to reduce that number of 20; the minimum laid down in the Byelaws.

The Hon. Secty. explained that it was for an extraordinary general meeting that an application from 20 members was required. In reply to a member, he stated that this was the Annual meeting, at which Rules might be altered, but it was necessary to give 10 days notice of intention to introduce a motion to that effect. The Meeting had been advertised for some time, and members had therefore had an opportunity of bringing forward any such proposition.

Mr. J. W. Taylor proposed that the materials of the Skating Rink, consisting of scaffold poles, bamboos, and mats, be sold for the benefit of the Association. Mr. J. J. Dare seconded, and the motion having been put to the meeting was carried; the numbers being 5 against 2.

Mr. Brent (Hon. Secty.) proposed, as a suggestion for the consideration of the Committee:

That, in private matches between members, the sum of \$5 be paid to the association by the intending competitors, in order to defray any incidental expenses connected with the match.

This was seconded by Mr. Townley, and unanimously carried.

Mr. Kilby proposed a vote of thanks to the retiring Committee, for their great exertions on behalf of the association. Carried by acclamation.

After the usual vote to the Chair the meeting separated.

## Law Reports.

### In H. B. M.'s Provincial Court.

Before N. J. HANNEN, Esq., *Act. Asst. Judge.*

Thursday, Feb. 19th, 1874.

REAINA vs. SMYTH.

(His Excellency Sir Harry Parkes, and Mr. Ernest Satow were also on the bench during a portion of the proceedings.)

William Alexander Smyth, lighthouse keeper, who was committed for trial on Dec. 27th, on a charge of having indecently assaulted one Nai-i, wife of Kondo Komei, at Nabeshima lighthouse, on the 5th of Nov. last, was this morning brought up for trial.

Mr. Wilkinson appeared to prosecute on behalf of the Crown. Mr. Davidson represented the Japanese Government, with whom was Mr. Ness, who conducted the case. Prisoner was defended by Mr. F. V. Dickens.

Mr. Wilkinson said he had just that moment heard that the woman Nai-i was seriously ill, and therefore unable to appear. He would produce witnesses to prove that she was ill, and would therefore apply for an adjournment of the case.

Mr. Dickens objected. There ought to be a certificate produced, shewing that the woman was unable to appear. The Court had no power to adjourn.

His Honour said it was in the power of the Court to adjourn. The question was whether there was sufficient cause for the adjournment.

Mr. Wilkinson admitted that there was not sufficient cause. He threw himself on the consideration of the Court.

His Honour replied that at the present moment it was out of his power to adjourn.

Mr. Dickens said before the case was gone into he thought the charge should have been laid by the person having some knowledge of the affair. It was a charge very easy to lay, and very difficult to disprove. Under those circumstances, seeing that the parties to the prosecution were Japanese subjects, and consequently outside the jurisdiction of this court, he would apply that they be required to deposit a sufficient sum of money to cover the expenses of the trial, in the event of failure to procure a conviction.

His Honour asked what was the authority for such an application?

Mr. Dickens read Rules of Supreme Court bearing on the point. According to Sections 74 and 75 it seemed evident that both parties should be served exactly alike, as regarded the expenses of the trial. On those grounds he applied that a sufficient sum of money be deposited by the prosecution—really the Japanese government—in justice to his client.

His Honour said he had no power to order the prosecution to deposit any sum, as required.

The indictment was then read over to prisoner, who pleaded "not guilty."

The following were then called as jury: Alexander Wylie, Matthew Brown, Frank Scott James, John Peter Reed, John Hartley.

Mr. Dickens objected to Mr. Wylie, as being employed by the Japanese government. Mr. Wylie corrected him. Objection withdrawn.

Mr. Dickens asked whether Mr. James had been a resident in Japan for any length of time.

His Honour interposed. Mr. Dickens was not allowed to challenge the Jury in cases of misdemeanour.

Mr. Dickens said his only desire was that the trial should be judged by persons who had been resident in Japan some little time, and who were consequently likely to know something about the habits of the people.

In reply to His Honour, Mr. James said he had been a resident in Japan about six years.

Mr. Dickens objected to Mr. Reed on similar grounds.

His Honour said he really could not admit such objections.

Mr. Wilkinson said there could be no legal objection. The gentlemen called were on the Jury list. His learned friend had not shewn that they had no right to be on that list.

Mr. Dickens maintained that a person who had no acquaintance with the Japanese might be influenced by a prejudice. Not a moral prejudice, but one due to an insufficient acquaintance with the country.

In reply to His Honour, Mr. Reed stated that he had been over 3 years in the country; Mr. Dickens consequently withdrew his objection. Messrs. Hartley, and Brown were accepted, and the whole of the Jury were sworn.

Mr. Dickens said he had one objection to make. Simply that, in the event of an acquittal, in consequence of the Court not being a legal Court, the acquittal would be invalid.

His Honour read Section 72, Rules of the Supreme Court, shewing that prisoner was under the jurisdiction of the Court. Instructions had been received by him, from the Supreme Court at Shanghai, that the case should be tried before him, and a jury.

Mr. Dickens admitted that, but said that the crime for which prisoner was arraigned was not a crime coming under the jurisdiction of the Court, and read Rules 8 to 12, Order in Council, shewing that they referred only to offences against the Treaty. He maintained that the act under which his client was accused was not an act liable to punishment in England. The act was not committed within a Consular district; it was not committed on board a British ship. It was not an act of murder or manslaughter. It was not an act for which he could be committed in England.

Mr. Wilkinson admitted that the case, if brought before a court in England, would be dismissed. But it did not follow that it was not within the jurisdiction of that Court. Mr. Wilkinson read Rule 5 in support.

His Honour overruled Mr. Dickens' objection. He would take a note of it, and the question could be brought up by and bye.

Mr. Wilkinson addressed the Jury, pointing out the circumstances of the offence alleged to have been committed by prisoner, and concluded by asking them to give the case the same careful consideration as they would one in their own country. With the consent of Mr. Dickens he would now leave the case in the hands of Mr. Ness.

R. H. Brunton, sworn:—I am Engineer in the Lighthouse Department of the Japanese Government. I have had prepared a plan of the lighthouse and other buildings at Nabeshima. The plan produced was prepared under my directions from the working drawings. (Exhibited to Court.) It is the habit of the lighthouse keepers to send me a monthly return of the state of the weather. The one now produced is the monthly return for the month of November. The signature to it is Smyth's. The return describes the night of the 5th Nov. as a clear night. The following night is also described as clear.

By Mr. Dickens:—When Smyth entered the service he brought a character. He must have had a good one. Apart from the present case he has been frequently reported against for carelessness, and quarrelling with those with whom he has been associated. Besides that, he has been several times unofficially reported to me for tampering with women, and he was once before discharged for bringing a woman of bad character into the lighthouse, during watch. That complaint was laid by Kondo. He and another Japanese lighthouse keeper sent up a joint report to the office. Smyth has given a great deal of trouble since he has been in the service. It was at another lighthouse, by other light keepers, that he was reported for carelessness. I communicated with accused when it was reported to me about his taking the woman into the house, but he replied that he did so that she might mend his clothes. I had only the Japanese testimony as to the woman's character.

The reports about his carelessness were so indefinite that I did not communicate with him. I received reports from accused with regard to the conduct of Kondo at the lighthouse. The reports were brought by me before the Japanese authorities. I believe they are still under consideration. One of Smyth's reports was to the effect that he (Kondo) fell asleep on his watch, that he didn't attend to his duties, and was disobedient. The Europeans are there in the nature of instructors. The Japanese are not supposed to be obedient to the Europeans. They are only supposed to obey them in matters requiring skill. I have not written letters to the light keepers telling them to demand obedience from the Japanese light keepers as to the duties of the lighthouse; only in matters requiring skill. Letters have been written to the light-keepers directing them to get obedience from the light-keepers. The present is a very unsatisfactory position with regard to Japanese and European Japanese. The chief cause of the dismissal of accused was for the reason of his keeping a girl. I would not be surprised to hear that

it was the custom of light-keepers to keep women. Some have wives, and several mess together. The fact of any of them keeping women has not come under my notice. I should not feel it my duty to dismiss all who did so, but would certainly think it my duty to put a stop to it. I know of one case, in which a Japanese light-keeper took his Chinese woman from one station to another, in a steamer.

Smyth has been in ill-health, but that was not the reason of his dismissal.

A translation of the usual oath was administered to Nai-i, wife of Kondo Komei, who, being ill, was accommodated with a seat. Her evidence was substantially the same as was given by her at the preliminary examination, which was published in our columns at the time.

Mr. Ness put in a plan shewing the relative positions of the rooms of complainant and prisoner on the lighthouse premises, which was explained to the Court, and to the Jury; Nai-i also pointing out the position of her bed, the two doors, and the window of the room.

On resuming, Nai-i, cross-examined by Mr. Dickens, repeated, substantially, her former evidence, given in December. Adding as follows:—

Is married to Kondo. Is his true, real, wife. There were no writings exchanged at the marriage, but it was witnessed and executed in due form. It took place at Nabeshima. The marriage was not registered. It is not usual to register it immediately. Does not think it is registered yet. Never had anything to do with any man before becoming Kondo's wife. It is a downright lie that she had had a child before that. On one occasion a derangement occurred in her system, during three or four months, and sometimes it was because she was in child. Her parents were exceedingly annoyed, and called in a doctor, who gave her medicine, which—after taking it a few times—had the desired effect, and she resumed her former state. Is aware that Kondo formerly had a wife, but believes she disappeared, and it is supposed she died. Does not know whether Kondo gave her a bill of divorce; is not certain, it is probable. Did not enquire. Recognised Smyth when he entered the room. There was a subdued moonlight coming through the window, and her head was turned that way; saw his face distinctly. The room was not completely bright, but there was a light admitted by the window by which she distinctly saw him. Inasmuch as there was a space between the house and a Japanese office adjoining, and there was a light between thinks the moon must be clear. (Distance between the two buildings shewn.) The door of her room opens inside. As Smyth was at one door about to go out, Ikonotsi came in at the other. As Ikonotsi entered Smyth had the door open, ready to go out. Ikonotsi saw him; he had no light. It was after Smyth went out and Ikonotsi came in that she struck a light. The first time she called out for Ikonotsi it was loudly. Called twice in a loud voice. Fell asleep almost immediately after Kondo went out. Was awakened with a start when Smyth entered the room, and cannot say how long it was after Kondo left. Was so frightened and startled then even after the whole thing was over she never thought of looking at the clock. Smyth stood in the light of the window, which was in the shadow of the office, but the room had a subdued light from the window. The office referred to is one-storied. On that night Smyth had on his clothes. Cannot speak as to their colour. He had on a European coat. It was short. It was not specially long. Did not particularly notice it. saw his form as he was leaving the room. Noticed that the coat came down to about the region of the knee. Saw it was different from the under part of his form. Did not particularly observe his feet, but, judging from the sound, believed he had not his boots on. After making the attempts to arouse Smyth by calling, the whistle, &c., Kondo returned to his duties at the lighthouse. Cannot by any means arrive at an idea as to how long the interval was between his falling asleep after Kondo left at 12 o'clock and the occurrence. Told Kondo she was frightened, when he returned to the lighthouse. Thinks it must have been four o'clock when she fell asleep after that. Was awake from the time of being startled until then. Does not know whether the moon was shining into the room during that time, as she was lying with her head under the clothes. Did not see Smyth's China boy on that evening. Did not hear any conversation that night between Kondo or Ikonotsi and the China boy.

By Mr. Ness:—There was no foundation for the report that she had a child before her marriage with Kondo. Marriages are not registered at once in Japan. Sometimes half a year and sometimes as much as a year elapses before a marriage is registered.

By a Juror:—The doors of the room in question are Japanese doors, like those in Court. Ikonotsi Kaimatsi took the usual obligation to speak the truth; his evidence was mainly identical with that given by him before

By Mr. Dickinson:—Wrote a report of the occurrence that night and showed it to Kondo next day. The one he sent to the light-house authorities he was requested to write by Kondo. Returned to his house when Kondo went back to the lighthouse. When the latter did so he thanked witness for taking his place. That was all. The relief whistle is blown at 5 minutes to 12, and they leave the lighthouse at 12. It is generally so. Sometimes it is a little later. Fell asleep at once after returning to the house. Was wearing European clothes when I returned from the lighthouse. Merely changed his clothes and went to bed. But nothing before that. It was about 5 minutes past 12 when he fell asleep. Got into bed about 5 minutes past 12; fell asleep at once that night. Thinks it would be about 15 minutes past 12 when he was awakened by the woman's cries. Knows nothing about a kerosine lamp smoking that night. It was afterwards when the China boy showed him how to use the lamps. Doesn't remember the date. Doesn't know anything about Smyth coming into his room that night. Didn't examine the door between his room and the woman's, but believes it was open on that night. When he went into the room it was open, it was not locked. Kondo told him that he left the other door shut (locked). When he entered the woman's room there was light from the window, which made the room light. There was a light from the window, but the moon was not shining on the floor. Being constantly with Smyth, and seeing him day and night, recognised him at a glance. Saw his face. He was going out; he was on the way out. Kondo looked a little vexed when he returned to the lighthouse from the house. He merely thanked him for taking his place; said nothing else. The doors of the woman's room were locked that night after the occurrence. Kondo told him so next day. Has never heard anything affecting the woman's reputation previous to her marriage.

Mr. Dickinson (referring to witness's deposition at the preliminary examination) asked him if he had heard that the woman had a child or children before marriage.

Mr. Ness objected to the question, quoting evidence and precedents.

His Honor, after some discussion, ultimately allowed Mr. Dickinson's question.

—He did not hear that. Denied saying that he had heard so (in his deposition). Never told the China boy anything of the sort. Does not know whether he had a child or not. Did not hear of it from anyone.

By a Juror:—The whistle which communicates between the lighthouse and the house is heard in the lighthouse when blown there to sound in the house.

Kondo Mitsunaki, duly obligated to speak the whole truth—Is a light-house keeper at Nabeshima, and husband of Nai-i. Recollects the night of 5th Nov. last. It was the day of his marriage with Nai-i. Went to bed about 8 o'clock that night. Arose at 12. The whistle had blown for the relief. Ikonoitsi and Smyth were on watch up to that time. When he went on watch left Nai-i alone. Thinks it would be about 10 minutes past 12 when he heard Ikonoitsi's voice outside, calling him. Asked him what was the matter. Ikonoitsi said, "Go back, a foreigner has been into your wife's room." Hastened back to the house, after requesting Ikonoitsi to take his place on watch. Before returning to the house, heard briefly from Ikonoitsi what had happened; how a foreigner had entered the house, kissed his wife, and embraced her. When he left the house her hair was nicely done up; when he returned it was all disordered, she had a morose face, and was crying. Asked her what was the matter; she replied that she was awakened by feeling a hand grasping her; saw a sudden light; was surprised, knowing that it could not be him, returned from his watch; looked, and found it was a foreigner, who said, "Okami-san, let me sleep with you; keep quiet and I will give you a present." He then put his hand in her breast. She called Ikonoitsi, and wrapped her head in the blankets. Smyth then put his hand under the blankets and over her mouth. She saw her mouth from his hand being out for Ikonoitsi. Smyth apparently heard Ikonoitsi coming, and went away. She spoke of Smyth as the "lighthouse foreigner." Smyth apparently heard Ikonoitsi getting up, as, when he went away he said that if she told this to Kondo her life would be in danger. After hearing the wife's story, witness went to Smyth's room and called "Smyth, Sam, Smyth, Sam," but Smyth did not get up. Consequently went back to the lighthouse and requested Ikonoitsi to blow the whistle, and then returned to the passage, between Smyth's room and his own, and listened. Heard the whistle shrilly sounded twice. After that heard the sound of the key of the whistle being taken away. (A whistle exhibited.) This differs a good deal from the one in question, but the principal is the same. Did not succeed in seeing Smyth on that night. Not being able to do anything,

and as it was getting late, returned to his own duty on watch. Met Smyth for the first time after the occurrence next day. Did not speak to Smyth about it during the time he was at his work: it was next morning, at the time of putting out the lights. Did not speak to him when he met him then. First spoke to him on the following day about 9; after the work was over. Met Smyth, when the work was finished, and asked him, "Why did you come into my room last night?" Smyth pretended not to understand him, and went away. As he went to get away, asked him a second time the question. Smyth said, "What, what?" Replied, "It is not a case of 'What, what; you cannot be ignorant of what occurred last night.'" Smyth said, "What is it? Tell me." Replied, "There is no occasion to tell you; you know." Smyth again said, "Tell me." Said to him, "Why did you come into my room, and put your hand on my wife?" Smyth made use of bad language saying "G—d— you, you son of a b—, who told you that?" Replied, "Ikonoitsi told me of it last night, and I went to the house and got my wife's assent." He said, "I know nothing about that," and went away upstairs into the lighthouse. He continued his work polishing chimneys. Said to Smyth, "There was no ignorance about it; why did you go into my wife's room—they all saw you. Prisoner replied that it was a lie, and said "I know nothing about it." There was mutual recrimination, and Smyth clenched his fist in his face, saying, "Take care." Replied, "Strike away, if you mean to strike." This was at edge of the steps. Prisoner made as if to throw witness, but he edged away from him. Made a report of the case to the office, in the execution of his duty. (A translation of the report was handed in to Court).

By Mr. Dickinson:—Was not looking at the watch, but judges it was about 10 minutes after he went on watch when Ikonoitsi came to him. There is a clock in the adjoining room to his, but it does not strike hours. It was always about 5 or 6 minutes before 12 that the whistle sounded, and they always made preparations to leave at 12. Went out on that night at 12 o'clock. No conversation ensued between the outgoing and the incoming watches. They were each prepared and passed each other. There was no rain falling, but it was slightly cloudy. There are two doors to witness's room. One of them is not much used, and is generally kept locked. The other is kept shut. There is no key in the door leading from witness's room to Ikonoitsi's. The door from his room to Ikonoitsi's is the one without a key. Passed to his own room through Ikonoitsi's, according to his usual custom. Generally leaves the outside door (shutter) of the window open, but the glass part is shut. Saw the clock when he returned to the lighthouse. It was half past 12. Observed the clock, inside the lighthouse, as he passed Ikonoitsi and thanked him for keeping his watch whilst he went to the house. It was 30 minutes past 12. When he entered his wife's room there was a candle burning. Only his wife was in the room. She was up. When he entered, she was sitting down and wiping the tears from her eyes. It was bright at the place where the glass was (the window). Had no conversation with Smyth on that night about a kerosine lamp; it was afterwards. Doesn't remember the exact date. It was some two or three days after this occasion. It didn't take place at night. Had no conversation with Smyth on the following day. It was while lighting the lamps that that conversation took place. Does not think it was on the day following that of the occurrence in question. Has no wife living in Yokohama besides Nai-i. That was the first time he had been married. There was a woman he intended to marry, but she went to Tsutsumi. The marriage is not yet entered on the register, as it is a very short time since it took place. Had no intercourse with Nai-i before marriage. Did not know anything about her prior to that; as he explained at his previous examination. Saw her when he entrusted the marriage to the middle-man. Saw her once or twice at the lighthouse, when she came out with other women. Did not speak to her then, as it would have brought trouble on her. Never observed her with other men about the place. Has never heard anything affecting her reputation. Made no enquiries as to her character. Never heard any rumours about her. At present hears talk of her having had a child, but, then, he heard nothing of the sort. Remembers having quarrelled with Ikonoitsi. Once he had a quarrel with him. On one occasion Smyth and Ikonoitsi and a boatman went out in the boat on a pleasure excursion to shoot pigeons; about 11 p.m. On the way back, the boat was capsized. They were saved, and got back. As they were standing in the cook-room drying their clothes Smyth came up and struck the sendo a blow on the nose, drawing blood, and was about to strike him again when witness interfered. This led to his enquiring how the boat was capsized. Addressed

himself to the sendo. Spoke to Ikonoitsi about it; saying it was from that that the boat was capsized, and, from that, words ensued with Ikonoitsi. Several of the company's properties were lost by the capsizing of the boat; nets &c. Did strike Ikonoitsi once. This was after the affair of the 5th November. Conducted himself towards Smyth in the usual way after that.

By Mr. Ness:—About half a year after the celebration is the usual limit for registering marriages. After the affair of the 5th Novr. treated Smyth with kindness. When Smyth lost his gun, even sent round to the village to have enquiries made.

By a Juror:—Smyth was the foreign head of the Nabeshima lighthouse. Witness was the Japanese head. Had been at Nabeshima about a year; since the 8th Japanese month of 1872.

Matsmoto Mitsutsa, cautioned as before:—Is one of the lighthouse-keepers at Nabeshima. Recollects the morning of 5th Novr. last. Was on watch after 12 on that night. Remembers a conversation between Kondo and Smyth on the morning of the 6th. Didn't pay particular attention to it, as it didn't concern him. Was not near when the conversation commenced between Smyth and Kondo, but, when he came up, heard Smyth say to Kondo, "You are a beast." They grappled and Smyth ultimately threw Kondo over. Came up and helped Kondo to rise, after Smyth had thrown him. Has an idea that the quarrel was about the woman.

By Mr. Dickinson:—Was sleeping up to 12 o'clock on the night of 5th Novr. Was on duty from 12 o'clock until 4 in the morning. Did not hear any noise at the house during the time he was on watch. At 55 minutes past 11 the relief whistle blows, and at 12 o'clock they change watch. Never said anything to Smyth about the woman having had a child; nor to the China boy. Never said anything about it. This closed the case for the prosecution.

Friday, February 20th 1874.

The case was resumed at 10 o'clock.

Mr. Dickinson said he would reserve his defence until after the evidence he had to produce was given. He maintained that there had been no marriage between the man Kondo and his so-called wife. He would call a China boy, the servant of Smyth, who saw him and heard him talking to Kondo about a kerosine lamp between 12 and 12.20. Between 12 and 1 o'clock it would be shown that the boy neither heard noise nor whistle; being awake all the time.

Chu Fu (Chinese), cautioned to speak the truth, said he was servant to the prisoner in Nov. Remembers the day Nai-i was married. About half-past 8 the kerosine lamp was smoking in Ikonoitsi's room. Turned it down. Went to sleep at 9.15. At 5 minutes before 12 the whistle blew. His master (Smyth) came to his room about 12.15, with a reading book. Turned out of bed at 12.20 and went into the dining room to get a piece of paper. While there, heard his master talking with Kondo about a lamp. Heard Kondo say to his master "I wouldn't have more light to-night." Saw his master eating in the dining room after that. Then went outside. Was absent about 10 minutes. On his return saw his master reading a book. Put the dirty plates away. Took a drink of water and a biscuit at 1.15 and went to bed. Could not sleep for an hour after that, but heard no noise. Remembers having told his master that the lamp was broken. He told witness to repair it. Next morning Kondo asked his master, "Why were you in my room last night?" He replied that he had not been there at all. That was at 9.15 next morning. Kondo told witness he had another wife in Yokohama, and kept that one (Nai-i) as a concubine. Never heard of the death of Kondo's wife. The light-keepers wore European clothes. There are three of them.

Mr. Ness (to witness):—Do you believe you will be punished, if you tell a falsehood?

His Honour strongly deprecated the pressing of such a question.

By Mr. Ness:—First conversed with prisoner on the subject of this charge about 9 o'clock next morning; at breakfast time. Kondo was married when he spoke about it. Kondo said he would bring a wife home that night, when some one else told witness that she was not his proper wife. Heard a sendo and a light-keeper talking together next night about this woman not being Kondo's proper wife. Does not know positively that Nai-i is Kondo's wife. Kondo told him he was going to marry. The morning after the marriage his master asked him if he had been in Kondo's room. Said he had not; whereupon Smyth replied that it must have been someone else. The conversation took place about a quarter to 9, when he asked Smyth what the row was about, between him and Kondo. Saw the row. It was immediately after the row that he spoke to his master. Kondo told him to "lick" his master. Said, "No, I got wages from

him, so I can't do that." Smyth asked witness if he saw anyone go into Kondo's wife's room. The question was asked in the lamp-room. Kondo and Matsmoto were not present; they had gone to their own rooms. His master never told him about his being accused of going into Nai-i's room. He came to witness's room at a quarter past 12. Knew the time, because when he got up it was 19 minutes past 12. Saw a clock face opposite. There is a watch in his room. The watch was left in his room on a table by the bedstead. His master awakened him to get him something to eat. That was all he wanted him for. Looked at the watch, being afraid it was late, and did not want to take another sleep. Looked at it to see what time it was, and to know what they wanted him for at that time of night. His master, when he awoke him, simply asked for something to eat. Keeps a watch to look at the time. Looks at it every time he wakes up. It may be 12.5, 12.10, or 12.15 when he gets up. On the night of the 5th Novr. his master awoke him at 12.15. Got up at 12.19. That was the morning of the 6th. Gets up every night about 12.15, when his master takes something to eat. Sometimes he gets up himself; sometimes his master awakens him. He wakes him up sometimes in the first watch; never in the second watch. Always looks at his watch when his master awakens him. Can tell within 10 minutes the exact time his master awoke him every night these last three months. Had no watch the first month he was there; was sometimes late. Asked his master for a watch. Since 5th Nov. has always looked at it. Cannot tell the exact minute when he got up during the week following the 5th, but can tell within 5 minutes. Remembers the time on that night, because the kerosine lamp was broken and caused a smoke in the room. His master said nothing to him next morning as to the hour he woke him. Turned out himself next morning. Told no one, before he came here, that he got up at 19 minutes past 12. That Japanese does not like his master because he gives him nothing to drink. His master brought him here. He wrote him a note to Kobe. Know nothing about this case. Thought he wanted him to wait on him. Neither Smyth nor any other person spoke to him about this case after he came to Yokohama. The letter he received at Kobe mentioned nothing about the case; it only said come to Yokohama. Came with Mr. Kirby. He did not say why witness was coming. Stopped at Mr. Kirby's when he reached Yokohama. Mr. Kirby asked him if he knew anything about the fight with the Japanese. Replied that he knew nothing at all. Saw no one else about this case. Mr. Kirby told him he was wanted, to be questioned in that Court; came of his own accord. Did not speak with his master's lawyer before. Could not say whether he ever saw Mr. Dickens before. His master did not bring a light into his room at a quarter past 12; he had only a book. Witness always has an oil lamp in his room at night; it was burning that night in his room. Always sleeps with a light. Has had a light during the last month. Keeps the light for the purpose of finding his clothes when he wakes up. His master always keeps a light in his room. There is always a light in all Japanese rooms. There was a candle burning in Kondo's room that night. Kondo came to him and asked for a candle that night; gave him a candle. His master gave it him, and he then passed it to Kondo. That was at about 4 o'clock in the afternoon. Cannot say whether that candle was burning in Kondo's room all night. He took the candle out of witness's hand. Ikonotsi had a Japanese candle burning in his room that night. It was burning all night. Does not know whether there was a light in Kondo's room. There was in Smyth's room all night. In Ikonotsi's about 20 minutes after the lamp broke perhaps there was none. Cannot tell if there was a light at 12 o'clock. There was a light there at 12.30. Saw the window. His master went to the dining-room about 12.20. He was not eating more than 10 minutes. Went out after that. His master was reading in the dining-room then. Knows nothing of what happened between 12 and 12.20. Awoke at 12.15. Does not know what occurred until the whistle blew at 5 minutes to 12. Hears the whistle every night. It woke him that night. Heard the whistle. His master came into his room about 15 minutes after the whistle blew, or say, about 12 or 13 minutes after. Went to bed at 9.15 that night. Was awakened by the whistle. Remained awake until his master came into his room. Heard no noise at all after hearing the whistle. His master is not in the habit of eating and reading every night. Was not surprised at his waking him and asking for something to eat that night.

By Jury:—(Watch produced) The watch is that worn by Smyth. Gave it back to him. It is now a quarter to 12 by it. Occupied the room marked B on the plan. Talked to Smyth in English. Never saw the letter that was sent to Kobe.

R. H. Brunton, sworn:—By Mr. Dickens. (Letter produced) I recognise this signature. This letter was not written by my directions. I was in England at the time it was written. Mr. Wauchope has authority to write letters of that kind. He was in charge during my absence. (2nd letter produced) Recognise this. (Mr. Dickens read first letter, to Mr. Smyth, and the other to Mr. Wauchope, signed Sato).

By Mr. Ness:—The Japanese employés are not bound to obey all mandates of the European light keepers, except on subjects that require a skilled knowledge.

The Court adjourned until ½ past one.

On resuming, Mr. Dickens called Mr. Kirby.

E. C. Kirby, sworn:—I know the prisoner and his servant. The boy came from Kobe with me. About two months ago Mr. Smyth called on me, and told me what had happened, and that the police were after him with a warrant. I asked him what witnesses he had to call. He said, only a boy, who had left his employ, and he did not know where he was. I said it was important that the boy should be found, as a witness. As I was going to Kobe I offered to find the boy; which I did with the assistance of my Chinese servant. I sent for him, and asked him to come to Yokohama and give his evidence. I got the consent of his master to his coming. After his arrival here, no conversation occurred on the subject of the case, more than perhaps a few casual observations. The boy has been staying at my house, waiting for the case to come on. I have known Mr. Smyth for the last 5 years. He was formerly in my employ. He always bore a good character while with me.

By Mr. Ness:—He came to me before he was apprehended. It was through me that Mr. Smyth's boy was found. No letter was sent to the boy that I am aware of. I told the boy this charge had been made against Mr. Smyth; I described the charge in general terms. I told him it was a charge of assault upon a light-keeper's wife. I did not tell him what evidence he would be expected to give. I asked him a few questions as to the plan of the lighthouse. The boy knew he had to appear in this Court as a witness. Smyth had no conversation with the boy in Yokohama, that I am aware of. I am not aware that Mr. Smyth met him in Yokohama. Mr. Smyth came to my house two or three times. He had no conversation with the boy in my presence. I was not with him all the time he was in my house. He never asked me to see the China boy. The latter, to my knowledge, never had a conversation with prisoner's Counsel. I have never been told so. I never told him it would be necessary for him to see Mr. Dickens. I brought the boy to this Court.

This closed the evidence for the defence.

Mr. Dickens then addressed the Jury on behalf of prisoner, and Mr. Ness, for the prosecution, replied. Mr. J. R. Davidson was about to make a statement to the Court, but was over-ruled by His Honour as not in order. On summing up the evidence, His Honour delivered the Charge to the Jury, who retired for deliberation. After an absence of 55 minutes they returned and delivered a verdict of *Not Guilty*, which was received with some applause by those present in Court. The prisoner was discharged.

### In the U. S. Consular Court.

Before GEO. N. MITCHELL Esq., *Vice-Consul*.

*Friday, February 27th, 1874.*

John H. Macgregor, Engineer, was charged with that he did, on the 26th February, assault, beat, and illtreat one Robert Ward, at No. 173, Yokohama.

Robert Ward, sworn:—I am an Engineer, formerly employed with Messrs. Whitfield and Dowson. I live at No. 173. I am the complainant and know prisoner. I have known him since I have been working for the above-named firm. Last evening, about 4 o'clock, I came home. Macgregor, Quig, and Ross were standing at the door when I went in. I went to go up the steps, when he, Macgregor, struck me on the chest, and knocked me into the pig-sty, saying he was as good a man as I. Got up again, when he knocked me down again; into the cook-house that time. I got up a second time. The man Quig was pulling Macgregor's coat off. Macgregor was the worse of drink. Don't think Quig was. I said, 'Hold on, I'll take my coat off, too,' and rushed past him into my room. Macgregor

came after me. I said, "I'll see you outside." Fastened the door on him. Macgregor and Quig tried to burst the door open; Macgregor with his fist, Quig with an iron bar (produced in Court). The iron is bent with the blows. Opened the door, and struck Quig, being afraid he would injure me with the iron. Knocked him down. Struck Macgregor and knocked him down, and ran out into the street. They both called out, and came after me in their shirt-sleeves. Quig caught me by the vest. Was afraid to go back to the house, so came right away to this Consulate and complained. Had a few words with accused in the Theatre one night, when he had a little drop of drink, and was making a noise. Told him, then, that I didn't go there to be disturbed. Had always been friends with him before.

To Prisoner:—Never struck you until after the door was burst in, and then only in self-defence. Did not strike you outside when I was on the steps.

Okinza (Japanese girl), cautioned to speak the truth, said that she lives in Homura, at her father's house, and knows both complainant and accused. When Ward came home last evening, about 4 o'clock, Macgregor, Quig, and another man were standing on the steps and commenced pulling off their coats. When Ward came to the door both Macgregor and Quig struck him, and he fell into the cook-house. Afterwards he got up, and several blows were exchanged by Macgregor, Quig, and Ward. It was a general fight. Ward then made for his own room, ran in, and closed the door. Quig and Macgregor then struck on the door; the former with the iron bar produced; Macgregor with his fists, to try and force it open. Prisoner, finding he couldn't do so, called his China woman to bring him a hammer to break it open. The woman brought a large hammer and Macgregor struck on the door with it, and broke the panels. Quig and Macgregor forced open the door with the bar and the hammer, and Macgregor struck at Ward several times. Ward then slipped out of his room, got away from his two assailants, and said would go to the Consul. Quig and Macgregor threw off their coats and followed Ward, in their shirt-sleeves, into the compound but found they couldn't catch him. They stood for some time looking after him, Quig making a great noise.

By Court:—Saw Ward fall once, into the pig-sty. Afterwards he fell again. Does not know who knocked him into the pig-sty. Saw him knocked into the cook-house. The first blow was struck by Macgregor, who was intoxicated and noisy. Was standing at the side of the door, outside, at the foot of the step when Ward came home. Did not see Ward strike Macgregor outside. Went into the room with Ward when he ran in and locked the door. Heard Macgregor call for the hammer whilst inside, and saw the hammer come through the door. When the door was opened, the hammer was in the hands of Macgregor's China woman.

Okinza (Japanese woman), cautioned to speak the truth, said she was no relative of last witness. Is cook for Messrs. Hall at No. 1 or 32. Knows complainant and prisoner. Saw them both yesterday. Was standing within the cook-house, inside Macgregor and Ward's compound. Saw Mr. Ward fall into the cook-house. Didn't see the blow struck. Ward got up and went out of the cook-house, and witness followed him. Several blows were struck, on the steps of the house, by Ward, Macgregor, and another man. The steps were about 2 yds from the cook-house. Did not see who struck the first blow; the blows were struck before he got out. Ward ran into his room. The other man (one-eyed) and Macgregor were trying to prise open the door; the former with an in

bar and the latter with his fists. When they got the door burst open, was afraid she would get struck, and ran away. Saw a hammer in the hands of the China woman who belonged to Macgregor. She was beating on the door with it. Is not certain who the China girl lives with. Macgregor lives upstairs, and so does the girl; also Quig. Ward lives downstairs.

Ah Yow, (Chinese boy), cautioned, said he was servant to Macgregor. Has been working for him about 2 weeks, as boy. Doesn't know Ward; has seen him before. He stops downstairs, in the same house. Saw the trouble between Ward and Macgregor yesterday. Was inside the doorway of the house. The door was open. Whilst upstairs, heard a noise. Came down and saw somebody fighting. Saw Ward strike Macgregor. Ward then went into his own room, but afterwards came out, and prisoner tried to make friends with him. Ward refused, and Macgregor then went upstairs. There was no noise after that. Prisoner went and knocked at the door, and asked Ward to open it, but he wouldn't, so Macgregor went away. Didn't see the iron bar used. Prisoner went upstairs when he found that Ward wouldn't open the door. No one was with prisoner at the door of Ward's room. No foreigners were outside. Macgregor, when he went upstairs, turned in. He had been drinking a little. Ward had been drinking too. Prisoner's coat was off, when he was at the door. It was off when witness came downstairs on first hearing the noise. Did not see Ward when he came home. Did not see the first of the trouble.

To Complainant:—Knew you had been drinking; smelted your breath.

By Court:—Has not been talking to anybody about this case. Quig has said nothing to him about it. Saw Quig this morning before. Did not see him yesterday. Saw him last night with Macgregor. Quig was not present at the time of the trouble.

Kum Oung, (Chinese girl), cautioned, stated that she lives at No. 173 with accused. Has lived with him, off and on, for the last few years. Knows complainant. He lives in the same house downstairs. Was upstairs, and heard a noise. Came down, and saw her master lying down, and this man on top of him, pounding him. Didn't notice whether his coat was on or off. Ward afterwards went to his room, and Macgregor knocked at his door and wanted to shake hands with him and make friends. When the two were lying on the ground, went and asked Ward not to fight any more, and he got up. Macgregor then got up. When her master asked Ward to make friends she went away upstairs, and saw no more. Her master came upstairs a short while after. Heard no noise after she went upstairs. Ward went out. They were, altogether, three foreigners present; complainant, accused and one now outside. Was present all the time. Saw the other foreigner doing nothing. Did not see anyone use the iron bar on Ward's door. Her master did not tell her to get a hammer. Got it of her own accord. Was afraid her master's hand would be jammed in the door, and accordingly pounded on it to save his arm from being hurt. The hammer went through the door. Did not see the China boy there. Saw Ward's kosgai.

By Complainant:—Did not see the iron bar produced in the hands of Quig.

By Court:—Macgregor had been drinking; Ward had not. Quig had; he was pretty full. He was her master. He went upstairs and turned in afterwards. He made no noise.

Daniel H. Quig, sworn:—I am a clerk by profession; now out of employ. I live with Macgregor at 173. I have known him for nearly four years, and Ward nearly 3 months; since the middle of December. I was with Macgregor

during the forenoon of yesterday; up to about one o'clock. I saw him about four in the afternoon, when he reached home; a little before or after four. He was slightly under the influence of liquor. I was standing on the doorstep when he arrived. I had been standing there for half, or three quarters of an hour prior to that, conversing with a man of the name of Ross. Macgregor spoke to me when he arrived. Ward was in his own room; saw him there before Macgregor got home. My back was turned as I was going up the steps, and I then heard a scuffle between Ward and Macgregor. The latter was in the passage. I heard him offer his hand to Ward, and apologise to him for insulting him the other other night; saying, "If I insulted you, I am sorry." That drew my attention. Ward said, "Get away," and I saw him push Macgregor, who fell. I saw Ward come out of his room. When he pushed Macgregor I said, "What's the use of fighting." They had clinched, and I went to separate them. Ward then took off his coat, saying, "If you are a man, pull off your coat." Ward struck me, and ran into his room. I took up a piece of iron and went to put it against the door way. I sang out, "Mr. Ward, for God's sake, open the door, and let him get his arm out." I took the iron and pushed it within the door to let him free his arm, which was jammed in the door. The China girl was pounding on the door with a piece of wood or a hammer, I don't know which. When Ward hit Macgregor he ran to his room and Macgregor followed him and got his arm in the door way. Got him away upstairs. Ross was present part of the time, but he went away. I was sober at the time; as sober as I am now. I did not see Macgregor strike Ward. When they clinched they were in the Hall. All that I saw of the occurrence happened in the Hall. Macgregor fell down; Ward did not. If he had, I should have seen it. When Ward pushed Macgregor he fell down at my feet, and his girl then came downstairs, Ward then went into his own room. Cannot say whether the China boy was there. Did not see Macgregor knock Ward against the pigsty, nor into the cook-house; I should have seen it, had it been so. Did not hear Macgregor remark to Ward that he was as good a man as he was. Did not pull Macgregor's coat off. Saw his woman; she came downstairs. When his arm was jammed in the doorway she tried to get it out. Ward was then in his room; Macgregor had gone after him. The China girl did not speak to Ward to my knowledge. When Ward was on top of Macgregor she did not go and speak to Ward, when she came downstairs. Did not, at any time, see Macgregor on the floor, and Ward on top of him. Had that occurred I should have seen it. I was struck by Ward in the Hall. Did not try to get into Ward's room. One of the panels of the door was splintered; I looked at it this morning. I saw Ward's Japanese girl and her kosgai; also Macgregor's kosgai. One of the Japanese witnesses was in Ward's room, and the other was in the cook-house. I saw prisoner's China boy, but not there. I believe he was upstairs, in my room. Macgregor was trying to open the door and Ward was pushing against it. I said, "Open the door, or you'll break the man's arm." It was previous to that when Macgregor asked Ward to come out and make friends with him.

Court here adjourned.

On resuming at 2 o'clock,

The Prisoner, being called upon state what he had to say in defence, being duly sworn, deposed:—On the day in question I was standing at the door with Quig and Ross, when Ward

came up. I said, as he approached, "Good afternoon," and asked him what he looked so sour about. He then began to talk about fighting, and words ensued, and we clinched. When I fell I was lying between the cook-house and the main building, in a sort of passage way. When the China girl spoke to Ward he got up and went towards the passage. I followed and we clinched again, and we both fell against the wall, and against his own door, which was open. He shoved me back in such a manner that the door was shut by him on my arm. I said, "Ward, stop that, or you will break my arm." The girl was there with something in her hand (I couldn't turn round to see what it was, my arm being jammed), with which she tried to prise open the door, that I might free my arm. Quig had something in his hand—I think it was the iron bar—with which he tried to release my arm. The door was opened and Ward came out after me and threw me down against it. I offered to shake hands with him. I had always been good friends with him. I haven't seen him since then. I was not drunk. I had had 3 glasses of spirits, but no dinner, so that it took more effect. I had been talking to him about 5 minutes when the trouble commenced. Did not tell Ward that I was as good a man as he. I did not strike him at all. He struck me, and we scuffled and both fell into the cook-house. Quig was not sober. He was more sober than I was. I did not ask the China woman to bring a hammer. I did not manage to get into Ward's room. The account of the affair I have just given is true to the best of my knowledge.

G. W. Elmer, U. S. Dep. Marshal, sworn:—I went up to No. 173 and examined the house. The door of Ward's room is damaged, and shews marks of a hammer having been used. It was also smashed, apparently by a fist, as I found threads sticking to the splinters, as from an article of clothing. There were marks on the door jamb as if a three-cornered bar had been used, like that produced in Court. Prisoner was not very sober when I arrested him last night. He had to lean on my arm to get here, as he was staggering about. I should say, judging from Quig's state of excitement, that he was not so sober as Macgregor. Quig told me he had seen the whole affair, from first to last. Prisoner came very quietly to the lock-up.

D. H. Quig, recalled. (By Court):—I asked the China boy this morning if he had seen anything of the affair. He replied that he was upstairs at the time. I did not threaten him in any way.

This closed the evidence.

His Honour, addressing the prisoner, said that the evidence before the Court plainly went to shew that he was guilty of an assault on Mr. Ward. Reviewing the whole case at some length, His Honour shewed that the evidence of the complainant was corroborated by that of the Japanese witnesses he had called, whilst that of the accused, Macgregor, and his witnesses totally disagreed. The evidence of Quig, the China girl, and the boy, contradicted each other materially. Prisoner had frequently appeared before the Court, and had received warnings enough as to the consequences of his indulgence in liquor, and only quite recently, Messrs. Whitfield and Dowson had laid a complaint against him for interfering with their men. It seemed to be useless to afford him any further opportunities of reforming, and Court intimated that deportation appeared to be the only alternative. The finding of the Court was that he was guilty of the charge. Sentence would be deferred for the present.

Prisoner was then charged with having, on the 26th February, beaten and ill-treated one John Morrison; to which he pleaded guilty,

saying that he would throw himself upon the mercy of the Court. He knew nothing whatever of the case. Did not even know that it had happened until the Marshal told him that morning.

John Morrison, sworn:—I am the complainant in this case. Yesterday afternoon, about 4 o'clock, I stepped into the "Brooklyn Tap" to speak to Mr. Scott. As soon as I entered, this man, who was sitting on a bench near the stove, jumped up, and struck me on the shoulder. I asked him what it was for, when he came at me a second time, and struck me on the head. We then clinched, and a struggle ensued. I finally got up, telling him to keep away, as he was drunk and did not know what he was about. He then came at me again, and Mr. Scott and some others present tried to keep him quiet. Whilst they were doing so, he tackled me again, but the gentlemen kept him off. I told him I would forgive him for what he had done.

By Court:—I never spoke to him in my life before. Have seen him several times. Never had any trouble with him. I got some bruises in the scuffle, when he threw me against a table, with my body bent right back. I have not consulted a doctor with respect to the injuries. For several years I have been suffering from rupture, and I have every reason to believe that, from the rough treatment I received at the hands of prisoner, it has been brought on again.

In defence, prisoner said that he didn't know anything about the case. He was skylarking with Scott in the "Brooklyn." Does not know the gentleman complaining. He begged the clemency of the Court, asking for one more chance.

His Honour pointed out to prisoner the very serious consequences of the assault which had been committed on the young man, whom he had caused to be ruptured, probably injuring him permanently, and spoke of the great trouble which he had given, not only in Japan, but in Shanghai and other parts of China. He had appeared twice before that Court, had been in gaol, and had been fined \$200 and \$100. He should not imprison him this time. For the assault on Ward he should fine him \$50 and costs; in default 2 days imprisonment for each and every dollar. The case of Morrison was a much more serious one; the assault probably resulting in his injury for life. For that, prisoner would be fined \$100 and costs, with a similar alternative to that of the other fine. He deserved to be sent to goal, and the next time he appeared before the Court, he would certainly be deported.

McDonald Elliott was charged with malicious mischief, in the wanton and reckless destruction of property, in the Grand Hotel, Yokohama.

The charge, as read over to accused, was as follows: That he, the said Elliott, did, on Wednesday evening, the 25th inst. between the hours of 5.50 and 6.30, wilfully wrench off 3 gas brackets from gas pipes in three latrines of the Grand Hotel, thereby causing danger to the limbs or life of any person who might have entered the said latrines with a light, and did furthermore attempt to pull down the gasaliers in an unoccupied bedroom adjoining, smash a small mirror in same room, and place articles of crockery about the floor, both in that room, and in the one opposite. The said Elliott did formerly, when an inmate of the Hotel, at various times destroy notices posted in one of the rooms."

The information was laid by the Manager of the Grand Hotel.

Prisoner pleaded *Not Guilty*.

In reply to Court, accused said that he was

not ready with his defence, and his witnesses were not present.

Court said, as it would be necessary to *sub-pena* witnesses from the English and French Consulates, the case would be adjourned to Monday, March 2nd. Prisoner, in the meantime, to be committed to goal, in default of procuring bail in the sum of two hundred dollars, on the security of two American citizens.

Monday, March 2nd, 1874.

McDonald Elliott was this morning brought up, on remand from Friday last, charged with wilful and malicious destruction of property at the Grand Hotel, No. 20, on the 25th ulto.

In reply to Court, accused said he was not provided with Counsel.

General Williams applied, as a friend of accused, to be allowed to watch the case on his behalf. His Honour intimated that there was no objection.

J. Lyons, sworn:—I am Manager of the Grand Hotel, and complainant in this case. On Wednesday evening, 25th ulto., one of the stewards of the hotel came to me, and informed me that several gas pipes in the latrines had been torn down from the brackets. I went to see them, and found they had been wrenched off with violence. I told the steward to see if there were any drunken people about the house. I went and looked in the Coffee room and then in the billiard room. I found the defendant, Elliott, sitting in the billiard room, and there were two friends of Mr. Add's talking to the latter gentleman. As soon as Elliott saw me, he got up and left the room. This aroused my suspicions, and I enquired of the manager of the billiard room (Mr. Add's) how long he had been there. He told me about an hour. I returned to my office and told my clerk to tax defendant with the act in question. In the evening I received a note from Mr. Gabriel, who lives in the hotel, saying that Mr. Elliott had told him what he had been accused of. I asked Elliott to come to my office, and then charged him with having done it. He wouldn't confess; he said he had not done it, and also declared solemnly that he had not been to the latrines or the wash-room that evening. I called in Mr. Davidson, the clerk, and before him, he denied having been there, and offered to pay for any damage that had been done. I couldn't consent to that. It was not the damage that we looked at; I wanted to find out the culprit. I didn't want an innocent man to pay, and unless he would confess I couldn't consent to accept his offer. I accordingly came to the Consulate and laid the charge. Mr. Ness came to see me about the case, and asked me the amount of damage. On the evening of the 26th I received another letter from Gabriel, asking me to go to his room, as he wanted to see me. I replied saying that he might talk to me in my own office. He came to the office with Elliott, who said he had come to apologise for having torn down notices in the reading room while he had been there; but he still denied having destroyed the gas-pipes. Gabriel asked me what I would do in the matter. Elliott wouldn't confess, and said that the steward (Mr. Cayeux) had been bribed to swear against him. I told him not to say such a thing as that. He repeated it, and I ordered him out of the office.

By Genl. Williams:—I did not say to Elliott that if he would pay the damage and apologise I would not prosecute him. He might have imagined that I said so by implication. The gas had been turned on about 10 minutes past 6. Elliott offered to pay the damage. On the first occasion of my taxing him with the act

he distinctly offered to do so. He admitted having torn down notices on two occasions. They had been torn down on several successive days, as fast as they were put up. I have heard that another American gentleman in the hotel had torn down notices. That gentleman has left Yokohama. One of the notices referred to was about loud talking in the reading room. He confessed in presence of Gabriel to having torn down two notices. No servants were discharged from the hotel on the day previous. A billiard boy was paid off the morning following the tearing down of the gas brackets. Elliott was the only man in the hotel likely to have done it. I have proof that he was in the latrines on that evening, although he denies it. Elliott left the hotel about 2 weeks ago, in consequence of the notices spoken of. I always found him to be quiet and steady. I scarcely ever spoke to him. There was no animus on my part towards him. On three occasions he asked me to do him little favours. Otherwise I don't think I ever spoke to him. I had no animus against him, but he had against me, I believe; because he left the billiard room immediately I entered the room, and because I told him that I didn't want him in the hotel. I had to speak to him about continually ringing the bells, and I wrote him a letter, and he left in consequence. I wrote him about pulling down the notices and he left. Of my own knowledge I do not know that he pulled down the gas piping. He was the only man in the hotel likely to have done it.

Alfred Cayeux, Steward, Grand Hotel, sworn:—On the 25th February I was steward at the Grand Hotel. As I was going to my room I saw Mr. Elliott (through a window, going along the passage. I went across the yard, and met the other steward, Taylor, on the way. I asked him if he had lit the gas; he said, "No," and I therefore went and turned it on. I went through the dark passages and lighted the gas. Having done so, I went to the latrine to light it there. I found a towel which had been left on the seat. There was a great smell of gas. I got a piece of paper and stopped up the hole where the gas was escaping from the brackets which had been pulled down from the side of the wall. I called a bar-boy, and, having gone to the wine room, I got a boy to bring a candle, went back, and found the gas pulled down. Went and told Mr. Lyons the circumstances.

By Mr. Lyons:—I saw Elliott go towards the closets; I could swear it was he. It was about 10 minutes past 6 when I went to turn on the gas, and about 20 minutes past when I found the gas pulled down. I found a towel in the closet.

By Court:—The passage leads to the bath-rooms and closets. There is a side passage leading off the main passage. Elliott could have gone out of the building by that passage, instead of going to the closets.

By Genl. Williams:—I never expressed an opinion that Elliott was not the man who did it; or that it was some one whom I couldn't mention.

C. Add's, sworn:—I am manager of the billiard room at No. 20. On the evening of the 25th, Mr. Elliott was in the billiard room for about an hour. During that time, he went out of the billiard room about dusk. He returned in about 10 minutes and sat down at the fire. I had no other conversation with him. Mr. Lyons came to me, about a quarter of 20 minutes to seven, and asked me if I had seen any stranger about. I replied, "no more than what you see at the present time in the room." When Mr. Elliott left the room I did not see where he went to; I cannot say.

By Court:—He went out by the door nearest the bar; he returned by the same door.

By Mr. Lyons:—It was about dusk when he went out; just as we were going to light the lamps. He was gone about 10 minutes; it might be a little more or a little less. I noticed that Mr. Elliott got up and left the room, almost immediately after you came in.

By Genl. Williams:—Mr. Elliott, to my knowledge, always conducted himself with propriety in every way. As far as I know, he has always borne a good character.

Joseph Davidson, sworn:—I am clerk at the Grand Hotel. I was standing in the main lobby of the hotel, on Wednesday, the 26th, soon after 6 o'clock, when the steward came and told me that the gas brackets in the latrines had been torn down, and that he suspected Elliott. I went to look and found it was as had been described to me. After dinner I intended to go to the "International" to speak to Elliott, who was stopping there. Before doing so, I thought I would go to Gabriel's room, to see if he was there. I went and found Elliott there. I called him out and taxed him with having pulled down the gas brackets; he denied having done so. He said he had not done any such thing. That on one or two occasions he had pulled down the notices. That he had only gone to the lavatory to wash his hands. He expressed animus against Mr. Lyons on account of his putting up such notices; saying that if it had been done in America, he would have been shot; which was a very extraordinary thing. (Laughter) Later on, I saw him in Mr. Lyons' office, and he told me that he had been to the lavatory to wash his hands. He also suggested that the steward had been bribed by Mr. Lyons to say that he had seen him where he was.

By Mr. Lyons:—On the evening in question, when I taxed him with it, he said, "Supposing I had done it, what could they do? they could only fine me \$5." On a previous occasion he had expressed animus on account of the notices, saying that if the d— or b— manager had put up such notices in America he would be shot. (To Court) Can't say whether b meant it. (To Lyons) So far as I can judge the reason of his expressing himself so was that you had written him a letter complaining about his ringing the bells, and about the notices in the reading room. He admitted having gone to the wash room.

By Genl. Williams:—I have known Mr. Elliott since he has been in the country. I knew him in Yedo. He has always borne a good character.

E. Gabriel, sworn:—I reside at the Grand Hotel. On the evening of the 26th February, Mr. Elliott came to me, and told me that Mr. Davidson, the clerk of the hotel, had informed him that the manager accused him of pulling down some lamps from the gas brackets, and furthermore stated that he would be prosecuted next day. He told me that, as he was innocent of the act, he wanted to go and see Mr. Lyons. I wrote a chit to Mr. Lyons, asking him to come to my room, as I wanted to see him on business. He came, and I told him that Mr. Elliott had told me. He said if Mr. Elliott would go with him to his office, he would settle the matter with him. Shortly after, Mr. Elliott came back, and said that Mr. Lyons wanted him to pay for the damage he had done, and paid guilty of the act, and he would take no proceedings against him. I asked him what he intended doing? He replied that, as he was not one who was guilty of the act, he wouldn't do anything of the kind, and he would let Mr. Lyons take his own steps. I saw Mr. Lyons next day, and he told me that he would take the case to Court. I asked him not to do so, saying it would be far better to settle the matter

quietly. He said that if Elliott would plead guilty and apologise he would do so. I told Mr. Elliott that, and said that he had better reflect, and that if he was guilty, he had better apologise. He denied it again, and said he would let Mr. Lyons do what he liked.

To Mr. Lyons:—I am a friend of Mr. Elliott's. It might have been on the 25th that he first came to me to speak of the affair. It was on the evening that the gas brackets were pulled down. You told me you would drop the matter if Elliott would apologise, and pay for the damage. You said, in my room, on that same evening, the 25th, that if he would do so you would not go to Court. You asked Elliott to go to your room to talk over the matter. You said that if he would admit it and write an apology, you would not take proceedings against him. Mr. Elliott did not admit to me having been in the lavatory on that evening.

By Genl. Williams:—I have always found Elliott a very quiet, inoffensive young man.

George Pauncefort, sworn:—I reside at the Grand Hotel. I remember a discussion of the question over the tiffin table. I had previously asked Mr. Elliott, if he were really guilty of the offence with which he was charged, to apologise and offer to pay the damage. He said that he was not guilty, and I then recommended him to allow the case to come into Court, and demand the suffrages of the public.

To Lyons:—You spoke to me on the subject. You said that if Mr. Elliott would pay the damage, and sign his name to a declaration of his guilt, to be published in the papers, you would forego the charge. A gentleman sitting by, said that would be too hard. You then said that it might be stuck up on the notice board. On those conditions you would withdraw the charge. I cannot tell whether you harboured any malice against the young man; that is a difficult question to judge. I really can't say whether you were anxious to ruin the young man.

By Genl. Williams:—I have always found Mr. Elliott to be a most exemplary young man.

This closed the evidence for the prosecution.

Genl. Williams said that the testimony of the witness for the prosecution had been heard, and it must be evident to the Court that no evidence had been adduced to support the charge. There were fifteen or twenty gentlemen present, of high standing, who had attended for the purpose of speaking as to the character of Mr. Elliott. The charge was really so impotent that he did not think it necessary to bring forward any evidence in defence. He would leave it in His Honour's hands.

Court, without preface, said the case was dismissed, and prisoner discharged. The decision was greeted with applause, which was suppressed by Court.

### THE AMERICAN CHURCH.

Yokohama, Feb. 27th, 1874.

Revs. S. R. BROWN, D.D., and J. H. BALLAGH,  
of the Reformed Mission to Japan.

DEAR SIRS,—In soliciting subscriptions for the purpose of building a church for the congregation, now worshipping in the Gaiety Theatre, we have met with the report that, a gentleman, well known in this community, has stated that he had seen Mr. Harris, former U. S. Minister to Japan, and that the latter stated that the donation of \$1,000 made to you was for the purpose of building a church for foreigners at this place.

Would you be kind enough to let us know the facts in the case, and place them at our disposal.

Most respectfully,

N. J. STONE,  
W. Sr. G. ELLIOT, M.D.,  
JOHN Y. HENDERSON,  
Jno. C. BALLAGH,  
*Committee of Subscriptions.*

Yokohama, 28th February, 1874.

To Messrs. N. J. STONE,  
and others, members of the  
Committee for Subscriptions.

GENTLEMEN,

In reply to your written inquiry of the 27th instant, concerning the object of the Hon. Townsend Harris' donation of \$1,000, in 1861 for church building purposes, we have the honor to furnish you with a copy of his letter accompanying the donation.

S. R. BROWN,  
JAS. H. BALLAGH.

[Copy.]

United States Legation in Japan,  
Kanagawa, Dec. 24th 1861.

REVEREND AND DEAR SIR,

I enclose an order on Mr. Edward Clarke for one thousand dollars, which I pray you to receive as my private contribution to the fund for building a church in this part of Japan, in connexion with the Mission to which you are attached.

I remain,

With unaffected regard,

Yours very sincerely,

(Signed) TOWNSEND HARRIS.

The Reverend S. R. BROWN,  
American Missionary, Kanagawa.

### YOUNG MEN'S LITERARY SOCIETY OF YOKOHAMA.

A MEETING of gentlemen interested in the formation of a Literary Society for Young Men was held at Christ Church School Room, on Wednesday afternoon. W. W. Cargill, Esq., presided. There was a good attendance, and amongst those present were, the Revs. E. W. Syke and — Shaw (of Yedo), Capt. Bridgford, R. M. A., Messrs. R. Vickers Boyle, R. H. Brunton, F. V. Dickens, W. G. Howell, G. P. Ness, and H. S. Wilkinson.

Mr. Cargill opened the meeting by stating the object of the proposed Society, pointing out the advantages and importance of some such Association for the young men of the community.

The following resolution was then proposed by the Rev. E. W. Syke, seconded by Mr. G. P. Ness, and carried.

"That the persons present at this Meeting organize themselves into a Society to be called the Young Men's Literary Society of Yokohama."

Mr. G. H. Pole then read a form of Constitution which had been prepared by the promoters of the Society, and, after some discussion and the alteration of a few points, it was finally passed.

The following gentlemen were elected office bearers of the Society:—President, Mr. G. P. Ness; Secretary, Mr. G. H. Pole; Treasurer, Mr. J. Y. Henderson. Messrs. H. B. Henley, and A. H. Dare were elected to work with these gentlemen as the Committee of Management.

A vote of thanks to Mr. Cargill for his kindly presiding closed the proceedings.

# Yokohama Market Report and Prices Current.

## STAPLE IMPORTS.

Our last was dated 23rd ulto., when we reported the market as almost stagnant and likely to undergo no improvement, the troubles in the South tending to confine business within the narrowest limits. Since then, advices to hand from the seat of the rebellion are more assuring, and, although it would be perhaps premature to announce the entire suppression of the insurrection, the news which continues to arrive is of a character likely to restore confidence in mercantile circles, and, as a consequence, a better tone is observable in both Import and Export markets.

SHIRTINGS are nominally at undernoted rates, stocks continuing to increase. In COTTON YARNS, a slightly improved tone is perceptible, and a fair business has been done in Nos. 16 to 24 at a slight advance on last quotations. VELVETS have been in some request. WOOLLENS remain at about last figures, perhaps a shade higher, with more demand; but little has been done. There is a better enquiry for MOUSSELLINES, and considerable business has been done, but at low figures. In IRON, there is absolutely nothing stirring, whilst stocks continue to increase and prices keep going down. SUGARS remain quiet at about former rates. One cargo of Formosa, ex *Courier*, has, however, been quitted at an improved rate, \$4 having been paid; our last quotations, for the line, being \$3.77½ per picul. RAW COTTON is again down, and exceedingly difficult of sale even at low rates quoted.

Articles.	Price.	Remarks.
Cotton Piece Goods.		
G. E. Grey Shirtings:—		
7 lbs 38½ yds. 39 in. ... .. per piece.	\$2.15 to 2.20	} Stocks increasing.

do. do. (Canton) ... .. nominal		
do. (Swatow) ... .. "	3.50 to 3.65	

# Yokohama Market Report and Prices Current.

## STAPLE EXPORTS.

**SILK.**—There is little change to be noted in the condition of our silk market. Good quality HANKS are still difficult to be had, and, as arrivals from the interior have been sparse, stocks continue to get lower; quotations are without change. OSHIUS are in more demand, and, as sellers are content with lower prices, business has been done to some extent; we quote prices \$20 to \$30 less than our last. Settlements since last report: Hanks 200 Bales, Oshiu 200 Bales. Stock 1,800 Bales. Latest European telegrams report a still falling market.

**TEA.**—Our Tea market since our issue of 23rd ulto., has remained comparatively quiet, settlements for the period to date amounting to only some Pcls. 1800. The demand has continued on grades much as last advised, viz: Medium and Good Medium classes: Prices for those rule \$32 @ 35 for the former, and \$36 @ 39 for the latter. Other kinds are in poor supply and receiving little if any attention. Arrivals from the country come in very slowly, but we expect a total export from Yokohama of 12 million pounds may be confidently relied on. It would be premature to hazard any ideas as to coming crop. The weather has continued temperate, yet not too warm to cause premature growth of the new leaf. The critical period is during the early part of April, when, if the crop be too forward, it is very liable to damage from frost and cutting winds.

Mr. and Mrs. Jackson, Dr. de Jong, Schut, Behncke, S. C. Kirby, and James R. Gornley.

Per Am. str. *Golden Age*, for Shanghai.

Mr. and Mrs. K. Ihda, E. C. Kirby, Mrs. C. T. Coy, Mrs. Evans, T. Lenz, C. Roberts, P. B. Hope, A. E. Olarowsky, H. A. Stevens, Groenwout, A. R. Hewlett, Mr. and Mrs. Florent, Mrs. Jamieson, G. H. Howell, R. M. Bevil, C. Brown, Mrs. Gerstmayer, 27 Japanese, 185 in the steerage.

Per Brit. barq. *Eastern Chief*, for London.—T. Wych.

Per Am. str. *China*, from San Francisco.

FOR YOKOHAMA.

Mrs. C. R. Harris and 2 children, A. T. Saisho, Commander E. C. Matthews, U.S.N., N. Wakayama and wife, J. B. Brown, Doi, S. Noki and servant, B. M. Gunn, G. Hamilton, C. Rickerby, and Mrs. J. R. Anglin and family.

FOR SHANGHAI.

Rev. Mr. Brown, James Jump, V. Chartron, E. Binssonet, and L. Sylvester.

FOR HONGKONG.

Miss Fanny Gray, Miss L. Markham, C. Eterling, and A. Neilson.

Per Am. str. *China*, for Hongkong.

Messrs. Nelson, Eberling, A. Center, R. S. Corning, F. Hall, E. Gammon, Mrs. Markham, Mrs. F. Gray, Dr. King, Mrs. Dr. Simons.

Per Brit. str. *Glenartney*, from Shanghai.

Rev. Mr. Davidson, Dr. and Mrs. Faulda.

Per Am. str. *New York*, from Shanghai.

Mr. and Mrs. G. P. Clapp, Dr. and Mrs. Carmichael, Messrs. M. Doblhof, bass, Arbuthnot, Wroughton, J. H. Mossup, D. Cooper, J. G. Mitchell, Dr. Fischer, U. S. Vice-Consul, Dr. Simmonds, M. Yashi and wife, T. Lepper, and D. Hodnett.

FOR SAN FRANCISCO.

Mrs. J. Hamblin and child, Mrs. W. J. Blydenberg, Miss Jessie Blydenberg, Miss C. B. Ellis, W. M. Schaeffer, and 4 in the steerage.

Per French str. *Volga*, from Hongkong.

Messrs. David Nakasima, Hashimoto, Hasiebiar, Emoura, Kamouiri, Tanaka, Shiodo, Ishida, Ishikawa, Narashima, Tamaka, Sisonki, Matsowa, Wakai, Mrs. T. Saito, and 100 in the steerage.

Per Brit. steamer *Acantha*, for Shanghai :

Mr. and Mrs. R. V. Boyle, Messrs. E. S. Cartman, Geo. Elliot, S. O. Lata, E. H. M. Gower, A. Oestman, and one Japanese. 100 in steerage.

Per P. M. Co.'s *Alaska*, from Hongkong.

FOR YOKOHAMA.

Hon. C. C. Smith, wife, 3 children and 2 servants, J. B. Coughtrie, wife, child and servant; and Mr. B. F. Wood, U.S.N., in the cabin. James Shaw, Ah Chot, Ah Che, and Ah Hye, in the steerage.

FOR SAN FRANCISCO.

Messrs. Geo. A. Wadley and S. W. Jones, in the cabin. Messrs. Bernard Kelly, John Smell, and 623 Chinese in the steerage.

## REPORTS.

The P. M. S. S. *Oregonian* left Shanghai February 3rd, at 12 noon. Experienced fine weather throughout passage.

The P. and O. Steamer *Madras*, from Hongkong, experienced strong head winds, and heavy sea throughout the passage.

The P. M. Co.'s Str. *Great Republic*, 3,881 tons, H. L. Howard, commander, left Hongkong Feb. 12th, at 3.15 P.M., to Feb. 18th had strong gales from N.E. and heavy sea; Feb. 19th at 10.15 A.M. off Cape Toyi passed French Mail bound South, same day at 8.20 P.M. off Isa Point, Lieut. F. Ela, U.S.M.C., committed suicide by jumping overboard. From Van Dieman Straits, had strong East gales and rain. Arrived at Yokohama Feb. 22nd, at 5.25 A.M.

The Am. str. *Costa Rica* reports strong northerly winds since leaving Hiogo.

The Brit. S. S. *Acantha* reports strong N. E. winds, throughout passage.

The German brig. *Otto* reports changeable winds and weather throughout, with alternate calms and strong gales.

The Brit. str. *Behar* reports, left Hongkong at 8.30 a.m., February 19th, and for the first four days experienced fresh gales from N. to N. E. with heavy sea. Wind veered to the N. W. during the last three days. Arrived at Yokohama, February 26th at 6.30 a.m.

The German barq. *Dolphin* reports very stormy weather with heavy rains since passing the Loochoos; winds veering from East to West.

The Am. str. *China* reports left San Francisco, February 2nd at noon.

The Brit. str. *Glenartney* reports strong northerly winds after leaving the Yangtze, with fine weather along this coast.

Ten Copies,...\$2.00

### THE "Japan Gazette" MAIL SUMMARY.

FROM 9TH TO 26TH MARCH, 1874.

OUR last Mail Summary was dispatched on the 9th inst. by the P. M. steamer *Alaska*. Since then the following mails have arrived.

	DUE.	ARRIVED.
The U. S. Mail	March 13	March 10
The Eng. Mail	" 15	" 15

The latest public telegrams are to the 12th March. Letter dates are to 23rd of January.

### Summary.

THE storm which prevailed in the political world of Japan up to the close of February has given place to a most monotonous calm during this month. There has been nothing of importance to indicate that any kind of trouble had been afoot. The Imperial troops having been victorious over the insurgents in Kinsiu, the excitement in Tokio has been quite allayed, and there seems every probability of the Government being able at least to preserve peace in the country.

All, however, is not as bright as it looks on the surface. The Saga insurgents have been beaten by the Imperial troops sent against them, but they resolutely meet whatever punishment the conquerors allot to them, and refuse to give up the cause for which they took up arms.

Various reports arrive from other parts, where the opinions of the Saga men are predominant; although it has been found possible to restrain the samourai from actual outbreak. Indeed, such has been the feeling in those clans, that at one time it was declared that they had actually risen. This, however, by great firmness on the part of those in whom they most confided, has, though with difficulty, been prevented.

There exist many circumstances which tend to prove that all is not so smooth as it looks. Last week it was stated that Shimadzu Saburo and Saigo Kitchinoske had re-

turned to Tokei from Kagosima, Satsuma. And to this the rider was almost universally added, "this shews that the government has nothing to fear from the Satsuma samourai." Now, it is stated that they both left on Monday last, to return to Kagosima; whilst other generally well-informed persons say that they never came—that they were ordered to do so, but that they would not, because their retainers objected. It is impossible for foreigners to learn definitely the truth, if it be determined to keep anything quiet; but the very mystery attending this leads to the fear that pacification is not so assured as the optimists paint it.

In Tokei the quiet has been unbroken. On Wednesday, the 18th instant, the Mikado and the Empress visited Yokohama, to inspect the Lighthouse Department and witness the brilliancy of a new light which has been fixed up in the experimental tower at Benten. Full particulars of the visit will be found among the general news.

On Thursday evening, the 12th instant, a fire broke out in the foreign settlement of Yokohama, which was of greater extent and destroyed more property than any fire we have had since the great fire of November 1866. The Hongkong and Shanghai Bank was in much danger, but, although much scorched and damaged, was saved. The same night there were two other fires in the settlement. By the first mentioned, the offices of the *Japan Herald* were destroyed. The proprietor, however, had a new office, and his paper published on the following Monday; only claiming the indulgence of his subscribers for non-issue on Friday and Saturday.

The fire which occurred on the 12th instant induced the Agents of the Fire Insurance Companies to hold a meeting, at which steps were taken towards organising more united action between them than has hitherto been exhibited. A committee has been appointed to watch the interests of the various Fire offices; to call a meeting of the Agents when desired; and to cause an investigation to be made into all circumstances connected with every fire that takes place. Attention was directed to the subject of water supply but nothing satisfactory was arrived at. The real truth is that the community of Yokohama is

very lukewarm. It bubbles up occasionally like a Geyser and as speedily subsides; and the few earnest workers it contains are expected to do a great deal and are found fault with if it be left undone, whilst the public at large are very chary of finding the funds.

### LOSS OF THE M. M. STEAMER "NIL."

News of a most terrible calamity has just reached Yokohama. The M. M. Steamer *Nil*, commanded by Capt. Samat, was due at this port on Sunday last, from Hongkong, with the mails and a number of passengers. She had not turned up this morning, and although there was a natural anxiety as to the cause of her detention no thought of the terrible fate which has befallen her crossed the minds of those interested in her arrival. The information to hand is meagre, and the grim facts of the calamity are these:—On the night of the 20th or 21st the *Nil* was totally wrecked at Iri-ma-mura, in the Province of Idzu, and about 10 miles from the cape of that name, where there is a lighthouse. Out of a crew and passenger roll of 146 souls only 4 escaped death.

The weather is said to have been thick, which may perhaps account for the final catastrophe, although not for the position of the vessel so close to a dangerous coast; unless indeed she had experienced the severe gales which prevailed here about that time.

The *Bourayne* leaves to-morrow morning for the scene of the calamity.

The news arrived by special messenger to the Governor of Kanagawa, and, notwithstanding the facilities afforded by telegraphic communication, it took four or five days to travel the 170 miles.

The crew are set down at 60 persons. We fancy, therefore, and truly hope, that the balance to be accounted for out of the 147 on board, a total of over 80 passengers, must be considerably over-stated, as the boats of the company do not usually carry so many.

\*\* Since writing the above we learn that a large proportion of the passengers were seamen drafted to the *Bourayne*.

THE FOLLOWING are the passengers for Yokohama by the Co.'s steamer *Smith*:

Mme. Avril, Messrs. Bateman, Laurence, Liccioni, Muraux, Josida, Leisberg, and Pallier.

### VISIT OF THE MIKADO TO YOKOHAMA.

"QUEEN'S weather," as applied to the invariable good fortune which seems to attend the selection of days appointed for royal progresses in the "old country," has long since become a household word amongst English people, and it almost seems as though His Majesty the Mikado were favoured with like good fortune in his excursions to those portions of his dominions occupied by Westerns. On the occasion of his last visiting Yokohama, *en route* to Yokoska, the weather was everything that could be desired; and, on the present occasion, both yesterday and to-day have proved deliciously mild and beautiful, and His Majesty and those accompanying him, as well as the good folk who are honoured by his visit, are to be congratulated that the day selected should have turned out to be so fine: the more especially as of late the weather has been somewhat unsettled. With all the accessories, then, of brilliant weather, the "pomp and circumstance" of Imperial dignity, the love and awe of a conservative people, and the indulgent sympathies of European residents, it is not to be wondered at that the visit of the Tenno to Yokohama should be a great event; and there was, consequently, a large number of both Easterns and Westerns crowding the Railway Station and its approaches to welcome the arrival of the Imperial party.

A body of what Artemus Ward would call "mounted huss troopers" was drawn up within the compound of the Station, in readiness to receive His Majesty, who with the Empress and suite reached the terminus at 5 minutes to 4 o'clock, travelling in the Imperial carriage, which was attached to the ordinary 3 P.M. train from Shinbashi, two engines being employed.

The Imperial party immediately repaired to the reception rooms on the upper floor of the Station, made use of on their former visit, and fitted up with much elegance for their use. After resting awhile, the Emperor reappeared, and, mounting a gorgeously caparisoned horse which was in waiting, (the Imperial Body Guard, which accompanied him from Tokio, saluting), proceeded towards the Lighthouse Establishment, Benten; the object of his visit being the inspection of the various interesting sections of the Department. The Empress, attended by two *kiu-jo*, (Court ladies) entered the Imperial carriage and drove off, followed by another carriage containing four high officials, *Matenokoji Kunaitaiyu*, *Yamaoka Kunaishosho*, *Sugi Daijo*, and *Funabiki Shojii* (Doctor). Four more *kiu-jo* followed in a wagonette, the whole *cortège* being escorted by the mounted guards. On reaching the Lighthouse establishment, which was tastefully decorated with flags, banners, evergreens, &c. the Imperial party were received by Mr. Brunton, the Engineer-in-Chief; the Japanese head of the Department, *Satow Yozo*, *Todai-no-kami*, having accompanied His Majesty from Shinbashi, whither he proceeded to receive him.

The Imperial party were conducted to the schoolhouse, a spacious building adjacent to the offices, which had been tastefully fitted up for his Majesty's reception. Here the various Foreign Ministers were presented by *Tera-shima*. The lighthouse officials, headed by Mr. Brunton, also received that honour. Whilst their Majesties rested awhile, the gentlemen attached to the suite and the Ministers amused themselves by looking over numerous excellently executed maps, plans, drawings, and photographs of matters connected with the lighthouse service.

The business of inspection was then seriously entered upon. The first place visited was a building devoted to the rectification of the colza and kerosine oils used in the lighting of lamps employed. Passing the iron and oil stores, we reach the storehouse for apparatus, filled principally with weighty packages destined for the new lighthouse at *Inaboye Saki*; a tramway connecting the stores with the wharf below for the convenience of shipment.

Entering the Machine shops, where a pretty little 8 h. p. engine was busily at work, the operation of testing the bricks employed in building was shewn, a cube of that material being submitted to the tremendous pressure of an hydraulic press, capable of exerting a force of 80 tons. As a matter of course the material was crushed into fragments, but such force, we need hardly mention, is not always used. In the same building the engine drove a handy upright sawing machine, which operated with 4 blades on a 16 inch log. As many as 24 blades can be used on a 2 feet log. The engine is, however, hardly powerful enough, although 11 blades were at work this morning. In a shop adjacent, under the same roof and fed by the same motive power, the busy action of morticing, beading, planing, dovetailing, tenoning and other machines was shewn; a lathe being also at work, and an ingenious labour-saving machine, by Messrs. S. Worsom & Co., of London, known as a "Geneaal Joiner," exciting much interest. This department is under the direction of Mr. Pearce, who is to be commended for the perfect order in which everything under his control is to be found. The wood yard was next visited, where the extensive carpenter's shops are situate, the object of attraction being, however, a quantity of screw piles intended for the erection of a lighthouse at the *Shinagawa* anchorage, *Yedo*. Proceeding across the compound, a large storehouse, containing immense buoys, stores of cement, and other heavy goods, was next reached, the rest of the building being used as a depository for the varied and extensive assortment of material required by the department. The principal object of the visit, as has been already mentioned, was the inspection of a new cata-dioptric lighting apparatus, intended to be erected, in the course of a month or two, at *Inaboye-saki*. This created very much interest, it being something quite ahead of what has before been attempted in Japan. The burners are a new patent of Capt. Doty, the celebrated English inventor. The apparatus is fitted with the most recent improvements and is very powerful.

His Majesty ascended the tower of the experimental lighthouse—where apparatus is tried before being despatched to its destination—and viewed the practical working of it, expressing himself as much pleased with what he saw. The lower story contained samples of various orders of optical apparatus, all in operation, and is used for the instruction of Japanese lightkeepers, who are thoroughly grounded in their duties before being despatch-

ed to their responsible appointments. Again crossing the compound towards the extensive offices, the Imperial party paused to view an iron tower in course of construction for *Yebo-shi-Sima*, at present some 32 feet high, but which, when mounted with lantern and other appurtenances, will probably total 40 feet. Although this is a comparatively small erection it undoubtedly reflects very great credit on the department, every portion of the substantial structure (with the exception, of course, of the raw material, in the shape of plate, bar and bolt iron,) having been prepared in the adjacent blacksmith's and machine shops, where the various operations of plate and flange drilling, &c., are carried on. Into these His Majesty merely glanced, in passing.

Having entered the offices, the party passed into a room filled with theodolites, telescopes, and other optical apparatus which seemed to puzzle some of the Japanese *attachés* not a little. Onwards through a suite of rooms filled with plans and drawings of lighthouses, and apparently devoted to draughting, the party finally reached the retiring rooms, where a halt was made and some refreshment provided for His Majesty and his numerous suite.

The inspection, which must have afforded His Majesty very much gratification, virtually ended here; and the groups of ladies who occupied the balconies of the departmental residences adjacent mostly dispersed, the Ministers also at that time taking their leave.

About half an hour was occupied in the business of refreshment, and, at about 6 o'clock, the Emperor again mounted his horse, and, followed by the Empress and suite in carriages in the same order as before observed, proceeded to the *Okurasho*, where it was intended they should pass the night, followed by immense crowds of His Majesty's faithful subjects. The Imperial party being safely domiciled, the cavalry guard departed to the *Nogé* barracks, the *Go Shimpei* doing duty at the premises during the night, an adjacent building being used as a guard-room. Soon after reaching the *Okurasho*, the party came out on the balcony, or belvedere over the porch, to view the practical working of the new apparatus they had just inspected at *Benten*. It being by that time dark, the effect was much more decided, and His Majesty lingered some time to admire the effect. Finally, the party retired to *yu-gozen*; and, after dinner, paid *Takashima Kayemon* the honour of a visit, reaching his house shortly before 8 o'clock. Here everything was bright and brilliant, the front of the house being illuminated with lines of gas jets and devices, the Imperial Mon being conspicuous and the whole effect very beautiful. The vicinity was lighted up with the reflection for a great distance around. The gasworks were similarly lit up, and both buildings attracted immense crowds of native spectators of all classes. *Takashima* had provided for the delectation of His Majesty and the Empress a rare treat, in the shape of an entertainment by that subtle conjurer Professor *Vanek*, who had been invited to give an exhibition of his beautiful dissolving views before the Imperial party. Such a representation has never before been given to a Japanese ruler. It is needless to say that the Professor was perfectly at home with his august patrons—royalty, indeed, being no novelty with him, as, we find, that of last evening was his twenty first appearance before crowned heads; principally in Europe, but also largely in the East. At first the purpose was merely to exhibit the wonders of the *Cyclorama*, but, after the Professor had produced from his *repertoire* just twice the number of

views set down in the programme prepared, and which included a large number of pictures of the late Franco-German war, the Emperor expressed a desire to see some of the wonders of the magic art, of the Professor's dexterity in which he had heard. This was unexpected and the latter was unprepared, but nevertheless he managed to improvise something really good, and the party, their Majesties especially, seemed to be much delighted thereat. The whole concluded at about half past ten. So ended the first day's amusements.

This morning (19th,) at half past nine precisely, (and punctuality seems to be a virtue with His Majesty) the Imperial party left Okurasho for the gas-works at Noge, proceeding in the same order as before. The road was kept by the police and cleared of pedestrians.

On arriving at the gasworks, His Majesty on horseback, the imperial party was received by Takashima and the European officials, and conducted to the reception rooms, where they remained awhile. The inspection of the works which followed was necessarily a short one, the intention being to return to Tokio by the 11 o'clock train. Opportunity was taken, however, to visit some of the works, the operations of a portion being shewn. First, the party entered the retort room, where the charging and discharging of two furnaces was shewn, very much to the discomfort of the visitors, apparently, the smell being abominable. The climax was reached by the dumping of a barrowfull of hot coals, upon which was thrown a quantity of water, close to the party, the result being that they were nearly suffocated. The Empress and her suite were again to take refuge beneath their umbrellas. The coal-tar tanks were next inspected, then the gasometer and registering apparatus, more retorts and receivers, stores of various kinds, the general meter, and lastly the ingenious contrivance for measuring the "candle-power" of the gas. Here the party again retired to the reception rooms, where they partook of some refreshment, the attendants participating to the extent of a sip of o-cha. At half-past ten the route was resumed and a start was made for the railway station, where they arrived at 10.35, in time for the 11 A.M. ordinary train, to which the Imperial carriage was again attached; two engines, as on the down trip, being considered necessary for the journey. On reaching the station His Majesty and suite made use of the withdrawing rooms until the hour arrived for departure. A considerable number of spectators assembled to compensate themselves for the loss of a previous peep. The Imperial body-guard went on by same train, the cavalry and carriages proceeding by road.

Homura, Benten, Moncho, and indeed all the native quarters, were profusely decorated with flags, and to-day is being observed by many natives as a holiday, the lighthouse especially being crowded with visitors.

Before closing we desire to express our acknowledgments to the heads of the Lighthouse and Railway Departments, and to the authorities of the Gas-works, for their courtesy and the facilities they have afforded us in the collection of intelligence.

#### THE COLONIZATION OF YESO.

IN THE *Nisshin Shinjishi* of the 13th February, was a letter to the Editor on the subject of the Kaitakushi, which ought to have found a place in our columns long ago. It alludes in its opening paragraph to some of the Hakodate correspondence which had appeared

in the *Japan Gazette*; and though the writer does not at all reply to the questions raised in that correspondence, he at least gives some interesting information. He says:—

"Many questions referring to the colony of Yezo, have been published lately in the *Japan Gazette*. Most of these being unjust and depreciatingly expressed, must not be believed by the readers. Although it is unnecessary to reply to such questions or to negative some of them, yet I fear that some who are ignorant of facts may be misled by them. I have therefore, undertaken to write to you (the *Nisshin Shinjishi*) that your readers may see the affairs of the colony, and what has been already effected.

In order to carry out anything, whether large or small, it is proper first to define the object and estimate the expense; and then we can see whether we have power to accomplish it. Unless this regular order be observed there can be no success. Mr. Kuroda, Jikuan or vice-commissioner of the Agricultural department, has never supposed it possible to make a colony rapidly; but only to do all that could be done perfectly within a settled term. Thus, in his first memorial about the colony, he considered that it would take ten years to fix it on a solid foundation; the fruits may be seen in twenty years, and success perfected after thirty years. The scheme and the work, being very great, it could not of course be done instantaneously or in a morning and an evening.

1.—The readers must consider:—The district of Sapporo being situated on the west coast, close to the port of Otaru, is bounded northward by the various mountains and hills of Ishikari and Atta, and a large river runs through the district. Being a vast plain, containing many ten thousands (square) ri (Japanese miles), it is capable of occupation by a large population of immigrants; and as it lies in the centre of the whole island of Yezo, the head quarters have been established there, so that all districts in every direction may be easily governed therefrom.

2.—In order to facilitate business traffic and for the convenience of travellers, a new road, about 46 ri in length, has been opened. The hills have been cut, the valleys have been filled up, between Hakodate and Sapporo. Many inns have been built on the line of the post roads; and a harbour having been built at Yétomo, Guburi district, over a hundred families of immigrants have settled there, though this was formerly totally uninhabited.

3.—Immigrants to each part of the island, since 1863 are collected on the following terms:—

Farmer immigrants are supplied with houses, farming tools, food and clothing for three years. They are rewarded for having opened up a wild country for cultivation, with money at the rate of two yen for each tan (300 tsubo—about  $\frac{1}{4}$  acre). Others who pay their own expenses are specially rewarded with ten yen per tan of land they bring under cultivation and these farm lands are all free from taxes for seven years. Trading and manufacturing immigrants are also supplied with moderate sums as capital for their business on the same principle as the farmers.

4.—The land, whether hill, forest or plain, is sold very cheaply to the immigrants; as a portion of the best arable land has been settled to be sold at one yen and a half per 1,000 tsubo (about  $\frac{5}{6}$ ths of an acre); second quality one yen, and inferior or wild country at half a yen for the same quantity. These lands are free of tax for ten years.

5.—All parts of Yezo abounding in mines, the rules for working them have been fixed. As it is most necessary to encourage the production of this its principal resource, the quality of the mines had to be examined into, and the expenses of working them estimated, so that they should be commenced without fear of loss.

Accordingly attention has been particularly directed to the examination of the geology and the minerals; and the southern part has already been examined throughout.

Mr. Lyman, an "employed American" has completed the examination of the four districts of Ishikari, Shiribesho, Yuburi and Oshima, and has found several valuable minerals, as will be seen in the following lists. In the parts Horomui, in the Sapporo Kori of the Ishikari district, the minerals above sea level have been measured as over ten millions of tons; and when they come to be worked, the production is likely to be twice as much as this.

Coal in the port Iwanai has been measured to be about ten millions of tons above the lowest level of the natural drainage.

Coal in Horomui about -	10,000,000 tons
Sand Iron in Yurabu about -	120,000 "
do. in Horomui about -	5,015 "
Sulphur in Tobetsu about -	100 "
do. in Iwoto about -	75 "
do. in Horomui about -	225 "
Lime-stone in Orosawa about -	20,000,000 "
do. in Ishi-zaki mura -	2,255,000 "
do. in Kami-Yuzawa -	2,000 "
do. in Washiki -	43,000 "

Gold in Toshihetsu, Hisato and Yesashi about \$2,500,000 value, besides Petroleum Oil in Washiki, Yamagoi-uchi and Hizumi-zawa.

6.—The geographical survey has been entrusted to Mr. Wasson. The base or foundation line has been fixed in Yurabei-Kori, from which survey lines in all other directions are drawn. Had the survey been finished, the map of the whole island of Yezo might be perfectly represented, minutely describing the locality of the mountains hills and rivers, and showing the vastness of the plains, &c. This will be of great use to future immigrants.

7.—Many thousands of kokus of timber have been cut down, land in the vicinity of Sapporo being cleared to the extent of many square ri. Much of this timber was used for the several buildings of Kaitakushi; but over sixty thousand kokus are still stored up. Timber is very abundant in Ishikari, Toyohira, Chitore, Ametatsu, Sorachi and Tobetsu, so that all could not be cut down for many years. Sawing machines have been established in Sapporo. One is moved by steam, another by water power. From thence the timber is transported to the harbour of Otaru. Besides these, there is a saw mill in Moraran, where large quantities of timber are brought to be sawn, from the high lands of Shiribeshi and Aritama. The timber may be expected to become a profitable article of export.

8.—Mill stones have been annexed to the above-mentioned water power saw mill. The excellent wheaten flour produced by the immigrant farmers in the vicinity of Sapporo was ground by them, and bread made of that flour is said to be not inferior to that imported from abroad.

The amount of the duty collected at six custom houses in Yezo is estimated to be over five hundred and sixty thousand yen (560,000.)

10.—Means have been provided to support those who are suffering, or, being old or de-

formed, have no one to aid them. A house has also been established in Hakodate for foundlings; and public warehouses have been built in several localities, to store up provisions, from which the poor may be supplied in years of scarcity. Twenty five thousand koku of rice and ten thousand bags of salt have each been stored up in these separate warehouses; and a public loan-agency has been established, to lend money at a very cheap rate (8 *per cent. per annum*) to the natives, as capital for their business.

11.—Honin Kuaisha, or Public Insurance Company, has been organised to insure against shipwreck and sea damage, to fix the regulations of exchange of goods, to secure against the risks on the voyage, and to facilitate the transportation of goods; for the purpose of enabling merchants to export the productions of the whole island of Yeso, and to increase the trade with foreigners.

Kaitsuigo, a branch office of the Honin Kuaisha, has been already established at Shanghai, China.

12.—Although the means of education are not yet perfected in the whole island, schools for both sexes have been built in the Kaitakushi department in Tokei. The students are all taught, that they may serve this department only, and when they have finished their studies they will be sent to Yeso. Besides these, six schools have been built at the public expense in Hakodate and Sapporo; and there are several more belonging to Kaitakushi, in Aritama, Yoichi, &c.

13.—As the people could not be left without protection, even for a day, 6000 men, chosen from the immigrants, have been appointed to act as troops or guards. Further, as it has been decided that the naval department should send two men-of-war permanently to guard the coast, this object is now about to be carried out.

14.—The rules for taxation have been arranged to be paid differently for different places—from 8 *per cent* up to 20 *per cent* (which is the heaviest on the island), according as the locality is easy or otherwise for the business of the settlers, and convenient or not for the transport of goods.

Most of these rules have been founded on the old style; though in every place under the district office of Nemoro, only, where a tax of thirty *per cent* was formerly levied, it has been reduced to 8 *per cent* since 1869; while, in the counties Horodumi, Samani, Urakawa, Mitsuishi, &c., the old tax of 30 *per cent* has been lessened to 20 *per cent*. But 24 *per cent* is required to be paid on the salmon fishing in Ishikari, because it affords to those engaged in it a very large profit; and besides, they are assisted by the department.

No payment of taxes on either land or anything else is levied in the whole of Karafuto, or Saghalien.

(Note.—As almost all people in Yeso (?) are employed chiefly in hunting or fishing the rate of taxation is upon these only. Nothing else is taxed).

Ten ships—steamers and sailing vessels, small or large, altogether—have been purchased for the use of the colony. Voyages between Hakodate, Mororan, Ishikari and Nankei, or Tokei, Osaka and Nagasaki, are constantly performed by these ships. By this fact, the import of goods having increased to many times the former extent, prices of all imports have declined: and the native produce, finding markets for export, has become dearer.

15.—A telegraph station has been erected at Sapporo, from whence the lines are extend-

ing to the town of Fukuyama in Matsmai, through Hakodate and Mororan; and a single line is even going to be laid to Otaru. These will all be completed shortly.

A mail service has been established already throughout all parts south of Ishikari.

16.—As the residents in Hakodate were suffering privations of living, as a result of the civil war there, the department gave the average sum of yen 46.62 to each family, and 8 To of rice to each person, as alms, three years ago.

Further, the poor in Fukuyama and Yesashi were also supplied with money and rice as alms, or as loans, by the department.

17.—The settlers having succeeded well with their occupations, have rendered the services to the department, during the leisure time, so as to reduce the public expenditure: viz.,

A harbour has been made in the gulf of Fukuyama, and thoroughly deepened.

A new canal has been dug to connect the rivers Shojin and Toyahira.

A new road has been made by the Shinoji village to pass along the shore of Kumansho.

The difficult passage on the mountain Furekoo, has been opened, to facilitate intercourse.

All these works have been done by the settlers gratuitously to save the public expense.

The population of Yeso is increasing year by year, as follows:—

	Families.	Males.	Females.	Total.
1869....	29,094	72,040	64,238	136,278
1872....	35,828	97,270	78,117	175,387
Increase..	6,734	25,230	13,879	39,109
(in three years).				

Hakodate only:—				
1869....	4,218	7,895	8,580	16,475
1872....	6,428	13,128	12,275	25,403
Increase..	2,210	5,233	3,695	8,928
(in three years).				

Horses, and ships or junks, in Yeso:—		
	Horses.	Ships.
1869.....	17,611	14,376
1872.....	21,157	23,452
Increase (in 3 years)	3,546	9,076

The produce of the fishing, hunting, and sea-weed, or Kombu, has also gradually increased: viz.,

1869, value of these productions—Koku	461,598
1871, " "	541,684
1872, " "	607,221
Increase in three years " "	145,623

The northern districts of Yuburi were once quite wild: but these tracts having begun to be opened for cultivation, a fair quantity of produce has been raised. For example:—

Newly opened lands for cultivation in Sapporo Kori, 1869 over	165 cho
do. " 1872 "	338 "

Crops " " 1869 "	454 koku
do. " " 1872 "	3,833 "

IN YOKOHAMA there is just as much preaching and as little practising as in most other places. The fire at Nos. 60 and 61 has led to all sorts of suggestions as to what

ought to be done at a fire, and what should have been done long ago in anticipation of fires in the heart of the settlement; and we suppose that there the matter will rest. The old complaint of "no water" is still heard; and the old outcry for an efficient "head" to the Fire Brigade is as loudly uttered as it was ten years ago.

Whilst the gentlemen who form the Fire Brigade are working at a fire as hard as men can do, to bring their hose into play, or otherwise act so as to arrest the progress of the conflagration, (fortunately thinking not of themselves, nor of the inconvenience they are putting themselves to, the danger they may run, or the loss, by damage to their clothes, which each fire entails upon them), there stand hundreds of critics quietly smoking their cigars, watching the progress of the flames, abusing the incompetence of the Brigade, and asking, why this, that, or the other, is not done? Clamouring for the head of the Brigade—why is he not here? why is he not there? as if he were ubiquitous; or could calmly take up his position and issue his orders by his officers, sent hither and thither, and punish those who did not instantly obey the orders conveyed to them.

To all this we would say nothing, if the community at large acted unitedly in public affairs generally. But we protest against blame being thrown upon the shoulders of the few energetic workers, by the drones who not only refuse to do anything themselves, but, by their unyielding opposition, prevent any really beneficial unity of action in the settlement.

The head of the Fire Brigade! We can understand the meaning of such a term in places where authority attaches to the title. But who, in Yokohama, acknowledges any authority? Looking round upon the foreign communities of the Far East, our eye cannot discover one where there is so much disunion, and such utter powerlessness to overcome it. We turn with a kind of envy to our nearest neighbour, Kobe, and sigh for the advantages she obtained by the thoughtfulness of those who framed the regulations under which the land was sold. As to Shanghai—but no; we must not commence a comparison. We are too hopelessly behind. The whole of the Yokohama residents have some fault to find; the obstructives as well as the progressists; and so there is an immense deal of talk but very little action. Although therefore our reporters may "express the general feeling" that the Fire Brigade is to blame, we distinctly disclaim any sympathy with this view, and we assert strongly and loudly that it is pure cowardice on the part of the community to attempt to throw the blame due to their own listlessness, idleness, or opposition, upon those who, by day and by night, busy or at ease, at all times in all seasons, rush at the first sound of the alarm to the scene of danger, and remain until the end.

This condemnation by no means includes all the members of the community: for there are those who by their contributions to the funds of the Brigade, and otherwise shewing their sympathy, perform their part. But there are many hundreds who never do anything or give anything; and who refuse to join in any action by which something like authority can be conferred for the Public Good.

That there are in Yokohama men well capable of drawing up rules for the Fire Brigade every one admits; but where is the advantage of good rules if they cannot be enforced? Something ought to be done—and, if we would see a really efficient Brigade, something must be done—to give power to the head of the Brigade to act with decision and without fear of consequences. We invite the Board of

Consuls to take this particular matter under their special consideration at their next meeting. It would be of great help to the foreign residents if the Board would agree among its members as to what powers could be by them delegated to the Fire Brigade. But the public must look to themselves. It is the individuals of the community who suffer from the present state of disunion; and it is only by all agreeing to abide by the decisions of the majority that any real, permanent benefit is to be obtained.

**M**UCH is said from time to time about the Yokohama Fire Brigade, for it includes among its members some of the well-known men of the community; but little is said of the Yokohama Hook and Ladder Company, although at all the fires that have occurred since its establishment, more than a year ago, it has rendered most energetic and useful service.

The Captain of the Hook and Ladder company is Mr. Hohnholz. Every member of the Fire Brigade will be glad to acknowledge that Mr. Hohnholz has personally been always among the first and most effective workers at every fire. At Mr. Thomas's fire, it was Mr. Hohnholz who, on his own responsibility and with his own men, prevented the spread of the flames by pulling down an edifice, which, had it caught, must have communicated the fire to the adjoining premises. At the French Hospital fire Mr. Hohnholz, on the roof with his hose, fell in with the roof when it gave way, and was supposed for a few seconds to have perished, and how he escaped it is hard to say. But, at the fire on Thursday night, he rendered service which all saw and all can fully appreciate.

It is needless to speak of his being among the first at the fire. We come to the later proceedings. The great want of water had been severely felt from the first. Now, Mr. Hohnholz occupied one of the small stores on Lot 82, at the back of Mrs. Searle's and Mr. Jaquemot's. Here, being unable to get insurance on his premises, he had provided a small supply of about 1,000 gallons of water in case of need. When the fire, with irresistible ferocity, travelled along the range of buildings on Lots 60 and 61, he took the engine he always kept ready at his own place, and which he had used elsewhere in the early part of the conflagration, to his own neighbourhood. As the fire caught Driscoll's, some persons wanted him to direct the water upon that house; but with consummate judgment, he replied that a thousand gallons of water could do nothing there; but that it must be husbanded to keep the Hongkong and Shanghai Bank and Mrs. Searle's walls cool, in case of North's corner shop catching; for, said he, "if the Bank catches, Strachan and Thomas's and Aymonin's must inevitably go, and, if Mrs. Searle's catches, all the houses to Lot 85 must go; and who knows how much further the fire may spread?"

All who were present will remember the occasional streams of water which kept the Bank and Mrs. Searle's wet, and which several times extinguished the incipient flames as they caught the building on No. 81, opposite to Mr. North's. Everyone admits that those little streams of water prevented the spread of the fire, and the destruction of an enormous amount of property. This water was the small supply Mr. Hohnholz had for his own purposes; and which he thus skilfully and judiciously used. It will be remembered that Mr. Bohm, who held the hose, was obliged to be screened from the heat of the flames by boards held up for the purpose, one of which actually ignited. So that the service rendered by Mr. Hohnholz and his fellow workers was of the most marked and undeniable character.

Probably, however, nothing would have been said about it, but for this circumstance:—Two other fires broke out; one in the godown at A. Fabre & Co's., and one at the North German Hotel. Mr. Hohnholz's shop being directly opposite to Fabre's, his goods were taken out, and, by the damage done to them and the quantity missing, he loses some \$800. And in the North German Hotel, Mr. Hohnholz loses \$1,700. All uninsured.

We have given this plain story because we think that Mr. Hohnholz is entitled to sympathy of a more tangible kind than mere words. Something is due to him from the community, and in particular from the Insurance offices and the owners of property saved by his exertions; and we hope that this notice will lead to immediate steps being taken to render him some restitution, under what will otherwise be a great and crushing loss to him.

### A SERIES OF CALAMITIES.

ONE of the most destructive fires we have lately had occasion to chronicle in Yokohama broke out shortly after 8 o'clock last evening, (12th) in the very heart of the settlement. The fates appeared to be against us, and it really seemed at one time as though the place would be given up altogether to the fiery demon. First of all there was no water, which surely ought to have been provided against, after the repeated warnings of past experience; keeping in mind the length of time the settlement has existed. But more than that, and chiefly, what must have struck the willing and indefatigable band of salvage volunteers—from the Japanese coolie upwards, through the various grades of our European population—was the utter absence of anything like system or management in the arrangements for staying the destruction going on; in point of fact, not to mince matters, the inexperience of the members of the Yokohama Fire Brigades—for we imagine they must primarily be held responsible for the direction of such measures as are considered necessary for the combating of dire calamities similar to those now under notice—was painfully apparent, and showed how great is the necessity for persistent drilling.

The alarm bell was sounded at the Y. F. B. Co's compound shortly after 8 o'clock, and our reporter reached the scene of disaster almost immediately after; yet, such was the rapidity of the conflagration—unless indeed the destruction had been going for some time unobserved—that the flames had broken through the roof of Mr. Thieme's store, where the general belief is that the fire originated (although some say it commenced on the premises of Messrs. Berriek Bros., whose firm had undergone a similar misfortune on two previous occasions), and the fire had gained considerable headway within a few minutes of the sounding of the alarm. On reaching the spot there was found the usual groups of spectators; inconsiderable, as yet, for there had hardly been time for the gathering of many. Those who were present saw at once the necessity of doing something towards rescuing the property contained in the adjoining premises; for it was evident that little or nothing could be done to stay the utter destruction to which, to all appearance, the whole block seemed doomed, in the absence of the engines and the doubtful dependency to be placed on the supply of water. Soon after, a company of French Marines arrived, and were detailed for duty to save and protect property. And the volunteers went to work cheerfully, quickly effecting an entrance into the premises as yet un-

touched, the *Herald* office, and Messrs. Driscoll & Co.'s premises; the result being that a large amount of valuable property was rescued and deposited in safety in the adjacent lots.

Meanwhile, the engines had arrived but were comparatively helpless, from the distance from and scarcity of water; the supply being procured from the Bund, and the tide, haplessly, being very low. By the time they were enabled to obtain an adequate supply the fire had gained such a mastery that it was evident the whole block was doomed, and it seemed imminent that the Hongkong and Shanghai Bank, the store of Mrs. Searle, and indeed the whole of that side of the street would be destroyed. The engines were virtually nowhere. The "Victoria Insurance Company's" steamer knocked up at an early stage and became useless, and the "Volunteer" hand engine—fortunately put into a thorough state of repair a very few days before—had to be fed from the Bund by the new steamer just imported by the Y. F. B., which certainly performed its work in the most admirable manner, engineered by Mr. Brown, who has handled it through the various trials to which it has been subject. The hand-engines did their best. And here we would take occasion to tender an expression of our profound admiration for the efforts of a branch of the fire-combating company hitherto made too little of, we refer to the Hook and Ladder Company. They were on the spot at the very outbreak of the fire, and, in the absence of the engines, did incalculable service, not only then but afterwards, in the preventing the spread of the destruction.

The affair commenced about 8 o'clock, and, by eleven, what was left of the block extending from Messrs. J. Thompson & Co.'s on the one hand to Messrs. J. North & Co.'s on the other was hardly worth the trouble of estimation. Immense exertions were put forth, however, and the efforts of the engine companies, seen to be worse than useless when directed on the doomed block where the fire originated, were diverted to the opposite side, and for the time with success. Gradually, it was seen that the tide of battle was turning, and the fire was likely to be vanquished, although block 81, as yet comparatively untouched, stood in imminent jeopardy. The immense crowd congregated visibly thinned, and those drawn together by interest or curiosity returned to their homes, most of them, however, to be again drawn back to the site of devastation by the renewed sounding of the alarm bell.

Although the original block attacked had burned itself out beyond further hazard, it appeared that the opposite line of buildings, or at all events a portion of it, had at last succumbed to the intense heat, and a two-storied building adjacent to the Catholic Church was found to be on fire. Ladders were placed in position and hose directed on the burning mass, and, after some delay in the procuring of a supply of water, the flames were overcome, before they had much time to spread. Meanwhile, it was known that a large godown adjacent, occupied by Fabre & Co., had caught fire, and was slowly but surely burning, although, owing to its massive doors and windows, (supposed to aid in rendering it fireproof) being closed, the outbreak was only a question of time. And so, an hour or two after, no one was surprised to hear the alarm again rung out, and the godown was found to have burst into a blaze. Considerable apprehension was felt by many, owing to a rumour that, just previously, a large quantity of live shells and cartridges had been stored there; and many were present who asserted

that they had witnessed the transference of something similar a day or two previously. No explosion, however, occurred, and it is to be presumed that if the supposition were really correct they must have been again removed. Thanks to the indefatigable exertions of those present, fighting, as they seemed to be, against fate, the mastery was gained over the flames, and the fragments of the burning mass were permitted to sullenly burn themselves out. Hardly, however, had the wearied workers time to think of resting awhile, before the cry was raised that fire had again broken out. This time, it was found to be comparatively remote from the scene of the origin of the devastation, although there could be little doubt in the minds of the majority that it had originated in the carriage of sparks from thence. Between 3 and 4 o'clock, the "German Hotel," situate on Lot 128, and well-known in former times as a thriving place of business, was found to have caught, and, in the absence of water, it was quickly seen that the result could be no other than total destruction; if, indeed, it did not extend beyond that, and include in its scope the adjacent buildings. And such, to a certain extent, was found ultimately to be the case; the premises of Mr. Clarke, of the Yokohama Bakery, the large two-storied residence adjoining, and other minor buildings near by being finally engulfed, with most of their contents, in the common ruin. It was feared, at one time, that the residence of Capt. Scott, on the opposite side (who suffered similarly in the fire at No. 32 some little time ago) would share the same fate. The fire, indeed, did catch it, but it was beaten out, and further danger in that quarter was averted. It must have been fully half past 5 o'clock this morning before the fire was subdued, and it was really pitiable to see the quantities of valuable property of various kinds strewn the adjacent vacant grounds; though saved (?) from utter destruction, irretrievably ruined by the showers of blazing embers which kept continually falling. The *tout ensemble* of the night was a grand one to a mere spectator, but, in view of the immense destruction of property involved, we fancy that even the most callous would hardly care to recall the scene exhibited last evening. Above all, we regret to have to report that the dire disaster was not unaccompanied with injury to the limbs, though happily the report is proved to be unfounded which stated the death of three firemen. On enquiry, we find that the native member of the Yokohama Fire Brigade who was supposed to have been killed by the falling of the corner section of No. 60 (Messrs. Thompson & Co's.) is not dead, although lying in a dangerous state at Messrs. Smith, Archer & Co's., No. 13.\* Two other coolies were injured at the same time, but we presume, and hope, that the damage sustained by them was not of a serious nature.

Lastly, to complete the measure of calamity, we hear that two more fires occurred, at Nogé, the one at half past two, and the other at a quarter to four this morning. What the damage amounts to we have as yet been unable to ascertain.

But little remains for us to add, save a further tribute to the indomitable band of workers, volunteer civilians, marines, and blue jackets of various nationalities, amongst whom we must not omit to mention sundry gold-laced gentlemen, who, nevertheless, pressed forward into the "thick o' the fray," and did good service.

\* We regret to add that the injuries sustained by the native fireman, who was employed as coolie for man, have since resulted in his death.

And now we present the "Black List," a statement of damage sustained which we have taken the utmost pains to verify at first hand. It is as follows:

No. 60, J. Thompson & Co.—Total loss. Insured for \$10,000, *China Fire Insurance Co.*

" Berrick Bros.—Covered in *Manchester Office.*

" G. Thiemer.—Insured in *Lancashire Insurance Co.*, \$8,000.

" J. Regensberg.—No particulars.

" Mrs. Lockyer.—Total loss; uninsured.

No. 61, *Japan Herald*.—Portion of plant, books &c., saved; also printing machine. Insured for \$8,000 in *Imperial office.*

" J. Smedley.—Total loss. Insured for \$800 in *Phoenix Fire Office.*

" C. Berger.—Furniture partially saved. Insured for \$600 in *Sun office.*

" Driscoll & Co.—Heavy loss. Insured for \$15,000, *Lancashire*, and \$10,000 *Sun*, Insurance Companies.

" J. North & Co.—Total loss. Insured for \$4,000, *Northern*, and \$5,000, *Sun*, Insurance Cos.

No. 80, E. Schwartz & Co.—Damaged by water and fire—Insured in *Hamburg and Bremen Insurance Co.*

" Victor Orny.—Slight damage by fire and water. Covered by Insurance.

" Catholic Mission—Premises only slightly damaged.

" Miss Gargan—Virtually a total loss, through fire and water. No Insurance.

No. 81, A. Fabre & Co.—Godown and contents destroyed. Insured for \$15,000, *Imperial Insurance.*

" Dr. Klotz, "Plymouth Arms," R. Druse, H. W. Hohnholz & Co., and several adjoining buildings occupied by Chinamen and others partially in jured by water damage.

#### BUILDINGS:

Nos. 60 and 61, E. C. Kirby.—Total loss. Insured for \$21,000 *Phoenix Insurance Co.* Loss not covered.

No. 128, "German Hotel."—Buildings, \$2,500, owned by Mrs. Wilkie; insured in the *Hamburg & Bremen Insurance Co.* Contents owned by German Hotel Co., \$4,000, total loss; no insurance, except on piano, owned by Messrs. Marks & Chapman, \$400.

" "Variety Theatre."—J. C. Plummer & Co.—Total loss (with the exception of a few dresses and properties) estimated at \$2,000.

No. 129, R. Clarke. — Yokohama Bakery. — Buildings and contents—including plant and stock, 3,000 lb. Biscuit, and large a quantity of flour just purchased, a portion of the latter saved. The Buildings insured in *Hamburg and Bremen Insurance Co.*, for \$10,000; loss on Stock estimated at \$4,000.

" Miss M. Campbell. — Building total loss; owned by R. Clarke, uninsured. Furniture valued at \$9000; nearly total loss, uninsured.

The *Phoenix Insurance Co.*'s loss is estimated at \$35,000; this is approximate, as we are re-

fused particulars by the Agents. The *Sun* loses \$25,000, allowing for salvage. The *China* \$10,000. The *Lancashire* \$23,000. The *Imperial* \$23,000, less salvage (probable). The *Hamburg and Bremen* \$11,000. The *Northern* \$4,000.

And now, before closing this already too lengthy report upon a catastrophe which must, for a length of time, to a certain extent tell upon the business relations of a busy portion of Yokohama, we would wish to draw attention to three vital points which forcibly struck us last evening, and to which we have already referred. They were these:— Firstly, The utter want of system, attributable to the apparent absence of a directing head, displayed in the operations of the Fire Brigade and its allies. Secondly, The noticeable absence of water—the undoubted cause of the vast destruction of property last night. And, Thirdly, the apparent indifference of the native police authorities to the wholesale thieveries of the Japanese and others, by which much valuable goods were appropriated which might otherwise have gone to reduce the heavy losses of the Insurance Companies.

The first point was seen and commented upon by very many of those who were in a position to judge of the matter. We do not wish to be misunderstood; the officers and others immediately employed about the engines and hose did well, to the best of their ability, but there seemed to be no one to guide, to direct, and, as a consequence, confusion frequently reigned, and well-meant efforts were rendered futile, simply from want of judgment as to how they should be directed. The want of water last night made itself felt to the tune of several thousand dollars. Perhaps the lesson it taught may serve to urge on the Committee, who are inviting tenders for specifications for wells and tanks, to some positive action.

Lastly:— Are there not enough coolies to be had to man the engines and do the work of salvage, without appropriating the services of the native police to such work? That there was enough for them to do at the scene of the fire last night, and more than enough, was made evident by the strings of natives that might be met with, trudging along towards the various native quarters, laden with spoil of every kind snatched from the fire. Two of our townsmen, to our knowledge, relieved some native gentry of stolen property certainly worth \$50; how much more was got away it is of course impossible to realise. One gentleman, who pulled off his coat in order to assist, found, on resuming it, that a watch and chain valued at \$450 had been "lifted" by some light-fingered adept; the European police have the case in hand, we fear with but little hope of success. We hear of another gentleman, a spectator, having had his watch and a portion of the chain quietly snapped off; although the culprit was caught in the act he managed to pass the prize to a confederate and get clear away. *Verbum Sap.*

At 10 o'clock this morning the fire was still smouldering, although all danger was virtually over. The streets presented a busy aspect; sufferers by the calamity being busily engaged in carting away the goods saved from the flames.

WE ARE requested to state that the firm of Berrick Bros. has not been burnt out before, and are assured that the fire of Thursday night did not originate on their premises.

DURING THE fire, whilst some people were assisting to remove goods from the house occupied by Miss Gargan at No. 80, some

scoundrel threw a bottle containing dye or something similar, evidently from the Dispensary opposite, through one of the upstairs windows. It grazed the head of a gentleman engaged in the work of saving the goods, which were uninsured, and smashed on the wall opposite.

### NAVAL COLLEGE ATHLETIC SPORTS—TOKIO.

THE ATHLETIC Sports at the Imperial Naval College, under the patronage of Mr. Katz and the officers of the College, came off on Saturday afternoon, to the evident satisfaction of the students and the immense crowd of spectators assembled, which included quite a number of Japanese soldiers. From the windows of the College several ladies and the children of the Kaitakushi school viewed the proceedings, and appeared to take a lively interest in the sports.

Although rain threatened during the whole of the afternoon, it fortunately held off until the sports were finished.

The first event set down in the programme was a flat race for students under 15 years of age, distance 300 yards, or once round the enclosure; it was well contested. This was followed by a race for students over 15 years of age, which was accomplished by the winner in 90 seconds. Then came a race of 150 yards, for students under 12 years of age, in which the little fellows ran very well.

The prize for the long jump was carried off by a stalwart youth named Kano, who succeeded in scoring 14 feet 6 inches. This competitor was throughout the games particularly lucky, and his continued appearances at the winning post were greeted with much applause; his success being evidenced by the number of prizes he carried off, consisting, in the aggregate, of Pocket-Books, Stationery, Gloves, Towels, Knives, Pencilcases, Walking sticks, &c. almost sufficient to start a small General Store.

The high jump was nothing extraordinary from a European athlete's point of view, but, considering the general habits of the Japanese and their inexperience in such exploits, it was very good indeed.

The three-legged race was a source of great amusement to the native spectators. It was well contested, the fall of the two leading couples adding greatly to the fun.

A flat race, for students over 15 years of age carrying a boy over 10 years, distance 200 yards, followed, and the next event was a pole jump. We could not get the height cleared, but it was very good, and cleanly done.

The walking match finished in a rather doubtful run, which, on European ground, would have resulted in a protest.

Some of the competitors in the blindfold race of 150 yards ran remarkably straight, under the circumstances, although one little fellow took quite an opposite course to the desired goal and ran full tilt against a fence.

The hop, step and jump came next, followed by a steeple chase of 300 yards, in which the jumps were all cleared easily.

The hunted pig, with greasy ears and tail, stood a very poor chance, followed by so many hounds, especially as Dennis was rather fat.

A race with a bucket of water carried on the head, the one bringing in most water in the shortest space of time to be considered the winner, distance 50 yards, was a most amusing event, but we didn't wait for the Rule of Five calculation necessary to determine the winner.

The sports were brought to a conclusion about five o'clock, with a race of 200 yards,

the competitors having to pick up 20 eggs scattered over the course. Only three started, and all managed to stow away the eggs remarkably well.

Too much credit cannot be given to Captain Douglas and the officers and blue-jackets attached to the College, for initiating and carrying through the programme so well, it being the first of the kind, we believe, ever attempted by exclusively Japanese competitors.

The Admiralty band, under the direction of Mr. Fenton, was in attendance, and contributed much to the enjoyment of those present. Much surprise was expressed by the European spectators at the proficiency which they have attained, as they are at present only in course of training; the band proper having gone south, to the seat of the recent disturbance at Saga.

The prizes were presented as won. There are at present nearly 200 students attached to the College, between the ages of 10 and 30.

THE LATEST telegrams from Fukuoka are of no great importance, further than that they state that Higashi Fushimi no Miya arrived on the 9th instant, and on the 12th made preparation for proceeding to Saga.

The Imperial Steamer *Unyokan* captured the steamer *Matsuru-maru* off Wakimoto, on the coast of Demidzu, Satsuma, but only four men of the crew were on board, the rest having gone ashore and run away. It was supposed some of the leaders were aboard.

On the 11th Okubo telegraphed from Nagasaki, "Have just been informed by Oyama 'Gonrei that Shima Danyemon, Soejima Ken-suke, Shigematsu Motoyemon, Murata and 'seven other insurgents have been arrested 'in Kagoshima. Yeto is reported to be hiding 'in the same Ken but cannot yet be found. 'I will report again about him in a few days.'"

It is with sincere pleasure that we are enabled at length to announce that the Mikado has given his assent to the formation of a Representative Parliament, or Assembly.

NOW we believe we may congratulate our readers and all concerned that quiet will be speedily restored.

OKUBO NAIMUKIYO has informed the government that he has ascertained that Yeto Shimpei was the real leader of the Saga insurgents. He therefore proposes to the Financial Department not to pay Yeto's allowance as a Sangi—because he is a criminal.

\* \* All Sangi are supposed to be at the disposal of the government, even though as, in this case, they may have resigned, and their places been filled. Whether it be true that Yeto is the leader, it is, of course, impossible for us to say; but the fact ought not to be forgotten that the rising took place before his arrival. As to his pay, we heard that he had refused to receive it, before he went south. Our readers will remember the information we translated from a native paper respecting his arrival in Saga Ken.

IN CONNECTION with the above, we may mention that on the 4th instant Okubo sent a telegram saying that Yeto had escaped; but that his whereabouts was known, and he would soon be captured. Okubo also mentioned that the number of Saga prisoners captured was 1600.

THE KENREI of Chikuma Ken, on receipt of the photograph of His Majesty the Emperor, had it exhibited to the people in various parts of the province. At Takayama, on the people

seeing it, they all joined their hands and worshipped it, using the Buddhist prayer "Namu Amida Butsu."

TWO JIN-RIKI-SHA men have been sentenced in Tokai to two and a half years' imprisonment with hard labour, for appropriating and sharing some money left by a foreigner in the vehicle belonging to one of them. The man to whom the jin-riki-sha belonged was about to take the money to the owner when he found it but was overpersuaded by the other fellow, who said it would not be robbery to take it, for it was money sent to them by Heaven.

WE WERE not aware until we saw it stated in a native paper on Saturday last, that, in the beginning of January, "the members of a local assembly" in Tokai presented a petition to the Chiji on the subject of a representative parliament. They pray that the members may be chosen from each large division of the city, and meet for the discussion of the national business, on the principle of the British House of Commons.

Okubo, the Chiji, was more than diplomatic. He replied with a verse of poetry.

A FEW days ago, a man and his son, the latter named Tsune-kichi, were in a boat on the Shiwodome river, near Shinbashi station, Tokai. The son took a bamboo pole, to propel the boat in the way so frequently seen, by thrusting one end of the pole on the bed of the stream, the other end being against the breast, and so walking along the side of the boat from stem to stern. The pole broke and the jagged end entered the lad's throat. Of course both father and son were greatly alarmed; but a policeman who saw the accident, called them ashore, and went with them to a doctor. The wound was dressed, but fruitlessly; for, says the native chronicler, "the violent wound cruelly took Tsune-kichi to another world."

LAST NIGHT, two large fires occurred in Yedo, one in the neighborhood of Kondo, and the other near Asakusa. The latter was still burning this morning.

Naimusho (the Home office) has received information from Hiogo, that, on the 18th February, the farmers, amounting to 3,000 men, assembled at Sanya, Kasama Ken; and that their numbers and discontent increased daily. Saito Sanji and Goto Chiusakan, with three of the chief officers of the police at Morioka, went to them and managed to appease them; but it was by the distribution of 1,000 rios among them. As seems natural to us, the next day, 21st February, the farmers met at Takawa, and, when the police went in numbers to restore quiet, they were assailed with stones and broken tiles, and some of them were wounded. On the 23rd, when it seemed likely that the Takawa men were to be tranquillized, another outbreak occurred at Yahaji; but here 400 Shizoku marched against them and seized about 30 of the leaders. At Nitta, next day, another rising took place. The high prices of food and the oppression of the officials is the alleged reason of the uneasiness.

TWO NOTED robbers, Nishida Ginjiro and Sekiguchi Masa-Yemon have just been arrested in Tokio. They were "wanted" for a burglary committed on 21st December last, when they entered a house at Horidome, Yedo, and despoiled the proprietor, Tiojiya, to the extent of 3,830 yen.

SAIGO KITCHINOSKE and Shimadzu Saburo returned to Yedo yesterday.

ANOTHER of those large crabs, of which two have reached Yokohama during the past seven years, was caught on the 1st of last month on the Midzusawa coast. We give a description of it from a native paper, in the Japanese translator's own words:—

"On the first of the last month, a strange large crab was taken up from the shore of Midzusawa-ken, at Rikuzen state. Its shape resembled very well to a spider and its back to a bull-frog, and its colour was very red, as if it had been boiled. Its teeth were like those of a horse, and the thumb was not at least much shorter than five feet, and the little finger was nearly three and half feet in its length. As it is very strange crab it was dried, and from the first day of this month it was exposed to the public spectators at Midzusawa-ken."

RASCALITY seems to assume pretty nearly the same phases all over the world, as the following incident, narrated by a native paper, plainly shows. The mode of procedure will not be unfamiliar to attentive students of English police literature:

Recently we have made great progress in Japan, but there are two ways of attaining it—one cunning, another wise. A few days ago, a person went to a grain store at Moto Torikoye, Tokio, and desired the proprietor to send one yen worth of rice to his house, which he said was a little distance away. He stated that, as the money he had was in 5 yen pieces, he would be glad if they would send the change, four yen, with the rice, so as to save time.

The rice and the change were accordingly despatched by a boy. On his way towards the house of the customer he fell in with him, and was told that the five yen had been paid to his master a few moments before, and that therefore he could hand over the four dollars change, as it was wanted to buy something else, perhaps another yen worth of rice. The unsuspecting youth at once delivered it up, and continued on his errand, but curiously, the house of the customer could not be found, and he was compelled to return to the shop of his master, who, on learning the circumstances, "understood his action, to his great surprise."

HERE is another specimen of native cunning which reads remarkably like what one is accustomed to see in the English police reports.

A few days ago, a man went to the residence of a government official in Tokio, saying that, as it was so cold in the office, he had been sent for the master's overcoat. "His lady intended to give it immediately, but when she observed that person"—we quote the translation *verbatim*—"he was an irreligious person, so that she stopped to give it, by telling that it should be sent down by her servant. When her husband returned from the office they understood it was only a robber's pretention."

THE *Niigata Kakujitsu Shinbun* (Every-day News) says, "We have a long-lived family, who are valuable to publish. A farmer, Tarozayemon, of Sin Iidamura, is aged 93 years, and his wife is 89; their son is 72 and his wife 68; their grandson is 49 and his wife 47; and their great grandson is 30 years old and his wife 26. It is indeed as strong and healthy a family as can well be seen." Nothing is said about any remoter generations, but, as things go in Japan, it is not unlikely that there is yet one or two more looming in the future of

the ancient couple, "before they shall go hence and be no more seen."

THE British Steam-ship *Canton*, which left here on the morning of the 2nd inst. with 900 troops for the seat of the insurrection, disembarked them all at Hiogo on the 5th inst., in consequence of their services not being required at the scene of disturbance.

They were an animated body of men, full of fun and jokes, and there was more than one remark made on board, that it was a pity to see such a good-natured lot go to the field of strife, whence few only might return. When orders came to disembark, the war being over, one could plainly see satisfaction depicted in every countenance.

THE STEAMER *Glenartney*, which arrived here from London, via Hongkong and Shanghai, yesterday, made the passage from the latter port to Yokohama in exactly four days. We clip the following interesting description of her from the *Shanghai Evening Courier*:—

"The new steamer *Glenartney* arrived today (24th ulto.) after a voyage of 48 steaming days from England; viz., 44 to Hongkong, and 4 thence to Shanghai, which, especially at this season of the year, must be regarded as indicative both of speed and of thoroughly seaworthy qualities. Indeed, so rapid was her run to Hongkong that she anticipated her manifests, which were forwarded by mail, and, to avoid a similar occurrence in Shanghai, she brought them on with her. She was completed only in December 1873, having been built and engined at Govan on the Clyde, at the works of the Glasgow and London Shipbuilding and Engineering Company, for Messrs. Macgregor, Gow & Co., of London, the owners of the *Glen* l.c. Her dimensions are: Length over all 350 feet, between perpendiculars 335; breadth 35½; depth 24; capacity, gross 2,160, net 1,370 tons. H. P. nominal 320: speed 11 knots. Being destined for the regular Suez Canal trade between China and Japan and London, her accommodation for Saloon passengers is limited to 12; but for these her accommodations are most handsome and complete. She is commanded by Capt. Keay, whom many of our readers will remember as the commander, in old times, of the *Ellen Rodgers* and the *Ariel*, and, latterly, of the steamers *Oberon* and *Glengyle*."

AMONGST the passengers per P. & O. Mail steamer *Behar* for Europe, this morning, was Enomotto Take-aké, who departs as Ambassador to the Court of St. Petersburg. A salute was fired in honour of his departure, as the steamer left.

ON FRIDAY, Feb. 27th, Enomotto, who was recently appointed to St. Petersburg, charged to settle the disputes between Russia and Japan relative to Saghalin, (Karafuto,) gave a grand farewell entertainment at the Nakamura tea-house at Riogoku, in Tokei. About one hundred and fifty persons, chiefly officials of the government, several of whom were of high rank, were in attendance. Beside the banquet, there were dances and music, given by a large and brilliant corps of Geishas, or singing girls. A number of these fair ones were the brightest stars of the firmament in which they shine. Enomotto is accompanied on his mission by a young native—formerly an interpreter to the Russian teacher in the Tokei School of Foreign Languages—who is considered to be fully conversant with Russian language.

AT MIDNIGHT a fire broke out at O-ta, in some native houses immediately under the cliffs, and adjacent to the native barracks. Owing to the inflammable nature of the materials and the delay in procuring water it soon assumed serious proportions and at one time threatened to destroy the whole of the surrounding quarter, the houses being very thickly clustered together and the streets extremely narrow. There was a large number of police and coolies available for the working of the hand engines, which were of really little service in extinguishing the flames, necessarily very fierce. Everyone worked with a will, however, several Europeans lending a hand in the work of demolition, and the wielders of the hooks and axes ultimately succeeded in arresting the destruction, so that at 2 o'clock this morning all danger was over. About 50 buildings were destroyed, but a good deal of the contents was saved. The barracks on the opposite side of the road were untouched. The ground was kept by a detachment of native troops, the streets being covered with salvage. We were unable to ascertain the cause of the fire.

LAST NIGHT, shortly after nine o'clock, a sharp but short earthquake was felt in Yokohama.

A house occupied by R. Holme, Esq., on the north side of the railway track, was entered some time during Friday night and various articles removed, without any alarm being raised. During the same night a dwelling house at Ohno, occupied by a servant of Messrs. D. H. Tillson & Co., was entered by six men with swords, a number of men—some six or eight—who were assembled inside offering no resistance. The latter were tied up and all the money which was found—about \$20—carried off. The tenant, who was out at the moment, heard a noise, and, on going to see the cause objected to the proceedings, with the result of receiving a severe wound in his arm and some stabs through his clothes. Still on the same night, all the horse blankets were stolen from Mr. Thompson's Livery Stables. The next night, from the same place, was taken away a valuable set of pony harness and some bits, &c. The Japanese police stopped a man carrying this in a jinrikisha on the road to Nishinomiyu, but were deluded by an artful tale about an accident having happened which had necessitated Mr. Thompson's sending home for harness. This night also, the Chinese restaurant at the top of Division Street was broken into and a quantity of things removed. Some of these were afterwards identified at a receiver's in the native town, and a boy who was laid hold of by the police so far yielded to the arts of persuasion practised at the Saibansho as to give some information which led to the police visiting a certain house, removing a woman they found at home, and quietly taking into custody three men who returned home at intervals. Some rope was also found there which corresponds with that with which the men at Ohno were tied up. On Sunday Mr. Cabeldu identified some property in the native town as having been stolen from him, but the suspected thief is not at present to be found. —*Hiogo News*.

THIS MORNING, Messrs. C. A. Fletcher & Co. sold by public auction to Mr. F. Da Rosa the U. S. S. *Idaho* for \$15,500, and to Mr. E. L. Hyde the S. S. *Washi* for \$29,000. The *Fun-jin-maru* fetched \$2,100.

## In H. B. M.'s Provincial Court.

Before N. J. HANNEN, Esq., *Act. Asst. Judge.*  
Tuesday, 10th March 1874.

GEORGE CRIPPS *vs.* W. W. CARGILL.

This was a claim, on the part of an engine-driver in the employ of the Japanese Government, for 7 days wages and 2 days overtime at \$2.96 per day.

Mr. Davidson, who appeared for the Government, did not dispute the overtime, the non-payment of which had resulted from error.

George Cripps, Engine-driver, Imperial Government Railways, sworn:—When I presented my pay sheet I saw that 7 days wages had been stopped from me. I asked the paymaster why it was so; he said he didn't know. I then asked him about my overtime; he replied that there was none put in for me. I spoke to Mr. Annand the foreman about it. He told me he had put the overtime in, but that he knew nothing about the seven days which had been stopped. (The agreement between plaintiff and the Imperial Government, signed in London, was here put in.) The amount of the 7 days wages has been stopped out of my wages. I worked one day out of the 7 referred to; on the 10th, 14½ hours. The remaining 6 days I was at home, waiting for orders to go to work. I have been in the Hospital 19 days. I left on the 3rd (February.)

By Mr. Davidson:—After I left the Hospital on the 3rd I was waiting for orders, and ready for work. On the 3rd there was no work done. I was charged (by the Railway authorities) for being in Hospital on the 3rd: they stopped it from me. I came back to work on the 3rd, and was ready for work on the 4th. I was not at work until the 10th, in the morning. I did not intimate to the doctor that I was about to leave the Hospital. I found that more money had been stopped from me than there ought to have been, so I left the Hospital to see what it was. I asked the doctor when I might leave the Hospital, and he said about the end of the week. I left on Tuesday, the 3rd. I left the Hospital on the 2nd, also on the 1st; I went for a walk. I did not leave it finally on the 2nd. I left Yokohama for Shinbashi by the 2 o'clock train on the 3rd. I did not sleep in the Hospital on the night of the 2nd. On that night I went to see a friend, as I was going away next morning. I had something to drink on the night of the 2nd. I was quite sober on the morning of the 3rd. I saw Dr. Purcell that morning. I did not report myself to the authorities as well when I left the Hospital; it is not my place to do so. I went back home on the 3rd and was ready for work on the 4th. I found that another man was on my job. I couldn't turn him off. I saw Mr. Annand on the Saturday, the last day of January, and told him I would be fit for work on the following week. I am under Mr. Christy; Mr. Annand is the foreman.

By Court:—I did not tell the doctor, on the Tuesday morning that I left, that I was about to do so. The same day I came out of the Hospital I told the man who was running my engine that I was ready for work.

By Mr. Davidson:—Between the 3rd and the 10th Mr. Christy wrote me. He did not ask me why I did not come back to my work. (Letter produced, dated Feby. 7th.) That is somewhat similar to what I wrote to Mr. Annand. (Another letter produced, addressed to Mr. Annand dated Feby. 14th.) In terms, that is what I wrote, denying being drunk. (Letter produced, charging plaintiff on the infraction of the medical officer with absents from the Hospital, and being the worse for drink next morning.) I couldn't go to work

until I was booked for work. Mr. Annand knew I was ready to do so.

Theobald A. Purcell, Chief Medical Officer of the Railway Department, sworn:—Plaintiff came into the Hospital on the 14th Jany. and left on the 3rd Feby. He had left on the previous morning, and stayed out all night. He had been drinking; it was quite evident. He was the worse for drink. Prior to that he had asked me when he was likely to leave. I said I hoped about the end of the week (previous). He did not intimate to me why he stayed away. I did not tell him he might go. I told him he would have to wear an elastic stocking before he could go back to work. He came and asked me for one, four or five days after he left.

A. S. Aldrich, Chief Accountant of Railways, sworn:—The two days overtime was inadvertently omitted in making up the pay-sheet. Cripps came to me two or three times after that about his wages, but he never said anything about the overtime. Had he done so it would have been paid him. The first I knew of it was from the summons. On the 4th, I received an intimation from Dr. Purcell, dated 3rd, stating that Cripps had left the Hospital. Also one from Mr. Annand, referring to a communication which had been addressed Mr. Christy on the subject, stating that Cripps had not reported himself for work. According to Dr. Purcell, Cripps entered the Hospital on the 14th Jan. When paying him in February we docked him the 18 days. He said it was too much.

To Plaintiff:—I am quite sure you never mentioned, in my hearing, about your not having been credited with the overtime.
